75. "It shall not be lawful to erect any house or other building in any parish mentioned in Schedule (A.) to this Act, or in any district mentioned in Schedule (B.) to this Act, or to rebuild any house or building within any such parish or district which has been pulled down to or below the floor commonly called the ground floor, or to occupy any house or building so newly built or rebuilt, unless a drain and such branches thereto and other connected works and apparatus and water supply as hereinbefore mentioned be constructed and provided to the satisfaction of the surveyor of the vestry of such parish or board of works for such district, of such materials, of such size, at such level, and with such fall as they may direct, so that the same shall be available for the drainage of the lowest floor of such house or building, and of its several floors or stories, and also of its areas, watercloseta, privies, and offices (if any), which drain shall lead from such house or building, or the intended site of such house or building, to such sewer, already made or intended to be constructed near thereto, as the Vestry or Board shall direct and appoint, or if there be no such sewer existing or intended to be constructed within 100 feet of any part of the intended site of such house or building, then to such covered cesspool or other place, not being under any dwelling-house, as the Vestry or Board shall direct; and whenever any house or building is rebuilt as aforesaid, the level of the lowest floor of such house or building shall be raised sufficiently to allow of the construction of such a drain and such branches thereto and other works and apparatus as are hereinbefore required, and for that purpose the levels shall be taken and determined under the direction of the Vestry or District Board."

Notice of Buildings to be given to the Vestry or District Board before commencing the same.

76. "Before beginning to lay or dig out of the foundation of any new house or building within any such parish or district, or to rebuild any house or building therein, and also before making any drain for the purpose of draining directly or indirectly into any sewer under the jurisdiction of the Vestry or Board of or for any such parish or district, seven days' notice in writing shall be given to the Vestry or board by the person intending to build or rebuild such house or building or to make such drain; and every such foundation shall be laid at such level as will permit the drainage of such house or building in compliance with this Act, and as the Vestry or Board shall order, and every such drain shall be made in such direction, manner, and form, and of such materials and workmanship, and with such branches thereto and other connected works and apparatus and water supply as hereinbefore mentioned, and as the Vestry or Board shall order, and the making of every such drain shall be under the survey and control of the Vestry or Board; and the Vestry or District Board shall make their order in relation to the matters aforesaid, and cause the same to be notified to the person from whom such notice was received within seven days after the receipt of such notice, and in default of such notice, or if such house, building, or drain, or branches thereto or other connected works and apparatus and water supply, be begun, erected, made, or provided in any respect contrary to any order of the Vestry or Board made and notified as aforesaid, or the provisions of this Act, it shall be lawful for the Vestry or Board to cause such house or building to be demolished or altered, and to cause such drain or branches thereto and other connected works and apparatus and water supply to be relaid, amended, or re-made, or, in the event of omission, added, as the case may require, and to recover the expenses thereof from the owner thereof in the manner hereinafter provided."

Power to branch Drains into Sewers constructed by Metropolitan Board, or any Vestry or District Board under certain Regulations. Penalty.

77. "It shall be lawful for any person, at his own expense, to make or branch any drain into any of the sewers vested in the Metropolitan Board of Works or any Vestry or District Board under this Act, or authorized to be made by them under this Act, such drain being of such a size, and of such conditions, and branched to such sewer, in such a manner and form of communication in all respects as the Vestry or Board shall direct or appoint; and in case any person make or branch any drain into any of the said sewers so vested in the Vestry or Board, or authorized to be made by them under this Act, of a larger size, or of different conditions, or in a different manner and form of communication than shall be directed or appointed by the Vestry or Board, every person so offending shall for every such offence forfeit a sum not exceeding 50*l.*"

78. Gives power to Metropolitan Board or Vestry or District Board to branch private drains into sewers, at the expense of the party to whom they belong.

79. Vestry or District Board may agree to make house drains at the expense of owners or occupiers.

80. Vestry or District Board may order a contribution towards construction of sewers in certain cases.

Penalty on erecting or rebuilding Houses without proper Watercloseta, &c. Power to Vestry, &c. to require Owners, &c. to provide sufficient Watercloseta, &c. If Owners fail, Vestry, &c. to cause the Work to be done at their Expense.

81. "After the commencement of this Act it shall not be lawful newly to erect any house, or to rebuild any house pulled down to the extent aforesaid, within any parish mentioned in Schedule (A.) to this Act, or any district mentioned in Schedule (B.) to this Act, without a sufficient watercloset or privy and ashpit furnished with proper doors and coverings, and also furnished as regards the watercloset with suitable water supply and water-supply apparatus, and with suitable trapped soil-pan and other suitable works and arrangements, so far as may be necessary to ensure the efficient operation thereof; and whosoever shall offend against this enactment shall be liable to a penalty not exceeding 20*l.*; and if at any time it appear to the Vestry or District Board of such parish or district that any house in any such parish or district, whether built before or after the commencement of this Act, is without a sufficient watercloset or privy and ashpit furnished with proper doors and coverings, and with other apparatus and works as aforesaid, the Vestry or District Board shall, in case the same can be provided without disturbing any building, give notice in writing to the owner or occupier of such house, requiring him forthwith, or within such reasonable time as shall be specified in such notice, to provide a sufficient watercloset or privy and ashpit so furnished as aforesaid, or either of them, as the case may require; and if such notice be not complied with, it shall be lawful for the Vestry or District Board to cause to be constructed a sufficient watercloset or privy and ashpit, or either of them, or do such other works as the case may require, and to recover the expenses incurred by them in so doing from the owner of such house in manner hereinafter provided: Provided always, that where a watercloset or privy has been and is used in common by the inmates of two or more houses, or if in the opinion of the Vestry or District Board a watercloset or privy may be so used, they need not require the same to be provided for each house."

82. Power for Vestries and District Boards to authorize inspection of drains, privies, and cesspools.

83. Penalty on persons improperly making or altering drains.

84. Where no default found expenses to be paid by Vestry or Board.

85. Vestry or District Board to cause drains, &c. to be put into proper condition, &c. where necessary.

86. Vestry and District Board to cause offensive ditches, drains, &c. to be cleansed or covered.

87. Power to Vestries and District Boards to fill up ditches by the side of roads, and substitute pipes.

88. Power to Vestries and District Boards to provide public conveniences.

98. Vestry or District Board to cause streets to be paved.

99. Owners possessing freehold of courts, &c. to pave the same.

100. Owner of courts to drain them, and keep the pavement, &c. in repair.

Vaults and Cellars under Streets not to be made without the Consent of the Vestry or Board.

101. "No vault, arch, or cellar, shall be made under any street without the consent of the Vestry or District Board of the parish or district in which the same is situate; and all such vaults, arches, and cellars hereafter to be made within any parish or district mentioned in either of the Schedules (A.) and (B.) to this Act shall be substantially made, and so as not to interfere or communicate with any drain or sewer under the control of any Vestry or District Board, or of the Metropolitan Board of Works, without their consents respectively first obtained; and if any vault, arch, or cellar be made contrary to this provision, it shall be lawful for the Vestry or District Board, or for the Metropolitan Board of Works, to fill up or alter the same, and the expenses incurred thereby shall be paid by the owner of such vault, arch, or cellar."

102. Vaults, &c. under streets to be repaired by owners or occupiers.

Provisions as to the Occupation of underground Rooms as Dwellings.

103. "Any room of a house, the surface of the floor of which room is more than 3 feet below the surface of the footway of the adjoining street, and any cellar, where such room or cellar is or has been occupied separately as a dwelling at or before the time of the passing of this Act, may continue to be so let or occupied if it possess the following requisites; that is to say,

If there be an area not less than 3 feet wide in every part from 6 inches below the floor of such room or cellar to the surface or level of the ground adjoining to the front, back, or external side thereof, and extending the full length of such side;

If such area, to the extent of at least 5 feet long and 2 feet 6 inches wide, be in front of the window of such room or cellar, and be open or covered only with open iron gratings;

If there be in every such room or cellar an open fireplace, with proper flue therefrom;

If there be a window opening of at least 9 superficial feet in area, which window opening must be fitted with a frame filled in with glazed sashes, of which at the least 4½ superficial feet must be made to open for ventilation:

And no such room nor any cellar not so let or occupied as aforesaid at or before the time of the passing of this Act shall be so let or occupied unless it possess the following requisites; that is to say,

Unless the same be in every part thereof at least 7 feet in height, measured from the floor to the ceiling thereof;

Unless the same be at least 1 foot of its height above the surface of the footway of the street adjoining or nearest to the same;

Unless there be outside of and adjoining the same room or cellar, and extending along the entire frontage thereof and upwards, from 6 inches below the level of the floor thereof up to the surface of the said footway, an open area at least 3 feet wide in every part;

Unless the same be effectually drained and secured against the rise of effluvia from any sewer or drain;

Unless there be appurtenant to such room or cellar

the use of a watercloset or privy and an ashpit furnished with proper doors and coverings kept and provided according to the provisions of this Act;

Unless the same have a fireplace with a proper chimney or flue;

Unless the same have an external glazed window of at least 9 superficial feet in area clear of the frame, and made to open in such manner as is approved by the surveyor of the Metropolitan Board of Works;

Provided always, that in any area adjoining a room or cellar there may be placed steps necessary for access to such room or cellar, and over or across any such area there may be steps necessary for access to any building above the room or cellar to which such area adjoins, if the steps in such respective cases be so placed as not to be over or across any such external window;

And whosoever lets, occupies, or continues to let, or knowingly suffers to be occupied, any room or cellar contrary to this Act, shall be liable for every such offence to a penalty not exceeding 20s. for every day during which the same continues to be so let or occupied; and every room or cellar in which any person passes the night shall be deemed to be occupied as a dwelling within the meaning of this Act; and every district surveyor acting under the Act of the session holden in the seventh and eighth years of her Majesty, chap. 84, or under any Act appealing or amending the same, shall, without any fee or reward, report periodically, and otherwise, as the said Metropolitan Board may order, to such Board all cases in which rooms or cellars are occupied contrary to this enactment in the district of such surveyor, and also to the respective Vestries and District Boards all such cases occurring within such parts of his district as may be within their respective parishes and districts; but nothing herein contained shall be construed to disable other persons from enforcing this enactment, and taking proceedings for penalties thereunder."

Power of District Surveyors to enter underground Rooms and Cellars. If admission refused, Justice may issue an Order.

104. "For the purpose of enforcing the enactment lastly hereinbefore contained, it shall be lawful for any such district surveyor, or for any other person, having reasonable grounds for believing that any room or cellar is occupied contrary to such enactment, to demand admission to inspect the same at any time between nine o'clock in the morning and six o'clock in the evening; and if admission be not granted, any justice having jurisdiction in the place where such room or cellar is situate may, on oath before him of belief that such room or cellar is occupied contrary to the said enactment, by order under his hand authorize such district surveyor or other person to enter into and inspect such room or cellar between the hours aforesaid."

105. Makes provisions for paving new streets.

110. Streets not to be broken up, except under the superintendence of Vestry or Board. Streets broken up to be reinstated without delay.

111. Penalty on persons taking up pavements neglecting to reinstate them, and to place lights during the night-time to prevent accidents.

Owners, &c. to remove future Projections on Notice from Vestry or District Board. Penalty for Neglect.

119. "If any porch, shed, projecting window, step, cellar door, or window, or steps leading into any cellar or otherwise, lamp, lamp-post, lamp-iron, sign, sign-post, sign-iron, showboard, window shutter, wall, gate, fence, or opening, or any other projection or obstruction placed or made against or in front of any house or building after the commencement of this Act, shall be an annoyance, in consequence of the same projecting into or being made in or endangering or rendering less commodious the passage along any street in their parish or district, it shall be lawful for the Vestry or District Board to give notice in writing to the owner or occupier of such house or building to remove such projection or obstruction, or to alter the same, in such manner as the Vestry or Board think fit; and such owner or occupier shall, within fourteen days after the service of such notice upon him, remove such projection or obstruction, or alter the same in the manner directed by the Vestry or Board; and if the owner or occupier of any such house or building neglect or refuse, within fourteen days after such notice, to remove such projection or obstruction, or to alter the same, in the manner directed by the Vestry or Board, he shall forfeit any sum not exceeding 5*l.* and a further sum not exceeding 40s. for every day during which such projection or obstruction continues after the expiration of such fourteen days from the time when he may be convicted of any offence contrary to the provisions hereof."

Vestry or District Board may remove existing Projections, and make Compensation for the same.

120. "It shall be lawful for every Vestry and District Board, if any projection or obstruction which has been placed or made against or in front of any house or building in any such street before the commencement of this Act shall be an annoyance as aforesaid, to cause the same to be removed or altered as they think fit: Provided always, that the Vestry or Board shall give notice in writing of such intended removal or alteration to the owner or occupier against or in front of whose house or building such projection or obstruction shall be, seven days before such removal or alteration shall be commenced, and shall make reasonable compensation to every person who shall incur any loss or damage by such removal, excepting in cases where the obstruction or projection may now be removable under any Act, in which case no compensation shall be made.

Hoards to be erected during Repairs. Penalty on not erecting Hoards.

121. "Every person who shall build or begin to build, or to take down or begin to take down, any house, building, or wall, or alter or repair, or begin to alter or repair, the outward part of any house, building, or wall, shall, in all cases in which the footway is thereby obstructed or rendered inconvenient, cause to be put up a proper and sufficient hoard or fence, with a convenient platform and handrail, if there be room enough for the same, to serve as a footway for passengers outside of such hoard or fence, and shall continue such hoard or fence, in such cases as aforesaid, with such platform and handrail, standing and in good condition, to the satisfaction of the Vestry or District Board of the parish or district in which such house, building, or wall is situate, during such time as may be necessary for the public safety or convenience, and shall, in all cases in which the same is necessary to prevent accidents, cause such hoard or fence to be well lighted during the night; and every such person who fails to put up such hoard or fence and such platform, with such handrail as aforesaid, or who does not, whilst the said hoard or fence is standing, keep the same well lighted during the night, shall for every such offence forfeit a sum not exceeding 5*l.* and a further sum not exceeding 40s. for every day during the continuance of such default."

122. No hoard to be erected without licence from Vestry or District Board.

123. If hoard be erected or materials be deposited in any manner otherwise than to the satisfaction of the Vestry or District Board, the same may be removed.

Providing against Accidents in laying out new Streets, &c.

124. "Every person laying out or opening any new street, or building therein, shall, during the operations necessary for forming such new street, or for building therein, take all such precautions for guarding against injury to the passengers along such street as may be directed by the Vestry or District Board of the parish or district within such operations are being carried on; and if any person fail to comply with the directions of such Vestry or District Board, within such time as may be limited by them, such Vestry or District Board may do whatever may be necessary for carrying the same into effect, and the expenses thereby incurred shall be repaid to such Vestry or District Board by the person laying out or opening such new street, or building therein, as aforesaid, and shall be recoverable by them from such person in manner provided by this Act."

141. Metropolitan Board to regulate naming of streets and numbering of houses.

Buildings not to be brought beyond Line of Street.

153. "No building shall, without the consent in writing of the Metropolitan Board of Works, be erected beyond the regular line of buildings in the street in which the same is situate, in case the distance of such line of buildings from the highway do not exceed 30 feet, or within 30 feet of the highway where the distance of the line of buildings therefrom amounts to or exceeds 30 feet, notwithstanding there being gardens or vacant spaces between the line of buildings and the highway; and in case any building be erected contrary to this enactment, it shall be lawful for the Vestry or District Board in whose parish or district such building is situate to cause the same to be demolished or set back (as the case may require), and to recover the expenses incurred by them from the owner of the premises in manner provided by this Act."

BYELAWS.

Power of Metropolitan Board of Works to make Byelaws. Penalty for Breach of Byelaws. Power to Justices to remit Penalties.

202. "The Metropolitan Board of Works and every District Board and Vestry respectively may from time to time make, alter, and repeal byelaws for all or any of the purposes following (that is to say); for regulating the business and proceedings at their meetings and of committees appointed by them, the appointment and removal of their officers and servants, and the duties, conduct, and remuneration of such officers and servants; and the said Metropolitan Board may also from time to time make, alter, and repeal byelaws for regulating the plans, level, *width*, surface inclination, and the material of the pavement and roadway of new streets and roads, and the plans and level of sites for building, and for regulating the dimensions, form, and mode of construction, and the keeping, cleansing, and repairing of the pipes, drains, and other means of communicating with sewers, and the traps and apparatus connected therewith; for the emptying, cleansing, closing, and filling up of cesspools and privies; and for other works of cleansing, and of removing and disposing of refuse, and for regulating the form of appeal and mode of proceeding thereon; and generally for carrying into effect the purposes of this Act; and every such Board and Vestry may thereby impose such reasonable penalties as they think fit, not exceeding 40s. for each breach of such byelaws, and in case of a continuing offence a further penalty not exceeding 20s. for each day after notice of the offence from the Board or Vestry: Provided always, that under every such byelaw it shall be lawful for the justices before whom any penalty imposed thereby is sought to be recovered to order the whole or part only of such penalty to be paid, or to remit the whole penalty: Provided also, that no byelaws shall be repugnant to the laws of England or to the provisions of this Act; and that no byelaw shall be of any force or effect unless and until the same be submitted to and confirmed at a subsequent meeting of the Board or Vestry: Provided also, that no penalty shall be imposed by any such byelaw unless the same be approved by one of her Majesty's principal Secretaries of State."

Buildings not to be made over Sewers without consent.

204. "No building shall be erected in, over, or under any sewer vested in the Metropolitan Board of Works, or in any Vestry or District Board, without their consent first obtained in writing, and if any building be erected contrary to this provision, the Board or Vestry in whom such sewer is vested may demolish the same, and the expenses incurred thereby shall be paid by the person erecting such building."

PROGRESS IN THE COLONIES.

TORONTO.—ADELAIDE.—MELBOURNE.—SYDNEY.

In Toronto we have a Canadian city preparing to become a capital, and making no small exertions to appear worthy of the distinction, not only as regards government offices and other public buildings, but in the spread of its streets and private dwellings in the true aristocratic direction,—literally *westwards*, as in all distinguished cities. The Belgravians of Toronto have even their Pimlico-and-park grievance, oddly similar to our own, "the Avenue" intervening with its barriers between the western and the eastern districts of the city; so that we have the *Timeses* of Toronto, such as the *Globe*, steel-pen in hand, tilting against the tabooed circle which obliges the citizens "when journeying in an easterly or a westerly direction to make a considerable detour to arrive at their place of destination," whereas,—taking "the examples of the parks in London and the Champs Elysées in Paris,—all [not all, Mr. Editor, at least so far as regards carriage-ways] intersected by public ways, and affording short communicating roads,"—if "the Avenue" were made "a place of greater public resort," and its fences and barriers removed, "a positive advantage would ensue, as respectable people would be able to pass through it without that molestation to which all are now too much exposed."

The seat of government is to be removed from Quebec to Toronto during the ensuing four years: hence the activity, alluded to, in various branches of the trade of the latter city, but especially amongst the building trades.

The Parliament-buildings, facing the bay, in Front-street, are having various additions and alterations. It is with difficulty that the architect has made the Lower House capable of accommodating the increased number of the representative body, and the *Globe* states positively that "no further increase of the number can take place during the holding of the Parliament at Toronto, for the simple reason of want of room." An addition, however, has already been made to the main building of two extensive wings, each containing a large and spacious room, one to be used as a library for the Legislative Council, another as a reading-room for the members of the House of Assembly. A number of committee-rooms occupy the ground-floors of these wings. The library is 45 feet long by 25 feet wide, and lighted from six large windows. The interior of the building has been completely renovated, painted, papered, &c. A detached dwelling for the messengers of the House has been erected on the western side. The works altogether are in an advanced state: they are under the direction of Mr. William Hay.

The Government House, as it is called, has been the scene of still more extensive alterations. It is intended as the future residence of the Governor-General, and from long disuse had been allowed to become uninhabitable. Like the Parliament buildings, this also was found to be too circumscribed in its dimensions, and large additions were accordingly immediately undertaken. These consisted in the erection of a large wing of three stories in height, the basement containing vaults, cellars, hot-air furnace, and store-rooms. On the next floor, the buildings in progress consist of a new portico, an orderlies' room, by the side of an apartment intended for the use of his Excellency while giving official receptions, and which is 31 feet in length by 20 feet in breadth, with, nearly opposite, the new dining-room, 46 feet long by 24 feet wide, and lighted by four windows, in addition to glass doors, with side fans. All the newly-built rooms on the floors above consist of numerous ser-

,' dormitories. Among the alterations in pro- are mentioned the widening of the staircase isite the private entrance of the mansion, and the ion of a new portico for the residents or private ors. The ball-room is undergoing a thorough vation and ventilation. This is a room 75 feet 8 feet. The windows open into a new conserva- in course of construction. Baths are being d up adjacent to the state and other bed rooms. remarkable that there are no preparations for the duction of gas into the Government House, his llency having an aversion to it. Apart from the se, a new building, intended for stabling, is in se of erection. In the rear of this the guard- se is to be raised, and made more convenient.

The Mechanics' Institute, at the corner of Church Adelaide streets, has been leased to the Govern- t for public purposes, for a period of four years. works in progress here consist principally of rations, the building being in preparation for the of the Crown lands and post-office departments. he beautiful music-hall, of which Toronto was aring to be proud, says the *Globe*, has been porarily destroyed."

The old General Hospital, situated at the corner of g and John streets, has also been called into uisition for Government purposes, and is at pre- t noisy with the ceaseless industry of many work- s. This building is intended to be used as offices the Executive Council, and it is in course of rapid version to its new purposes, as also are the esar's office, at Dorset-street, and the Albany Cham- s. The Medical School, which occupied a portion the Parliament Buildings, has been sent back to the onto University, where, one would think, it just ght to be.

Amongst the numerous streets and dwellings ich are being run up in this city, there are, it pears, many frame or other easily destructible uses, a circumstance much to be regretted, and to ich the attention of the Corporation has been ded. A great majority, however, of the houses cted this season, are of brick. Besides these works rious other public buildings are in progress. mong these stand numerous railway works, consist principally of extensive freight-houses, engine- uses, for the western section of the Grand Trunk ne, and for the Toronto and Hamilton Railway mpany; the latter a substantial brick structure, 0 feet long by 53 broad. These are all situated ar the Old Fort. The Northern Company is erect- g, at the corner of Front and Bathurst streets, a ng frame building, containing twelve or fourteen oms, to be used as clerks' offices.

Another large public edifice not yet finished, is the oronto Exchange.

A new Congregational church at the corner of Bay d Adelaide streets, is intended as a substitute for e building destroyed on same site by the fire last inter.

A Presbyterian church is about to be commenced the corner of Victoria and Gould streets.

A contract is about to be entered into for a Roman atholic Hospital, called the New Home of Provi- ence, to be erected on a vacant piece of ground outhward of St. Peter's Church, Power-street. The yle of the edifice is that which prevailed in the north f France about the early part of the sixteenth cen- ary. Mr. Wm. Hay is the architect; as also of the ollege of St. Michael and St. Basil's Church, another ndertaking in progress at the expense of the Roman atholics. When complete the college will accommo- ate about 200 pupils. The principal wing is 90 feet n length by 40 in breadth, and of a height of 48 eet. The dimensions of the church are 100 feet in ength by 50 in breadth. The church is in the style hich prevailed in England about the middle of the hirteenth century. The style, it seems, is novel n Canada.

Some idea may now be conceived of the active oings in Toronto within the past few months. In ddition to the public and private edifices in course of onstruction, there are many other large works going n with great rapidity; for instance, new sewers are eing opened, the Esplanade is progressing, and the everal railway lines, running into or through the ity, are hastening to completion. A large accession o the population has thus been gained, merely in the urplus number of mechanics allured thither. One irm alone, that of Messrs. Worthington and Co. who ave extensive contracts in and around the city, give mployment, at present, to 350 men, and lately paid early 7,000 dollars a month for their services. The reat abundance of work, while it has kept up wages, as made it difficult to obtain mechanics in sufficient umbers. Some leading houses have been even com- elled to send to the United States in search of men o enable them to do work contracted for within the pecified time; and some hundreds of additional en, it would appear, might yet find employment at Toronto in the different trades connected with building.

The following are the prices per *diem* at present paid:—Carpenters, locksmiths, gasfitters, and plas- terers, 8s. 9d.; bricklayers and masons, 10s.; pain- ters, 7s. 6d.; labourers, 5s. This scale is that which has ruled since the spring of 1854, when an advance of a quarter of a dollar per day was made in the wages of workmen engaged in mechanical trades con- nected with house-building.

While there has been an advance, since the corre- sponding period of 1854, in lumber, an article exten- sively required for building purposes, a diminution has taken place in the cost of bricks of about three dollars per thousand, though they are still quoted much higher at Toronto than in the markets of the United States. While an inferior article is easily sold in Toronto at seven dollars per thousand, the New York papers note the prices in that State as but little over three dollars and a half. This is said to be rather attributable to the depressed state of the build- ing interest in that portion of the United States, than to any advantage, natural or artificial, that the American maker enjoys. The fall in the price of bricks at Toronto is generally attributed to the intro- duction of machinery in the manufacture—an innova- tion of quite recent date. Messrs. Worthington and Co. have established extensive works for this purpose, with steam power.

At Adelaide, in South Australia, there are various public works in progress or completed. The City and Port Railway is in hand. The station at the Adelaide terminus is completed, and the line is ex- pected to be opened by the end of the year. The Adelaide station is a brick and stone building, in the Anglo-Italian style. In the immediate vicinity are the new Legislative Chambers,—a more stately pile than the former one, Elizabethan in style, and elaborately finished, according to the *South Australian Register*. New police-barracks and other Govern- ment offices have just been completed; and the embanked road leading from King William-street to the Torrens is formed, and the solid masonry of the new City-bridge all ready and waiting for the iron structure that will eventually span the river. Till it arrived from England, however, it was proposed to throw a temporary wooden bridge across the river upon the masonry already formed. The intended alterations at Government-house were not yet begun, although the money has long since been voted. In various parts of Adelaide new stores have been erected, many of which are large and substantial buildings.

The Commissioners of the Adelaide and Gawler Town Railway have been appointed, and were adver- tising for tenders by last accounts. The inhabitants of the Port are showing symptoms of good progress. A new steam flour-mill, the largest in the colony, had just been opened. A dwarf wharf was in course of con- struction at the Port; and the new Trust, empowered to spend the 100,000*l.* sanctioned last session by the Legislative Council, had got so far as to appoint their secretary. The Trinity Board have been down to Cape Borda to select a suitable spot for the erection of a new lighthouse, ordered and expected from England. Building and investment societies are now becoming exceedingly numerous both in town and country. In the suburban districts of Adelaide are several popular and flourishing societies. All the localities surrounding the town, or within two or three miles, are being rapidly built upon, especially the eastern suburbs. The majority of new houses are of a good substantial character, and either sell or let with great readiness. Scarcely a house is built without its surrounding garden-plot. The site for the Botanical Gardens has been appointed by the Government, and a Board of Management has been nominated.

At Melbourne, matters are not proceeding so swim- mingly, there being great complaints of want of em- ployment there, and a sad tendency towards disorgan- ization generally, though, it is to be hoped, but of a temporary character.

The value of a knowledge of mechanics in Australia was well illustrated in an inaugural address lately de- livered at the Mechanics' School of Arts in Sydney, by Sir Thomas Mitchell, D.C.L. the president of the institution. From some noticeable details of the pro- gress of that colony, and of the difficulties overcome in acquiring a geographical knowledge of Australia, reported in the (London) *Athenæum*, we extract the following:—"In first scaling the heights of Australia Felix," Sir Thomas remarked, "a house carpenter was to me, in a small way, what Tullius Labienus was to Julius Cæsar in his passage into Gaul. Wheel- wrights and blacksmiths were my best soldiers on the banks of the Murray. Few are aware that but for very nice mechanical appliances, the expeditionary party that reached the shores of the Southern Ocean would never have returned." In building bridges for the infant colony there were great difficulties until Sir Thomas accidentally lighted upon "a mechanic, who was then employed on day wages, cutting the coping-stone of the dwarf wall in front of the Council Chambers in Macquarie-street. I allude," the lec- turer stated, "to Mr. David Lennox, who left his stone wall at my request, and with his sleeves still tucked up, came with me to my office, and undertook to plan the stone bridges we required, make the cen- treing for arches, and carry on such works, by direct- ing and instructing the common labourers then at the disposal of the Government. Thus originated all the bridges this colony possesses at all worthy of the name."

THE WATER SUPPLY OF THE LONDON POOR.

In addition to the notes on this subject, already given, it may be worth while to mention that notwithstanding the great benefit caused by the water supply in certain districts, still the scarcity is very great. This is caused by the short time, sometimes only half or three-quar- ters of an hour per day, during which the water is allowed to run amongst a multitude of peo- ple from a single pipe. The butts and cisterns have been either done away with, or have never been fixed; so that the poor can only catch water in the insufficient vessels which their miserable homes contain. We believe that amongst the middle and upper classes, where the water supply is adequate, very little water is wasted; and after careful inquiry into the matter amongst many sections of the Lon- don poor, the sanitary officers of police, and others, we have a strong conviction that if the poor of the metropolis were furnished with taps of water from the main fixed at convenient places, they would be greatly benefited, and the quantity of water which runs to waste in the present arrangement would be lessened.

At any rate it is necessary that a sufficient quantity of water should be at hand in crowded neighbourhoods, for at least three hours in the morning, and three hours in the evening, of every day.

In many instances the landlords of the un- wholesome houses in which the poor *live*—if it can be so called—pay, instead of *for one water service for each house, for one service for three or four houses*. This is not just either to the water companies or to the tenants.

THE COMMERCIAL TRAVELLERS' SCHOOLS, PINNER.

On Saturday, the 27th of October, the Com- mercial Travellers' Schools, at Pinner, for orphan and necessitous children, were opened by H.R.H. Prince Albert, in the presence of Sir F. G. Moon, Lord Mayor, and a large assem- blage of friends. The Lord Mayor afterwards presided at luncheon, and a number of appro- priate addresses were made.

A view of the building externally will be found in our last volume, at p. 159.

The arrangement of the plan is an extended parallelogram, about 305 feet long and 46 feet wide; the centre and wings being double, the intermediate portion single. The basement is appropriated to the kitchen and washing pur- poses, cellaring, and officers' rooms, together with the general sanitary accommodation of the scholars, their dining-rooms, &c. The ground- floor, which is approached by a double flight of steps (under which access is obtained to the kitchen), is appropriated to the matron's apart- ments, the board-room, secretary's offices, &c.; the large school-room, 81 feet by 30 feet, and averaging 35 feet high; the head master and mistress's apartments, and accommodation for a few beds for smaller boys.

The general dormitory accommodation is ob- tained in the upper floor throughout, subdivided into classes; each provided with the customary lavatories, closets, baths, &c. The wings are appropriated to infirmaries, divided from the general building by separate staircase thereto, to which there is convenient approach through efficient classification.

It should be remarked in this building, that all the rooms have a lofty, cheerful appearance, and the usual close offensive odour, so generally prevailing about all such institutions, where numbers are collected together, is obviated. Very few of the rooms appropriated to the scholars are plastered, but generally neatly painted, and coloured a warm colour, harmonizing with the

stonework visible; the corridors throughout, connecting the dormitories with the staircases, are arched with the hexagonal bricks.

The building is generally executed in brickwork, and covered with red tiles, according to the old custom of the neighbourhood, and of which Lord Holland's house is a good precedent.

It is intended to light the building with gas from small works erected on the premises. Water is obtained from a depth of 140 feet, good in quality, and never-failing, laid on in all parts of the building, and raised by a small steam-engine to the wings of the building, about 80 feet perpendicular. The lavatories and footroughs are fitted with Jennings's patent taps and basins. The closets are also on Jennings's principle. A small farm is erected on the north-west side of the property. The gas-works adjoin this building. The works have been in progress about two years. The total cost, exclusive of land, will probably be over 21,000*l.* including fittings, fixtures, approach, playground, drainage of land, fencing, &c. The school-room is fitted up with oak, and is a fine room, 80 feet by 30 feet. The dining-hall under it has the same dimensions.

When the committee said, in their address to Prince Albert,—"To the cultivated taste of your Royal Highness, the edifice may present many architectural imperfections and defects," they thought more of flattering the Prince than doing justice to their architects. We were pleased to hear from the mouth of the treasurer that he had been requested to convey to the public his Royal Highness's approbation of both the arrangement and details of this structure, even to the consideration of some portions thereof in the building of the Wellington Testimonial. The architects were Messrs. Lane and Ordish; the builder, Mr. Walter Parker, of Thrapston, who appears to have done his work particularly well.

DINNER OF THE BUILDERS' BENEVOLENT INSTITUTION.

The dinner in aid of this Institution, and already referred to several times in our columns, took place at the London Tavern, on Tuesday, the 30th of October, when Mr. Charles Lucas presided, and about 200 friends of the charity attended, including Messrs. Barry, Jay, Myers, jun. Burton, G. S. Smith, Joseph Bird, Grissell, Wm. Piper, Josiah Biggs, Newson, Cozens, Hunt, Gardner, Freeman, Meakin, Thorn, R. Richardson, &c. Let us say at starting that the chairman showed himself to possess the clear head and good heart which characterize the school out of which he comes. The various loyal toasts having been drunk (Mr. Myers jun. returning thanks for the Army and Navy, because of the "hutting" he is doing),—

The chairman proposed "Health and Prosperity to the Builders' Benevolent Institution." In the course of his address, he said,—The Institution, notwithstanding its importance, was 160*l.* in debt, and there were twelve applicants for its bounty whom they were unable to relieve. It was hard to be compelled to refuse assistance to men of their own class. He would suggest a plan which had occurred to him, and which would relieve them from their present difficulties. If 40 gentlemen in the room would give their subscription of 10*l.* a year, with himself, there would be no necessity for turning away a single applicant. They knew not what reverses of fortune might ever befall themselves, and cause them to become supplants to the bounty of the institution whose objects they were now supporting. There was another mode which suggested itself to him; and that was, that if every gentleman present would but secure one contributor of a guinea to the funds of the institution, a sum of 200 guineas would be secured, sufficient to enable them to relieve all the applicants they had. It appeared that a sum of 1,800*l.* had been paid up to the building fund; and he was sure that they were all most eager to co-operate in the good work they had in hand. What he wanted was, that ten of the principal firms should contribute 100*l.* each for five years. In talking the matter over that morning with his brother, he had expressed his willingness to be one of ten who would thus come forward with their donation. When he considered the large amount of capital represented by the builders of this country, the influence they wielded, he felt sure that they would all do their utmost to support this institution, which was a credit to the craft.

Mr. Joshua Higgs, in proposing the health of the president, re-urged the suggestions he had made, and showed that the committee were constantly obliged to reject deserving applicants for want of funds.

Mr. Higgs afterwards replied for the patrons and trustees, Mr. Joseph Bird, for "The Brighton Branch;" and toasts were duly drunk, to the health of Mr. George Bird, the treasurer; "The Architects and Surveyors" (for which Mr. Meakin returned thanks); the directors and stewards (for which Mr. Thomas Cozens, the founder of the institution, returned thanks); and the Press.

The secretary, Mr. A. G. Harris, announced subscriptions and donations to the amount of 1,200*l.* including, as we are informed, Sir Saml. Scott, bart. 26*l.* 5s.; Messrs. Grissell, Brothers, 25*l.* 10s.; Messrs. Cheesewright and Sheffield, 21*l.*; Mr. W. Webb, 21*l.*; Mr. Thos. Lucas, 25*l.*; Messrs. Collins and Stanbury, 10*l.* 10s.; Mr. George Myers, 10*l.* 10s.; Mr. G. Spencer Smith, 10*l.* 10s.; Messrs. W. Cubitt and Co. 10*l.* 10s; Mr. A. F. Livesay, Portsmouth, 10*l.* 10s.; Mr. W. Webb, 10*l.* 10s. and 10*l.* 10s. for building fund; Mr. Wright, 21*l.*; Mr. Alderman Cubitt, 10*l.* 10s.; "Gray-stone Lime," 10*l.* 10s.; Mr. Barry, 5*l.* 5s.; Mr. Hunt, 5*l.* 5s.; Messrs. Wood and Son, 5*l.* 5s. The following became subscribers of 10*l.* 10s. annually for five years:—The Chairman; Mr. George Bird, the Treasurer; Mr. R. Richardson, Camden-town; Mr. Charles Richardson, Paddington; Mr. Thos. Lemon; Mr. Wm. Piper, Lambeth; Mr. Geo. Jennings, Blackfriars; Mr. Joseph Bird, Regent's-park; Mr. John Jay, City-road; Mr. Henry Myers; and Mr. George Burge.

SPA-FIELDS CHAPEL,

EXMOUTH-STREET, CLERKENWELL.

The original leases of valuable property in Clerkenwell, belonging to the Marquis of Northampton, have just expired, and the alterations and improvements consequent upon their renewal, have been extensive. Even already these have added much to the appearance and importance of the neighbourhood, particularly in Exmouth-street; and when the long contemplated line of Victoria-street shall be complete, must necessarily enhance the value of the property. Considerable alterations have been made to the old Northampton Chapel, called after the marquis, but better known as "Spa-fields Chapel."

A tablet within the building informs us the chapel was opened for divine worship by Lady Huntingdon nearly eighty years since. The exterior has been improved with porch and iron fence. The inside of the building is a circle, with two galleries, each supported by small columns, and surmounted by a dome of large size, with lantern at the top. To light the building, a circular pipe, about 144 feet in circumference, is supported on brackets at about a foot from the base of the dome, from which project upwards of sixty-four gas burners, fitted with globes. The alterations have been made under the superintendence of Mr. T. W. Constantine, architect. The chapel will hold upwards of 2,000 persons.

WHAT MAKES A BUILDER?

I wish you, or some of your numerous readers, could devise some means of restoring the respectability of the building business, and excluding unworthy members from exercising the art. I think we need to be restricted from practising without a diploma as much as architects. Had the *Lancet* Commissioners the proper knowledge, there would be a much greater amount of rascality for them to expose in the speculative buildings that are continually running up in both town and country, than in the field in which they are at present engaged.

It has always, up to the present time, been my practice to execute work in a substantial manner, with the best workmanship and materials that could be obtained for money, and this work has never been found fault with in regard to *quality* (price I will say nothing about); but as it costs me 25 to 30 per cent. more than the kind of work now in the market, of cours cannot compete in price with that article, should feel ashamed of turning out such rasc joinery work in particular. Journeym bricklayers, plasterers, wheelwrights, and c sons of Crispin, are now dubbing themsel "builders," and taking contracts all round neighbourhood. Few of them are capable taking off quantities, and never attempt they make a guess at the amount, and all risks. Hence the great discrepancies tenders.

The public seem determined to be suppl at ruination prices, and architects are obliged shut their eyes to many things that are what they ought to be, well knowing the f of expecting skill where it does not exist.

Some of these contractors, who have a li money to commence with, get rid of it; those who have not, which are much the grea number, swindle their creditors and ret with the spoil. It is quite useless under present system, parents apprenticing their s seven years to learn the *art* of building: it only requisite they should be placed a months with a sharp practitioner to learn tricks of *trade*, for building is no longer *science*. I cannot bring my mind to descend these practices; and were I a few years young should be inclined to leave this country in d gust, and try my chance in one of the colonie

Fair Play.

ON THE PRESENT STATE OF OUR KNOWLEDGE OF THE SUPPLY OF WATER TO TOWNS.

At the late meeting of the British Association the Advancement of Science, a report on this subj from Mr. J. F. Bateman was read. After alluding the interest which attaches to the consideration this question, and its importance as affecting health, the comfort, and well-being of the inhabita of large towns, Mr. Bateman remarked that till a ve recent period the question of water supplies on a lar scale has in this country been much neglected. works, however, now designed and carried out amongst the largest, the boldest, and most successf productions of the age, rivalling the greatest unde takings of the ancients and the Romans. Towns now almost universally supplied with an unlimit quantity of water, in the most perfect and convenie manner, the water being conducted into the interi of the houses, and thus applied to every domest want. Towns were formerly supplied by artifici means, by the collection of springs, which were co ducted to public fountains, from which the inhabitan fetched water as they required it. The supply Rome on this system is said to have amounted at o time to 50,000,000 cubic feet per day to 1,000,0 inhabitants, which is upwards of 300 gallons a day each person. After glancing at the early attempts this country to procure water by artificial means, shortly described the manner in which Peter Morio a Dutchman, first raised water from the Thames f the supply of London, in 1581, by means of wate wheels worked in the arches of Old London Bridg and the construction of the New River works, which water was brought to London from Hertford shire by Sir Hugh Myddleton—a distance of fort miles—in the beginning of the seventeenth century He stated that London is now supplied with water b nine companies, who deliver about 44,000,000 gallon per day, and derive an annual revenue of abou 236,000*l.* He then went on to say, that the differen sources from whence a town can derive a supply o water, beyond that which the inhabitants can collec in cisterns from rain, or procure by wells on their own premises, may be classed as follows:—1st, From springs; 2ndly, From artesian wells, or from water t be obtained from absorbent geological strata; 3rdly From rivers; 4thly, From gathering grounds, where the surplus water of wet seasons is collected into large storage reservoirs, and 5thly, From natural lakes. The most abundant supply of spring water, from an extended area, was stated to be in the green sand formation near Guildford, in Surrey, where between 30,000,000 and 40,000,000 gallons of water per day, not exceeding 2½ degrees of hardness, might be produced for the supply of London. As to artesian wells, the artesian well at Grenoble, in France, yields 880,000 gallons per day: fifteen wells at Tours, in France, yield about 4,000,000 gallons daily; and it is estimated that the quantity obtained in this way in London and its immediate neighbourhood is equal to 8,000,000 or 10,000,000 gallons per day. The most important supplies of modern times have been procured from gathering grounds. Many points of considerable interest enter into this branch of the sub-

—the annual fall of rain—the loss by evaporation and absorption—the quantity of water flowing the ground or issuing in springs—the duration of ights—the heaviest falls of rain—and the capacity reservoirs. Mr. Bateman entered largely into e questions, showing that the rain varied from nches to nearly 200 inches per annum, according ocality; that from 12 to 16 inches of that which was lost by evaporation, vegetation, &c. and that storage capacity of reservoirs should vary from 000 to 60,000 cubic feet and upwards, according he annual rain-fall for every acre of collecting und.

TRIGONOMETRICAL SURVEYS.

Your readers must not be allowed to suppose, n the wording of a notice of the survey of reford, in your paper of 20th instant, that a ect base, and computed distances from observed les, are a new contrivance of the surveyor ded to. All surveyors know, or ought to know, t such triangulation is indispensable as a check the chained distances, and if left undone, as rted, it must be owing to the "cheap and nasty" tem generally prevailing. I myself triangulated a ge district some years since in Devonshire, in conction with Mr. John Pasley Luckraft, of the Royal vy, a gentleman who considered everything, whether land or sea, worth doing well if it were to be done ll. We chained a horizontal base of nearly a mile, kward and forward, to within a fraction of an h; and connected the extremities with other proent objects, by observed angles, &c. but we were h perfectly aware at the time that old Euclid made rvey of the town of Alexandria, precisely on the ae system, more than twenty centuries before. ere are also other towns in England besides Hereid that are properly surveyed. METATOR.

In reply to an article in the *Builder* (p. 504, *ante*), ncerning the Trigonometrical Survey of Towns, mit me to say a few words on behalf of the survey this town, Cheltenham. The survey commenced February last: the trigonometrical observations re completed in March. The base-line was meed twice with a standard chain. Commencing at h ends of the line, both measurements were preely the same length. It forms nearly an equilateral angle with St. Mary's Church spire, extending over f the town, and it is the first side of a complete tem of major triangulation extending over the ole district.

The trigonometrical angles are proved correct the 32nd prop. 1st Book of Euclid, and this tem of triangulation was reduced to a minor tem, calculated to obviate the ordinary way of versing, which is not trigonometrical, and is well own to every proficient civil engineer to be in that se computed from the contained angle and two des; which sides are not calculated from the base-e, but measured on the ground for that purpose. they are calculated from the base-line, why do they me under the denomination of a traverse, which is ways used to finish an imperfect triangulation? and at relation do these measured lines bear to a duced base-line? So much for the boasted talent trigonometrical surveyors.

JAMES M'CLEARY.

The Cambridge Survey.—With reference to this rvey, Mr. Radcliffe asks us to say it was comenced in 1851, by Mr. R. R. Rowe, the town surveyor, by whom the former was subsequently engaged a general assistant, so that he has no right to appear the principal.

OLD FATHER THAMES.

Passing over Waterloo-bridge the other day on y return from a visit to Twickenham, I was more an ever reminded of the noxious condition of the hames in its meanderings through our grimy city. happened to be low tide, and the appearance , and odour from, the black and dismal banks were ch as to produce a terrible revulsion of feeling the unfortunate pedestrian. There might be seen rtain of the sewers discharging their contents along e muddy way in seemingly vain attempt to seek a fuge and a "home" amidst the congenial wave, hilst the human abodes on either side called forth sions in the mind of sure and welcome refuge therein be found for Pestilence—foul, gaunt, and dire. The ntrast between the limpid stream I had been erst beolding and that which I *now* beheld, sluggishly rolling beneath my feet, was painfully striking. Why, r, I would ask (and through the medium of your lumns may the echo be prolonged), why is this ily-increasing nuisance allowed to accumulate? We now that a scheme for its relief is "under consideration," and as such it is likely so to continue; but would not the wiser course be at once to advise with competent professional men, and, abiding by the decision of the majority, adopt an efficient present remedy and future preventive for the evil? Nothing short of creating a new passage and outlet for the sewage beyond the danger of reflux can accomplish the desired object; and as regards the question of expense, where interests so paramount and all-embracing are concerned, it should form but a secondary consideration. There is the greater necessity also for promptitude, as the work must necessarily extend over a considerable period of time, and will be confined to one side of the river at a time: let, therefore, vested interests no longer stand in the way of public necessities, nor men further delay to seek after the dearest blessing of life—Health; but secure, as far as in them lies, the means to attain it, and so avoid the reproach of hypocrisy in beseeching God to avert what their own wilful neglect has created. OMNIBUS.

A COATING FOR LEAD.

I have made some experiments for the benefit of your correspondent "Belfast," and beg to submit the following process to his consideration.

Boil together, in one quart of soft water, three ounces of subcarbonate of potass (commercial pearlash), and one-and-a-half ounce of powdered rosin, just moistened with boiled linseed oil, until the latter ingredients are dissolved, or nearly so; then mix the whole with a gallon of a boiling solution of shell-lac and borax (prepared as directed for the lacboreic paint):* allow it to cool, and strain through coarse flannel.

A colour must next be made of a lead-grey tint, without, however, containing any of that metal. As *pure* rain-water is the desired object, it may be thus prepared:—

Dilute some commercial oil of vitriol with two or three times its bulk of water, raise it to the boiling-point, and throw in gradually a quantity of fine porcelain clay (or pipe-clay), keeping the liquid boiling until it becomes quite neutral, *i.e.* free from acidity (this will take several hours); then strain, and add a saturated solution of common washing soda in slight excess: the precipitate of alumina produced should be washed upon a cloth, dried, and four-fifths of it calcined in a crucible for half-an-hour; when cool, to be mixed with the remaining fifth;† finely ground upon a stone slab, with enough ivory-black to form the required colour. This alumina-grey is ready for the menstruum named in the preceding paragraph, which should be added to it, till a creamy consistence is obtained.

The rules before given for lacboracic painting apply equally well to this, which will be found very serviceable where poisonous colours may not be employed. If "Belfast" will give his lead-flats two coats of it, and allow it forty-eight hours to dry, his rain-water will be found free from all impurities, except such as are furnished by the atmosphere. Should he deem the alumina-white process too troublesome, requiring only a small quantity, a mixture of 1½ lb. best modelling clay, and 4 lbs. of broken tobacco-pipes (to be had at any place where they are made), finely ground together, answers nearly as well.

If "Belfast" at any time likes to send half a gallon of his rain-water, addressed to me, "Care of the Royal College of Chemistry, Oxford-street, London," I will analyse it with pleasure.

WENTWORTH L. SCOTT.

MEMORIAL TO LIEUTENANT BELLOT.

A monument to the memory of the late Lieut. Bellot, of the French Navy, who unfortunately perished in the last Arctic expedition, has just been erected on the west wharf of Greenwich Hospital.

It is a very prominent object from the river, and consists of an obelisk of Aberdeen red granite, standing on a plinth and three steps, the obelisk itself highly polished, and the faces of the other work fine-axed. On the plinth is cut the simple inscription, "Bellot," and the total height is about 34 feet. The base of the obelisk itself is 3 feet square. The drawing was furnished by Mr. Hardwick, R.A. The foundations, extending 15 feet from the surface, through loose ground, were put in by Mr. James Suter, of Greenwich, and the monument was supplied and fixed by Mr. McDonald, of Aberdeen.

Iron Theatres.—Mr. Richard Turner, of Dublin, has lately contracted to fit up a wrought-iron roof and all the upper machinery of a large theatre at Buenos Ayres, the cost of which will be upwards of 4,000*l.*

* See p. 466, *ante*.

† This Alumina-white is original, and will be found a useful white for oil or lacboracic painting.

AMERICAN PATENTS.

The following are quoted from a recent number of the *Journal of the Franklin Institute of Pennsylvania*:—For an Improvement in Metallic Blinds for Doors and Windows.—William L. Worthen, City of New York. Claim.—"1. A tubular metallic window blind slat containing in the cavity thereof a non-conductor of heat. 2. Pivots and grooves, or their equivalents, in combination with metallic slats, capable of vibration and of rising and falling, by which a firm, secure shutter is constituted, while the ordinary uses of inside Venetian blinds are still retained. 3. A locking bar in combination with slats, capable of vibration and motion, in a plane vertical, or nearly so. 4. Arranging arms to which are attached vibrating chains, and also vibrating chains in a recess separated from the slats proper. And, lastly, a supporting chain in combination with slats capable of vibration and motion."——For an Improved Window Blind: Frank Chase, South Sutton, New Hampshire. Claim.—"Constructing blinds by nailing or securing oblique or diagonal slats to both sides of a frame, the slats on one side of the frame being opposite to or covering the spaces between the slats on the opposite side."——For an Improvement in Machines for Pulverizing Clay: John O'Neil, Kingston, New York. Claim.—"The combination of the spring blades with the ridged surface of the cylinder against which they act. Also, the combination of the aperture in the depressed part of one or more of the ridges with the spring blades, which eject or force out the stones. Also, the combination of the cutting or pulverizing blades with the ridged surface of the cylinder. Also, the perforated or grated door and slide, for the purpose of regulating the discharge of tempered clay."——For an Improved Machine for Cutting Screws on Bedsteads: Orson Parkhurst and Daniel Bullock, Cohoes, New York. Claim.—"Arranging and operating the rotary cutters at an angle, so that we can traverse them parallel to the rail, and cut under the concave shoulder."

THE METROPOLITAN BUILDING ACT OF 1855.

The Metropolitan Building Act, 18th and 19th Vic. c. 122. *With Notes and Suggestions.* By Edward Ward Lower, Architect, Surveyor to the Office of Metropolitan Buildings. London: Waterlow and Sons, Parliament-street.

The Metropolitan Building Act. With Notes, Index, and Engravings. By David Gibbons, Special Pleader; and R. Hesketh, Architect and District Surveyor. London: John Weale, High Holborn.

Both these editions of the new Act, which is to come into operation on the 1st of January next, contain the unrepealed clauses of the present Buildings Act, and of the Act of Geo. III. c. 78, and the arbitration clauses of the Companies Clauses Consolidation Act. The main difference is, that Mr. Lower gives in his book the building clauses of the Metropolis Local Management Act; while Mr. Weale publishes the whole of that Act separately, in a cheap form, to accompany Mr. Hesketh's edition. The name and position of the editors give complete assurance of correctness. Both editions contain a full series of diagrams, showing the required thickness of walls, and point out the various troublesome qualifications contained in the Act which will have to be considered. There seems to be a little error in Mr. Lower's diagram showing the thickness required for the walls of dwelling-houses up to 40 feet in height. In the wall without limit as to length, the topmost *two* stories are shown to be of 9 inches work: it should be the topmost story only. This, however, is corrected by the table. Mr. Lower adds a diagram, which makes more strikingly apparent than words that the section which regulates the dimensions of footings is a very bungling one.

A hardship appears to threaten the district surveyors of Hornsey and Tottenham, which are not included in the limits of the new Act. Sec. 32 provides that places which were constituted districts by the existing Buildings Act shall continue to be districts. But lawyers seem to doubt if Hornsey or Tottenham will come within the operation of the new Act. The section, 32, to us, nevertheless, seems clear.

A question will arise, amongst others, as to the mode in which buildings carried higher than the footings before the 1st of January next are to

be completed—whether in accordance with the old Act or the new,—the new Act declaring such to be "old" buildings. Mr. Gibbons says on this point:—

"Buildings which have been carried higher than the footings previously to the 1st of January, and are then in progress of construction, should, it would seem, be completed under the old Building Acts, and so far as regards the regulation of such buildings, the provisions of those Acts will continue in force according to the enactment of 13 & 14 Vict. c. 21, s. 4, that whenever any Act repeals any former Act, and substitutes provisions instead of the provisions repealed, the repealed provisions remain in force until the substituted provisions come into operation. The alteration, addition, or other work mentioned in the next section can hardly be construed as referring to the continuation of a building in course of erection; but such section is probably confined to works commenced after this Act commences to operate. Sec. 38, as to notice to the district surveyor, favours this construction. The notice is to be given before the work is commenced. If this be so, the present Act does not operate as to the building under consideration until it is finished, when it will apply to any alteration afterwards made to it, or if it should become dangerous; and consequently the repealed provisions remain in force."

Bearing on this question, Mr. Lower points to the Repeal Clause, sec. 109, which says that proceedings pending before the official referees, or any other tribunal, shall not be affected by the repeal; and also that proceedings may be had after 1st of January, 1856, where any act or omission in respect of which proceedings might have been taken under the 7th and 8th Vict. occurred *previously to that date*. But he thinks this does not seem to meet the case of works executed *after* January 1st, upon an "old building." Should it be held that the completing of an unfinished building constitutes an "alteration, addition, or other work," under sec. 9, some difficulties might occur. There will be time, however, for the discussion of this and other points.

Notices of Books.

Practical Geometry. The Course of Construction of Plane Geometrical Figures, used as a part of the Course of Instruction in the Training School, Marlborough House, &c. By R. BURCHETT. London: Chapman and Hall. 1855.

THE method of teaching masters in training at Marlborough House is that of lecture, with the black-board for illustration; and the principal object of the work before us is to extend this method of oral teaching. For those who cannot attend the Training School, and yet desire to prepare themselves for examination, it will be found particularly useful. It is, moreover, such a course as should be taught in all schools. Mr. Burchett is the head master of the Training and Normal School in connection with the Department of Science and Art, and knows, by experience, what is wanted. He advises students to draw the figures large, say for each line 1 inch long in the plates, to draw one 3 inches long himself, and instead of *copying* the description, to write one of his own, and then compare them. He properly urges, too, that neatness and care are essential to success in drawing geometrical figures.

"It has been the endeavour," says the author, "to make this course of the construction of Plane Geometrical figures full and complete, without being limited or overloaded by the requirements of any specialty, to impart to the students of the schools a knowledge useful in every branch of art, and only so frequently unapplied from being so commonly unknown." As it seems to us, he has succeeded in the endeavour.

VARIORUM.

THE Society of Arts have issued an edition of a well-intentioned little pamphlet, "Good Times; or, the Savings-bank and the Fireside." The author, Mr. C. W. Sikes, of the Huddersfield Banking Company, is an earnest advocate of all those things which are calculated to make better citizens, by giving every one an interest in the state, inducing the habits of saving, of thrift, industry, and temperance. He produced the pamphlet in this spirit, and hoped that employers would largely purchase it to give to their workmen, with which object in view, fifty copies are sold for half-a-guinea. They might usefully do so. One chapter is devoted to building and investment societies.——"Childe Harold" is so largely an architectural and topographical poem, as to afford a good reason why we should mention the new edition of Byron's poetical works now being issued, an edition with all the advantages of good paper and printing. For the use of subscribers to the Art-Union of London who received this year a set of designs from "Childe Harold," Mr. Murray has printed this poem separately, so that it may be bound up with the illustrations,—and a beautiful volume the whole makes. —— The same publisher's new and cheap edition of Hallam's standard historical series, will place these works within reach of a fresh class of readers. "Europe during the Middle Ages" is completed in three vols. and of "The Constitutional History," two volumes are out.—— The illustrations of "The Kirk and the Manse" (Fullarton, London, &c.), lithographed by A. and J. Macpherson, have much improved since our first notice.——"The Royal Gallery of Art" (Colnaghi) is making very satisfactory progress, increasing rather than diminishing in excellence. The last three numbers contain some charming specimens of both painter's and engraver's art: we would especially mention the "Bay of Naples," by Callow (engraved by Wallis); "Amalfi," by G. E. Hering (engraved by E. Goodall); "The Star in the East," by Warren (engraved by R. Brandard); and "The Wolf and the Lamb," by Mulready (engraved by C. W. Sharpe). The first volume is now completed. We are glad to hear that the subscription for the proposed testimonial to the editor of this work, Mr. S. C. Hall, for his manful behaviour as editor of the *Art-Journal*, is going on well, and promises to reach a sum worthy of the object in view. We have reason to know that the number of the subscribers will be more regarded, both by the recipient and those who have set it afoot, than the amount subscribed,—that ten subscribers of ten shillings each will afford more gratification than one subscriber of ten pounds.

Miscellanea.

SALTS IN CEILINGS.—A correspondent asks for information as to how "salt water" can be got out of a ceiling without taking off the plaster,—no easy task, we fear. Our correspondent may be referred to page 334 of our present volume, although the remarks and suggestions there made, as well as in other numbers about the same time, refer to salts, and especially to saltpetre, in walls only. Other methods, besides extraction of the salt, have been suggested,—washing with silicate of lime, if we mistake not, amongst other plans.

CEMETERY AT ISLEWORTH.—An undertaking on the limited liability principle has been set on foot to establish a cemetery, at Park-hill, near Isleworth. The population of the district within eight miles of the spot selected, exceeds 500,000 persons. The lands, extending to about 50 acres, can be obtained, it is said, and fully completed, for a sum under 50,000*l*. The soil is sand and gravel.

LINING OF LEADEN WATER-PIPES.—In reference to what we some years since, and again lately, said as to the desirability of settling the question of lead contamination in water supply, without awaiting the decision and agreement of conflicting chemists as to what peculiar properties in water really do render it most liable to such contamination, we have already recorded several inventions since brought to our notice, whereby leaden pipes are intended to be protected from the action of the water passing through them, as by interior coatings of tin, aluminium, lac-compositions, gutta percha, &c. and it is satisfactory to find that the subject must have been exciting special interest of late years, from the various inventions to which our attention is now being successively drawn. One of these, just brought under our notice, is a patent granted in April, 1853, to Mr. Chatterton, of Birmingham, manager to Messrs. Stock and Son of that town, whereby leaden pipes are lined with gutta percha. The lining, as appears by a specimen sent us, is in this case fixed to the interior of the leaden pipe, and is of considerable thickness.

FALL OF A CHAPEL ARCH.—One of the arches of the Episcopal Chapel in the cemetery at Rochdale fell down during a storm on Thursday before last. The chapel is 66 feet long and 29 feet wide. In the centre there rises a square tower 60 feet high, and from the square of this tower a spire, 30 feet high, was in course of being slated. The tower rests upon two arches, the span of each being 19 feet. On either side of these arches there is an abutment, 7 feet wide. Some time ago one of these abutments gave way a little, and the cemetery committee met Mr. Cheetham, the contractor; Mr. Foulds, the clerk of the works, and Mr. M. Smith, of Manchester, the architect. Mr. Cheetham, it is reported, was of opinion that the abutments were too narrow and weak for so large an arch, while Messrs. Smith and Foulds were of opinion that it would stand. The whole of the square tower, it appears, will have to come down nearly to the base, and the damage is estimated at nearly 300*l*. The contractor says he has worked to his plans.

FALL OF A CHIMNEY.—A new chimney at a mill in course of erection at Belthorn, near Blackburn, fell on Sunday before last, in consequence, it is said, of defective foundation. The chimney was of stone and 33 yards high. It fell upon the engine-house driving in the roof. The damage is estimated at 120*l*. Falls of buildings are very frequent in some parts of the undermined districts of Lancashire.

FALLING IN OF A RAILWAY TUNNEL.—The traffic on the main line of the Great Northern Railway between Peterborough and Grantham was suspended last week from Thursday to Sunday, in consequence of the falling in of a considerable portion of Stoke tunnel, a few miles south of Grantham.

BUILDING ESTIMATES.—(Birmingham County Court.)—In the matter of Whiston *v.* Selman, plaintiff was a builder (conducting his own case), and defendant a mechanician. Deciding to erect three houses, defendant and plaintiff had some conversation respecting them, and with others plaintiff furnished estimates for such building. The work was, however, finally given to another party, and now Mr. Whiston sought to recover from Mr. Selman a sum of *1l.* 5*s* for making such estimates. It was shown that no agreement took place as to any the least remuneration for such a labour, and indeed the trade usages went to show that estimates were not paid for. Finally it was shown that plaintiff did go to see the borough surveyor, Mr. J. P. Smith, at defendant's request, relative to the plans, &c. of these houses, and his Honour holding that no claim as for the preparation of these estimates could be enforced, gave plaintiff a sum of 5*s*. for his trouble as to such visit to the borough surveyor.—*Birmingham Journal.*

THE LIVERPOOL FREE LIBRARY AND MUSEUM.—From the third annual report of this excellent institution, just issued, it appears that the advantages of it are appreciated by those for whose benefit it was established. During the year ending August 31, 1855, 100,507 books have been issued and returned, and, in addition, there have been, on an average, 110 readers a day of periodicals, making an average total of 462 works perused per day. During the last twelve months 88 new books have been added by donation, and 3,285 by purchase; the total number in the library being 18,112. This number is exclusive of 1,200 volumes and 490 parts, duplicates of Parliamentary papers. Upwards of 360 volumes have been transferred to the lending libraries. The report also states that during the last session of Parliament an Act was passed authorizing the council to purchase land between Shaw's-brow and Clayton-street as a site for a new library and museum. With respect to the lending libraries, the committee speak very encouragingly. There are at present 4,090 persons entitled to select from 8,054 volumes, the present weekly circulation being 3,014 volumes. Out of a circulation of 140,000 volumes only one has been lost to the library. The number of readers last year included 3,879 males and 365 females: of these 2,689 were under age, and 102 above fifty years of age. During the year 2,050 catalogues of the books were sold. The number of visitors to the Derby Museum during the year was 111,931.

"LIVRES" AND FRANCS.—In a foot-note to your last number, page 505, you observe that M. de Guilhermy's statement that the Sainte Chapelle cost, in the thirteenth century, 800,000 *livres*, was an error, and that *francs* must be meant. The fact is that these two words are identical in French. The word *franc*, which may either be taken to signify *French* or *Free*, was introduced at the French revolution, to designate a silver coin *approximately* (but the standard before that event varied in the different provinces) the same as the old *livre*, which was adopted as the unit of account. It was, I believe, the old *livre Tournois*. Old-fashioned people continued to call the *franc* the *livre* till very recently. I have often heard it so termed. The *gold* pound of England is always distinguished as "livre sterling."—Y. K.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—The first meeting to be held on the 5th inst. the chair will be taken by Mr. Tite, Vice President, M.P. He will offer some remarks on the present condition and future prospects of architecture in England. The paper to be read is entitled,—"Considerations upon some of the Objects connected with Architecture in the Exposition des Produits de l'Industrie at Paris, 1855," by J. W. Papworth, Fellow.

CAST-IRON LIGHTHOUSE FOR THE WEST INDIES. There is now in the course of erection at the engineering works of Messrs. Grissell, Canal Basin, near the City-road, a cast-iron lighthouse, the ultimate destination of which is the Island of St. Isaac, among the West Indian Islands. This lighthouse is 8 feet diameter at the base, and will rise to the elevation of 150 feet to the top of the lantern. It will diminish upwards from its lower diameter to 5 feet. The entire work is formed of a series of cast-iron plates, of about $1\frac{1}{2}$ inch in thickness upon the lower courses, with radiated joints, diminishing in a thickness of $\frac{1}{2}$ of an inch in the upper courses. The lower portion of the lighthouse, to the height of 20 to 25 feet, will be filled in with solid concrete, and will at this elevation be entered by an external staircase. The interior will have a spiral staircase ascending to the lantern, and will be fitted with store rooms, offices, and apartments necessary for the purpose of the lighthouse.

ANOTHER FORM OF THE CHANNEL TUNNEL PROJECT.—A survey has of late been going on about Dover on the one hand and Calais on the other, with the view of forming a submarine tunnel and railway to unite the British and French lines, the chief feature of which form of the general project is the formation of wells in the Channel, whereby the work can be proceeded with simultaneously in different parts of the tunnel, and the whole be afterwards ventilated. Five years, it is estimated, would thus suffice to complete the work. M. L. Favre, the engineer, has published the details of his project, from which it appears that the tunnel would be so pierced that a bed of earth 25 metres deep would divide it from the sea at the greatest depth. It would be lined with a double arch, the first of granite and impermeable cement, and the second of thin iron plate perforated in different places to reveal any risk of filtration. The excavated matter would be cast into the sea round the wells, and so form little islands around them for their protection. The cost of construction is estimated at 500,000,000 francs for thirty-four kilometres of tunnel, five maritime wells, four kilometres of trenches, and two stations, leaving 23,000,000 francs for unforeseen contingencies. An Anglo-French Company, it is said, is to be "immediately organized upon the most powerful basis to execute the railway."

ART-UNIONS.—There are more than fifty Art-Unions in Germany, says the *Athenæum*, some of which are connected among themselves, so as to form distinct provinces or districts (*Kreise*). There is no Art-Union in Berlin, but every year a large academical Exhibition. In the course of last year, 1,549 pictures, realizing a total amount of 195,404 thalers, have been sold by the combined means of the German Art-Unions, including the sales of the Berlin academical Exhibition.

MUD AT A PREMIUM.—Adverting to the cleansing out of the river Brayford, the *Stamford Mercury* says:—"The men get out 200 tons of rich soil daily, or 1,200 tons weekly, and it is turned into the diggings to fill up the swamp. One person has offered 1s. per ton for 4,000 tons, another the same price for 4,000, and another the same price for 700—all to put on land, as it forms very superior manure. A farmer who put 2,000 tons on some land some years since states that the land has not yet forgotten it. This is the same person who now wants 4,000 tons. The cost of getting the stuff out is 25*l.* weekly, and 1,200 tons at 1s. per ton would realise 60*l.*—a profit of 35*l.* weekly. After this demonstration it is to be hoped that Brayford and the rivers will be kept constantly cleansed of mud.

NOTE FOR LONDON TOPOGRAPHERS.—A writer in *Notes and Queries* says Cole has preserved the following epigram on the removal of the London sign-posts:—"On the back of a scrap of paper which I found in the register-book of my parish of Burnham, in Buckinghamshire, written in my brother Apthorp's hand, and probably composed by him, as I know he had a turn for epigrammatic writing, is the following punning epigram on new paving London streets with Scotch marble or rock stone, at which time all the sign-posts, and other posts to divide the coach way from the common walking way, were removed:—

"'*Epigram on the New Pavement in London*, 1764.

"'The Scottish new pavement deserves well our praise;
To the Scots we're obliged, too, for mending our ways:
But this we can never forgive, for they say,
As that they have taken our *posts* all away.'"

MEASURE OF COMBE DOWN STONE.—Can any of your numerous readers tell me if the law which inflicts a penalty on rogues in grain, for dealing out short weight and measure, can reach rogues in stone also? Having for a length of time been working up a considerable quantity of Combe Down Stone, I have, after carefully measuring, found almost every block short of the cubical quantity in the quarry mark, and charged for in the merchant's invoices; so much so, that in blocks containing from 15 to 40 feet, I have found from 4 to even 9 feet short. The quarry masters, when remonstrated with, tell me they can make no allowance for whatever may be deficient, as "it is the custom of the Down to measure close." Close measure I would not complain of, but of dishonest measure I do, and if such is the custom, for the credit of the Down's people, and the satisfaction of their customers, the sooner it is abolished the better. They may call it close measuring—I call it by its proper name, a fraud, and I think it very proper that those who have not already been taken in and done for, by their close measuring, should be put on their guard. If you think this exposure worthy a space in your columns, you will by inserting it oblige one who only wishes money's worth for his money—a foot of stone for a foot, no more nor no less.—A VICTIM.

CESSPOOLS IN THE CITY.—At the time the cholera was raging in the metropolis, the police made a visit to every house in the City, to ascertain and report if any cesspools were existing, in order that the occupier might have notice to remove them, or be proceeded against according to the statute; and in consequence there is a general opinion that the City of London is entirely free from such nuisances. Judge then my surprise, on looking over the premises now being pulled down at the corner of Mark-lane, to find a large cesspool overflowing, and the soil draining through an old wall into the basement, where several men worked at a forge daily. Who is to blame for allowing such an abomination to exist in a crowded neighbourhood?—"ANTI-CHOLERA."

GAS SMOKE CONDENSER.—An invention has been patented by Mr. Simons, of Birmingham, consisting of a gas-shade, to supersede the old bell glasses, and intended to condense the smoke and absorb noxious vapours. The invention is said to be simple, and cheap. It is manufactured in glass, porcelain, and metal.

THAMES TUNNEL.—During the week ending 27th October, 17,783 passengers passed through the tunnel, and paid in tolls 74*l.* 1s. 11d.

GREENWICH CEMETERY.—Tenders have been received for the east and west boundary walls and iron railing for the Greenwich cemetery at Kidbrook, ranging from (Norris) 895*l.* to (Rolfe) 702*l.*

TENDERS

For a dwelling-house at Blackheath, for Mr. C. Redout. Quantities not supplied. Mr. F. F. Thorne, architect:—

Pearson (Kensington)	£1,799	0	0
Wellmott (Blackheath)	1,778	0	0
Penny (Lewisham)	1,758	0	0
Searle (Deptford)	1,588	0	0

For erection of villa at Sutton, for Mr. A. Looke. Mr. Woodthorpe, architect. Quantities supplied by Messrs. Fox and Enoch:—

Lawrence and Sons	£1,666	0	0
Ashby and Sons	1,626	0	0
Brown and Co.	1,537	0	0
Haynes and Eyre (accepted)	1,515	0	0

For painting, re-decorating, and sundry other alterations to the Hall of Commerce, to be fitted up for the use of the Bank of London. Mr. Woodthorpe, architect. Quantities supplied by Mr. Fox:—

Ashby and Son	£1,360	0	0
Lawrence	1,342	0	0
Brass	1,247	0	0
Haynes and Eyre	1,139	0	0
Browne	1,005	0	0

Messrs. Piper sent in their tender too late.

For two semi-detached villas at Newport, Monmouthshire. Mr. R. G. Thomas, architect. Quantities supplied:—

Davies and Knapp	£1,378	0	0
Caroline Street	1,268	0	0
George Jones	1,249	0	0
Henry P. Bolt	1,230	0	0
G. Jayne	1,230	0	0
A. Robbins	1,220	0	0
Thomas Jones	1,189	0	0
Thomas Richards (accepted)	1,168	0	0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

Will be published November 22,
THE BRITISH ALMANAC for 1856.
Sewed in wrapper, price 1s.

THE COMPANION to the ALMANAC.
Sewed in wrapper, price 2s. 6d.

THE BRITISH ALMANAC and the COMPANION together, in cloth boards, lettered, price 4s.
London: KNIGHT and CO. 90, Fleet-street.

Price 2s. 6d. with Maps and Diagrams, 174 pages.
CHOLERA.—Report of the Local Committee on the Great Outbreak in St. James's, Westminster.
"A most valuable contribution to statistical medicine—a model for other reports on a similar subject."—*Medical Times*, October 27.
J. CHURCHILL, New Burlington-street.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DEED, and WRITING BOXES, with their sizes, fittings, and prices, will be sent by post on receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's-churchyard, London.

Just published, price 2s.
THE METROPOLITAN BUILDING ACT; with Notes and Cases, explanatory of its Law and Practice; List of District Surveyors; the Unrepealed Sections of the 8 Vict. c. 84; Index, &c.
By FREDERICK W. LAXTON, F.S.A. Barrister-at-Law.
London: BUTTERWORTHS, 7, Fleet-street.

Will be published November 1st, Part IV. containing Four large Plates, in a neat Wrapper, with Advertisements, price 2s. 6d. Also Division I. comprising the First Four Parts, or Sixteen Plates, price 10s.
EXAMPLES of BUILDING CONSTRUCTION, being a series of Working Drawings, to a large scale, of the Details of Public and Private Edifices.
By HENRY LAXTON.
Of the "Civil Engineer and Architect's Journal," author of "Laxton's Builders' Price Book," &c
No. 19, Arundel-street, Strand; and of all Booksellers.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. XI. for November, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and
K. SPENCER, 314, High Holborn.

Third Edition.
THE BUILDER'S FRIEND,
Price One Shilling.
Office of "The Builder," and of all Booksellers.

Neatly bound, price 4s.
A HANDBOOK of ARCHITECTURE for the UNLEARNED: in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.
By GEORGE GODWIN, F.R.S. &c.
With Illustrations.

By the same Author, price 1s.
LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.
Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

KELLY'S PRACTICAL BUILDERS' PRICE BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work, with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Wood cuts. Royal 8vo. price 8s. neatly bound.
London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD: being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 30s.; containing upwards of 130 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. Brooks, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 36s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. Brooks, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 32s. boards.

6. THE HOUSE DECORATOR and PAINTERS' GUIDE containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture By H. W. and A. Arrowsmith, House Decorators to her Majesty. Ten Parts, at 3s; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. Higgins, Esq. Accompanied by actual Specimens of Hand-brush Graining and Marbling Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 1000 Wood Engravings. By JOHN HEBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1836, of the Author's work. The Inventions and Discoveries recently made have engaged the peculiar attention of the Editor; for, as the value of such was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing the existing state of Engineering and Mechanism, and meeting the wants of Practical Men." In two large 8vo. volumes, cloth, lettered, price 30s.

MACAULAY'S RAILWAY MAP.—The first and third editions of this map are nearly been published, and has been revised by the Chief Engineer, may be considered an authentic guide for Members of Parliament, Parliamentary Agents, and Railway officials. Price in sheets, 15s; or with Counties coloured, 22s.

Also,

MACAULAY'S LIST of STATIONS on the Railways of Great Britain and Ireland, alphabetically arranged, with Distances. Price 6d. each.

SMITH and EDES, Tooks-yard; GROOMBRIDGE and SONS, Paternoster-row.

ARCHITECTURAL PUBLICATION SOCIETY.—PART II. (price 5s.) of Illustrations to the DICTIONARY of ARCHITECTURE, will be ready at the end of the month. Those Members who wish to have two copies of the Works for 1854 and 1855,

WYATT PAPWORTH, Hon. Sec.

34, Great Marlborough-street, October 23.

TO BUILDERS, FOUNDERS AND OTHERS.

AGENTS are wanted by the undersigned, to introduce DUPPER'S PATENT HYDROMETIC and ECONOMIC OVEN, for all towns, and the whole of England, Ireland, Scotland, and the Channel Islands. This Bread Baking Oven, which has been recently patented, is an invention of great importance to the trade, as well as to the country at large, inasmuch as it possesses vast advantages over the present system there being not only 50 per cent. saving in the consumption of fuel, but is much more expeditious. From the construction all smoke or air is withdrawn, and consequently the bread is much purer. The cost of building is not much above that of the present. The model may be seen in the Inventors' Court of the Crystal Palace, Sydenham; and the first and only oven built from which the experiments have been made at Mr. MATTHEWS'S Baker, Guildhall house, Plymouth.—Apply to JOHN DUPRE, 6, Bedford-street, Plymouth.

TO ARCHITECTURAL DRAUGHTSMEN.

AN Architect is in want of a first-rate clear and rapid DRAUGHTSMAN, who must be thoroughly skilled in perspective, and well acquainted with the details of Gothic Architecture.—Apply by letter, stating age, qualifications, terms, and previous engagements, to M. I. B. A. Office of "The Builder."

TO ENGINEERS.

AN excellent opportunity now offers to an experienced and practical Engineer, possessed of some capital, to purchase a Well-Established Business in the Country. One acquainted with the Foundry Business would be preferred.—Apply by letter only, to L. S. care of Leggett, Hayward, and Lear, 79, Cornhill.

TO LAND SURVEYORS.

THE DIRECTORS of the LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY being about to appoint a SURVEYOR, Gentlemen desirous of being enfranchised are requested to forward, on or before the 20th of NOVEMBER next, their proofs, testimonials, as to ability, character, &c. under cover to the Secretary, at the Offices of the Society, 201, High-street, Borough, addressed "Applicants for Surveyor"—Parties unless actually in the employ of the Directors of the Secretary are evening, between the hours of Four and Eight o'clock.—Oct. 26, 1855. WM. BANKS, Sec.

TO BUILDERS.

WANTED, an active MAN of BUSINESS, to join the present proprietor, who has carried on a large and profitable business for upwards of twenty years and has at this time nearly 200 men in his employ. The present proprietor, from age, feels he is not competent for what he could do, and therefore requires from a party one-third or one-fourth part of the stock, for 3000. None but principals or their solicitors will be treated with.—Apply in the first instance by letter, prepaid, addressed A. B. care of Mr. Chamberlain, Solicitor, 36, University-street, Tottenham court-road.

TO PLUMBERS, BUILDERS, AND OTHERS.

WANTED, by a THREE-BRANCH HAND, CONSTANT EMPLOYMENT. Direct to T. S. No 1, Log court, Oxford-street.

WANTED, in an Iron Establishment partly manufacturing and partly mercantile, a thoroughly competent MANAGER, to take the principal charge of the business of the principals. He must be clear and systematic in conducting the office business and the works. None need apply who have not had good experience in a similar situation, and if connected with the iron trade will be preferred. Salary, 150 to 200 per annum. All applications to give full particulars and references,—Address, R. H. D. Office of "The Builder."

TO SMITHS.

WANTED, a WORKING FOREMAN, in the house line principally. He must be a thorough good mechanic in the various branches of the smith's business. Initial.—Address, W. A. Office of "The Builder."

WANTED, in a Builder's Office, a respectable YOUTH, who writes a good hand, and is capable of measuring and booking materials. He would be required to take charge of the store, and serve out the timber and other materials.—Address, stating references and salary required, to C. S. Mr Fletcher's, Saltoner, No. 4, Union row, High-street, Camberwell.

TO ARCHITECTS' PUPILS.

WANTED, in an Architect's Office, a Gentleman who has served part of his articles in the country, and is desirous of learning London practice. A salary according to proficiency will be given.—Address, J. S. S. 19, Camden road, St. George's East, London. An Assistant wanted.

TO ARCHITECTS, ENGINEERS, AND OTHERS.

WANTED, an ENGAGEMENT with an Architect or others as DRAUGHTSMAN and GENERAL ASSISTANT. The Advertiser is a first-rate draughtsman and colourist, and familiar with office practice, as well as quantities. B. J. 38, Smith-street, Kings-road, Chelsea.

TO ARCHITECTS AND SURVEYORS.

WANTED, by a Young Man, who has just completed his articles, a SITUATION in either of the above offices.—Address, Y. Z. housekeeper, 31, Buckingham-chambers, Buckingham-street, Adelphi.

TO BUILDERS.

WANTED, by a Young Man, a RE-ENGAGEMENT in a Builder's Office. Is accustomed to accounts, measuring artificers' work, and the general duties of the office. Unexceptionable references can be given.—Address, E. W. C. Post-office, Little Sussex-place, Hyde park-gardens.

Lime of the finest and purest quality, and on the cheapest terms, for agricultural purposes, for building boundary walls, stables, cottages, &c. by using which one third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the finest quality, pure blue, both white and flake prices. Specimens can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Grays, Essex.—Orders, by letter, to Messrs. MEESON and CO. Grays, Essex, executed with despatch.

BRICKS.—To Builders and Contractors.—Capital Hard burnt STOCKS, of good colour, GRISSELS, and PLACE, at very reduced prices. Cash.—J. F. SMITH, Further Field, Acton Bottom, near Shepherd's Bush.

BRICKS.—To ARCHITECTS, BUILDERS, and OTHERS. WHITE and RED FACING BRICKS and HARD CLINKERS, for paving stables, &c. Tiles pipes of every description, and every article in the trade may be had of superior quality and on the cheapest terms, of W. and W. WRIGHT'S Brick and Tile Works, Springfield, Essex.

W. W. in returning his grateful acknowledgements for the liberal support he received during the last twelve months, embraces this opportunity of informing his friends and the public that he has removed to Springfield, Essex, and can supply them as above at my siding, station on the Eastern Counties Railway, or alongside in the Thames, at as per cent under the usual prices.

DUTCH CLINKERS, 32s. per thousand, by the best Makers.

WELSH, STOURBRIDGE, AND NEWCASTLE FIRE-BRICKS, LUMPS, AND TILES, at much less than cost prices. The Premises to be DISPOSED OF, with the valuable satisfaction, and a portion of the PREMISES to carry on the same, TO BE LET, at almost a nominal rent.—For particulars inquire on the premises, Honduras Wharf, Bankside, Southwark, London.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No 31 Wharf, Harrowroad, to 3, North Wharf-road, Paddington, have now on sale good Gravel and Screened Gravel. For terms, &c. apply at the Wharf.

Contractors supplied to any extent.

POTTERS' CLAY FOR SALE.—An ESTATE, of nearly 400 acres, with residence, suitable for a gentleman, and containing an inexhaustible deposit of Potters' Clay; situate 4 miles from a port and 3 miles from a railway station. For particulars, &c. apply, post-paid, to T. RAWLINS, Esq Solicitor, Wimborne.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

This Paint possesses in an eminent degree the following advantages over all other known Pigments:—
INDESTRUCTIBILITY BY HEAT—PRESERVATION OF IRON FROM OXIDATION, WOOD FROM DECAY, AND MASONRY AND BRICKWORK FROM DAMPNESS—PERMANENCY OF COLOUR AND FREEDOM FROM DELETERIOUS PROPERTIES—SUPERIORITY OF BODY.

The Protoxide Paint, as at present produced, is of one shade of colour, viz.—a pale drab, but it may be tinted with any other colour to suit the taste and purpose for which it may be required. Not affected by sulphuretted or carburetted hydrogen gas, bilge water, or indeed foul air of any kind, and is therefore well adapted for the interior of Ships, Warehouses, Offices, Stabling, &c.; and its total freedom from deleterious properties, it will be found of great value for painting the interior of Hospitals, Asylums, Unions, Gaols, and other Buildings which may require to be painted during occupation.—Sole authorized Agents for England:—

MESSRS. C. GRABHAM AND CO. 4, BARGE-YARD, BUCKLERSBURY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 84, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK—LONDON PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminently hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PARIS, and STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855. CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting cement, that requires no coarsing. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME, in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.

BRICK, LIME, and CEMENT MERCHANTS.

SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewer Pipes, Fire Go te Vitrified Blue Bricks, White Bradley Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used in most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boat-loads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, East-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement as manufactured at these works with especial reference to its destination, whether for stemming, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly exceeds them in its constituents properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the last meeting of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 2, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied or shipment, on advantageous terms.

NOTICE.—M. H. BLANCHARD, 7½, Blackfriars road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c. will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7	0	0
Fine	3	0	0
Coarse	2	10	0

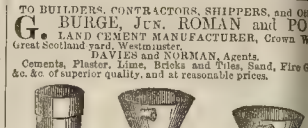
Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

11, George yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality manufactured on the above works. Also SCOTCH and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BJORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, they are enabled to be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Messrs. THOMAS WEEKES, Agent at the Works.



Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

WANTED to PURCHASE a PORTABLE STEAM-ENGINE, of from 12 to 15 horse-power, mounted on wheels, with tubular boiler, suitable for driving "Appold's Patent Pumps." Also an "Appold's Pump," of 15-inch diameter. Apply, stating maker's name, &c. to Mr. W. RITSON, Contractor, Neath, South Wales.

PRIZE MEDAL, CLASS 3.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.
The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO BUILDERS AND HOUSE-PAINTERS.
THE BRIDGEWATER PAINT will be found CHEAPER and SUPERIOR to white lead for oiling out new walls or priming wood-work, &c.
Testimonial.—"This is the most extraordinary paint I ever used. When its merits become known, it cannot fail to be generally used. For priming and second colouring to all new work, it is superior to that now in use, being equal in body to white lead, is superior to that now in use, being equal in body to white lead, and much lighter. It is also cheaper. I am using it to paint canvas linen for gardeners' pits, frames, and greenhouses, and also as a substitute for tarpaulin, being impervious to rain, of singular flexibility, more durable, and not half the weight of the tarpaulin in general use. J. LE CRAS, House painter,
26, Moorgate-street.
Sold by L. FRANK and SON, Oil Merchants, 14, Borough, London-bridge.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily used or of its produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase of weight, it then produces a very inferior instead of a very superior paint, and the economy realised by purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and Co.; when ground and dry, by Messrs. T. R. MORLEY and CO. and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William street, City; FREDERICK BRADY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-hush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.
For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP to TERRA COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large stock of newly-designed Chimney-shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs. Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-relievi, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red coloured Terra-cotta. A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Pratd-street, Paddington.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 52, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

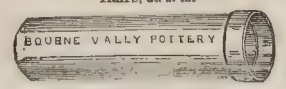
IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.



Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Specimens" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the disadvantage of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 8, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

SUPERIOR STONEWARE GLAZED

PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction, the price being also lower than many in the trade, viz. 25 per cent. discount off the list, for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices. E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered. October 1, 1855.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of Art and in the Art-science on its severeign principles, with the view of qualifying them to impart, to others a careful Art-education, to develope its relation to the requirements of trade and manufactures, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concommercially with writing.

The Instruction comprehends the following subjects: Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applied to Art. Also, Classes for instruction in the technical processes of Chintz and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last Classes for female students only.

Hours of Study.—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 2l. per session, or part of the session. For Evening Classes only, 1l. per session.

The Class for Practical Geometry and Perspective, or that for Modelling and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the Museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session.—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

ARCHITECTURAL EXHIBITION.—Suffolk-street Galleries, Pall-Mall East. All works for Exhibition must be sent on the 3rd or 4th of DECEMBER,—except works from the French Schools, which, to save trouble, may be delivered direct, notice being given first of all. The Committee are endeavouring to get a jury appointed, who shall recognise by a diploma or certificate, merits in the articles exhibited in the department for materials and manufactures connected with Architecture, and for which two rooms will be set apart as before. They hope also to arrange for the delivery of lectures during the continuance of the Exhibition, but are not yet able to announce full particulars, although several gentlemen have signified their willingness to assist. All information will be given immediately on application to the Honorary Secretaries.

JAMES FERGUSSON, F.R.A.S., 9, Langham-place, } Honorary Secretaries.
5, Crown-court, Old Broad street, }

ARCHITECTS' BENEVOLENT SOCIETY.

LOWESTOFT IMPROVEMENT ACT, 1854.—Notice is hereby given, that the Lowestoft Improvement Commissioners intend to meet on THURSDAY, the 6th day of DECEMBER, 1855, at the Office of the Commissioners in Lowestoft, at ELEVEN o'clock in the FORENOON, to elect a SURVEYOR and INSPECTOR of NUISANCES for the Town of Lowestoft, and Parishes of Lowestoft and Kirkley, otherwise Kirkley, comprised within the limits of the Act. He must be competent to prepare plans, drawings, estimates, and specifications for all works connected with the sewerage, paving, making, and repairing of the streets, and the public roads and highways within the limits, as well as surface cleansing, and to superintend the execution thereof, test materials, and see to the fulfilment of the conditions of contracts for executing any such works, and to do and perform all the duties imposed upon him as Surveyor and Inspector of Nuisances by the said Improvement Act, and the Towns' Improvement Clauses Act, 1847, and other Acts incorporated therewith. The salary will be 50l. payable quarterly, and the person elected will be required to give three months' notice on resignation. The party will not be restricted from private practice.—Applications, with testimonials, to be sent in on or before SATURDAY, the 1st day of DECEMBER next, addressed, under cover, to the undersigned Clerk of the said Commissioners, High-street, Lowestoft. By order, EDMUND NORTON, Clerk.

Lowestoft, 5th November, 1855.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-Mall, London, on or before THURSDAY, the 29th day of NOVEMBER, 1855, from persons desirous of CONTRACTING for the following WORKS at Sandown Castle, near Deal, viz.—

1st CONTRACT.—REBUILDING a portion of the MASONRY WALL on the sea face of Sandown Castle

and CONTRACT.—ERECTING THREE GROYNES on the beach in front of Sandown Castle

Plans and specifications of the works to be executed, may be seen by competent persons, none others need apply, and forms of Tender obtained at the Royal Engineer Office, Walmer, between the hours of TEN and FOUR o'clock, from the 7th of NOVEMBER, to the 14th of NOVEMBER, Sundays excepted

The parties whose Tenders may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 500l. for the due performance of each of the Contracts.

Separate Tenders for the above works to be addressed to the Director-General of Contracts, Pall-Mall, London, and endorsed "Tender for Ordnance Works at Sandown Castle."

N.B. The War Department reserve to themselves the right of rejecting the whole or any of the Tenders

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek street, Soho square, on TUESDAY, the 13th day of NOVEMBER, instant, at ONE o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING certain intended BRICK and PIPE SEWERS, 1,100 feet in length, or thereabouts, with other works in connection therewith, in Whitehall and Whitehall-place, in the county of Middlesex, and the maintenance of such works in complete repair for 12 calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the principal Office of the said Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 12th NOVEMBER inst. The said Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the said works. No Tender will be received after the hour above mentioned.

E. H. WOOLKYCH, Secretary.

No. 1, Greek-street, Soho-square.

Dated this 3rd day of November, 1855.

TO MASONS AND PAVIORS.

THE BOARD for REPAIR of the HIGHWAYS for the PARISH of WEST HAM, ESSEX, are ready to receive TENDERS for about 16,770 feet superficial of 3 inch YORK PAVING, to be laid down in various parts of the parish, from the eastern end of Bow-bridge to certain places in Stratford, West Ham, and Plaistow, as are detailed in the specification to be seen at the residence of Mr. JAMES LOUDON, the Assistant Surveyor of West Ham. Also, 2,500 feet run of ABERDEEN GRANITE CURB; 2 yards of GRANITE CROSSINGS, 45 inches wide, 9 inches in depth, and upon an average 6 inches in length; 1,260 feet of the present pavement to be taken up, part of it re-laid and part to be stacked, and 221 yards of the present pitchings to be taken up and relaid. Such York paving, granite curb, and pitchings to be supplied forthwith, the same laid down, and other works completed by the 31st of DECEMBER next, unless prevented by frost or other inevitable accident, or unless otherwise ordered by the Assistant Surveyor. Persons willing to supply all or any of such York paving, granite curb, and pitchings, and to perform such works, may see the Specification and obtain all other particulars of Mr. JAMES LOUDON'S. The Tenders are to be delivered in to the meeting of the Board, in the Vestry-room of West Ham Church, on TUESDAY, the 20th day of NOVEMBER next, at SEVEN o'clock in the evening precisely, and the Board do not bind themselves to accept the lowest or any of the Tenders unless satisfactory in all particulars.

GEORGE DACRE, Clerk to the Board.

Stratford, Essex, 6th November 1855.

TO NURSERYMEN AND OTHERS.

HALSTEAD CEMETERY.—The BURIAL BOARD for the parish of Halstead, in the county of Essex, hereby give Notice, that they are prepared to receive TENDERS for SHRUBS, &c. for planting their Cemetery. Forms of specification and plan of the intended Cemetery, and all information, may be obtained either at my Office, or at the Office of WILLIAM DAVIDSON, Esq. 36, Great Russell-street, Bedford-square, London, on and after the 12th of NOVEMBER. All Tenders must be sent in to Mr. DAVIDSON on or before SATURDAY, the 24th of NOVEMBER next. The Board reserve to themselves the right to accept or reject, in the whole or in part, any Tenders submitted to them.

G. P. ARDEN, Clerk to the Board.

Halstead, Nov. 8 1855

GREAT GRIMSBY WATERWORKS and DRAINAGE.—The Local Board of Health of Great Grimsby desire to receive TENDERS for the CONSTRUCTION of WORKS for supplying the town with water and for drainage of the town. The work required to be done consists of supplying and laying upwards of [illegible] cast-iron pipes, making and fixing a pair of engines and boilers, and wrought-iron tank; building tank tower, engine-house, boiler-house, and various other work, according to the drawings and specifications, which may be seen at the Office of the Surveyor to the Local Board of Health, from the 9th day of NOVEMBER next, to the 16th day of NOVEMBER next, inclusive. Tenders are to be sent in, addressed to the Clerk to the Local Board of Health, Town-clerk's Office, Great Grimsby, on or before the 24th day of NOVEMBER next. The Board do not bind themselves to accept the lowest or any Tender.—By order,

GEO. BABB, Clerk to the Local Board of Health.

Great Grimsby, October 31, 1855.

TO BUILDERS.

TENDERS REQUIRED for FINISHING TWO PAIR of VILLAS, and four others at Peckham. The plans and specifications may be inspected on and after MONDAY, the 12th, between the hours of NINE and TWO o'clock, at the Architect's Office. The Tenders to be forwarded, sealed, to the Architect, on or before the 21st day of NOVEMBER. The lowest or any Tender will not necessarily be accepted.

JAMES SHEPPARD COLE, Architect,

15, Commercial road, St. George's East.

CHESTERFIELD WATERWORKS.—CONTRACTS for CAST-IRON PIPES, VALVES, HYDRANTS, and other CASTINGS.—The Directors of the Chesterfield Waterworks Company will meet at their Office, in Chesterfield, on WEDNESDAY, the 21st of NOVEMBER instant, at TWO o'clock, in the afternoon, to receive TENDERS and PROPOSALS for the SUPPLY of CAST-IRON MAINS and SERVICE-PIPES; as also for a number of STOP-COCKS, HYDRANTS, AIR-VALVES, GRATES for BRIDGES, and other CASTINGS.—Plans and specifications may be seen, and further information may be had, from and after MONDAY, the 12th instant, on application at the Chesterfield Waterworks Office, Old Brampton.

By order,

SHIPPON and HALLOWELL,

Joint Clerks to the said Company.

Chesterfield, November 1, 1855.

[For remainder of Contracts see next page.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"18, Hyde-park Gate, Kensington, February 24, 1854

"My dear Sir—The Air Warmer continues to work very satisfactorily in bed, with regard to the main body of the house, and during the late warm days even in the painting-room. Mrs Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"Mr. J. Jobson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield.

"Stanhope Lodge, St John's wood, London, January 27th, 1855

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England, and this has increased with increasing years and decreasing strength; I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the halls and passages of my house; but I have never succeeded till now in producing an equal temperature over every part, and have not thus a temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and have the climate of May within doors in the months of December and January. The servants learnt its proper management in a few days with great facility, and its economy in fuel is a remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall lose no opportunity of hearing a trial of its adoption to all who desire to protect themselves against the changes of temperature in their dwellings. I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Rosse-place, Sheffield."

M. E. HADFIELD, Esq Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855

"My dear Sir,—We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the House has been pleasant and equable, and the atmosphere perfectly free from the disagreeable oppressive sensation usually met with in Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective. I am, my dear Sir, yours faithfully,

"Mr. J. Jobson Smith, Rosse-place." "M. E. HADFIELD.

WILLIAM RUTSON, Esq.

"Newby Wiske, Thirsk, 15th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the dreadful cold we dent to an unoccupied and unfurnished house, with all the doors open into the adjacent rooms, it is keeping up a very genial influence over the temperature, even during the severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 16s. 8d. per ton, the rate at which it has been dried for the last two or three months is 1s. per hour.

"I am, Sirs, yours truly, "WILLIAM RUTSON.

"Messrs. Stuart and Smith

"P.S. Mr Rutson, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3s. 6d. for coke—say about 5d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop-road, February 27th, 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the comfort has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase, and passages being cold, and a reserve of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have had the general run of the house without the fear of a relapse. To many it valids the invention will prove invaluable, giving them the freedom of their habitation instead of confining them prisoners to one apartment.—Believe me, my dear Sir, very truly yours,

"Mr Jobson Smith." "EDWARD MARTIN.

E. F. SANDERSON, Esq.

"Sheffield, 27th March, 1855.

"Gentlemen,—The Gill Air Warmer you put up for me last year at Endcliffe, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country; but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling-houses most equably comfortable in point of temperature.—I am, yours very truly,

"Messrs. Stuart and Smith, Rosse-place." "E. F. ANDERSON.

CONTRACTS.

TOWN of TUNBRIDGE WELLS.—NOTICE. The Commissioners acting under the Tunbridge Wells Improvement Act, 1848, are desirous of receiving TENDERS for a contract to LIGHT the TOWN with GAS, for the term of three years, from the 25th of JUNE, 1856, when an existing contract will determine. Further information may be obtained on application to the Clerk. Sealed Tenders to be addressed "To the Paving Committee Tender for Gas Contract," under cover, to Mr JOHN ELLIOTT, Clerk to the Commissioners, to be delivered at the Clerk's Office, at the Town hall, Tunbridge Wells, on or before FRIDAY, the 30th NOVEMBER instant.

NOTICE to BUILDERS and CONTRACTORS.—The Secretary of State for the War Department being about to enter into a special contract for ERECTING ADDITIONS to the CELLS at the Royal Artillery Barracks, Woolwich, such persons as may wish to TENDER for the same, may inspect the plans and specification of the work, and obtain forms of Tender, by applying to the Clerk of Works, at the Royal Engineer Office, Royal Artillery Barracks, Woolwich, on or before the 21st NOVEMBER, 1855. Tenders are to be delivered in the printed form, to be delivered, pre-paid, at the War Department, Pall mall, London, on the 22nd NOVEMBER, 1855, addressed to the secretary, and marked "Tender for Work at Woolwich Barracks."

Woolwich, 6th Nov 1855.

GREENWOOD'S PATENT INDIA-RUBBER STOPS render Doors, Windows, Show-cases, Closets, &c. perfectly air-tight, keep out Dust and Draught. Reduced price, 4d. per foot. Spring Slides for the bottom of Doors, 4s. each.

J. GREENWOOD,
10, Arthur-street West, London-bridge.

Sheet Floor Brads, 14s per cwt.
Hoop Floor Brads, 13s 6d per cwt.
Sash Weights, 7s. 6d. per cwt.; 9-inch Air Bricks, 3s. 6d. per doz.; 6-inch Sink Traps, 3s. per doz.; strong Coal Plates, with hooks 2½s. per doz. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Bucklersbury, London.

IRON FOUNDRY,
HARROW-STREET, LANT-STREET, SOUTHWARK,
W. R. BARTLETT, manufacturer of Girders, Columns, Pantiles, Screws and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Pans, Area Gratings, Sash Weights, Fly and other Wheels, Rosses, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby the Smoke.

The present is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to all descriptions of Furnace, such as Marine Boilers, Coppers, Ovens, Bakers' ovens, Potteries, Chemical Works, &c. Its effects is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

The furnaces, of various construction, to which it has been successfully applied, may be seen in operation, at the Cement Works of Messrs. FRANCIS BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY,
Nine Elms, London.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO 55, High Holborn.

TO BUILDERS, CARPENTERS UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE.—

No.	4	5	6
	4s.	5s. 6d.	7s. 6d. per gross.

At JOHN YOUNG'S, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester square, running out of Baker-street, Portman-square. Every other article equally reasonable.

HART AND SON,
PROPRIETORS AND MANUFACTURERS OF
PITT'S PATENT SELF-ADJUSTING SPINDLED DOOR FURNITURE.

COAL-PLATES, AIR-BRICKS, &c.
53, 54, 55, & 57, WYCH-STREET, STRAND.

JOHN HENDERSON PORTER,
ENGINEER AND CONTRACTOR,
IRON BUILDING AND ROOFING WORKS,
GAS-STREET, BIRMINGHAM.

LONDON OFFICE—1, RICHES-COURT, LIME-STREET.

PATENT GALVANIZING and CORRUGATING IRONWORKS Improved Process.
WORKS—GLASS-HOUSE YARD, opposite the Entrance to the London Docks
GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.
A Discount allowed to the Trade.

SKAIFE'S GALVANIZING WORKS,
Commercial-road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated.—Roofs fixed complete.
J. Skaife is also Agent for Morew ood and Rogers's Patent Galvanized Tinned Iron, Patent Zinc, and Tiles.
An Allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station. A large variety of build ings always on view, churches, chapels, schools, boxes, lodges, manors, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC.
GREAT REDUCTION IN PRICE.
PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about 18 oz. per foot super.			
12	"	20	"
13	"	23	"
14	"	30	"

Full particulars and the reduced price sent by post on application to
A. MOREWOOD and CO. DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

TO BUILDERS, &c.—FOR SALE, cheap, a 30 feet 4 inch GALVANIZED IRON PUMP, by Richards (has been used a week only)—Apply to A. R. SMITH, Carpenter, next the Organ Factory, West Brompton, by letter, inclose 1s. a stamp for reply.

PATENT CORRUGATED IRON.
JOHN WALKER,
MANUFACTURER OF ROOFS, BUILDINGS, &c. &c.
Works Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge.

PATENT GALVANIZED IRON.
JOHN WALKER,
GALVANIZED IRON MERCHANT, &c. The trade supplied
Corrugating by steam power capable of doing 5 tons per day, at the lowest remunerative prices, for bulk.

IRON-FOUNDER, &c.
JOHN WALKER,
IRON-FOUNDER AND ENGINEER.
Orders to any extent can be executed at his Works, Mill-wall, Poplar. Apply at the Works.

BUILDER AND CONTRACTOR.
JOHN WALKER,
Having his own Saw-mills, is enabled to CONTRACT BUILDERS' WORK,
At low prices, consistent with good work.
Apply at his Offices, Arthur-street West, London bridge.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Fenchurch-street, City.

A. MOREWOOD and CO. (late Morewood and Rogers),
Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham.
PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets,
PLAIN or CORRUGATED, and Curved, of all Gauges.
Manufactured articles always kept in stock, such as pails, scoops, bowls, riddles, skips, &c of all sizes.
Also the Patent Galvanized Tinned Iron Tiles, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c.
Estimates given for Roofs, and every description of Galvanized Building, at the
OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

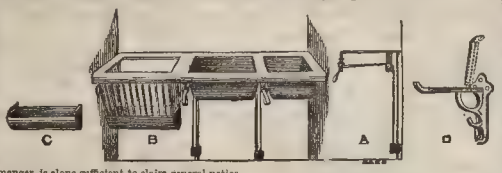
Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

HE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.



NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

ave made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

A represents the Patent itter-guide and Collar-rein, ball of which is taken to the th of the manger-works with ection and case up or down e guide-bar, and is noiseless its operation, as also a sure eventative against the most tive Horse being cast in the all.

B. The Patent Portable Seed- x can be instantly detached om the rack without disturb- g the hay. The saving of the id in a clean and useful state, ller for agricultural purposes,

mining with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an ject, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, rable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers. Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Pre- ving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-Iron ork for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental, Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

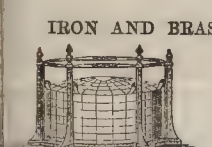
COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, ses, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on plication to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron bridge.

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (class 4?0), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Entrance-halls, Libraries, and Ware-rooms.—CUTLER and SONS, Sole Licensees and Manufacturers, 16, Great Queen-street, Long-acre, London.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

HEATING BY HOT WATER.

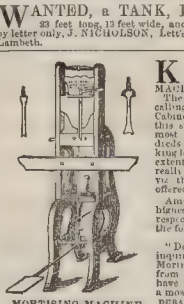
JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 2d. This achievement in heating by hot water is unprecedented.

NO CHIMNEY WANTED for RICKETS'S PATENT CALORIFERE GAS STOVES in CHURCHES, HALLS, or SHOPS;

And for Counters, stories, or any close apartments, which can be attached to carry away the burnt air.

RICKETS'S CHEAP GAS STOVE, Price, £1. 15s.

Made of Sheet Iron, suitable for Heating small Countinghouses, Bodrooms, Cellars, &c. &c.



MANUFACTORY,

AGAR-STREET, STRAND, LONDON.

Liberal Discount to Builders.

BUILDINGS HEATED by HOT WATER. G. B. COOPER, IRONWORKS, 121, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

WANTED, a TANK, IRON or WOOD, 23 feet long, 13 feet wide, and about 7 feet deep.—Apply, by letter only, J. NICHOLSON, Lett's Wharf, Commercial-road, Lambeth.

MORTISING MACHINE. 12l. to 15l.

KIMBERLEY'S PATENT MORTISING MACHINE.

The Patentee feels justified in calling attention of all Builders, Cabinet-makers, and others to this simple, strong, cheap, and most effective machine. Hundreds are in full use all over the kingdom, and references to any extent can be given to prove it really is what it is represented, viz. the most valuable tool ever offered to the trade.

Amongst testimonials of the highest character, he would respectfully invite attention to the following:

"Rugby, June 14, 1855.

"Dear Sir,—In reply to your inquiry respecting the Patent Mortising Machine I purchased from you three years ago, I have to inform you I consider it a most simple, efficient, and durable article; nor do I think it saying more than it deserves when I state it is highly superior every way to one I was recently induced to purchase from a London house, which, although represented to be unexcelled in its principle and make, has totally deceived myself and all others, as it is always breaking, and is useless in comparison with your own, upon which I believe not a sixpence has been expended since received from you, although in constant work. I candidly assert that its use in my shop is worth twice the value, as it must, indeed, be to every builder who possesses it.

"I am, Sir yours faithfully,

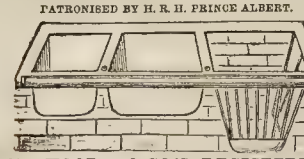
"JOHN PARNELL"

London Agents: Messrs. PUGH and CO. 13, King-street, Snowhill, who keep Stock of all Kimberley's Patent Goods, Flooring Cramps, &c.

KIMBERLEY'S PATENT FLOORING CRAMPS, Scaffolding Brackets, Door Springs, Mortising Machines, Casement Fasteners and Stays, Skylight Screws, &c. &c. Also, KIMBERLEY'S PATENT GAS STOVES, may be had from any Ironmonger in town or country; from the Patentee, Inge-street, Birmingham; or from the London Agents, Messrs. PUGH and CO. 13, King-street, Snowhill, where a stock is kept.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES

W. BISSELL, PATENTEE, WOLVERHAMPTON. Manufacturer of Rim and Mortise Locks and Builders' Ironmongery.



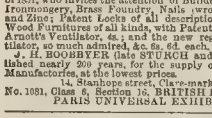
AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will grasp all firmly and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a newer cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse removed from 81 to 88, Upper Thames-street.



FIRE-PROOF CONSTRUCTION.— FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.
CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. 8s. 6d. each.
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope street, Clare-market, London.
No. 1031, Class 8, Section 3, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods. Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 169, Shoreditch.
A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler,

Contracts taken to any extent. Goods landed. A powerful crane.

LIGHTNING CONDUCTORS.— R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at on. shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
18a, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

IRONMONGERY,
PFEIL AND STEDALL.
THE LARGEST STOCK AT
THE LOWEST PRICE,
5 AND 6, BROAD-STREET, BLOOMSBURY.

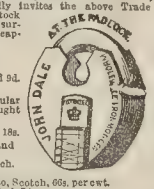
J. MICHIE, Engineer and Machinist, Battersea-park, Nine-elms, manufacturer of all kinds of Steam-Engines, Portable and Stationary, Sawing and Planing Machinery, Pumps, Cranes, Grabs &c.
N.B. Several high-pressure Engines for Sale.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE, can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.
Established 1774.

JOHN PARKIN and CO. late BLAKE and PARKIN, NEW MEADOWS TEEL WORKS, SHEFFIELD, MANUFACTURERS of CIRCULAR and MILL SAWS, IMPROVED CAST-STEEL FILES, for the use of engineers and machinists, PATENT TEMPERED MACHINE KNIVES and CUTTERS, manufactured for planing and groving wood, for cutting paper, iron, stone, leather, &c made to any pattern or dimensions with the utmost exactness. Warranted to work with a harder and finer edge than any other mode of temper.

INVENTORS of CORE-AND-SEALED CAST-STEEL for taps, piston-roads, &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST-STEEL, &c.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 98, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.
JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 6½d. 6d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.
To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

COLLINGE'S PATENT HINGES,— Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

212° MILNER'S HOLDFAST and FIRE- RESISTING SAFES (non-conducting and vaporising) with all the improvements, under their Quadruple patents of 1849-51-54 and 1855, including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.
MILNER'S PHŒNIX (2127) SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47a, Moorgate-street, City.—Circulars free by post.

THOMAS EDINGTON, PURCHASER and INSPECTOR of CASTINGS on COMMISSION,
17, GORDON-STREET, Glasgow.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than had heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

KENNEDY'S PATENT WATER-METER.— The attention of water companies and large consumers of water is respectfully requested to the above, which has been pronounced by many engineers to be the only perfect meter ever offered to public notice. It will work under pressure of 100 to 250 feet, and discharge double the quantity of water per hour of any meter yet made.—Further particulars may be known, and a meter inspected, at the Office of the London Agent, E. HICKMAN, 22, Budge-row, Cannon-street, City.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RICHARD JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for billiard-tables.
Diving-dresses of superior make, and improved Vulcanised Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell mews, Goswell-road, London.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. — Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

PAPER-HANGINGS.— The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 32, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGING WAREHOUSE, 3, OXFORD-STREET.—To be DISPOSED OF, at a considerable reduction, all the remaining summer STOCK of PAPER-HANGINGS, including Gold Flocks, Satins, and Machine-work, which must be cleared out before the new year.

CHEAP PAPER-HANGING and PAINTING.—To BUILDERS and HOUSE-OWNERS.—Papers hung from 4½d. per piece. Every description of painting and graining done equally cheap, and in a workmanlike manner. Work punctually attended to.—Address, Y. Z. 13, Clandon-street, Walworth.

PAVING, 2s. 9d. per SQUARE YARD.— Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, is manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

and by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under sides at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy as it is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Rollers, &c. is also manufactured, by which a saving of about 50 per cent in fuel is effected. The TRADE are respectfully solicited to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their works. They are likewise CAUTIONED AGAINST MISREPRESENTATION as none ONLY WORKS in Great Britain where the above Roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt may be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.
Established 1831.

At 1st March, 1855, the amount of the accumulated Capital exceeded	£910,000
And the Annual Revenue exceeded	163,000
The amount paid to the Representatives of Deceased Members was upwards of	800,000

This affords the strongest evidence of the continued prosperity of this Institution, and of the immense benefit to the families of deceased members.—For prospectuses and all information, apply to WILLIAM COOK, Agent.
126, Bishopsgate-street, London.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD STREET, LONDON. Instituted in 1820.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which 146,000l. is invested from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to	£3,500,000
The premium fund to more than	800,000
And the annual income from the same source, to	109,000

Insurances, without participation in profits, may be effected at reduced rates.
SAMUEL INGALL, Actuary.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash, Cills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

FURTHER REDUCTION of PRICES.—SAMUEL PUTTNEY begs to inform the Trade, that he has REDUCED the PRICE of YELLOW DEALS 3l. p. 120, and solicits their attention to the following low prices:—

Yellow Deals	From	£24	0 p. 120
Spruce ditto	"	17	10 "
Pine Planks, 19 ft. 3 in. by 11 ft.	"	24	0 "
Yellow Battens	"	13	0 "
Honduras Mahogany, in logs	"	4	4d. per ft.
6 ft. Oak Staves	"	2	8s. each.

Prepared flooring and cut stuff of every description at equally low prices. A list forwarded on receipt of post-office-stamp.
Borough-road, Southwark; and Elm-street, Gray's-inn-lane.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings. A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Rankside.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

1 inch White, 13s. 6d. per square.		1 inch Yellow, 10s. per square.	
¼ ditto	15s. "	¼ ditto	16s. 6d. "
1 ditto	18s. "	¼ ditto	20s. "

Laths, 20s. per load. Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road

PADDINGTON TIMBER-YARD.—SAWING, PLANING, and MOULDINGS.—3, Irongate Wharf, Praed-street, Paddington, and 96, St. John's-wood-terrace, St. John's-wood. GEORGE WILLIAM FRY begs to draw attention to his large stock of SEASONED and PREPARED WOOD GOODS at the lowest current prices. Liberal allowance for cash, and facility for immediate despatch by rail or canal, which affords every advantage to country as well as town buyers. Illustrated and priced sheets of mouldings, dressing and general price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.
N.B.—Sawing and planing for the trade.

NOTICE to MAHOGANY MERCHANTS, CABINETMAKERS, and OTHERS.—The next LIVERPOOL PERIODICAL SALE by AUCTION of MAHOGANY and other FURNITURE WOODS, Baltic and American White Wood, will take place on WEDNESDAY, the 14th NOVEMBER, 1855, at TWELVE o'clock at noon precisely, in the BROKERS' SHEDS, Brunswick and Toxteth Docks. Catalogues, containing full descriptive particulars are now ready, and may be had on application to EDWARD CRAGGS, Timber and Mahogany Broker and Measurer, 6, East-side, Queen's Dock, Liverpool.

EDWARD SIMMS begs to inform builders and the trade, that he has now on hand at his manufactory, the first of its kind ever established, a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from ¼-inch to 1½-inches thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Pantile Laths, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.
Address, E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
King's-road, Chelsea, and Wilton-road, Pimlico.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enable to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash sills, at reduced prices for cash. The Only Patent Corn Turret forwarded on application.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, for cash only, at C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 21, Munster-street, Regent's-park.—A large quantity of PAPER-HANGINGS, CHEAP. 2½d. per yd. given for old lead.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal leading firms, architects, and others, who have used them, to be the best ever produced by machinery. He in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps.—Please note the address 20, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

A HANDSOME PULPIT SOUNDING-BOARD, of waincoat oak inlaid, and carved moulding round, octagonal, to suspend from iron rod by a chain. Price 80s.—EDWD. SPENCER and CO. Carpenters, 18, Billiter-street, City.

STAIRCASE WANTED.—WANTED, an OAK STAIRCASE, in good condition, with handsome oak or iron balusters; if oak, to be free from paint. The stairs to be about 4 feet 6 inches long, 1 foot wide; a rise of steps, 6 inches, and twenty-five or thirty of them; the half space preferred to winders. The price must be moderate.—Address, pre-paid, to E. R. H. Post-office, Cromwall, near Farnham, Surrey.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through sashes

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 30 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Benham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

¼	⅜	½	⅝	¾	⅞	1	1¼	1½	2	2½	3	3½ in.
9d.	11d.	1s.	1s. 3d.	1s. 5d.	1s. 7d.	1s. 9d.	2s.	2s. 3d.	2s. 6d.	2s. 9d.	3s.	3s. 6d.

Super-extra stout quality.

2	2½	3	3½	4 inches.
2s.	2s. 3d.	2s. 6d.	2s. 9d.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1¼	1½	2	2½ inches.
8d.	10d.	11d.	1s.	1s. 3d. 1s. 6d. per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

The Builder.

VOL. XIII.—No. 666.

VIRTUALLY the Industrial Exhibition in Paris is closed: the huge cases have been removed from the nave, many of the things sent back to their owners, and workmen are making the arrangements, such as they are, for the ceremonial of distributing the prizes on Thursday, the 15th. If our neighbours' much talked of powers of organization make it a success, it will be the one solitary instance to be recorded in the history of the *Exposition Universelle* of 1855. At any rate, it is not likely, we fancy, that the mixture of stupidity and blackguardism exhibited on the occasion of the fête given the other day to S. A. I. the Prince Napoleon, president of the Commission, will be outrivalled.

On Saturday last, the Emperor and Empress visited the Gallery of Domestic Economy, established in the Palace of Industry, on the suggestion of Mr. Twining, who desired to bring together those productions which bear directly on the physical welfare and moral development of the working classes. The element of *cheapness* is here largely involved, and the people of Paris see in this exhibition, for the first time, how much may be done with a little money, by going to the right place to spend it.

When Mr. Twining was presented, the Empress said to him, "This exhibition is very interesting: it is a good and useful creation. I trust that it will be made permanent: I desire it much."

Neglecting the Exhibition, however, for a time, we would have our readers travel back with us to the more ancient part of Paris, and look again at the Sainte-Chapelle, in order to see the interior, with its polychromy, enamels, and stained glass.* It will be seen that it is in one span. The side walls are divided into four compartments by clustered columns, from the capitals of which spring the groins of the vaulted roof. The absis is divided into seven compartments, and in all the spaces thus formed, above an arcade, which runs round the walls, are the stained-glass windows of which we have already spoken. The capitals of the small columns forming the arcade each exhibit different foliage, and in the quatrefoils are paintings of saints and other personages. In the spandrils are sculptured angels and foliage, the whole aided by a ground-work of enamel and mosaic work. It is worth noting, that the ornamentation is all derived from the indigenous Flora.

On the main pillars against the walls, at the height of about 13 feet from the ground, are figures of the twelve apostles, one against each pillar, with an enriched corbel and canopy. These are of stone, and mark, what is called in Roman Catholic churches, the Stations,—or, the places where the officiating priest when consecrating the building, leaves the mark of the Cross. These statues, which are of admirable design, are elaborately draped, and, like every other portion of the interior, richly coloured. Part of the number only are the original statues, and these were preserved by the rarest chance.

In 1791, the National Assembly having appropriated the property of the church, charged a committee with the preservation of such works of art as were attached to religious edifices. Alexander Lenoir, who was the director of the museum of French monuments, established at the Convent of the *Petits-Augustins*, caused the carvings, altars, staircases, and statues of the Sainte Chapelle, to be brought there, and thus saved them from destruction. Soon, however, this museum was broken up, and the various monuments were dispersed without reference to their original locality. Thus the bishop of Nancy obtained four of these statues of the apostles to ornament his chapel, where they remained till 1830, when they were mutilated by the rioters of that period, and were afterwards buried to prevent the recurrence of disorders, and lost sight of. Fortunately, however, M. Lassus succeeded in discovering them when excavations were being made for a fortress, on the spot where they were buried. The figures had been decapitated, but further endeavours brought the heads to light in the little garden of an old lady, who had preserved them in 1830, by carrying them away, one by one, in her apron. Another of the statues which was recovered had first figured in the park at Sceaux, as "Mercury," and had then found a resting-place in the church of Corbeil as a St. John, the beard being first cut to make it accord with tradition. Two others were dug from under the pavement of the Sainte Chapelle, in a very mutilated condition.*

When you leave the Sainte Chapelle, you are very near to the metropolitan cathedral, Notre Dame, and may look at what has been done there, as well in clearing away the circumjacent buildings at the east end, as in restoring the structure itself. The magnificent west front, and, indeed, nearly the whole of the building, has been put into a good sound state by the expenditure of large sums of money during a considerable period of time. A glance at its history must suffice. The first stone of the Notre Dame of to-day was laid in 1163, in place of a more ancient church; but it was more than fifty years after that, namely, somewhere about 1215, that the west front, as we now see it, was commenced. About the year 1223, it had been carried up as high as the underside of the gallery which connects the two towers. About 1257, the front of the south transept was rebuilt to accord with the western portion, and the two topmost stories of the towers belong also to that period. The erection of the side chapels occupied the remainder of the century.† A more majestic specimen of the architecture of the thirteenth century than this west front is not to be found. It is at once severely grand and delicately beautiful. In mass it is overwhelming, in detail charming,—a grand monument, and a marvellous story-book in stone! The building was much mutilated at the beginning of the eighteenth century by those who desired to *improve* it, and more so under Soufflot, the well-known architect, in 1771, who even destroyed some of the extraordinary sculptures in the central doorway of the front. In 1793, the time of trouble, the destruction of all the effigies of kings was ordered, and was only prevented by the readiness of one lover of the arts in the fanatical band, who declared that the astronomer Dupuis had discovered the planetary system in one of the doorways of the church; and so forthwith Dupuis was added to the administration of public works, in order that he might preserve the monuments worthy to be left for posterity, and thus the statues that remained were saved.

The doorways contain an immense amount of curious sculpture, disposed in six concentric receding orders around the openings, and in the space between the horizontal doorhead or transom and the outline of the arch. A quadrangular pier, adorned with bas reliefs, and with a statue on the front face, divides each doorway between the transom and the ground into two openings. This was removed by Soufflot from the great central doorway, but has been restored. The groups, in three rows, in the space over the doors, represent subjects from the Scriptures: saints, martyrs, and apostles people the sides. A complete description and inquiry would fill a volume. The doorway at the foot of the north tower is known as the door of the Virgin, that in the south tower, as the doorway of St. Anne. The latter would seem to have belonged to the fabric of the twelfth century, and has a Romanesque character not observable in the others. The wooden doors are covered with very elaborate wrought ironwork, and we have engraved a view of one of them, but we postpone the insertion of it till our next notice. In the "Annales Archéologiques," by Didron, *aîné*, it is given as a specimen of the ironwork of the twelfth century; while, on the other hand, the Abbé Sauval, in his "Antiquities of Paris,"* says this ironwork was executed by Biscornette, a famous smith of the sixteenth century. "The iron of the doors," says Sauval, "has been admirably bent (*roulé*), by Biscornette. The sculpture, the birds, and the ornaments, are marvellous: they are made of wrought iron, the invention of Biscornette, which died with him. He melted (*fondoit*) the iron with an almost incredible industry, rendering it flexible and tractable, and gave it all the forms and scrolls (*enroulements*) he wished, with a *douceur et une gentilesse*, which surprised and astonished all the ironworkers. Gaegart, *serrurier du Roi*, broke off some pieces of the hinges, in order to discover the secret; but confessed that he got nothing for his pains and experiments, and had great difficulty to use even that little: these gates have been made 120 years, and are yet admired by all smiths. The wonder is that none of the trade have ever been able to tell precisely the mode of manufacture: some say it is cast (*fondu*), and filed up; others that it is wrought with the hammer; others that it is *fer moulé*, which they call *fer de barreau*: the most skilful of them think that it is cast-iron, without any soldering. However, the secret died with Biscornette, for nobody ever saw him work."

A cast of some of this ironwork will be found in the French Mediæval Court, at Sydenham. The authors of the handbook, Messrs. Wyatt and Waring, are of opinion that the hinges "are of wrought-iron, that they were executed in the latter part of the thirteenth century, and that all that Biscornette ever did to them was, most probably, to repair them." Having given them some little consideration, we must confess that we go with Sauval, at least as far as regards much of the work, which has the aspect of being of two periods. The scrolls of the more elaborate hinges terminate in birds and lizards of Renaissance character. One tradition views Biscor-

* See p. 543.

* In our previous notice we mentioned the date of the erection of the Sainte Chapelle. As it is remarkable for the early introduction of tracery in the windows in fact, it is a specimen of what we should call the Geometrical style,—our readers may like to see some authorities. The following are given in Mr. Lukeraley's 'Inquiry into the Chronological Succession of the Styles of Romanesque and Pointed Architecture in France:'—

"LA SAINTE CHAPELLE. Anno eodem MCCXLI ut existimo, cepta est Sancta Capella. Anno MCCXLVIII die XXVI. mensis Aprilis, Rex Ludovicus, sub nomine Coronæ Spineæ et Sanctæ Crucis dedicationem Sanctæ Capellæ celebrari curavit. Celebritas magna fuit. Serram rem erit Odo Episcopus Tusculanensis Apostolicæ sedis Legatus."—*Hist. Eccl. Parisn, Dubois*, fol. xv. cap. iv. p. 356.

"SACRA CAPELLA — . . . ut liquet ex hisce duabus inscriptionibus, quæ adhuc existant in sua quæque capella ad murum septentrionalem. 'Anno Domini 1248. VII. cal. Mail, dedicata est ecclesia ista a venerabili patre Odone Tusculanensi, episcopo, in honore Sacro sanctæ, Coronæ spineæ, Domini, et vivificæ crucis.'" —*Gallia Christiana*, Vol. VII. col. 230.

† SOUTH TRANSEPT FRONT OF NOTRE DAME. — "Anno domini MCCLVII. mense Februario, id. II. Hoc fuit inceptum Christi genitrici honore Kalensi Latino vivente Johanne Magistro." En l'une desquelles (chapelles) d'autour le Chœur, est escrit et paint soubs la statue d'un evesque eslevée debout sur une col une de pierre audessus d'un tombeau de marbre. "Cy est l'ymage de Bonne Mémoire Simon Matifas du Bucy, Eueque de Soissons et iadis Euesque de Paris, par qui furent fondées premièrement ces trois chapelles où il gist en l'an de grace, 1256: et puis on fit toutes les austres enuiron le Chœur de ceste Eglise." *Les Fastes Antiquitez de Paris.* By Pierre Bonfous 1605. I. vol.), p. 132. *Le Theatre des Antiquites de Paris.* Jacques du Breuil (1612. I. vol.), p 16.

* Quoted in the "Handbook for the Mediæval Courts," Sydenham.

nette as the devil in disguise; and another, that he was a mortal, but aided by the evil one, for which aid he had sold himself. The smith has always been regarded as an object of interest. As Longfellow sings of Basil, the blacksmith, he

> "—— was a mighty man in the village, and honoured of all men;
> For since the birth of Time, throughout all ages and nations,
> Has the craft of the smith been held in repute by the people."

In the same court and the adjacent gallery, at Sydenham, casts of the extraordinary series of sculpture in relief from the choir of the cathedral, twenty-three in number, will be found, together with some smaller carvings.

An arcade above the doorways in the west front of Notre Dame, is known as the gallery of kings, and growing out of an open parapet which surmounts this are pedestals, which carry five stone statues,—one in the centre of the face of the north tower (Adam), one in the centre of the south tower (Eve), and three over the middle doorway and in front of the great rose window,—with the effect of which, by the way, at a distance, they interfere greatly. The latter group represents the Virgin bearing the infant Saviour, with an angel on each side; the whole symbolising, it may be thought, the Fall and the Redemption. These figures are modern work, as indeed is much of the sculpture below; and it is to be hoped that an exact account is preserved of the interpolations, for the sake of posterity and truth.

Full of romance and poetry is this suggestive old building. The history of Paris is associated with its venerable aisles, and Quasimodo looks out from the belfry window.

SOME OBJECTIONS TO POLYCHROME CONSIDERED.

It has long been a disputed point amongst architects and men of taste generally, whether or not our churches gain by the use of colour; whether bold and beautiful mouldings are seen to better effect when the material in which they are cut is visible in its pure natural colour, or when the effect at which the designer aimed is heightened by a judicious application of polychrome; giving apparent depth to the hollows, and apparent prominence to the projecting members; whether the introduction of large painted surfaces does or does not distract the attention from the moulded and constructive parts of a building; and, in fine, whether the brush of the decorative painter is or is not necessary to the production of a perfect building, in order to unite the works of the builder and the sculptor, by a skilful use of diapers, flat tints, scrolls, and large mural pictures, so that our churches shall present a union of the sister arts of architecture, painting, and sculpture.

Those who have any respect for the works of preceding ages generally declare for colour. Indeed, all those who are in favour of a strict adherence to precedent must, to be consistent, support this side of the question, for they find that almost every ecclesiastical edifice that they would regard as a model church, whether it be Basilican, Byzantine, Gothic, or Italian, is, or has been, partially, if not entirely, adorned with painted decorations.

The opponents of polychrome are either those who have no regard for what has been done before; those whose tastes are so sickly, that they shrink from anything that is of a bright colour; those who have not the keen perception of the beauty of colour that adds so much to the enjoyment of the man of healthy tastes; or those who object to the use of coloured decorations on religious grounds. Of these classes of objectors, the first and fourth alone require to be noticed or answered.

The second class of objectors is composed of those who have not yet conquered the prejudices of early education, or have not strength of mind to assert their freedom from them. A morbid fancy for drabs, greys, and undecided tints crept over the country in the middle of the seventeenth century. Since then, all those brought up in this dim atmosphere of prejudice have been taught to regard the use of grey, drab, vapour, or any other indescribable shade of colour, as a mark of refinement. These men will tell you that they object to bright colours; that their eyes are offended by them; that they see no beauty in them; that they are gaudy, tawdry, garish, and vulgar. We have only to contrast the perfection of coloured nature with their cold standard of art, to convince them that unless they boldly profess to surpass by their art the works of Nature, she will prove that on their side lies the want of healthy taste, and the vulgarity, *i.e.* unthinking adhesion to the common irrational opinion.

We may ask them if they find the azure of the heavens so intolerable; if they turn with disgust from the vivid green of budding trees and growing grass; if they are overpowered by the gorgeous dyes of the peacock's plumage; if they look upon the glories of the amethyst, the ruby, the emerald, as gaudy and meretricious? We may ask them if they do not think it would be a dull world, if the varied works of creation were destitute of that element of colour which pervades them all? And we may tell them that unless their art will admit the use of every one of the hues we find in nature, it will be vapid, and also, as art is but a humble imitation, unreal and untruthful.

Religious objections are not fit subjects to be discussed here; but we may assert with truth, that the principle which would exclude colour would exclude ornament of any kind; that there is no halting-place between the richness of St. Mark's, and the simplicity of four plain walls. We may assert that St. Peter's at Rome has not a less devotioned effect than St. Paul's in London; that the Certosa at Pavia looks as much like a building devoted to religion as St. Luke's at Chelsea. We may add that austerity should not be a characteristic of a church, and that if we go from our richly-furnished houses to our cold undecorated churches, we shall be apt to prefer the former to the latter, as conveying a sense of repose, richness, and beauty, while the others make us shiver when entering their precincts,—they present such a cold, poverty-stricken, and uninviting appearance.

Objectors of this class, too, can be referred to nature for an answer as to the propriety of using colour in religious edifices. They may be told that the natural and untutored taste of the simple Italian peasant girl teaches her that she can present no more appropriate offering, at the shrine where she performs her evening devotion, than the many-hued flowers she gathers on her way thither.

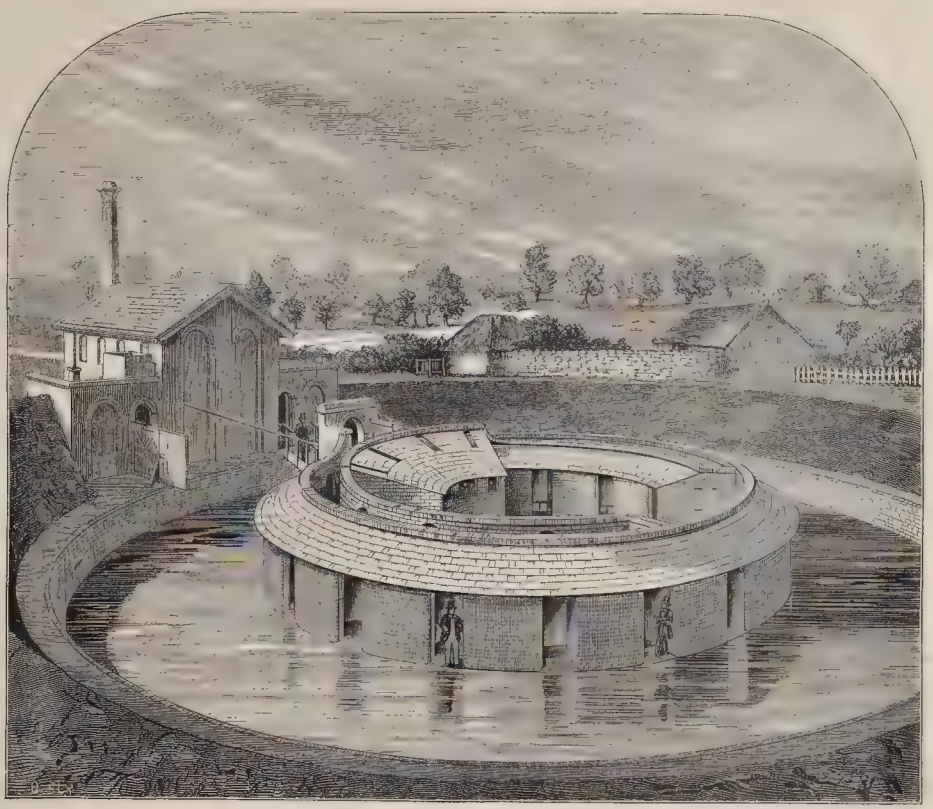
Those who advocate thorough colouring of churches generally pass through two or three phases of opinion. They begin by objecting,—some never get beyond the slough of despond,—and do not see, even in dim perspective, the glories of the perfect and richly coloured mediæval church. Those who reach another stage have gained courage to gild a few ribs, pick out a few mouldings, scatter about a few scrolls, and perhaps even venture to do a diaper two shades of the same colour, proving by the results that thorough colouring is the thing to be desired. But those who have thoroughly studied the works of the Middle Ages have found that every production of those times glowed with colour; that the men and women attired themselves in doublets of scarlet, jerkins of green, and petticoats of purple; that the houses they inhabited were hung with rich tapestries of Arras; that their windows glowed with rich armorial bearings; that the books they read were illuminated with ultramarine and vermilion; that the chapels in which they worshipped had vaults of azure, studded with golden stars. They accordingly endeavour to introduce this essential element of colouring into every work they undertake, in imitation of the works of mediæval times, knowing that unless they do this, however fine the proportions, however carefully studied the detail, however highly finished the execution, their work will but resemble a well-drawn and excellently designed picture before the processes of glazing and scumbling have given it transparency, texture, and harmony of parts.

P.

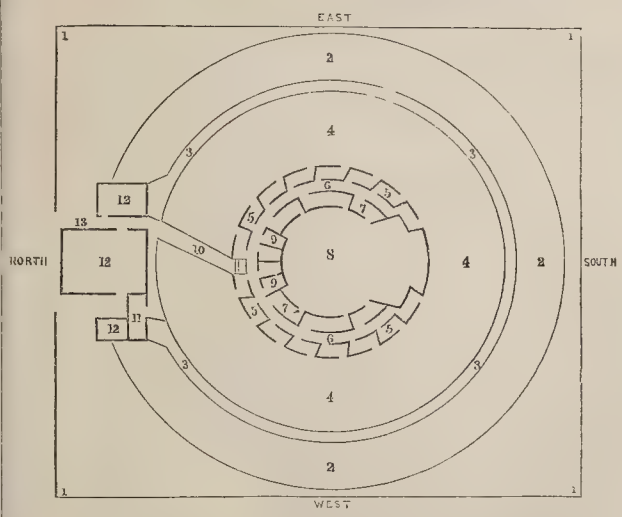
THE ARCHITECTURAL EXHIBITION.

We are glad to learn that the Architectural Exhibition is progressing satisfactorily. The committee seem to be exerting themselves, and have determined to make the approaching exhibition as attractive as possible. The drawings and specimens are to be sent in on the 4th and 5th of December. It will be opened with a *conversazione* on the evening of the 16th. During the exhibition, papers will be read on stated evenings, and it is proposed to appoint juries to grant testimonials in the department of materials (alone). Materials and manufactures in connection with architecture will, for this reason, no doubt be more largely exhibited each year, and will in time form a very useful and attractive portion of the exhibition. With respect to the drawings, in looking over an old catalogue we find amongst those who have exhibited on former occasions the names of Allom, Ashpitel, Bury, Britton, Chantrell, F. P. Cockerell, Donaldson, Fergusson, Griffith, E. P'Anson, Kendall, Lamb, Little, Papworth, Petit, Richardson, Ruskin, Scott, Tite, St. Aubyn, Walters, J. D. Wyatt, &c.: these we hope, amongst others, will exhibit again this year. Messrs. Sydney Smirke, Hakewill, Slater, Ferrey, Wright, Digby Wyatt, &c. will, we are told, exhibit for the first time. Also Messrs. T. Wyatt, Chamberlaine, A. Gilbert, and many others will be seen as exhibitors or subscribers. Mr. Tite has joined the committee.

It is very desirable that the exhibition should be made to show the actual state of the art amongst us. Those who cannot send drawings this year, can aid by subscribing: and we shall be happy to serve as their medium, for such "table-rapping."



THE BANBURY SWIMMING-BATHS.



In our last volume (XII. p. 629), a plan was suggested for an annular swimming-bath, as having certain advantages over the present usual arrangement. Mr. Thomas Draper, of Banbury, one of our non-professional readers, adopted the idea, and has erected baths in that town, in order to meet an avowed public want. In former numbers, we have referred to the progress made towards completion of these baths, and we now present our readers with a view, sketch-plan, and explanatory notes, which will convey to their minds a clear impression of the arrangement. The leading feature or novelty in their construction consists in the shape of the men's swimming-bath being annular, as we have already said, and whether this is or is not an improvement, the verdict of the public is sought. The local users say it is. Privacy in bathing, and economy of water, are the advantages. The dressing-boxes being around the inner circle of the ring of water, each bather enters the swimming-bath in a comparatively private manner, whereas every bath in England which has hitherto been constructed has been either circular, oval, or quadrangular, with dressing-boxes around the outside, and consequently public to all the bathers. A further improvement has been accomplished at Banbury, by making the boys' swimming-bath separate from the men's, and by so arranging it, in the shape of a central and nearly circular basin, as that one circular passage will suffice as the way to each. The swimming-baths were opened to the public in August; and whilst the warm weather lasted, the bathers, in a population of 9,000, were about 900 per week.

Royal Academy.—Mr. George Gilbert Scott and Mr. John Callcott Horsley, have been elected Associates. Mr. Lumb Stocks is elected Academician Engraver.

Royal Institute of British Architects.—The Session was opened on Monday, the 5th, by an address from Mr. Tite, M.P. the chairman of the evening, upon the progress and position of the profession. If we gave a report of it in our present number, we should be forced to curtail it. We elect, therefore, as it contained matter of interest, to give a full report of it next week. A night will be set apart for the discussion of it at the Institute. After the address, a paper on objects connected with architecture in the Paris Exhibition, announced in our last, was read.

THE BANBURY SWIMMING BATHS, WITH PRIVATE BATHS ATTACHED.

GROUND PLAN.

References to Ground Plan.

1. Square piece of ground taken for baths.
2. Circular grass embankment, 10 feet high above surface ground, terminating in a ridge, the base being about 16 feet wide, securing privacy to baths.
3. A walk for attendant only round large swimming-bath, on the top of its outer boundary-wall.
4. Ring-shaped men's swimming-bath, open to the air, about 80 yards round and 6 yards wide, the water level 3 feet 6 inches below surface ground, but the outer side wall 9 feet high, built as high as surface of ground, the inner side wall 5 feet high, the depth of water 4 feet 3 inches on entering, increasing gradually to 5 feet 3 inches; the bottom washed gravel.
5. Sixteen dressing-rooms, entered from circular passage No. 6, and opening at opposite ends, with steps, into men's swimming-bath; the roof slated.
6. Open circular passage leading right and left from descending steps from bridge, to men's dressing-boxes, and to boys' also.
7. Six boys' dressing-boxes, with slated roof, entered from circular passage, and opening at opposite ends, with steps, into boys' swimming-bath.
8. Boys' swimming-bath, open to the air, about 34 feet by 24 feet, walls and floor being brick; the depth on entering 2 feet 6 inches, increasing gradually to 4 feet.
9. Four private baths, hot or cold.
10. Bridge at entrance over large swimming-bath, and steps descending about 3 feet to circular passage, the bridge being about 4 feet above surface of water.
11. Conveniences attached to baths.
12. Attendant's dwelling-house and offices, boiler-room, and extra private warm baths.
13. Entrance.

HERALDRY IN ITS CONNECTION WITH ARCHITECTURE.*

AMONG the many rich examples of Heraldic Diaper which yet remain, I may here specify (as being peculiarly worthy of both admiration and study) the shields of Sir Robert de Vere, at Hatfield Broadoak, in Essex; of Sir Hugh Hastings, at Elsyng, in Norfolk; and those of England, and of the Earls de Warenne, at Castleacre Priory, in the same county.

I may here observe that *heraldic supporters*, properly so called, rarely appear in the heraldry of architecture before the Tudor age; and when they are present, they do not produce a satisfactory effect, nor do they seem to be in their right place in architectural compositions. The long and gorgeous array of supported and crowned shields in the chapel of King's College, Cambridge, does not affect this opinion; they will not endure a comparison with the shields that hang above the arcades of Westminster.

I now pass on to remark that wherever a shield forms a part of any architectural composition, it ought always to be charged with a "coat of arms." Shields are not in themselves architectural ornaments or details: they are heraldic accessories, and nothing else than heraldic accessories,—and, as such, they are most beautiful *in* architecture and most valuable *to* architecture. But all heraldic shields *are* of necessity charged with their own blazonry; and, consequently, all shields in architecture which are *not* so charged, are simply anomalies;—they have no right to be where they are,—they are unmeaning intruders and empty pretenders. And they also *look this:* witness the dreary lines of misshapen shields in shallow panels, without any heraldic bearing, and never intended to have any heraldic bearing, which lend such efficient aid towards debasing the Gothic in its decline, during the fifteenth and sixteenth centuries. Their only parallels are niches devoid of statues, and which were never intended to have a statue stand upon their pedestal, and take shelter beneath their canopy. Many a beautiful niche, indeed, which now is statueless, has lost its original occupant, while others appear, from some cause or other, to have been left thus incomplete, contrary to the original intention. Thus, the exterior of Westminster Hall, on either side of the grand entrance, displays a series of niches which, though statueless now, were, I am persuaded, originally destined each to have a statue of its own. Beneath these niches is a corresponding series of panels, and within each of these is a shield; all are plain, except one close to the doorway on its eastern side, and this one shield bears the royal arms of Richard II. very effectively carved. Does not this solitary coat of arms convey the impression that it was not intended to have been without numerous companions: and may not this inference extend to a once proposed completion of the niches above—their completion with statues?

In many instances, the heraldic devices were not carved in relief upon the shields introduced into architecture, but were expressed upon them in *colour* only; and not uncommonly plates of copper were affixed to the stone shields, upon which the armorial bearings were emblazoned in *enamel*. Again, I may refer you to Westminster Abbey for some beautiful illustrative examples: the large enamelled shields within the panels of the massive plinth of the tomb of Edward III. exhibit alternately the quartered arms of France and England, and the red cross of St. George upon its field of silver; and the smaller shields below the beautiful statuettes (or "weepers") in the canopied niches of the tomb itself, display the differenced and impalled arms of the royal personages there portrayed.†

Where a series of shields occurs, charged with a variety of armorial insignia, and the whole form a single group, the heraldry thus displayed will be found to convey a complete chapter of family, or perhaps of national history. I may mention the Burghesh tombs in Lincoln cathedral as examples, amongst many others, which still preserve, in their heraldic accessories, such passages of history.

Besides their more customary positions in panels and spandrils, shields of arms are often sculptured upon the face of the large bosses of the later Gothic vaulting, and upon corbels and brackets; and, much smaller in size, they also may very frequently be observed, grouped with ornaments composed of foliage, figures, parts of figures, and with monograms and other devices, in strings, corbel-tables, and elsewhere.

And, in addition to the shields with their own specially appropriate insignia, helmets, with wreath, crest, and mantling, together with every variety of heraldic badge and cognizance, are commonly employed for the purpose of combining symbolical records of personal history with architectural ornamentation.* These various devices may be seen in every possible position, and reiterated in almost interminable succession, in the architecture of the Tudors: the badges of that much-to-be-remembered house—rose, portcullis, and fleur-de-lys—are scattered, with never-sparing profusion, over almost every important edifice throughout the realm; and with these, other badges more strictly personal in their character are, in many instances, interspersed. The correct method of placing a badge (as distinguished from a coat of arms) in an architectural or monumental composition, was to charge it upon a roundle instead of a shield, or to introduce it amidst foliage, or simply by itself.

The practice of repeating a single device, or a small number of devices, again and again, instead of grouping together a rich variety of heraldic insignia, was in strict accordance with the prevailing tone and character of the architecture of the fifteenth and sixteenth centuries; and it is also strikingly expressive of the spirit of personal ambition which then exercised so powerful an influence upon every condition of society and every circumstance of life. Amongst other changes for the worse in architectural heraldry which advancing time brought with it, the altered forms of the shields will not fail to attract the notice of the student. The fine form of the early shield was altogether discarded, and various designs—each continually less consistent and more unsightly—were adopted in its stead. And, at length, with the Renaissance, shields gave way, in many instances, to wreaths of curious composition; and heraldic ensigns of every kind, which had then for some time been degenerating into all sorts of strange fashions and fantasies, at length were well nigh lost in a maze of nondescript symbolism, of which boys' heads with wings but without bodies, skulls, hour-glasses, scythes, cornucopeias, and such like, were the leading features. Shields of arms were, indeed, still retained, and their quarterings were multiplied exceedingly, but the old feeling—the noble old feeling of *combined architectural and heraldic art*—was gone, and these shields served but to show, to an artist's eye, that the *forms* of heraldry might survive the extinction of its *spirit*.

As the heraldry of architecture and of monuments was one and the same thing in the works of the Gothic artists, so also this same identity of general feeling and of practice may be said to have extended to the *heraldry of stained glass* during the same periods. It is unnecessary for me to particularise examples of shields of arms and other insignia of the heralds' science employed in this beautiful accessory of Mediæval architecture, which, from its very nature, was pre-eminently calculated to receive an heraldic tone, and to convey, with the lustrous brilliancy so peculiarly its own, the blazonry of heraldry. Neither is it necessary for me to add any particular notices of shields of arms, and other heraldic devices introduced (as was very commonly the practice) into the inlaid paving-tiles, which formed such effective accessories of mediæval architecture.

II. I pass on then, at once, to the second division of the subject now before us, and proceed to some consideration of *the use of heraldry in its connection with architecture;* or, rather, of the use of heraldry *in* architecture, *by ourselves*. Without such an application as their result, our researches into the architectural heraldry of past ages would be of but little worth to us: did not the shields of Westminster Abbey,—did not these heraldic casts in our own museum here, convey to us some lessons for our own direction and governance; as practical and experimental students, we should gain but little from either the one or the other.

I have been endeavouring to sketch out before you the manner in which heraldry was used in our country during the rise amongst our ancestors of that great and noble expression of art, which we call Gothic Architecture; and I have added a few words, with a view to indicate how it was, that with the decline and decadence of the architecture its heraldic accessory declined and fell away. But such a sketch will afford us none of the practical information for which we now propose to seek,—nay, which now we propose to derive from this very sketch, unless we carry our glance inward, from the manifest usages of the Gothic architects in this matter of heraldry, to the principle which actuated them, first, to employ such an accessory to their architecture, and then to use it as they did.

To study architectural heraldry as it has been practised, with a view to apply the usages of the past as "authorities" in our own practice during the present, implies that we treat the heraldry of Gothic architecture precisely as we must treat Gothic architecture itself, if we would ourselves be true and truly great Gothic architects. In other words, we must, both in the case of the architecture and of its heraldic accessory, make ourselves masters of the principles of this great art, and of all pertaining to it; we must become imbued with its animating spirit, and then we must set to work, in the fulness of that spirit, and through the strength and under the direction of those principles. And I venture to consider that we have but too generally failed to realise such views of our position with regard to the Gothic, even if we have not failed to entertain them. I am unable to shake off the conviction, that we have taken by far too low a position in our study of the Gothic, and have also, very frequently, inverted the proper course for studying. We have not aspired to more than to awaken Gothic art from its long, deep, entranced sleep, and to restore the fallen "dynasty of mediæval architecture" (I use Mr. Ruskin's most felicitous expression) to its former power and grandeur. We have, for the most part, been content to strive to make the Gothic once more what it once was: that is to say, we have only thought of making it reproduce itself under some one of its former aspects; we have laboured to give a renewed activity to "Early English Gothic," and "Decorated," and "Perpendicular" English Gothic; we have striven to revive, upon fresh and sharp-cut stone, what the worn, and broken, and stained, and moss-freckled relics of the mediævalists were, when themselves fresh and sharp-cut: but we have forgotten to regard the Gothic as one great style of architecture, we have not felt the unity of the Gothic as one style,—one style which, at different times and in different places, expressed itself after different forms; consequently, in our zeal for "First Pointed," and "Middle Pointed," and "Third Pointed," we have been led away from the one true point of search, the Gothic itself: aiming only at being copyists, we have signally fallen short of the original standard. Now, so long as we only seek again to build after some former form or condition of the Gothic, we shall surely fail, unless we copy literally; and then our literal copy (however successful in itself) will be but a copy after all. But, if we base our revival of the Gothic upon a recognition of its *unity* as a Style; if we seek, not the reproduction of parts or phases of this great style, but its development as a whole; if we draw together and consolidate the teachings which the past put forth gradually, age by age, and step by step, and apply the whole to the acquiring fresh wisdom,—we then may really hope to equal the great mediævalists, because thus we aim at surpassing them. This is indeed the only way in which we may make the Gothic of our own times equal to

---

* See p. 518, *ante*.

† Reference was also made to the heraldic enamel of the tomb and effigy of William de Valence, in Westminster Abbey.

* The bold strine which traverses Westminster Hall is enriched with the helmet and the "hart" of Richard II. carved with great spirit in long sac ceston. Amongst many other illustrative examples of heraldic devices which occur as decorative accessories in architectural compositions, reference was here made to a group of Tudor roses, which were discovered a few years back in the remains of the sepulchral chapel of Abbot Wallingford, and of which both a cast and a coloured engraving were exhibited from the collections of the Architectural Museum.

at of times past,—by both endeavouring and xpecting to make it better. And, I must add, at when we are actually equal, in the matter Gothic architecture, to the architects of the iddle Ages, we shall speedily prove ourselves eir masters. The style, once revived in the vival of its spirit and its principles, will neces- rily advance to a "perfection unknown fore."

Permit me to enter somewhat more fully on this point: it is not only of moment in self, but it will be found to bear, at least indi- otly, upon our actual subject.

In our study of the Gothic, our object is to animate a great art, and to reproduce it in tion. This object we have to achieve through e visible and tangible works of that art. hese works are to teach us the principles, and inspire us with the spirit which called them to existence. Our business with these works (in the purest and strongest sense of that rm) to study them, not to copy them. In our udy of these works, we must always endeavour trace out the spirit from which they emanated. et us beware, lest we mistake Gothic details r Gothic architecture; for, it is not the details hich will develope the style, but the style hich will produce the details. This museum not formed to enable us to make just such nother set of details as here we have in fac- mile; on the contrary, these casts have been rought together to aid us in attaining to that pirit, to that faculty in art, of which they are ticulate expressions. Our Gothic buildings, ke those of old, must result from certain chitectonic principles: we are not to seek ose principles from our buildings. In order ally to effect the restoration of Gothic chitecture, we must first master the true othic spirit, and then apply its practical work- gs; we must first learn what we have to do, d then do it. Hence, it becomes apparent w vast is the difference between studying cient edifices and copying from them. A py is at best but the reproduction of an ex- mple (it matters not how excellent in itself), what Gothic architecture was, at a certain riod of its progressive development. But cannot reproduce any period of Gothic chitecture, and call it the *Gothic style:* neither ll the simultaneous reproduction of the culiar works of several periods reproduce the yle. On the other hand, in the various works the Gothic "masters," we study the one com- rehensive principle which pervades them all; trace the diversified workings of the one ble spirit which yet animates them all. And, mprising within the wide range of our research e entire period, from the first struggle of the othic spirit to shake off the fetters of Roman- queness to its final catastrophe, and consider- g the traces and relics of the art in every untry and province as possessing equal claims on our attentive investigation,—we are led to gard Gothic architecture as a whole, as one and style. We discover that our true course to search out the entire spirit of the entire yle, through its developments in successive ges and in various places. Thus only is othic architecture to be restored, because thus ly can it be understood. And Gothic archi- cture being thus understood, thus restored, we at once that our success in restoration ually implies the faculty for onward progress th this great art. For, partiality and pre- dice, and every similar weakness, must have lted away before the strength of vision, cessary to pierce the remote depths of the long ta of years through which we had to look k. We may concentrate the powers of the with an effect denied even to Alan de Wal- ngham and his compeers; and we may employ s concentration of all that has been, as the ith upon which all that shall be may rest in solidated strength. We may combine the re freshness of invention with the elaborate inement of matured experience, and *so*, may , aspire towards realising a "hitherto un- own architectural perfection."

And, as with the artist-architect, so also with artist-workman the same law obtains. Nei- r will attain to full equality with the men of Middle Ages, without aiming at taking pre- ence of them. In the case of the artist- rkman, I mean that he, too, must rise far above being a mere copyist: while he studies the best works of the mediævalists (and he must study them with equal care and diligence), his true object must be to acquire their spirit; and he will no less carefully, no less diligently, study Nature; and thus, with the advantages which he possesses (but which they did not possess) for making himself really an artist, he may look to his own chisel as a more powerful implement than the mediævalists were able to wield: and yet they were strong in hand, and in touch most delicate.

Apply what has been said to the matter of "heraldry in its connection with architecture;" observe how we are to search out every point of early practice, and to choose out all that is most excellent in itself, and most worthy in its application, and then to bring our accumulated experiences, in connection and combination with our general stores of information, to bear upon our work. For example (I assume that we first familiarize ourselves with the technicalities, with the mere bookwork of heraldry as science): in the drawing of our heraldic figures, we shall be able to adjust to its true level the balance between natural exactness and conventional exaggeration. Convinced of the necessity of idealizing the real, we shall see how to give the living power of reality to the ideal. Our lions will be lions, but yet heraldic lions. And so with every other device and bearing.

Again, in workmanship, we shall see how far to refine, and how far to carry breadth and boldness; we shall neither sacrifice art to elaborate finish, nor mistake rudeness for natural vigour: we shall be true to both Nature and Art.

Our compositions will be true to the essentially symbolical character of heraldry,—but there will be in them no affectation of symbolism; nor, on the other hand, will historical fidelity be ever permitted to yield, in any one single point, to any fanciful yearnings after originality.

Historical exactness and fidelity we must, indeed, make the keystone of our heraldic system; and it will be well for us to carry out our system in general accordance with early usage. Remembering the true character and use of shields, and whence the shield of arms in architecture was derived, we shall be very particular always to have our heraldic shields in the true form of shields,—always to have them charged with "coats-of-arms,"—always to have their heraldry "true heraldry," and their marshalling rigidly exact. We shall exclude from our shields all mere badges and cognizances, restricting them absolutely to coat armour; we shall admit no "coats-of-arms" which do not possess indisputable heraldic authority; we shall provide that each single shield be expressive, and, if need be, comprehensive in its expressiveness; and our groups of shields will combine order and precision. Badges and other personal devices we shall use with caution, lest their historical character be misunderstood or misapplied; and for such as we introduce we shall always secure distinctive positions. In every instance we shall keep in remembrance that our heraldry is really to be our own heraldry; we shall not introduce an early shield, or an early device, or an early mode of expression, because we happen to have built after an early method, or in an early form.

In restoring early examples (if ever we do restore them), we must, indeed, reproduce the original shields or other devices, otherwise the historical propriety is violated, and the historical record broken through; but, in new buildings, the heraldry must be contemporaneous with the structure,—at least, it ought always to begin with the date of the architecture,—I mean with the period when the architectural work is erected, not the period in which the architectural type may have been originally produced.

In a word, it is for us to preserve to our architectural heraldry the character of a historical record and memorial under a symbolical form: in it, therefore, we must discriminate between personal and general symbols,—between what appertains to the realm in its collective capacity, and to individuals as members of the community,—between what possesses heraldic authority, and what is purely fanciful: we shall avoid the purely mythic, and adhere to the intelligibly figurative; we shall indicate facts, and not indulge in fancies. We shall take care that our drawing, composition, and execution be good and true, yet in keeping with the laws of heraldic truth and excellence. Our ornamentation will be natural, appropriate, really ornamental,—yet in similar keeping with what are laws in heraldry. Moreover, our heraldry will be in its right place, and will appear, in our architecture, to be in its right place. We shall keep in remembrance that architecture is the art, and heraldry the accessory; and consequently, we shall duly subordinate their respective positions. Our heraldry will also be a really ornamental accessory, valuable from what it does for our architecture,—valuable, also, because of its intrinsic importance.

I believe that by thus keeping equally in view all that the past has handed down to us, and all that the present is continually communicating, we may, in our architectural heraldry, surpass what has heretofore been done, even in the best times of Gothic art. Exactly equal in every point to the architectural heraldry of the past in its best condition, I am persuaded that we cannot be; we must be inferior, unless, by aiming at superiority, we become superior. It will be the same with Gothic art itself; the knowledge of to-day combining with the experience of past ages, will raise it to an eminence not hitherto reached, and, by developing its full powers, open to it a new career of brilliancy and renown.

In treating of the heraldry of Gothic architecture throughout its varied career, I have now endeavoured to illustrate my statements and remarks with examples,—and of those examples by far the greater number have been from Westminster. Westminster contains, besides its Abbey Church and Hall, another national pile—its new Palace, a Gothic (or Gothesque) work of our own times. This is a structure peculiarly heraldic in its own character. I deeply regret that I cannot adduce its many heraldic accessories as (on the whole) examples of success and excellence in modern architectural heraldry.* We have much to study and much to accomplish in this matter before it will be easy to point to surpassing excellence displayed in the heraldry of modern architecture. Doubtless, as we have much good modern architecture, so we have much (or, at least, some) good modern architectural heraldry; but I desire and hope to see both the one and the other much better than good,—much better than the best that now is.

And I look to the Architectural Museum as to an Institution which, if properly supported and properly used, may be the means of rendering most important service in maintaining and setting forward amongst us the great cause of architecture,—and with architecture, the cause of all architectural accessories. Let heraldry be included amongst the accessories of our great art, which we may study with mingled pleasure and advantage here, as well as in the neighbouring treasure-house of precious relics, the Abbey Church of St. Peter.

Architects certainly ought to be good heralds; and so ought architectural workmen also to be good heralds; otherwise they can read but in part the stone-writ lessons of early architecture. Their predecessors, the men whose works we all study here, were good heralds. Had they not been such—instead of its being rare indeed to find that they have fallen into an error, or committed a blunder through ignorance, we should have had many warnings against ignorance in ourselves from their failures; but, being good heralds, they did not fail. I cannot point in early architecture to a single instance of such an error, as you may see repeated throughout the whole length of the fine open-timber roof of the equally fine new Hall at Lincoln's-inn. In each of the small spandrils, formed by the upper hammer-beams and braces with the rafters, is a carved shield: these shields are without charges—merely ornaments. The shields are of that peculiar form which was in actual use by the knights

* The opinion here expressed must be considered to apply to the selection, composition, arrangement, and drawing, of the heraldic devices which cluster so thickly around the panelled surfaces (I cannot call them "walls") of the Palace of the Legislature. The workmanship in these accessories is generally worthy of that high praise which I am truly happy to accord to it.

in Tudor times, and in which a notch was cut out on the dexter side, to admit the lance being levelled when the shield was placed in front of the warrior's person. In all the shields along one side of the hall these notches are cut out correctly, on the dexter side of the shield; but in the shields on the other side, the notches are all cut out on the sinister side—evidently to cause the shields along the two sides of the roof to resemble each other, in having this peculiar feature always in the same relative position in the spandril. The heraldic usage of this piercing of the shield was clearly unknown. But the "Architectural Museum" was not then in being.

This is, I know, but a trivial error: still it is like a fragment of straw, which shows the current of the gale: it significantly supports my proposition, that architectural workmen as well as architects, should be good heralds, and for this reason only I have mentioned it.

I leave many curious and interesting, and also important details respecting "heraldry in its connection with architecture," in the hope of being permitted on some future occasion to address to you another lecture on this subject. In what I have now advanced, being merely an amateur, I desire to be considered to have spoken with all deference: at the same time I have spoken without hesitation, and freely, as I really feel: and believe me, that in the matter of architecture and its accessories, my feelings are deep and earnest.

CHARLES BOUTELL, M.A.

FOREIGN ART INTELLIGENCE.

Munich Walhalla.—The latest addition to the German Pantheon is the bust of Schelling. In the year 1852 the sculptor M. Holbig had modelled a bust of the great philosopher after life, from which a colossal copy in white marble was made by M. Lasson, of Munich. This latter has been now placed, by order of King Ludwig, in the Walhalla. On its margin is inscribed, "Fried. Wilh. von Schelling, Weltweiser." (F. W. de Schelling, the world-wise.) The king has also purchased of late a picture made by M. Klotz, and which is much spoken of in Germany,—the astrologer of Wallenstien, Seni, arriving in the morning in his master's bed-chamber and finding him dead! M. Rugenda's "Columbus" is also a recent work of great stamp.

Rome: Excavations.—Prince Barberini has made some excavations near Preneste, which, amongst others, have brought to light a grave, which much resembles that of Cerveteri, especially some little gold plates are very like those of the Museo Gregoriano. It contained also some carving of ivory and several vases, some Etruscan and others painted. Amongst the bronzes are two mystic cisti. Similar excavations will also be shortly undertaken near Ostia, the ground having been already cleared for that purpose.

Nüremberg: a Reflex of the Crystal Palace.—When, three years ago, the Sydenham art-committee had commissioned Messrs. Fleischmann and Rodtermundt to model in plaster of Paris some of the fine Mediæval art-works of Nüremberg, the idea was raised to establish themselves a museum of such monuments in their native city. This has now already reached 200 specimens, of which some are of great importance. Amongst those are the splendid portal of the Frauenkirche, the sepulchre of the Duchess Anna (1512), which alone contains twenty-four figures of saints, &c. There are also models of the passion stations of Adam Kraft, epitaphs of Peter Vischer, and especially some fine carvings of the best Mediæval style, amongst which one of the "Last Judgment," from the Emperor's Chapel, in the Castle of Nüremberg. Messrs. Fleischmann and Rodtermundt have also a work entitled, "Monuments of Mediæval Sculpture," with engravings by Prof. Walther, dedicated to Maximilian, of Bavaria.

Restoration of Ulm Minster.—The transactions of the Archæological and Art Society in Suabia, are amongst the most interesting in regard of Mediæval architecture and art. The present issue contains a paper on the excavations of Celtic and Roman tumuli; on the architecture, sculpture, and painting of Suabia; on the industry and commerce of Ulm in olden times; and finally, on the restoration of its ancient minster. The architect, M. Thrän, renders a detailed report of the works done here since 1851, to which a very correct plan of this famous building is added. The same gentleman has written an ingenious explanation of the old baptismal fonts at Heiningen, Arnegs, &c. The documentary history of the great Suabian painters, Frederic Henlen, Barthol. Zeitbloom, Martin Schöngraver, are of equal interest. Large lithographed plates of the fonts by M. Thrän conclude the transactions.

German National Festivals.—The town of Hall, in Suabia, has witnessed this year the meeting of the German *turners* (gymnasts), who assembled there, carrying banners, wreaths, maypoles, &c. They were hospitably received by the private citizens of Hall. This was a public prize-contention, like in ancient Greece, and after an excursion in the neighbourhood, the sturdy gymnasts returned to their homes, many, a hundred miles off.

GLEANINGS IN IRELAND.

THE new Roman Catholic Church at Tipperary has been commenced by Messrs. Doolin, of Dublin, contractors, and is expected to be completed on the 1st of November, 1857. The plan comprises nave and aisles, with chancel and side chapels, sacristy on the north side, and tower and spire at the west end of south aisle. Dimensions in clear are 141 feet by 65 feet. The height of the clerestory walls is 48 feet, and from floor to ridge 75 feet. The total height of tower and spire will be about 170 feet. Style, Early English. The material is limestone of the neighbourhood, with white sandstone for internal columns and dressings. Probable cost about 7,000*l*. Mr. J. J. M'Carthy, architect.

A small convent chapel, 60 feet by 20 feet, with cloisters and sacristy, is to be built (under the same architect) at the Presentation Convent near Clontarff, county Dublin. The material will be red bricks, with Bath stone dressings. The style Decorated Gothic. Cost about 1,000*l*.

The improvements at the harbour of the town of Wicklow comprise a pier and breakwater 460 feet in length and 45 feet in breadth, 4 feet high over high-water mark. Piles have been driven into the bed of the river to strengthen the quays. The channel of the river is to be dredged out, and sunk 8 feet below low-water level. His Excellency the Earl of Carlisle visited the town recently on the occasion of an experimental trip on that portion of the line from Bray which has been since opened, and which presents some objects of engineering skill. The first stop was at the point of the head known as Ram Scalp, opposite Bramstone tunnel, where a viaduct of timber 300 feet in length, at an altitude of 75 feet, has been constructed. The next tunnel is the Brandy Hole, and a third is cut through the cable rock. The railway runs along the Murrough for five miles, and the scenery on the entire line is (as may be expected) very picturesque and romantic.

The new church of St. Cronan, at Roscrea, has been dedicated. The original entrance to the chapel on this site was through the basement of the belfry of a Franciscan church, founded in 1490. The building recently erected was commenced about the year 1843, but the works were for some time suspended owing to the famine of 1848, which presented necessary subscriptions from coming in. Mr. William Deane Butler, of Dublin, is the architect.

The report of Captains Kellett and Frazer, as to the respective merits of Messrs. Rendell's and Barry D. Gibbon's plan for the improvement of Kingstown Harbour, has been published, and recommends the adoption of Mr. Gibbon's plan, as affording "all the necessary accommodation and safety for the packets and convenience for the travelling public."

The pedestal of the statue of the late Earl of Belfast has been designed by Mr. Charles Lanyon, architect (Mr. McDowell, sculptor), and is of Irish granite. The Lord Lieutenant attended, and delivered an appropriate address, at the inauguration of the monument.

The O'Connell Monument, in Limerick, will consist of a granite pedestal 12 feet high, with a statue 8 feet high, in bronze, from a model by Hogan placed thereon. It is to be cast in Paris.

Kidbrogan Church, Bandon, built by the first Earl of Cork, on the ground of an old Danish intrenchment, and in a locality replete with historical interest, is being re-modelled. The western gable has been removed, and an enlarged projection built with a large Gothic window. The tower is being built, and an octagon spire is to be raised thereon. Mr. Welland, architect; Mr. Matthew Parrett, builder.

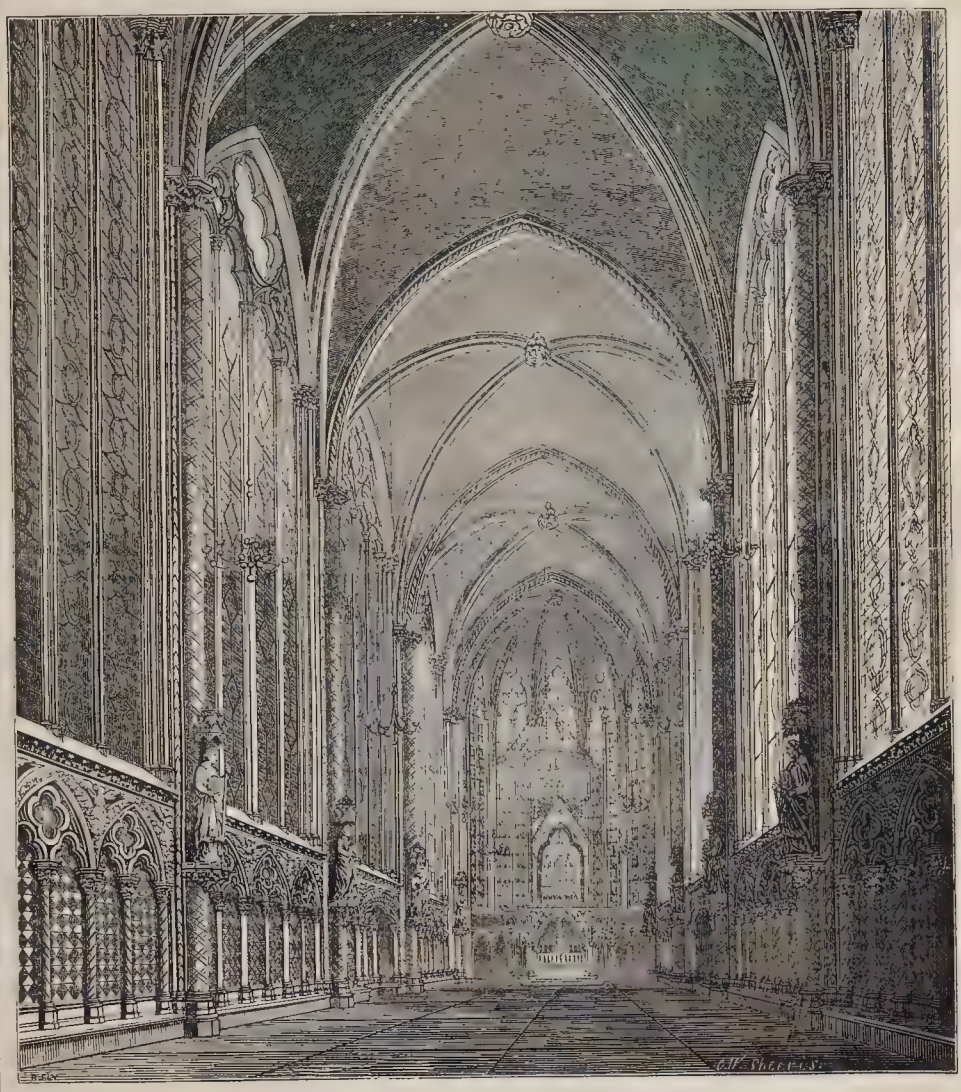
THE CAMP AT SHORNCLIFFE.

SEVERAL weeks ago we were informed on very good authority that the men of the Foreign Legion had no sooner entered the new huts at Shorncliffe, than a violent outbreak of cholera occurred, and carried off a number of them. Our informant said that being seen in the camp by a medical acquaintance, he had been warned that "it was no place for one who wished to keep well." We have delayed mentioning the circumstance, hoping, as we heard no confirmation, that our correspondent had been wrongly informed. Now, however, that we see in the Registrar's returns thirty-four deaths from cholera reported amongst the men of the Foreign Legion stationed in the Folkestone district, it seems to us unwise to allow so sad an occurrence to pass over in silence, and without inquiry. Possibly some of our readers may be able to throw light upon it, and to say how the huts were constructed.

ACTION OF BEER ON LEAD PIPES.

IN a large London brewery to which I am surveyor, a number of old lead beer mains have recently been removed. They have had porter running through them for about sixty years, and, at intervals, ale also. During the time that the pipes were not charged, the air had access to the interior. On removing them, we found that the beer, &c. had had no effect whatever upon the lead, beyond leaving a very thin brown crust (apparently of sediment), which being removed, the lead was seen quite smooth, and with the bloom upon it, as though put up only yesterday.

As one cannot often get the experience of so many years, I thought the statement worth sending. T. H. L.



*** This experience, it will be seen, is at variance with the statement of the French minister already referred to. Probably the result is regulated by the quality of the *water* with which the beer is made.

YORKSHIRE ARCHITECTURAL SOCIETY.

THE annual meeting of the members of this society was held in York on Thursday, October 25th, when a visit was paid to the church of S. Mary Bishophill, Junior, for the purpose of examining its architectural features. The tower of the church naturally attracted the chief attention of the members present, and after a minute inspection was pronounced to be an undoubtedly Saxon example, although it was evident that it had been much tampered with, and repaired at a considerably later period, and was supposed originally to have been constructed in a great measure with materials taken from some destroyed Roman building. The remainder of this church is principally of Middle Pointed date, with the exception of the north arcade of the nave, which is of Norman character. The two arches of the south arcade are very curious. They are evidently of Middle pointed date, but are nearly straight-sided. These were considered to have supplied the place of more ancient Norman arches, and to have been built in this form in order that their height might not exceed that of the former ones.

At two o'clock the members met at the Society's Rooms, Minster-yard. The Rev. John Sharp, of Horbury, near Wakefield, occupied the chair. The Report, read by Mr. W. H. Dykes, one of the honorary secretaries, said, as to Spofforth Church;—

During the course of the past year information was received by the committee, that considerable work

INTERIOR OF THE SAINTE-CHAPELLE OF PARIS. [See p. 537, *ante*.

were in progress in the nave of the magnificent church of Spofforth, and that there was an intention of extending these works to the choir, which it was proposed should be taken down and rebuilt upon a very contracted scale. On investigation it was found that the whole of the nave, with the exception of the north arcade, had already been pulled down, and was in the course of being rebuilt without regard being had to the style of the building that had been destroyed, and that the stately chancel was already unroofed for the purpose of its demolition; and further, that these works were proceeding without any faculty being had from the Ecclesiastical Court. The committee at once sent information of what was going on to the Archdeacon of Craven, who inhibited the further progress of the work until the matter should be brought before the Consistory Court. The rebuilding of the nave was already far advanced in accordance with a new design, but the committee still thought that they might succeed in saving the chancel, which was one of the noblest and most spacious of its date within the county; and in this opinion they were confirmed by the remarks which were made by the Chancellor, when the question was first brought into court. They therefore at once drew up a memorial, which they submitted to the court, praying for the preservation of the chancel, and protesting earnestly against its threatened mutilation or curtailment. It was long before any decision was given, so long, in fact, that the elements virtually decided the case, for the roof having been removed before the commencement of the proceedings, and the walls being left during some months unprotected from the weather, at length gave such evident signs of approaching ruin, that it was determined that they must come down, and a faculty was accordingly granted, allowing the rebuilding of the chancel, after a new design, and of contracted dimensions. The church formerly appeared, externally, as a noble structure of middle and third-pointed character: now it has been rebuilt, with the exception of the tower, in imitation of Romanesque, and with a chancel reduced to nearly one half of its original size. By some, this change has been called a "restoration;" but the true state of the case is, as it seems to your committee, that one of the noblest parish churches in Yorkshire has been ruthlessly destroyed, and that a building which bears no resemblance to the former structure, has been substituted in its place. Another object which has occupied the attention of the committee, with like ill success, has been the endeavour to preserve the fine old gateway of Holy Trinity Priory, in Micklegate, in this city. The site of this priory, which, since the dissolution of the house, has lately been sold, has been thrown upon the market by the new proprietor as building ground, across the centre of which a street has been laid out. As the committee were deeply anxious that the gateway should be retained, they suggested that the entrance to this new street from Micklegate should be made through the old archway, which was of ample dimensions for the purpose, and offered, if their proposal was accepted, to make themselves responsible for raising the necessary funds for the repair of the

gateway. Their proposal was, however, rejected, except upon the condition of their purchasing for the proprietor additional property, which would have involved them in an outlay of some hundred pounds, with which condition they were unable to comply. They had, consequently, the mortification of seeing this venerable structure sold to a stonemason, for the sake of the materials, and piece by piece demolished."

The Rev. J. B. Scriven read a financial statement, from which it appeared that during the year there had been received in donation 13*l.* 2s.; and in subscriptions and arrears 102*l.* 2s. 4½d. The expenditure for the same period had been 26*l.* 13s. 8d.; leaving a balance in hand of 88*l.* 10s. 8½d. The actual balance, however, due to the society, was only little more than 15*l.* as when all the outstanding accounts were got in and paid, the 88*l.* odd would be reduced to about 15*l.*

The Rev. R. E. Batty, of Pontefract, then read a paper on the subject of "The Cross as an appropriate Symbol for a Tombstone." The rev. gentleman referred to instances of the cross being employed in early Christian times, and then observed that in the Lutheran Church, the sign of the Son of Man is adopted without any hesitation. He argued, that viewed as an architectural ornament the cross demanded our attention. It was capable of great display of artistic skill on the one hand, and might be made simple and unassuming on the other.

CHURCH-BUILDING NEWS.

Salford.—The polychromatic decorations of St. John's Roman Catholic Church here were designed and executed, with one small exception, by Mr. H. T. Bulmer.

Tillingham (*Essex*).—The restoration of the chancel of the church here has just been completed. The east window has been glazed with Powell's quarries, at the expense of Dean Clarke's trustees. Mr. C. Ainslie, of London, was the architect, employed, and Mr. Wm. Brown, of Lynn, the builder.

Greenstead.—The church here, being too small, the rector has issued an appeal for assistance to enlarge it. It is proposed to repew the area and to add an aisle, whereby nearly twice the number of sittings will be provided—the increase to be free. To this the ecclesiastical authorities have consented, and the plans and specifications have been approved by the Essex Church Building Society: funds to more than half the amount required have been contributed.

Ridgmount (*Bedford*).—The new church of All Saints for this parish was consecrated on Thursday in last week. The edifice is in the Decorated style, and consists of nave with north and south aisles in five bays, chancel, and vestry. The organ is at the end of south aisle close to the vestry. The tower, with broach spire, is at the west end—the arch open, showing the west window. The east window is of three lights, with flowing tracery, and is soon to be filled, according to the *Bedford Times*, with stained glass. The other windows are of two lights, filled with cathedral glass. The clerestory windows are of trefoil form. The nave roof is of open timber-work. The tower and spire constitute the chief features of the exterior. It is built of Cosgrove and Stagsden stone with Box Bath stone dressings, and the sandstone of this neighbourhood occasionally introduced for decoration. The admixture of colours is thus a creamy white, grey, and dark brown. At the north-east angle of the tower is a belfry-turret, from the top of which a very extensive view is obtained, the site of the church itself being an elevated one. The spire has canopies at the openings, and crockets running up the angles. The church is paved throughout with Minton's tiles, encaustic in the chancel. The sittings are uniform and open, being constructed of pitch pine, stained. The font has been brought from the old church. The building throughout is warmed by hot-water pipes. Mr. Scott was the architect, and Messrs. G. H. Miller and Son, of Bedford, were the contractors for the building. Mr. W. Freshwater, of Bedford, undertook the woodwork, and Mr. Smith, of Bedford, the glazing.

Lapley.—The parish church at Lapley, near Penkridge, says the *Wolverhampton Chronicle*, requires immediate repair; and the chapel-of-ease at Wheaton Aston, a mile and a half to the westward of Lapley, and in the neighbourhood of which the principal portion of the inhabitants of the parish live, is alike deficient in accommodation as it is unsightly, both externally and internally. In May last Messrs. Bidlake and Lovatt, of Wolverhampton, architects, prepared plans for the restoration of both the church and chapel-of-ease. The plans for the restoration of the church involve an expenditure of 850*l.* 250*l.* of which are required to protect the tower, some of the buttresses of which have been cut away, one of them to make room for a gravestone. To complete the alterations in the chapel-of-ease, by which 140 additional sittings would be gained, an outlay of 600*l.* is required.

Shrewsbury.—The new Roman Catholic Church here is rapidly drawing towards completion. The style is Decorated, and consists of a chancel 24 by 21 feet; side chapel; nave, with aisles, 75 by 48 feet; two sacristies, one for the clergy, and one for the servers. The nave is separated from the aisles by five arches, supported on octagonal Painswick stone pillars, with moulded bases and carved caps, and ornamented with wood moulds and bosses. The east window is of seven lights, the upper portion filled with geometrical tracery, and it occupies almost the entire of the east end. The chancel has four side windows, of three lights each: it is separated from the nave by a Painswick stone arch, 38 feet high. There is a clerestory, and a small bell-cott at the west end for one bell. The clerestory in nave is lighted by triangular tracery windows, with simple tracery. The ceiling of the chancel is panelled, and that of the nave and aisles open. The west door is approached by a flight of nine steps. The whole of the exterior is built from stone obtained at the Grinsal quarries. The total cost will be about 3,500*l.*; and the building is calculated to hold 1,000 souls.

Bedminster.—The new church here has at last been consecrated by the Bishop of Gloucester and Bristol, attended by nearly 100 of his clergy. The edifice is cruciform, with aisles and western tower, and is capable of containing upwards of 1,000 persons. The chancel, which is raised by three steps above the level of the nave, is separated from the transept, or transeptal chapels, by two lofty wooden screens, surmounted by a metal cresting, bearing innumerable leaf-shaped gas jets, and from the nave by a low arcading in Caen stone and Purbeck marble, to which it is intended, on some future occasion, to add handsome brass gates. At the east end is the reredos, carved in Caen stone, and representing, in three alto-relievo compartments, the Nativity, Crucifixion, and Ascension of our Lord, surmounted by elaborate canopies, with Babbicombe marble shafts. Between the compartments are niches containing statues of the four Evangelists; and on the canopies are angels, also in Caen stone, with a cross in the centre. The nave is seated throughout with low open benches. The roof of chancel is waggon-headed, and the two easternmost bays decorated with painting and gilding: that of the nave is open, with intersecting braces. The pulpit, which is in Caen stone, and square, stands at the north-east corner of the nave, and is entered from the chancel. The windows at the east and west ends have been painted by Mr. O'Connor, of London; those in the clerestory by amateurs. The east window is of three lights, representing our Lord on a jewelled cross in the centre, enclosed in a vesica of passion-flowers, with the Holy Women below. On the two side lights are groups of adoring angels, with St. John the Baptist below them on the north, and St. Stephen the Deacon on the south.

Cardiff.—The foundation-stone of a new Wesleyan Methodist Chapel, was laid here on Wednesday before last, by Mr. S. D. Jenkins, Bude Docks, the principal contributor towards its erection. Mr. J. Wilson, of Bath, is the architect, and Mr. William Backhouse, of the same town, the builder. The cost will be about 2,000*l.* The site is in London-square. The length of the chapel will be about 70 feet, and the breadth 50: it will be without a gallery, and will contain 150 free sittings. The style is Early English. Schools will also be built, with vestry and other conveniences.

Seaham.—During a high wind on the night of Tuesday week, the greater part of the new building, now being erected here for a Congregational Church was blown down. The damage done is reported to be between 300*l.* and 400*l.* The loss, it is said, will fall on the builder.

Newcastle-upon-Tyne.—St. John's Church has, for the last few weeks, been closed to the public, and in the interim various improvements have been effected in the chancel, which was rebuilt in 1848, but was then left unfinished in the interior, owing to want of funds. The embellishments in the vicinity of the communion table of the church comprise carved oak panelling and railings executed by Messrs. Burnup, from designs by Mr. John Dobson, of this town; figures and scrolls added to the large east window by Mr. Wailes, and the painting of the decalogue, creed, &c. by Mr. Potts. The organ has been refitted by Mr. Nicholson; and Mr. Rattee, of Cambridge, supplied some furniture. Owing to the funds having proved insufficient, part of the side panelling has not been completed. The whole of the interior of this ancient building requires a thorough repair.

PROVINCIAL NEWS.

Alford.—It has been the talk during the last few days, says the *Lincolnshire Chronicle*, that a new corn exchange will shortly be erected at Alford.

Kelvedon.—This improving town is now partially sewered and lighted. About twelve months ago, Mr. J. Fenton, of Chelmsford, made a survey, and gave a plan, &c. for draining a part of the street at the eastern entrance, which has now been carried out, and nuisances removed. To complete the drainage at once throughout the town would have incurred an impracticable expense: it is therefore proposed to do it by degrees, that it may not press too heavily upon the ratepayers. The lighting of the town with gas was carried into effect on Wednesday before last. The gas-works were then not quite completed.

Liverpool.—The promoters of the association recently formed here for improving the dwellings of the poor, have chosen eligible building sites in Northumberland-street, not far from the South Docks, and near a populous district. Designs, approved by the Health Committee, have been adopted, as convenient and economical, for about forty cottages, in three separate stories, with an infant school adjoining, a wash-house in the basement, and a drying-room in the attics, for the use of the tenants.

Manchester.—The re-opening of the Sunday and day schools in connection with All Saints' Church, in York-street, off Oxford-street, took place on Tuesday before last. The old schools have been re-modelled and partially re-built, and a considerable increase of accommodation has been provided. The large room is about 80 feet by 30 feet, and 18 feet in height, with two class-rooms adjoining. The infant school on the ground-floor is about 30 feet square, and of good height. The industrial department is behind. The schools will now afford accommodation for nearly 700 children. There are also wash-houses, ironing-rooms, kitchens for cooking, &c. attached to the schools, in which the industrial instruction is imparted. Towards the sum of 1,800*l.* incurred in the purchase and alterations, 1,300*l.* have been raised, so that there is a deficiency of about 500*l.*

Sheffield.—The chairman of the Sheffield Board of Guardians has given notice of his intention to propose, amongst other resolutions, to the Board, that 30,000*l.* be laid out in the purchase of fifty to sixty acres of land and in the erection of a new workhouse and premises for the union.——The first stone of the new school of design was laid by Dr. Branson, the president, on Wednesday before last. The council resolved to reserve all public demonstrations for the opening of the school. Messrs. Manning and Mew are the architects, and Mr. Ald. Mycock the contractor.

Glasgow.—Messrs. Wylie and Lochead have commenced to re-erect shops and warehouses on property in Union-street, destroyed by fire lately. The Procurator's Hall, in George's-place, is another new building lately erected. A commencement has been made with a large pile of buildings, projected at Madeira-court, and with a range on the opposite side of Argyll-street. The iron edifice in Jamaica-street is also making progress.—*See* also under "Railway Matters."

Dundee.—The foundation-stone of a new industrial school building was laid here on Thursday in week before last. The site is in the Wards, in the open space in front of the jail. The design is by Mr. Charles Edward, and was selected in a competition by local architects. The walls are of rubble work, of local stone, and the dressings are of Fifeshire stone. The design is after the old English model. The extreme length is 128 feet, having slightly projecting wings. On the south elevation there is a small tower. A corridor runs the whole length of the building. In the centre of the building is a dining-hall, 55 feet by 20 feet. The building was estimated for at an aggregate sum of 2,329*l.* Of this sum upwards of 1,000*l.* were raised by a subscription for a testimonial to Mr. Duncan, M.P. for the burgh, who proposed that it should be expended in the erection of a new building for the industrial schools established here in 1846. By means of a ladies' bazaar, an additional sum of no less than 1,100*l.* was procured. The chief stone was laid by Mr. Duncan as Grand Master of the Provincial Grand Lodge of Freemasons, who attended from their various lodges in procession.

Fraserburgh.—The new town-house at Fraserburgh, according to the *Banffshire Journal*, was opened on Tuesday before last, by a ball and supper, given by Lord and Lady Saltoun. The building is of freestone, and occupies the site of the old town-house. It is surmounted in its centre by a dome. The lower floor is occupied by a market-place, with stalls for fleshers, &c. To the wing fronting the west are the police-office, cells, &c.

FREE LIBRARY FOR THE CITY OF LONDON.

On Monday last a meeting, numerously attended, was held in the Egyptian-hall, in the Mansion-house, to consider the propriety of establishing a free library for the city of London; and we are the more sorry that it was determined in the negative by a very large majority, because there is too much reason to fear that the example of London will be followed by other corporations in the provinces.

In the city of London, it is true, there are several libraries of great value, but these, owing to various causes, are to the great body of the community useless.

First, the Guildhall Library, consisting of upwards of 12,000 volumes. "Here," says Mr. Deputy Peacock, "in the month of October, only seven persons attended." It is a mistake to suppose that this library consists only of dry, antiquarian books connected with the history of the City. It is true that it is rich in this respect, and contains many drawings and important manuscripts, which have been scarcely looked at since the time that they were lodged there at considerable expense; but there are many books of general interest.

The recommendation of any common-councilman or member of the corporation is sufficient for admission here for life. How is it, then, that this important library is, as it were, a dead letter?

There is nothing to be urged against the librarian for want of attention, but visitors are so scarce that a feeling is induced that one ought not to give trouble to the single attendant. The place wants a more business-like appearance, and the library should be enlarged. The value of the library as one of general use requires to be more generally known,—it requires to be thrown open on the recommendation of any responsible person in the city,—clergymen, merchants, bankers, and respectable shopkeepers; and, above all, it ought to be opened in the evening, say from five o'clock till ten, when the young men of the City, relieved from business, would be able to attend. At present the Guildhall library is open from about eleven o'clock till three or four in the afternoon, hours when every brain in the City is engaged in business, and has no time to spare for books. The Guildhall library is a nucleus for a useful institution, in which, at moderate expense, could be collected the standard and more general works as they appear. The corporation should at once see to this.

The library of Sion College is also of great extent, and contains, in addition to the more rare theological works, many hundreds of volumes of general information; but this, for public purposes, is also a lost library; so is Dr. Wilson's. Each of these, with the large funds available, might, to some considerable extent, be made a public benefit.

Connected with the Bank of England, a library, by the exertions of a few of the gentlemen in the establishment, has been successfully formed; the results in every way showing that the City youths are not disregardful of the means of knowledge. This library is open in the evening, and we have reason for believing that many young men in the large houses, who sleep in the City, would gladly avail themselves of the Guildhall, or any other library to which access could be had during convenient hours.

THE METROPOLITAN COMMISSIONERS OF SEWERS AND THEIR ENGINEER.

At a recent meeting, Mr. F. O. Ward, with reference to principles, made a serious charge against the engineer of the Commission, Mr. Bazalgette, having previously asserted that the plan prepared for diverting the sewage of London, approved by Sir William Cubitt and Mr. Robert Stephenson, is founded on wrong principles, and that the engineering details for carrying out these principles are unscientific. Mr. Ward, at the meeting referred to, accused the engineer of having made serious engineering errors; of having concealed those errors, and sought to establish his own conclusions by tampering with the details;—such as altering the declivity of the ground in particular instances, omitting important data, and introducing, without acknowledgment, formulæ prepared by persons who are not recognised by the Commission. Mr. Ward moved a resolution for appointing a committee to investigate and report upon the engineer's own statement; the committee to be assisted by three eminent professors of mathematics; such as Professor Willis, Professor Moseley, Mr. Babbage, or Mr. Wheatstone. The Court postponed the consideration of the subject, and appointed a special day on which Mr. Bazalgette could appear to state his own case in answer.

Mr. Stephenson has since published a letter, wherein he says,—

"This plan was prepared and submitted to me as a commissioner by Mr. Frank Forster, in 1850-1. It has since been altered and improved by the extended experience of Mr. Bazalgette and Mr. Haywood, the engineer of the City sewers, who have given their attention to it for more than three years.

Every detail has been submitted to Sir W. Cubitt and myself; the levels have been most carefully taken by Mr. J. Smith, the surveyor of the commission.

Each part of the whole plan has been separately and conjointly deliberated and reported on by Sir W. Cubitt and myself. At least three of these reports have been printed by the Commissioners of Sewers.

I have personally checked all the calculations; the formulæ or rules used in making these calculations are those accepted by every engineer of hydraulic reputation: of their accuracy I have no manner of doubt.

I am therefore prepared to be personally answerable for the soundness of the principles and the accuracy of the details of the London sewage intercepting plan which Sir W. Cubitt and myself have approved as consulting engineers; and I beg leave here to express in the most decided manner my full confidence in Mr. Bazalgette's professional skill and personal integrity, as well as my opinion, that he has furnished the commissioners with all the information which he was bound to furnish."

Mr. Stephenson terminates his letter with the expression of his opinion, that Mr. Ward's objections are "nothing better than puerile."

Mr. Ward, in reply, says the question is *size and cost*:—

"How big must the intercepting tunnels be? How much must the ratepayers spend on them?

Mr. Stephenson, calculating by a formula, fixes 272 square feet as the collective sectional area of the north-side tunnels, and 1,627,000*l.* as their collective cost.

I and my friends, on the contrary, relying on John Roe's observations of the run of the Fleet in all weathers, for more than twenty years, and adopting (subject to modifications) John Roe's proposed lines and sizes, fix 108 square feet for the north-side tunnel capacity; and so reduce the cost to 753,000*l.*

Our object is to save, for north-side ratepayers, three quarters of a million sterling of capital (besides heavy annual pumping costs); and the economy we aim at for the south side is relatively larger still.

Whether we are right or wrong, is a matter for technical decision; but we submit that our broad proposition is neither 'intricate' nor 'puerile.' It is clearly for the ratepayers' interest that the question we raise should be discussed; nor can such a debate be properly suppressed by the weight of an eminent name.

This tunnel controversy is, in point of fact, only the tubular controversy renewed on a greater scale. We have carried, against the vehement opposition of the very engineers whom we now find against us, the substitution of small pipes for great culverts in the drainage of streets and houses. We have already saved for the public by that system, so strenuously decried up to a year ago, several hundreds of thousands sterling. We can point to scores of provincial towns drained on the new principle at a third of the cost of the old mode. We have already between 200 and 300 miles of pipe working successfully in the metropolis. And at Croydon, where the pipes were said to have caused an epidemic, the zymotic mortality has declined since their introduction (partly, no doubt, because of their introduction), upwards of forty per cent."

Here stands the matter at present.

REAL CEMENT!

What a sad state we poor moderns are reduced to in architecture. This morning, one of the cement vases on a neighbouring house came to pieces, and fell into the street in lumps several pounds weight. If any person had been beneath, the consequences might have been as fatal as a round shot or shell at Sebastopol. There are several more vases up in the same place. It is to be hoped they will not come down in a similar manner. There are also vases in Belgrave and other squares. Cement! real cement!!

But joking apart, this cement work is the bane of us weak and flashy moderns. Cement fronts, cement columns, cement balustrades, cement cornices, and cement vases; the latter ready at any moment to fall and break our heads. Pray take warning, gentlemen. If we must have cement, life and limb at least ought to be safe. A jury would give heavy damages against the builder or owner of such cement abortions.

ON TENORS AND BELLS IN GENERAL.

Mr. Denison deserves praise, for his remarks, from every campanologist. Having been allowed by the *Builder* insertion of a list of London peals and tenors, about four years ago, I may claim to be a campanophilist. The avidity for weak—numerous—bells in our day may plead that "anything is better than nothing;" and, certainly, a few "lively tinklers," as Dr. Parr, a great campanologist, expressed himself, may be preferable to the mockery of *one* dull bell in a large tower, whose "campanological" use might have been supplied by a gable or turret. But there is another adage, that "what is worth doing is worth doing *well*," and those who can put up bells might consider that a little more liberality would be a greater boon to posterity.

When "St. Barnabus" had a peal of *ten*—tenor, 19 cwt.—it might have been thought the minimum was reached, though there is a "pretty" peal, with twenty, at St. Dionis', in Fenchurch-street, and a tolerable at Horselydown. Now, it appears, a family of *twelve* have an equally weak head, which would greatly resemble, in suitability, a "father of ten children," at the age of thirty.

Thirty years ago, it was supposed that St. Bride's—28 cwt.—was the lightest tenor of twelve in England. I believe there is a good tenor of ten, about 21 cwt. at Fulham; also at Aston (Birmingham). At Cheltenham, I am told, loud, at 22; better, 24 or 25, as at St. Magnus, Bermondsey, and Poplar. (?) Better still, as at Wrexham, 33. Of "Bow" (53½), the largest in London, I will only observe, I have heard, the peal is similar in weight and key to York Minster. According to the *Family Herald*, some time back, the heaviest in England is Exeter—"tenor" (not the "clock bell," 6 tons), 75 cwt.

I more than agree with Mr. Denison on the absurdity of a tenor of 14 cwt. for eight. I would venture to predict that there are few peals of eight a century and a half old, especially in towns of any pretension, with tenors under 20 cwt. and that weight is

not "grand." The smallest I have known within that date is Brighton, 16. I am sorry to see in the *Morning Advertiser* that weight only for a peal of eight recast by the Duke of Norfolk (and said to "reflect great credit" on Messrs. Mears), at Arundel.

The average, in my experience, is from 20 to 23,—the latter at Portsmouth. Sometimes 26 or 27, as at East Grinstead, Sussex, and St. Paul's, Bedford. There is a very musical, though not loud peal, at All Saints', Northampton, 22½ cwt. A fine one at All Saints', Derby, but I know not the weight. Greenwich (now ten, but I have not heard the trebles used); and Hackney Old Church, both good, 25. At South Hackney is a peal I must agree to be the best in tone and effect, for the weight (I know not the founder), of late years 20 cwt.

Mr. Denison may be very right in his expression "potty," and the larger of three at Knightsbridge is harsh enough. At Christchurch, Newgate-street, said to be built for twelve, is a new bell of 23 cwt. (much inferior to All Hallows, Thames-street, *ib.*) termed very "full-toned," and certainly powerful, but I should conceive it "sullen," if poets have thought that picturesque.

Perhaps there were scarcely any peals of eight before the Reformation. The only record I have seen is of Tewkesbury Abbey. Although their "fives" and "sixes" might be far heavier, as at Christchurch, from Osney Abbey (*vide* "six" in the catch), at Luton and Dunstable, Beds, there were five, with tenors of about 50 cwt. and 36 cwt.* both now eight: at the former is now a poor substitute, only 20 cwt. At Leighton Buzzard, recast from six, now 27 cwt. The weights of the Oxford College peals, Christchurch, Magdalen, and New, ten, Merton (also parochial), eight, have never, I believe, been given, and would interest.

I venture to differ with Mr. Denison, as to 14 cwt. being a sufficient tenor for six; unless where lightness be essential, when I have known 12 cwt. or even less. The average in country villages, may be from that, or 15, to 18 cwt.; the latter at Ticehurst, Sussex, and Eversholt, Beds. Sometimes, as also of five, 20 cwt. or upwards. I have known of a tenor of six, 36 cwt. at Baldock; and know there is one of 33 cwt. at Wing, a Bucks. village, between Aylesbury and Leighton. And have been assured of 56 cwt. at some Oxfordshire village, worth inquiring into.

The most beautiful ring of six I know (two recast in the present century), and expect to be unexceeded in Europe, and worth a journey to hear, is at Hasborn Crawley, about 1½ mile from Woburn, Beds. Here there is the peculiarity, at least in my experience, of beginning "high." The "treble" weighing full 11 cwt. and the tenor about 21½ cwt. with, perhaps, 1 cwt. each difference between the first five. There is a class idea that the tenor should weigh "half as much more" than the preceding bell (though at Cripplegate, an excellent set, when rung, it is 38 and 28 cwt.) But here the effect, with the weight of the fourth and fifth (15 or 16 cwt. probably), is much augmented. J. D. PARRY.

THE SYMBOLS ON THE PENNY.

A WRITER in your paper of the 27th October last, under the signature "S." is very facetious upon the subject of our present penny; and he imagines that he has made the discovery of the omission of the Saltire of St. Andrew in the shield.

With his young hopeful's criticisms upon it as a work of art, I have little to do; although I see no reason why Britannia should not hold the trident in her left hand if she be so minded; but with regard to the Scotch Saltire, I think it will be found that "S.'s" discovery of its omission is one of which he may be left to the sole and undisputed enjoyment.

The Saltire of St. Andrew is there. As the colours are not marked on the coin, we may suppose the field to be azure. Then we have first the Saltire Argent of St. Andrew on its field azure: upon this is the Saltire of St. Patrick, gules on its field argent; the whole surmounted by the cross of St. George gules, fimbriated argent. And this arrangement of the three badges of the United Kingdom I take to be far better than that which is usually made in our Union Jack.

The late Sir Harris Nicolas, well known as a good herald, some years back wrote a paper upon the absurdities of our Union Jack; and his suggestions for its alteration were, I think, such as are represented upon our penny. PENNY-ROYAL.

NEW CHURCH IN SOUTHWARK.—A church is to be erected in Union-street, Blackfriars-road, one of the worst parts of the densely-populated parish of St. George the Martyr, Southwark. The new church will be dedicated to St. Michael.

* See "Bibliotheca Topographica Britannica."

THE SUBSTRUCTURE OF OLD LONDON.

THE SUBSTRUCTURE OF OLD LONDON.

THE FLEET VALLEY.

IN making the excavation for the great sewer which will soon convey from view the Fleet-ditch, at a depth of about 13 feet below the surface in Ray-street, near the corner of Little Saffron-hill, the workmen came upon the pavement of an old street (A), consisting of very large blocks of ragstone of irregular shape. An examination of the paving-stones shows that the street had been well used: they are worn quite smooth by the footsteps and traffic of a past generation.

Below the old street we find another phase of Old London. Thickly covered with slime are piles of oak, hard and black, which have seemingly been portions of a mill-dam. The formation of the ground indicates that in ancient times, a water-mill with all its appurtenances, had stood here. To the north of Ray-street has been a large pond banked up, and where Ray-street now is, on the south, was probably one of the city mills referred to by the London historians. In course of time the mill-pond and dam became filled with slime, and the water scarce, and then the old mill road became the centre of a street.

A few feet below the stakes were very old wooden water-pipes, nothing but the rough trunks of trees: as shown in the sketch. The course of time and the weight of matter above the old pavement have pressed the gravel, clay, granite, portions of tiles, &c. into a hard and almost solid mass, and it is curious to observe that near the old surface are great numbers of pins.

Whither have the pins gone? is a query which has puzzled many. In comparatively modern days, "Pinne money" was an important item in the dame's accounts. Pins were then expensive: those which fastened the dresses of the old English-Saxons were made at wonderful pains and cost: the specimen of now hard concrete in the sketch, stuck with these useful articles, almost like a pincushion, is a partial reply to the query. The 13 feet of newer deposit would seem to have accumulated in two or three centuries: it is not unlikely that a portion of the rubbish from the City after the Great Fire was shot here.

THE BARRACK-COMPETITION DESIGNS.

REFERRING to the paragraph on the above subject in your publication of the 13th October, 1855, from which it appears that over 130 designs have been submitted to the Barrack Committee, and as considerable anxiety must be felt by the public as well as by the competitors, I would suggest that before, or at any rate after, the decision of the War Department or committee on these designs, the whole should be exhibited for public inspection, so that all interested as well as disinterested parties may have an opportunity of inspecting and examining the designs in question.

This course would appear extremely desirable. The barrack establishment proposed to be erected from the *best* design submitted, will probably be the model on which many such extensive establishments will be erected in the British empire, and as their erection will be at the cost of many thousands, if not millions, of the public money, it is but fair and reasonable that the public, who pay, should have an opportunity of criticizing all the designs submitted by the competitors previously to any of the designs being carried into execution. COMPETITOR.

UXBRIDGE CEMETERY.

THE cemetery for the township of Uxbridge, situate in Kingston-lane, about one mile distant from the town, was consecrated on Monday, the 29th October, by the Bishop of Oxford (in the absence of the Bishop of London, who was prevented by serious illness).

The quantity of ground enclosed is 4 acres, and the cemetery has been laid out and drained, the roads formed, and the ground equally divided into consecrated and unconsecrated portions; the central road forming the separation, distinguished only by boundary stones at intervals.

There are two chapels, both similar in arrangement, with the exception of a bell turret to the Episcopal Chapel: the style adopted is Early Decorated, with open timber roofs. The walls are built of flint, with Box stone dressings. The bell turret is built from the ground, and is square below, with buttresses at each angle, and octagonal in the upper part, with a spire and small dormers, all covered with lead, dressed closely, and indented at the joints, with wrought iron finial on the spire, and on the gable of each chapel.

The residence for the sexton is similar in character to the chapels, and built also of flint, with stone dressings. Attached to the residence is a waiting-room, for the use of persons attending the funerals of their deceased relatives.

The entrance is in Kingston-lane, with large oak entrance gates in the centre, and smaller gate to the residence, all filled in with wrought-ironwork in the

per part. The cemetery on this side is enclosed ith a dwarf flint wall and piers, having Yorkshire one coping and Box stone dressings, and wrought-n railing, with standards.

The north side is enclosed with a brick wall and ers. The two remaining sides are enclosed with k park-pale fencing.

The works have been executed from the designs Mr. Charles John Shoppee, architect. Messrs. eharne and Son, of London, were the contractors r the chapels. Messrs. Hardy and Son, of Cowley, ar Uxbridge, were the contractors for the sexton's sidence, walls, fences, gates, and iron railing. Mr. Cole, of Norwood, was the contractor for the roads d drainage; and Mr. John Collett was clerk of the orks.

RAILWAY MATTERS.

Sir S. M. Peto has offered to make the proposed owestoft and Beccles line for 10,000*l.* per mile ncluding all Parliamentary expenses, directors' harges, the purchase and conveyance of land, &c.); pay the shareholders 3½ per cent. upon the ms they advanced during the progress of the orks; and, on their completion, to take the ncern at 6 per cent. upon the capital advanced. ——Two of the iron girders of the Great Northern ilway-bridge that crosses the great north road near rantham are cracked, but have been secured by a mber support. —— The Edinburgh and Glasgow ompany some time ago purchased the hotel at the rner of North Queen and George streets, Glasgow, e church of the late Dr. Wardlaw, and contiguous roperty in Dundas-street, for the purpose of erecting greatly extended station and offices. The plan is ot yet fully matured, but a commencement has been ade with the work. The shell of the church will main, and be reconstructed as the business-chambers f the company. The entrance to the station will be rom Dundas-street, by four arched gateways.—— he select committee of the Royal Arsenal at oolwich have been engaged in witnessing the erec-on of a machine, named an aërial railway, introduced y the inventor, M. Balan, a working engineer, who as obtained a patent from the British Government. propels cars or waggons by their own weight on nclined wire-ropes. For earthworks, such as cut-ngs, embankments, quarries, &c. this apparatus, it said, will be found useful, as it requires few hands o work it, the weight of the load depressing the rope th that the car travels without assistance to the lever here it is unloaded, and, the other rope being raised, e car slides to its loading-place. It may be also sed for crossing rivers, where bridges would interfere ith the navigation, and in any place where the dis-nce does not exceed 400 yards, to convey either oods or persons. An Englishman, who solicits our nterference, claims having published a similar inven-ion some time ago.——The traffic returns of railways n the United Kingdom for the week ending Oct. 27 mounted to 405,947*l.* and for the corresponding eek of 1854, to 373,304*l.*; showing an increase of 2,643*l.* The gross receipts of the eight railways aving their termini in the metropolis amounted, for he week ending as above, to 185,144*l.* and for the orresponding week of last year to 169,096*l.*; showing n increase of 16,048*l.* The increase on the Eastern ounties Railway amounted to 708*l.*; on the Great Northern, to 3,370*l.*; on the Great Western, to 5,335*l.*; on the London and North Western, to 1,060*l.*; on the London and South Western, to 1,334*l.*; and on the South Eastern, to 3,640*l.*: ogether, 16,947*l.* But from this must be deducted 24*l.* decrease on the London and Blackwall, and 75*l.* on the London, Brighton, and South Coast.

Notices of Books.

The Metropolis Local Management Act, 1855, *with an Introduction, &c.* By Toulmin Smith, Barrister-at-law. London: Sweet, Chancery-lane. 1855.

Practical Proceedings for the Removal of Nuisances and Execution of Drainage Works under the Nuisances Removal Act, 1855, *&c.* To which is added, *The Diseases Prevention Act*, 1855. By Toulmin Smith. Sweet, Chancery-lane.

In these volumes we have not merely the Acts referred to, but the author's comments and peculiar views and teachings regarding them. The first contains, besides an introduction, copious practical notes and a full double index, also a table of qualifications for voters, vestry-men, auditors, &c.; and the last comprises forms and instructions for the conduct of parish committees. The author states, in reference to the first, that the objects of the notes added in this edition of the Act are to help in securing its sound practical working, and the overcoming of many omissions and imperfections, so that, as a matter of duty, and whatever its defects may be, the Act may be made to work well, notwithstanding its difficulties. Doubtless these, as expressed, are very proper objects and motives; but it must be recollected that the author has preconceived ideas of his own, which he desires to see carried out, and that what he may regard as sound working, others, not seeing through his spectacles, may (perhaps with some prejudice too) look upon as much liker a frustration of some of the purposes of the new Act. To readers of deliberative mind, however, the author's comments and views cannot but be useful, whether they induce dissent or assent. As regards the second of the two volumes, the author appears to claim the Act embodied in it as a product of his own teachings, and recommends the volume as directly applicable to the subject of the first.

An Elementary Atlas of History and Geography. By the Rev. J. S. Brewer, M.A. London: Longman and Co.

The author of this work is a professor of English history and literature, and late a lecturer on modern history at King's College, London. The maps were compiled and engraved by Mr. E. Weller, F.R.G.S. The whole constitutes a series running from the commencement of the Christian era to the present time, and containing maps arranged in chronological order, with illustrative memoirs, and is intended for the use of colleges and schools. Such a work was a desideratum. The condition of the world at successive eras is here represented, so that, in connection with the illustrative memoirs, all the great changes of territory in the rise and downfall of empires, within its scope, may be traced by comparison of the various maps, and a familiarity with the great bearings and landmarks of history be thus easily and rapidly attained. Spruner's maps wanted the advantage of co-ordinate narrative, which, in this Atlas, completes the idea.

VARIORUM.

The issue of a new and improved edition of Dr. Lardner's "Hand-book of Natural Philosophy," by Messrs. Walton and Maberly, needs no recommendation, and only claims a general notice of issue: the treatise on Mechanics now before us forms the first of the series, of four volumes, intended either for school education, or for the general student of the Universities. The present volume is illustrated with engravings, cleanly printed, along with a clear type, upon excellent paper.——Messrs. Houlston and Stoneman, of Paternoster-row, and Orr and Co. of Amen-corner, have issued, in "Orr's Circle of the Sciences," Mr. J. Scoffern's treatise on "Elementary Chemistry of the Imponderable Agents and of Inorganic Bodies," including light, heat, electricity, and magnetism, the simple chemical bodies, and their inorganic compounds. The treatise is in some respects based on Dr. Henry's well-known work, but as about thirty years have passed since it appeared, only the more permanently valuable portions of that work have been made available, and, in fact, the whole constitutes a treatise of modern chemistry brought up to a recent standard, and adapted to a pretty far advanced state of intelligence as to chemical matters as well as to more elementary instruction. It contains a section, we observe, on photography, in which the various chemical processes are described. The latter has become a very interesting branch of chemical science.

Miscellanea.

Statue of Sir Robert Peel at Bradford.—The ceremony of inaugurating the Bradford memorial of the late Sir Robert Peel took place on Tuesday last, under the auspices of the Mayor and corporation. The memorial consists of a colossal statue in bronze, 11 feet 6 inches in height. It is from the studio of Mr. Behnes, and represents the deceased baronet in the act of addressing an assembly. It is placed upon a circular stone pedestal, 13 feet high, upon which is inscribed the word "Peel," and it stands in an open space of ground. It is stated that the amount paid to Mr. Behnes was 1,000 guineas.

Institution of Mechanical Engineers.—The general meeting of the members of this institution was held on the 24th ult. at the house of the institution, Newhall-street, Birmingham; Mr. William Fairbairn, F.R.S. president, in the chair. The secretary, Mr. W. P. Marshall, having read the minutes of the last meeting, the nomination took place of the president and officers for the year, to be elected at the annual general meeting. A paper was then read on a "New Expansive Valve-motion for Steam-engines," by Mr. George M. Miller, of Dublin: the next was a description of a "Set of Six Blast-engines, made for the East-Indian Iron Company," by Mr. Edward A. Cowper, of London: the third was on an "Improved Spring for Railway Carriages," by Mr. W. Bridges Adams, of London; and the last was a description of a new "Packing for Steam-engine Pistons," by Mr. David Joy, of Worcester. After the meeting, a powerful hydraulic lifting-jack was exhibited by Mr. Thornton, of Birmingham, of simple and convenient construction, and capable of lifting a weight of fifty tons by the labour of a single man.

Accident to Mr. Locke, M.P.—We regret to observe, from *Galignani's Messenger*, that a very serious accident occurred on Thursday week to Mr. J. Locke, the eminent engineer. In company with Mr. W. Locke, Mr. Brassey, and Mr. Moffat, M.P. he went down the Caen Railway, to inspect the works which are going on there, and when examining the tunnel of Boissy, now in course of construction, he and the other gentlemen ascended a scaffolding about 10 feet high, which fell with the whole party, and Mr. Locke had a very severe fracture of the right leg below the knee, the others escaping with some slight contusions. By subsequent report we are glad to hear that Mr. Locke is progressing favourably.

Soiree of the Manchester School of Art.—The annual *soirée* in connection with the Manchester School of Art was held at the Royal Institution in that city, on Monday in last week. The attendance of ladies and gentlemen, and students, was very numerous. The antique sculpture-rooms, and one of the corridors, were filled with a large collection of drawings and paintings, executed by students of the different schools of art throughout the country, and in particular those produced in the Manchester school. The visitors inspected these works for an hour, and then adjourned to the lecture-theatre, which was crowded.—Mr. Edmund Potter, president of the local School of Art, occupied the chair. He read a paper on "The Position of Schools of Art," of which the local *Courier* gives an abridgment. One main point on which the lecturer dwelt at some length, was to the effect that the schools of art in this country not only are not self-supporting, but are not likely to be so; and that hence the system adopted by Government ought to be altered. He advocated the foundation of a ministry of art, and urged what we presume he would call justice to the provinces. As for the shortcomings of the provincial magnates, who are the most likely to benefit substantially or pecuniarily by the cultivation of a taste for art and by the education of art-designers, not one word appears to have been uttered by the lecturer on that subject, except at the conclusion of his discourse, when he urged the necessity of contributing to the support of the institution until they could either establish some scheme for general art-education, or force the Government to bring forward a measure which should give the provinces their due. Parisian art dazzled and charmed, but there were points of warning connected with it. There was the essence of art centralisation in Paris: we wanted the reverse,—art increased, but diffused amongst the mass of the people, so that they could enjoy it at their firesides. Professor Scott and other gentlemen then addressed the meeting, and the prizes were distributed.

Westbury Burial Board.—The Burial Board here, after rejecting all the plans which were delivered in answer to an advertisement inviting a competition, applied to Mr. Bruton, of Oxford, who furnished them with designs for two chapels and an entrance lodge. At a meeting held on the 30th ult. these designs were approved, and the architect was instructed to make working drawings. Mr. Bruton's estimate for the erection of the chapels, lodge, and boundary walling, was 2,500*l.*

Hoop-iron Bond.—If—and I doubt it—any tie in brickwork be required more than the weight of the mass bearing on the ordinary iron bond offers, is it not much easier to obtain such tie by depressing or raising the courses of iron-hooping occasionally, by altering the layer of bricks on which the bond is bedded, thus ——|_____|—— than by the patent hoop-iron bond you have mentioned? by these means entirely preventing all fear of a longitudinal escape of the bond, occasioned by any strain exerted upon it, unless of such a character as to exceed the weight of the work *above* the bond, which in most instances is very improbable.—R.

The Peel Statue in London.—The Commissioners of Sewers think they have done all that is necessary for the statue of Peel, when they have hoisted it to the top of a square block of stone, which is afterwards eulogised as a pedestal of "very chaste and appropriate design;" and I believe that I express the feeling of every lover of art when I exclaim against the beggarly proceedings of this "commission." We need not servilely copy our neighbours in France, but we can at least think how they would have treated an opportunity like this. They know well that a colossal statue of a great man, erected in a great city, must be so displayed as to command the admiration of all who pass by, and to this end the pedestal should be as much the work of an artist as the statue itself. Such a pedestal should be of elaborate design and of lofty proportions—a monument in itself, surmounted by the statue of the man whose deeds it serves to record. It cannot be a question of money, when Peel is the man whose memory is to be honoured, and the "City of London" is the paymaster. And why is the railing "inevitable?" The present state of things certainly does not require special keeping, and the obelisk which formerly stood there did not suffer any injury. I always hoped that a fountain of *running* water would adorn the top of Cheapside, and that a few trees might have been planted there. Such a plan, in connection with the Peel statue, I only dare to hint at, but it would be worth waiting for, and would be a refreshing change in the dulness of our thoroughfares.—G. C.

Builders' Benevolent Institution.—We are glad to learn that at a meeting of the Directors on Friday, the 2nd, after receiving the secretary's report of the noble response to the appeal of the president at the dinner on Tuesday, at the London Tavern, it was resolved that *six* candidates out of the twelve should be elected on the 28th inst. instead of two as previously advertised, and the directors confidently hope to be able to announce the remaining six to be elected in April next. This is a step in the right direction, and will, it is hoped, stimulate other friends to come forward to give their aid in carrying out the objects of this institution. We believe, with the president, it only requires to be brought more immediately under the notice of our wealthy builders and contractors, and the requisite funds for the almshouses would be realized. His proposition to raise 5,000*l.* for that object by ten gentlemen or firms giving 100*l.* a year for five years is a good one, and we trust will meet with that response which so liberal an example deserves.

The School of Arts Watt Club, Edinburgh.—A fruit *soirée* was held on Wednesday evening before last, under the auspices of the School of Arts Watt Club, in the lecture-room of the School of Arts, on occasion of the retirement of Professors Lees and Wilson, as lecturers in the school, and also to introduce their successors, Mr. William Lees and Dr. Macadam. Mr. Alexander Black, president of the club was called to the chair. After the meeting was addressed by the chairman and the retiring lecturers, Professor Pillans said he could not but congratulate the members of the Watt Club, and the friends of the School of Arts generally, on the appointment which had been conferred on Dr. Wilson. He owned that when he had first learned they were about to lose the services of the two gentlemen whom they had met that night to honour, he had felt that the prospects of the School of Arts were somewhat gloomy; but from that feeling he had been relieved by the happy choice which had been made in the selection of their successors. Mr. William Lees then proceeded to deliver an address "On the Advantages of studying Physical Science;" and Dr. Macadam afterwards spoke at some length on "The Atmosphere." Mr. Sheriff Gordon finally addressed the meeting.

Liverpool Architectural Society.—At a meeting held on the 31st ult. as we learn from the *Journal*, Mr. Chantrell exhibited a number of bricks, of various colours, designs, and quality. Amongst them, a light, perforated brick excited much interest. Mr. Picton observed that he was glad to see the subject of bricks brought before the society so frequently, for something would, no doubt, come out of it. He suggested that bricks of various colours should be made in moulds of one size, so that architectural ornamentation might become more practicable. Of late there had been a perfect passion for pressed bricks, but for what virtue they possessed more than the others he could not see. A little more care used in preparing the material in the first place, and a little more care and attention bestowed in moulding them, would produce a much superior brick than at present, at very little more cost. The common brick was charged at the rate of 25s. a thousand, and if a little extra labour was bestowed in making them, the price was 65s. If a medium brick was sent into the market, he had no doubt it would be a profitable speculation. A paper was then read on Town Improvements.

The Dwellings of the People.—At the West Brompton Mutual Improvement Society, on Friday, the 2nd inst. a lecture on "The Homes of the People," was delivered by Mr. G. Godwin. At the close of it Mr. Godrich, who was in the chair, said, in moving a vote of thanks to the lecturer, that the most distressing of the details given by Mr. Godwin could be paralleled in the Royal parish of Kensington, in which they were: the condition of Jennings'-buildings, the Potteries, and Hooper's-court, was a disgrace to the country. The Rev. Thomas Pearson confirmed the assertion of the lecturer, that the efforts of the clergyman were unavailing with people housed as he had described. The lecture will be repeated at the Polytechnic Institution on Monday, the 12th.

Dover Drainage.—The Local Board of Health, at their meeting on Saturday last, made a stand against the demands of the engineers, Messrs. Rammell and Lister. So serious has the expenditure become, without producing corresponding results, that the ratepayers are naturally frightened, and have become suspicious of the men who have led them into it. The estimates of these engineers, which deluded people into the belief that the whole town would have a perfect system of drainage and water supply for about 50,000*l.* have been so alarmingly wrong, that at the present time, when 60,000*l.* or 70,000*l.* have been spent, we seem as far off as ever from a participation of the much-needed boon. Either Messrs. Rammell and Lister were wanting in that engineering talent which Dover required, and for which it will have most dearly to pay, or they omitted to give that close attention to the works that was needed, so as to be enabled to form a correct estimate of the expenditure likely to be entailed.—*Dover Chronicle.*

Workmen's Club-houses.—A large number of workmen being engaged in building the new Museum at Oxford—many, strangers to the town—it occurred to Dr. Acland that if a temporary building for their accommodation were set up, containing a kitchen, mess, and reading-room, it would keep the men from the pot-house. The authorities adopted the suggestion; the building was rapidly completed; and it was formally opened last week.

The Railway Club.—An association has recently been formed at Manchester, with this title, having for its object the promotion of more frequent communication between the principal officers of all railway companies, for interchange of information and friendly offices, and for securing the comforts and conveniences of a club-house for miscellaneous meetings. The association already includes a large proportion of the principal officers of the railways of this country, and it is intended, we believe, as the precursor of a more extended and complete establishment in London, as soon as circumstances are deemed favourable for its removal to the metropolis. The institution was inaugurated by a dinner at the Clarence Hotel, Manchester, on Friday in last week, presided over by Mr. Edward Watkin, the general manager of the Manchester, Sheffield, and Lincolnshire Railway, and president of the club.

Cast-iron and Concrete Pavement.—On the recommendation of Mr. Haywood, the surveyor to the City Sewers Commission, 400 yards of a new pavement have been ordered to be laid down experimentally in one of the City thoroughfares, probably about London-bridge, if it is to be tested to the fullest possible extent. From a report to the commission by the surveyor, it appears that the pavement to be tried is an American modification of the British invention of paving with iron, and is patented by General Knapp. It consists of cast-iron frames, divided into small sections filled with gravel, concrete, or stones, and when laid looks much like macadamization studded with large iron nails. The patentee states the cost of the paving, weighing 250 lbs. to the yard super. when laid, complete, to be about 18s. 6d. a yard for the quantity to be now tried. Mr. Haywood is dubious as to its alleged superiority to good granite paving as regards wear, and it has not been tested as yet anywhere to his knowledge beyond three years; but it is said to have other advantages, such as noiselessness, a good foothold for horses, and freedom from dust, as well as facility and rapidity of repair.

Covent-garden Theatre.—For M. Jullien's annual concerts Mr. Frederick Gye has added a wide balcony, projecting into the house on the face of the "grand tier," such as is found in the Paris theatres, and with very good effect. The hangings throughout the house, of white and gold, are scarcely so attractive in appearance as some previous arrangements have been: remembering, however, how many combinations Mr. Gye has made of the same few elements, this is not to be wondered at. M. Jullien has always our best wishes and applause for his endeavours to supply the multitude with the best music at small cost: and on the present occasion he has brought together an irreproachable band, and an admirable singer—Madame Gassier.

The Southampton Shipwrights have had a meeting to obtain an advance of wages. It was stated that the London shipwrights were paid 10s. and 11s. a day, while those in Southampton were only paid 5s. a day. Considering the briskness of the trade and the rise in the price of provisions, they thought they were justified in claiming an advance of 1s. a day; and a deputation was appointed to wait on the master shipbuilders to urge their claims.

The Liverpool Timber Trade.—Messrs. Holme, Slater, and Crook, in their last monthly circular say, "The arrivals into the docks of the Mersey, during the month, containing timber from British North America, are 69 vessels, 48,019 tons, against 58 vessels, 41,893 tons, for the corresponding period last year. The tonnage employed in the Canadian timber trade, as compared with last year to this time, is only 50,000 against 102,000 tons; but from St. John and other ports it is greatly in excess, being 184,000 tons against 136,000 tons to the same period last year. The great deficiency in the supply of Quebec timber, and an extensive consumption, have reduced the stock and enhanced the price so considerably, that cargoes which sold at the commencement of the import season at 16½d. per foot for 78 feet average, are now worth 20½d. per foot."

Fall of a Church Roof.—In the parish church of Kintail, Inverness, on 8th ult. during a crowded attendance, the crashing of breaking timber was heard right over the west gallery. The falling roof, however, rested on the sarking and plaster, and did not fall into the body of the church; otherwise it is fearful to think of the probable consequence. The parish church of Kintail is a very old fabric.

The Northern Union of Mechanics' Institutions.—The annual meetings of this union were held in Newcastle on Wednesday week, under the presidency of Earl Grey. The first of these meetings was in the Victoria Hall, Grey-street, Newcastle, which was opened for a fortnight as an Exhibition of Works of Art.

The Oxford Architectural Society.—The first meeting of this society was to be held on Wednesday in this week, when a paper was to be read by Mr. F. Hingston, B.A. of Exeter College, on the Ecclesiology of Cornwall, past and present. The annual meeting will take place on Tuesday, Nov. 27.

Subscriptions in Kind.—The village of Burringham, a short distance from Gainsborough, is without a church, and for some time past efforts have been made to raise funds to erect one. The following novel announcement has been circulated in Brigg:—"For the benefit of Burringham Church.—To be raffled for, at half-past three o'clock, a pure-bred Skye terrier dog, direct from the island; twenty shares at 5s. each. Also, a pure-bred terrier puppy, four months old, same breed; twelve shares, 5s. each."

Gas.—The Chartered Gas Company held their half-yearly meeting on Friday in last week, Mr. Benjamin Hawes in the chair, when a dividend at the rate of 6 per cent. per annum was declared.——The special committee of the Liverpool Town-council, appointed to consider certain complaints made by the public against the United Gas Company there, chiefly to the effect that the charge for gas was exorbitant, and that the bills for the past year were heavier than the year preceding, notwithstanding that there had been a decrease in the price to the extent of 6d. per 1,000 feet, have presented their report. It stated that the charges had been more than substantiated, and recommended that arrangements be made for the transfer of the company's affairs to the management of the corporation, or that the corporation construct works themselves, and supply gas to the public, as the only means of protecting them from the exorbitant charges and reckless management of the existing company.——There have been several serious gas explosions of late. At the United Service Institution, Whitehall, last week, some workmen, employed to ascertain the cause of a serious and continued escape of gas at the basement, carelessly took a lighted candle with them to test the pipes, though cautioned by the officials of the institution, and the immediate consequence was a powerful explosion, by which one man was severely burnt, and another had his clothes set on fire, while the earthwork and paved carriage-road above an old drain in the roadway were blown up for nearly 30 feet. On Tuesday in last week also, no less than thirty-one persons were more or less seriously injured by an explosion at the Birmingham Workhouse. It appears that a gas stove is placed between the ranges of beds in the tramp ward: the feeding-pipe connected with the main passes from the stove into the wood-work of the room, in which there is a tap or a recess with a door inclosing the gas-tap. From one or more of the joints of the feeding-pipe the gas had escaped during the night, and the room became filled with it: the inmates, half-suffocated, gave an alarm, and a lighted lantern was introduced: the gas rushed in at the top of the lantern, and the explosion instantly ensued.

EFFECT OF SANITARY IMPROVEMENT.—The decrease of mortality in some districts is striking, and the registrars in their notes endeavour to account for this evident fact. According to the quarterly returns,—"Some refer the improved health of the people to the fine weather, others to active employment in the harvest, others to the removal of the population, either in search of employment or by draughting into the militia and into the ranks of the army. One registrar makes the following statement: 'The deaths are below the average. In the township of Workington, containing a population of 6,122, the deaths during the last nine years have averaged forty-two quarterly; this quarter they are twenty-one. In the other nine townships, containing a population of 3,412, there have been only four deaths. Some ascribe the decreased mortality to Providence; others to improved sanitary arrangements." Various causes in operation undoubtedly contributed to this happy result—that if all the deaths of British soldiers in the Crimea during the last three months were added to the deaths in England, the sum would be less by some 20,000 than the deaths registered in England during the three summer months of 1854. More lives may be saved by sanitary arrangements at home every year than have ever perished abroad in the years of our greatest losses in war; and the enlightened people of this kingdom will suffer no such embarrassment as the registrar of Workington has recorded if this result be realized, as they know that all effectual measures for the improvement of the human race receive the blessing, because they are the inspirations, of Divine Providence."

A YOUNG MAN, who has served his Articles with a practical Architect and District Surveyor at the West End, and with whom he has since been for some months, wishes an ENGAGEMENT. He has been accustomed to making out working and finished drawings, surveying works, taking dilapidations, &c. and has a fair knowledge of taking out quantities and measuring work. He was brought up by a relative, a builder.—Address, A. B. Swallow's Library, Pratt-street, Camden town.

TO BUILDERS.

A YOUNG MAN, who understands accounts, measuring, and the routine of a builder's office, is desirous of a RE-ENGAGEMENT. Country no objected to.—Address, X. Y. Z. Mr. Calder's Library, Bathurst-street, Hyde park-gardens.

TO ARCHITECTS' ASSISTANTS.

AN ARCHITECT in a provincial town requiring OCCASIONAL ASSISTANCE in his Office, is willing to communicate with any gentleman well versed in ecclesiastical architecture, perspective, and taking plans of buildings, &c.—Address, stating age, terms, and references, ALPHA, Post-office, Bishop's Stortford, Herts.

TO THE PROFESSION.

A GENTLEMAN, who has had great experience in the Offices of some of the principal architects in London, is desirous of meeting with an ENGAGEMENT. He has carried out on his own account works of both a public and private nature; is fully competent to design, make contract and detail drawings, specifications, take off quantities, estimate, measure up work, and could take the charge of an Office in the absence of the principal. Unexceptionable references and testimonials can be given.—Address, R. X. A. Office of "The Builder."

TO GASOMETER BUILDERS.

A GENTLEMAN, living within ten miles of London, wishes to contract with a respectable party to ERECT GAS-WORKS on his Premises. Fifty lights is the maximum. Capacity required for fifty hours, or consumption for one week. Expense, space, and time to erect such required. Terms, cash.—Direct, L. B. M. Ham, Surrey.

TO ARCHITECTS.

A GENTLEMAN, of first-class abilities as draughtsman, and long practical experience, is open to a RE-ENGAGEMENT as MANAGING CLERK, or otherwise. Age 38.—Address, F. F. 17, Marlborough-square, Chelsea.

TO ENGINEERS, CONTRACTORS, AND COMPANIES.

A GENTLEMAN, who has recently returned from the East Indian Railway, is now open to an ENGAGEMENT as MANAGER or SUPERINTENDENT of RAILWAY or other WORKS, either in England or on the continent. He is practically conversant with building and construction, as well as measuring up, valuing, and setting out railway and other works. Salary not so much an object as a permanency.—App'y (post-paid), to A. B. 20, Warwick-street, Pimlico.

TO ENGINEERS, &c.

AN experienced LAND-SURVEYOR, LEVELLER, and ENGINEERING DRAUGHTSMAN, who has lately been engaged on extensive works on the Continent, is desirous of meeting with a RE-ENGAGEMENT. Terms moderate.—Address, F. S. 87, Stanhope-street, Hampstead-road.

TO PLUMBERS AND BUILDERS

A RESPECTABLE Young Man wishes for a SITUATION as PLUMBER, PAINTER and GLAZIER. Address to W. C. 34, Boston-street, Hackney-road.

TO BUILDERS AND OTHERS.

A RESPECTABLE young married Man, by trade a bricklayer, plasterer, &c. and who thoroughly understands his business, having had the sole management for the last ten years, is anxious for CONSTANT EMPLOYMENT as FOREMAN, or otherwise.—For further particulars, apply to Mr PURKISS, 12a, Fall-mall East.

TO ARCHITECTS OR OTHERS.

A YOUNG MAN, who has had several years' experience in bold and flat relief ornaments, is desirous of EMPLOYMENT as MODELLER.—Address J. B. W. 1, Broad-street, Bloomsbury.

TO ARCHITECTS, ENGINEERS, BUILDERS, CONTRACTORS, &c.

AN Architect and Surveyor, of many years practice, is desirous of an ENGAGEMENT with either of the above, to take the management in the absence of the principal, or to superintend the formation and construction of railway or other works requiring good practical skill. No objection to go abroad.—Address, H. H. W. 10, New North street, Queen's-square, London.

TO BUILDERS, MASONS, AND OTHERS

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Sardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Hareld Park burrie, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Meeting-field-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful architectural, and ornamental, to the Architects, Builders and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.

July 25, 1855. C. ADENEY, Secretary.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 23, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No 8, Crescent-terrace, Millbank, to offices on his own premises, at Cumberland Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America

MARBLE and STONE CHIMNEY-PIECES.—WM. HUSTLER, Marble and Stone Sawing Mills, Cambridge-heath, Hackney, begs to call the attention of the Trade to his STOCK of CHIMNEY-PIECES, suited to all classes. W. H. has enlarged his workshops and improved his machinery, so as not only to compete, but is able to sell lower than any other house in the trade.

N.B.—Good marble and mason and polishers wanted.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates. For further particulars apply at the Offices of the Company, 18 Cannon-street, City.

WILLIAM W. BONNIN, London Secretary.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall. London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depôts, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

PIMLICO MARBLE WORKS, BELGRAVE-WHARF, LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SOULES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to

NORTH-WESTERN STONE DEPOT, Hampstead road Bridge, Camden-town.—W ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Pottermewton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.

N.B. Good 2 inch Tooled Paving, at 40s. per 100 feet, cash.

AUSTIN'S ARTIFICIAL STONE.—This material (frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000 and 5,000l. In consequence of the Terra-cotta, and all other kind of Pottery, there is no distortion of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof.—AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.

*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED, Manufactured by MACHINERY, which produces the greatest degree of fineness. WILCOX & CO. Flint Mills, Mollwell mew, Scott Russell's. CARRIAGE FREE.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street, and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag-Stone Company and the Llantysilio Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney pieces, Baths, Filters, Larders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices.—Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr. GEORGE F. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c. ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

TO PLUMBERS, GASFITTERS, PAINTERS, &c.

AN excellent old-established BUSINESS, in the above line, for DISPOSAL, to which is attached a good ready-money lamp and gas glass trade, situate in the suburbs of London. Terms very moderate.—Apply to A. B. Messrs. Defries and Sons, 147, Houndsditch.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

HAWKINS'S PATENT BRUSH COMPANY.—Manufactory, 37, College-hill, Cannon-street West, London.—Merchants, Artists, and Others, would do well to buy Hawkins's Patent and other Brushes; their superiority in every respect being now established by use. Prices and full particulars can be had, and samples seen, at my Offices as under, or at the Manufactory as above.—Mr. FRANCIS FORD, 9, Lawrence Pountney-hill, Cannon street, London, Sole Agent for London and its vicinity.

PATENT SOLID SWISS PARQUETERIE This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Lay rubbish delivered per barge, in any quantity, alongside the Thames.

TO FARMERS, BRICKMAKERS, and OTHERS.—TO BE SOLD, 20,000 CHALDRONS of ASHES and BREESE; also, a quantity of good Mixture and Horse dung, close adjoining the Regent's Canal and Great Northern Railway; can be taken away by boats and barges, or delivered in carts.—For further particulars, inquire of Mr. GEORGE TILLEY, Saint George's-wharf, Cambridge-street, Agar-town.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c apply at the Wharf.

Contractors supplied to any extent.

POTTERS' CLAY FOR SALE.—An ESTATE, of nearly 400 acres, with residence, suitable for a gentleman, and containing an inexhaustible deposit of Potters' Clay; situate 4 miles from a port and 3 miles from a Railway station. For particulars, &c. apply, post-paid, to T. RAWLINS, Esq. Solicitor, Wimborne.

CARR'S PATENT BRICKMAKING MACHINE.—A PORTABLE MACHINE, drawn by two horses, of the best construction, the most effective that has yet been invented. A FIXED MACHINE, on the same principle, has been working most successfully the last two years, of which testimonials can be had, price 260l. A PORTABLE STEAM-ENGINE to accompany the same, if required, the same price.—Apply to EDWARD SPENCER and CO. Carpenters and Builders, 18, Billeter-street, City.

SANITARY  DEPARTMENT.

JOHN RIDGWAY, BATES, and CO. CAULDON-PLACE, STAFFORDSHIRE POTTERIES, beg to inform their friends and the public that they have appointed Mr. F. LOCKE, Brook-street, Holborn, their TOWN AGENT for their SANITARY VESSELS, including Fountain Basins, Closet-pans, complete and inclosed; Urinals, Slate Tanks, Cabinet Stands, Domestic Ovens, Washing-tubs, Tiles of all kinds, Single and Swimming Baths, Anti-corrosive Taps, &c. &c. The whole of stone and granite pottery-ware, of all kinds, forms, and colours, both first-class and for the million.

They have introduced these most useful goods under the patronage of the General Board of Health. With many subsequent improvements, they recommend them confidently to the patronage of townships and parishes, architects and builders, founders, plumbers, and fitters; in short, to all who have the carrying out of sanitary operations, being prepared to give such references and to quote such prices as they have the best reason to believe will ensure the public favour.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climate act up to it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in original Packages, each cask stamped HUBBUCK'S LONDON PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained (at his Works, Mill-wall, Poplar, or at his Warehouse, Praed street, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large lime kilns and machinery for grinding the same, in order to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 19, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

PORTLAND CEMENT.

CHARLES RICHARDSON,

6, SOUTH WHARF, PADDINGTON.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,

6, SOUTH WHARF, PADDINGTON.

BATH CEMENT.

CHARLES RICHARDSON,

6, SOUTH WHARF, PADDINGTON.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON,

BRICK, LIME, and CEMENT MERCHANTS,

SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first class quality, for the home and foreign trade Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied or shipment, on advantageous terms.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not re-state in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL,—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Parrs White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

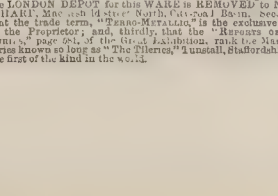
11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise. Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with at moderate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London: Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.



JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Welbeck, Cumberlidge, Yorkshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6-inch pavings, at 37s. 6d. per 1,000; 8-inch pavings, at 57s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin, Security, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Reasons for our Junction," page 681, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4l. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PRIZE BRICK-MAKING MACHINE.—CHAMBERLAIN'S PATENT.—This portable machine will make 20,000 solid bricks per day, with 3-horse power. One man to feed the machine with clay, and boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helen's, September 6th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 5th, 1855.—Apply for particulars to Mr. HUMPHREY CHAMBERLAIN, Kempsey, Worcester.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet-pans, Furnace blocks, Fire bricks, Gas-retorts, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality. WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent.—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea bridge, at the following prices, viz.:—Grey Stocks, 23s. per thousand; Grizzles, 27s. per thousand; Rough Stocks, 31s. Place, 35s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

THE BEST HERTFORDSHIRE MALM SECONDS;

THE BEST WHITE SUFFOLK and RED FACINGS:

DEEP-RED RUBBING BRICKS.

Also COWLEY and KENT STOCKS, in any quantity.

J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY

(Within a short distance of the five bridges).

THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.

Also, STOCKS, of FIRST QUALITY.

J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENTISH, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY, MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge.

Depôt, Agar Wharf, Kings-road, St. Pancras.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. on low terms for any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, lists for building boundary walls, cottages, &c. by using which one third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and pure, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs MEESON and CO. Gray's, Essex, executed with despatch.

BRICKS.—To ARCHITECTS, BUILDERS, and OTHERS.—WHITE and RED FACING BRICKS and HARD CLINKERS, for paving stables, &c. Tiles pipes of every description, and every article in the trade, may be had (of superior quality and on liberal terms) at W. and W. WRIGHT'S Brick and Tile Works, Sprat-hall, Essex.

The Proprietors of these Works acknowledgements for the liberal support they have had, and embrace this opportunity of informing their friends and the public, that the late removed to Messrs. Meeson and Co.'s Wharf Kilns at Bow, any goods station on the Eastern Counties Railway, or alongside in the Thames, at the usual prices.

500,000 BRICKS.—TO BE SOLD by TENDER, 500,000 BRICKS, made by the London Patent Brick Company, now lying on their Premises adjoining the Grand Junction Canal, near Northolt bridge. Tenders to be sent to Mr. JOHN A. DUFFY, No. 5, Old Jewry, Secretary to the Company, on or before the 15th day of November next. N.B. The Bricks may remain on the premises for a limited time.

FOWLER'S

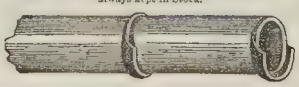
BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

AYLESFORD POTTERY COMPANY,
BELVEDERE-ROAD, LAMBETH.
MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith, take this as a fair test of the quality of the articles supplied by them, and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.



HENRY MILLICHAMP,
MANUFACTURER OF
GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.
65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap connected, price 3s. 6d. each.

DRAWING AND LIST OF PRICES FORWARDED FREE ON APPLICATION.
"Terra-cotta." Chimney-pots of various patterns and sizes, also Red Earthenware Drain pipes, at greatly reduced prices. (1179)

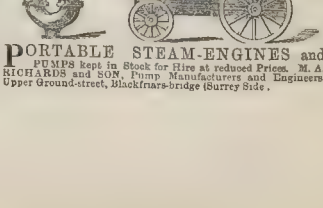
WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.

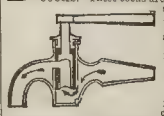


These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

VAST IMPROVEMENT IN PUMPS.—PARSEY'S REVOLVING PUMP, all metal, without valves, leather, or packing. Liability of choking and disarrangement removed; and equally superior for hot or cold liquors. Contractors, brewers, distillers, ship-owners, water and gas companies, agriculturists, &c. are solicited to see them in action at Mr. PARSEY'S Depôt, Great Scotland-yard, where orders are received and executed.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

TO CONTRACTORS.
STEAM-ENGINES, for PUMPING, WINDING, SAWING, &c. TO BE LET on HIRE, by the day, week, or for any time required, strong simple PUMPING and WINDING ENGINES, made portable, with a reversing motion, pumps and driving gear, complete. These engines have been successfully employed for years by all the principle contractors, and for a variety of other purposes. Are ready for immediate delivery, of 4-horse, 6-horse, 8-horse, 10 horse, 12-horse, 16-horse, 20-horse, to 40-horse power.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 93, Blackfriars-road, where they may be seen.



PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM-ENGINE and BOILER for SALE, to make room for larger ones. TO BE SOLD, a 10 horse high-pressure TABLE ENGINE, and BOILER large enough for a 14 horse engine, both nearly new.—Can be seen at work at 130, Great Suffolk-street, Southwark.

ENGINES.—For SALE, THREE 12-horse high pressure horizontal ENGINES, admirably suited for winding; 12-inch cylinders, metallic pistons, either with or without lever. Also two powerful double-purchase CHAINS, capable of lifting 30 tons each. Also a wrought-iron TANK, 36 feet by 4 feet, by 4 feet, ¾ plates.—Apply, by letter, to No. 20, BOX, Post-office, Derby.

TO WATER COMPANIES AND PLUMBERS.
BURDEN'S PATENT HIGH-PRESSURE COCKS.—These cocks are remarkably simple in their construction, very durable, cheap, not liable to get out of order, and have been most successfully used for a period of three years, under a continuous heat pressure, varying from 200 to 350 feet. The following is one of the latest testimonials received:—"Stirling, 4th September, 1855. At a meeting of the Water Commissioners held this day it was unanimously resolved to recommend Burden's Water Cock for general use. It has been on trial here for nearly three years. During that period it has successfully resisted the high pressure of water in Stirling, amounting to from 200 to 350 feet, about the highest pressure in the kingdom. The Commissioners confidently recommend to the public generally the above cocks, as the very best for high-pressure purposes, from the simplicity of their construction, cheapness, and durability. Owing to the entire absence of leakage, they will effect a saving of from 15 to 20 per cent. of water over the cocks that have been hitherto in use. By order of the Commissioners, JOHN SAWERS, Provost, Chairman."

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP

FOR STREET USE.

Price, with Gutter Plate, 18 inches by 12 inches, each 24s.; weight about 2 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.

10 inches by 8 inches, each 10s.

The above articles are protected for the Patentee by the British Government, on account of their construction, for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down generally speaking, no attention is ever paid to them afterwards; this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves last those places where the air is vitiated by obnoxious gases proceeding from drains, &c.

Any individual suffering any inconvenience, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings, and if wishful, testimonials. Please order from any respectable ironmonger contractor, or the Patentee, JAMES LEWIS, Ironfounder, Abergavenny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics, or gas. Pumps, etc. on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to I. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

The premises in Charles-street East, Hampstead-road, comprising a frontage of 114 feet, are underlet to Messrs. Marshall and Tracy, for a term of seven, fourteen, or twenty-one years from Lady day, 1849, at 34. per annum. These premises are in excellent repair, and held by the Commissioners for an unexpired term of fifty-three years from Michaelmas, 1855, at a ground-rent of 3?. 16s. per annum. The Commissioners will not be bound to accept the highest Tender. Further particulars may be known at the Office, 10, Edward-street, Hampstead-road, daily, between the hours of TEN and FOUR o'clock. No Tender will be received after SEVEN o'clock in the evening on the said 13th inst. All Tenders must be addressed to the Commissioners of the Southampton Paving Trust, 10, Edward street, Hampstead-road, and also have "Tenders for the Purchase of the Board-room and Premises," or "Tender for the Purchase of the House and Premises, Charles street East," as the case may be, written on the outside. By order of the Commissioners,

JOHN ARNELL, Clerk.

Board room, November 1st, 1855.

TO CARPENTERS, BUILDERS, &c.

ONE or MORE HOUSES, in CARCASE, with Garden Walls and Washhouse. TO BE LET, on a ground-rent, or TO BE SOLD; the purchase money can stand over a given time at five per cent.—Inquire of Mr. CHARLES MARSHALL, Builder and Brickmaker, Albert-terrace, Kentish-town.

TO TIMBER MERCHANTS and OTHERS.

The Proprietors of Leta's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 10 feet Cranes, Saw pits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other impurities or corrosions. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure (oxide of Zinc.) Any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase i weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R. TAYLOR and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 5, Tottenham court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in Kegs of 14, 21 and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and Isle of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so deservedly adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noble buildings, and is the only true material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Entablements, at prices and quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Trusses for Parapets, Balusters, String Courses, Friezes, Bas-reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed street, Paddington.

MONEY.—12,000?. and 250?. to be invested, the former in freehold, the latter, if in Leasehold, the term must not have less than sixty years unexpired. Either would be lent on mortgage.—Full particulars to be addressed to Messrs. LOCKWOOD, surveyors and Auctioneers, 1, Barwood-place, Hyde-park; or 44, Upper Baker-street.

London: Printed by Charles Wyman, of 13, Hunter street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of Cox (Bros.) & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said Charles Wyman, at the Office of "The Builder," No. 46, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, November 10, 1855.

BUILDERS' BENEVOLENT INSTITUTION.—An ELECTION of SIX PENSIONERS (four females and two females, instead of one male and one female, as previously advertised), will take place at the London Tavern, Bishopsgate-street, on THURSDAY, the 29th inst., CHARLES LUCAS, Esq. President, in the chair. Polling commences at TWELVE, and closes at THREE o'clock precisely.
7, November 15, 1855.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTITUTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to adapt its principles to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects: Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still life, &c. the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Pencil and Engraving in Wood and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study: Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees if per session, or part of the session. For Evening Classes only, 5s. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students and training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session, Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

ARCHITECURAL EXHIBITION.—All Works for Exhibition must be delivered at their lodgings, Suffolk-street, Pall-mall East, on the order of the 1st DECEMBER. The Committee are endeavouring to get a proper jury appointed, whose certificates of merit shall confer a benefit on exhibitors in the department for materials and manufactures connected with architecture, and Travelling Bursaries will be set apart, as before.

On the TUESDAY evenings, beginning with the 8th of JANUARY, Lectures will be delivered at the galleries, and arrangements are so far complete as to enable the Committee to announce the following:—

JAS. FERGUSSON, Esq. F.R.A.S. Hon. Sec. Architectural Exhibition, on the Ancient Architecture of Assyria.

GEORGE SCHARF, Jun. Esq. on Early Christian Art, as Illustrated in Mosaic Paintings.

The Rev. J. L. PETIT.

ROBT. WM. BILLINGS, Esq. on the Ancient Architecture of Scotland.

THOMAS ALLOM, Esq. on the influence of Light and Shadow upon Architectural Composition.

Season Ticket holders will be free to the Lectures, and also subscribers, who will have, in addition, the privilege of introducing a friend. New subscribers should send their names in good time, in order that they may be included in the first edition of the catalogue. All information will be instantly given on application to

THE ARCHITECTURAL MUSEUM, Canonbury, Westminster. Autumn Session, 1855.

On Monday, November 26th, a LECTURE will be delivered at the Rooms of the Museum, "On Colour and its Use in Architectural Art" a continuation of a former Lecture, by Sir WALTER C. JAMES, Bart.

Hour of admission, Seven o'clock. The chair to be taken at Eight o'clock.

Cards for the Course of Lectures may be had at the Museum, and at the office of "The Builder."

The Museum is now open Monday and Wednesday Evenings, from Half past seven till Half past Nine o'clock.

The Subscription for Artisans is 2s. per annum, due on the 1st of January in each year. HENRY CLUTTON, Hon. Sec.
November 15, 1855

LOWESTOFT IMPROVEMENT ACT, 1854.—Notice is hereby given, that the Lowestoft Improvement Commissioners, acting by power of the said Act, will, on THURSDAY, the 6th day of DECEMBER, 1855, at the Office of the Commissioners, at Gisleham, in the County of Suffolk, in the FORENOON, proceed to elect a SURVEYOR and INSPECTOR of NUISANCES, for the Town of Lowestoft, and Parishes of Lowestoft and Kirkley, both being Districts under the Provisions of the Act. He must be competent to prepare plans, drawings, estimates, and specifications of all works enacted by the said Commissioners, pavior's walking, and the air of the streets, and to be able to demand and obtain within the limits, as well as surface cleansing, and to superintend the execution thereof and test materials, and keep the fulfilment of the conditions of contracts for executing any such works, and to do and perform all the duties imposed upon him as Surveyor and Inspector of Nuisances by the said Improvement Act, and the Towns' Improvement Clauses Act, 1847, and other Acts incorporated therewith. The salary will be 80l. per annum, paid by quarterly, and the person elected will be required to give Security for the due performance of his duties on his appointment. The party will not be restricted from private practice.—Applications, with testimonials, to be sent to me before SATURDAY, the 1st day of DECEMBER next, addressed, and endorsed, "To the Chairman of the Commissioners, High-street, Lowestoft, Suffolk."

EDMUND NORTON, Clerk.
Lowestoft, 7th November, 1855.

COMPETITIONS.

PREMIUM for DESIGN.—To ARCHITECTS, LANDSCAPE GARDENERS, and Others. The Council of Hastings are desirous of inviting DESIGNS for LAYING OUT and DRAINING their BURIAL GROUND at Ore, near Hastings, comprising about nineteen acres. The laying-out should comprise the sites for the required Chapels, Lodges, and Buildings, describing their several purposes by reference; also, Roads, Paths, Planting, and Fencing. A premium of 10l. will be paid to the person whose design, in the judgment of the Council, is approved the best Design. All designs not approved will be returned. Each design is to be distinguished by a motto; and a sealed letter, similarly and ruled, containing the author's name and address, is to be sent therewith. No design bearing the author's name will be received. The plan of the ground may be seen at the Office of the Town Clerk, Hastings, where designs, marked "Burial-ground," are to be sent on or before TEN o'clock of WEDNESDAY, the 5th day of DECEMBER next. The Council do not bind themselves to accept any design.

JOHN G. SHORTER, Town Clerk.

November 7, 1855.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD for the Parish of Northwood, in the Isle of Wight, in the county of Southampton, invite Designs of receive PLANS, DESIGNS, and ESTIMATES, comprising ground plans, sections, and elevations for laying out a new BURIAL-GROUND of four and a-half Acres, permanently enclosing and planting the ground, building a reception-house, lodge with entrance-gates, and two chapels, one to be consecrated and one not. The party whose plans, &c. may be approved, will, at the discretion of the Board, either have the superintendence of the works, or be paid to guarantee the plans, designs, and estimates, which will be the property of the Board. All plans, &c. must be delivered at my office in West Cowes, free of expense, without the author's name, but with a motto, on or before the 8th day of DECEMBER next, addressed to me, and endorsed "Designs &c. for Northwood Burial-ground." A sealed letter containing real name and address to accompany each design. A plan of the ground can be seen, and any further information obtained, at my office.

By order, HENRY JAMES DAMANT,
West Cowes, 13th Nov. 1855. Clerk to the Board.

SUPPLY of WATER to the town of Neath. Twenty-five guineas will be given for the best PLAN of supplying the town with water from the Gnoll property. There is no doubt as to quantity and quality. For further particulars, apply to WILLIAM BULLOCK WEBSTER, Esq Gnoll Castle, Neath, Glamorganshire.

CONTRACTS.

Royal Engineer Office, Portsmouth, 14th November, 1855

NOTICE to BUILDERS.—The Commanding Royal Engineer, Portsmouth, hereby gives notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on or before WEDNESDAY, the 19th day of DECEMBER next, from persons desirous of contracting for certain ADDITIONS and ALTERATIONS to Cambridge Barracks, Portsmouth; the plans and specification for which may be seen, and all necessary information obtained, together with printed forms of Tender, at this Office, between the hours of TEN and FOUR each day (Sundays excepted) until the 18th proximo. The person whose Tender may be accepted, will be required to provide two sureties to be bound with him jointly and severally in a sum of 100l. for the due performance of the contract by the 25th NOVEMBER, 1857. The War Department reserve the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed forms.

NOTICE to BUILDERS.—Royal Engineers' Office, Portsmouth, November 8, 1855.—Notice is hereby given, that TENDERS will be received at the ordnance Office, Pall-mall, London, from such persons as may be desirous of entering into a CONTRACT for the ERECTION of proposed HOSPITAL at Winchester Barracks, county of Hants. Plans and specification may be seen at the Royal Engineer's Office, Portsmouth, where also forms of Tender may be obtained every day (Sundays excepted) until DECEMBER 1, 1855. Tenders to be delivered on or before DECEMBER 15, 1855. The War Department reserve to themselves the right to reject the whole or any of the TENDERS. No notice will be taken of any Tender unless made on the printed forms, to be obtained at the Royal Engineer Office, Portsmouth.

NOTICE to BUILDERS and CONTRACTORS.—The Secretary of State for the War Department being about to enter into a special contract for ERECTING ADDITIONS to the CELLS at the Royal Artillery Barracks, Woolwich, and persons may wish to TENDER for the same, may inspect the plans and specification of the work, and obtain forms of Tender, by application at the Clerk of Works' Office of the Royal Engineer Office, Royal Artillery Barracks, Woolwich, on or before the 21st NOVEMBER. Each Tender, on the printed form to be delivered, or sent at the War Department, Pall-mall, London, on the 22nd NOVEMBER, 1855, addressed to the Right Honourable Secretary at War, and marked "Tender for Work at Woolwich Barracks."

Woolwich, 6th November, 1855.

PLYMOUTH BREAKWATER.—Contract for Granite.—The Lords Commissioners of the Admiralty propose CONTRACTING for upwards of 1,000,000 FEET of GRANITE for Plymouth Breakwater, the conditions and specification for which may be obtained at the Offices of Messrs. WALKER, BURGES, and COOPER, Civil Engineers, 24, Great George-street, Westminster; and at the Office of COMMANDER WALKER, Superintendent, Oreston, Plymouth, from the 16th to the 30th instant.

London, November 9, 1855.

WELLS and FAKENHAM RAILWAY COMPANY. The Directors of the Company are prepared to receive TENDERS for the supply of about 20,000 TIMBER SLEEPERS, of which a specification may be had at the Office of GEORGE BIDDELL, Esq. 24, George-street, Westminster. The Tenders must be endorsed, "Tenders for Sleepers," and left at the Office of the Company, on or before the 20th instant. The Company do not bind themselves to accept the lowest Tender.

JAMES HUTT, Secretary.
63, Lombard-street, London, Nov. 13, 1855.

HEYWOOD CEMETERY.—To CONTRACTORS and OTHERS.—The Burial Board for the Township of Heap, in the parish of Bury, in the county of Lancaster, is desirous of receiving TENDERS for the formation of the Cemetery, and the erection of the Chapels, &c. The Boundary-wall, Draining, Excavations, &c.; also, an Approach-road thereto. Persons willing to Tender for any or all of the above works may see the drawings and specifications on and after MONDAY next, the 12th inst. at the Office of Mr. T. D. BARRY, 47, Bedford-street North, Liverpool; or at the House of Mr. T. WOLSTENHOLME, Clerk to the Board, St. Luke's, Heywood, and further information, if required, may be had upon application to Mr WILLIAM GAY, Cemetery, Heywood.

N.B.—Tenders to be delivered on MONDAY, the 26th, to the undersigned, not later than TWELVE o'clock at noon, the Board not being liable to accept the lowest or any Tender.

THOMAS WOLSTENHOLME, Clerk to the Board
Town's Office, Heywood, Nov. 7, 1855.

TO BUILDERS.

TENDERS required for ERECTING and COMPLETING TAP HOUSE, BILLIARD and other ROOMS, to the Manchester Wine Shades, Old Fish street, Doctors' commons. The plans, specification, and conditions of contract may be inspected at the Architect's office on and after MONDAY, the 19th inst. between the hours of NINE a.m. SIX o'clock. Tenders to be delivered, sealed, to the Architect on or before WEDNESDAY, the 28th day of NOVEMBER. The lowest or any Tender will not necessarily be accepted.

JAMES SHERGOLD SCARD SCOTT, Architect.
19, Commercial-road, St. Gentle st. let.

[For remainder of Contracts see next page.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—I. BUILDERS, CONTRACTORS and Others.—The Metropolitan Commissioners of Sewers hereby give Notice that they will be ready to receive TENDERS, No. 1, Greek-street, Soho-square, on or before TUESDAY, the 27th day of NOVEMBER, instant, at ONE o'clock P.M. precisely, in one vessel or TENDER, for the several undermentioned WORKS, viz.:—PART for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING, with cement, BRICK SEWERS and IRON PIPES, of various lengths and Depths, with other works in connection with new Outfall, which is situate at Hare Marsh, and in Parishes of St. Mary, Stoke Newington, Hackney, and the maintenance of such works in proper repair for twelve calendar months, the time, price, and specification of the above works, together with the form of Tender, may be inspected on either or both days aforesaid at the principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE and FOUR o'clock, and the 5th NOVEMBER inst. The Commissioners do not by this Advertisement bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. N. Tender will be signed unless the bond above mentioned is E. H. WOOLCOTT, Secretary.

No. 1, Greek-street, Soho-square.
Dated this 15th day of November, 1855.

TO BUILDERS.

TENDERS are required for the ERECTION of a new Chapel-of-Ease, at Hare Street, Essex. The plans and specifications may be seen at the office of the Architect, Mr. E. SWANBOROUGH, 25, Broad-street Buildings, City, between the hours of TEN and FOUR, on and after MONDAY, the 19th instant. The lowest or any Tender will not necessarily be accepted.

NEWARK CEMETERY.—To BUILDERS and CONTRACTORS.—The Burial Board for Newark-upon-Trent hereby give Notice that any person desirous of CONTRACTING for the ERECTION of the CHAPELS, LODGE, &c. &c. for the use of such Board, and forming Roads, Drains, and fence out the new Burial ground, may inspect the plans, specifications, and forms of Tender at the Town Hall, in the parish of Newark-upon-Trent aforesaid, after the 24th day of NOVEMBER instant to the 1st day of DECEMBER next. Sealed Tenders for the execution of the works, endorsed "Tender for the Cemetery Buildings, &c." are to be sent to me not later than TWELVE o'clock at Noon on the 3rd day of DECEMBER next. The Board reserve to themselves the right to accept or reject any Tender submitted. Any other information may be obtained on application to me, or to Messrs. BELLAMY and HARDY, Architects and surveyors, 30, Bargate, Lincoln.

By order,
WILLIAM NEWTON, Clerk to the Board.
Kirkgate, Newark 15th Nov 1855

TO CONTRACTORS

LINCOLNSHIRE.—NEW TUNNEL, with SLUICE DOORS, SEA RACE, LAND DOORS, &c. at Ingoldwells Outfall.—All persons willing to CONTRACT for Building a New Tunnel of Brick and Stonework, with Sluice-Doors, New Channel, Sea Race, Land Doors &c. in the parish of Ingoldwells, in the county of Lincoln, agreeable to plans and specification at the Office of the undersigned, on application to Mr LEWIN, Eng neer, Boston, or at my Office in Spilsby, are desired to deliver in their proposals in writing (sealed up) at a Court of Sewers to be held at the Session House in Spilsby on MONDAY, the 17th day of DECEMBER next, at ELEVEN o'clock in the forenoon. The contractors will have to enter into acceptable and bonds, with sufficient sureties, for the performance of the Contract.

By order
W WALKER, Jun. Clerk of Sewers.
Clerk of Sewers' Office, Spilsby, Nov 9, 1855.

Note.—The situation of the intended new works may be viewed by applying to Mr JOHN DAVEY, of Ingoldwells, the Dikereeve, who will point out the same

TO GAS-FITTERS.—Kingsgate Chapel, Holborn.—ESTIMATES are required for LIGHTING the above Chapel (Vestries, and School-rooms) with GAS. Every information respecting the same can be obtained at the Office of the Architect, CHARLES G. SEARLE, Esq 29, Poultry, on and after MONDAY, 19th NOVEMBER inst.

TO ENGINEERS.—Kingsgate Chapel, Holborn.—ESTIMATES are required for WARMING and VENTILATING the above Chapel, on the most approved principle. The drawings can be seen at the Office of the Architect, CHARLES G SEARLE, Esq 29, Poultry, on and after MONDAY, 19th NOVEMBER, inst.

HIGHWAYS.—CONTRACT.—The Commissioners of Highways are ready to receive TENDERS from persons willing to CONTRACT for the REPAIRS of the ROADS in the EAST and WEST MEDENES in the Isle of Wight, to commence on the 1st day of JANUARY next, and to continue from year to year, subject to be determined by either party giving two months' notice in writing, to expire at the end of any year. The Tenders may be for both Medenes, or for one separately, at the option of the contractor, but the amount tendered for each Medene, must in any case be stated separately. Each contractor will have to find two sureties to the satisfaction of the Commissioners for the due performance of the Contract, and the names of the sureties must be stated in the Tender. Each of the sureties to be responsible for an amount equal to one half the amount of the Contract. All the work to be done under the superintendence of the Improvement Committee and the general Surveyors. One-sixth of the amount of the Contract to remain in the hands of the Commissioners until after the due fulfilment of the Contract, the remainder to be paid in equal monthly instalments, if the work is carried on to the satisfaction of the Commissioners. The contractor will be required, at his own expense, to sign an agreement for the due performance of the Contract; the Contract to be in the form of a draft, which can be inspected at the Office of the Clerk to the Commissioners. Tenders to be delivered, addressed to "The Commissioners of the Commissioners," at the Guildhall, Newport, on WEDNESDAY, the 21st of NOVEMBER next, by ONE o'clock.—Further particulars and the terms of the Contract may be known on application to the Clerk to the Commissioners, or to the General Surveyors, Mr. HENRY HEAVEN, residing at Lake, near Sandown, and Mr. FRANK WHITE residing at Shide, near Newport. The Commissioners will not bind themselves to accept the lowest or any other Tender.

CHARLES WYATT ESTCOURT, Clerk to the Commissioners.
Newport, Isle of Wight, November 3, 1855

RUGBY LOCAL BOARD of HEALTH.—To BOILER MAKERS.—Notice is hereby given that the Board are prepared to receive TENDERS from parties who may be willing to PROVIDE and FIX a NEW BOILER to the engine at their waterworks at Rugby, according to the specification deposited at the Office of the Board, Church-street, Rugby. Tenders for the same, addressed to the Chairman of the Board, must be sent in to me on or before the 26th inst.

By order of the Board,
C. E. WRATISLAW, Clerk.
Rugby, 7th Nov 1855

IMPERIAL IRON FOUNDRY, and ECONOMIC RANGE MANUFACTORY.

Three ft. wide	£6 10
Three ft. three in.	7 0
Three ft. six in.	7 15
Three ft. nine in.	9 0
Four ft.	10 10
Four ft. six in.	12 12
Five ft.	14 14

Copper Cocks, 5s. per foot.
Fixing, 5s. per foot.

This valuable KITCHEN RANGE, the Manufacturer has much gratification in stating, has been in use several years, and gives the utmost satisfaction. It may be used either with the fire open or closed, thereby avoiding the objection so naturally felt against having the fire at all times shut up, which is well known to generate a close unwholesome vapour.

The Prize Medal and Honourable Mention was awarded to this Range at the Great Exhibition of 1851.

To be seen in operation at the Manufacturer's,
J. SHERWIN, 52, TABERNACLE-WALK, FINSBURY.
Castings of every description in Loam or Sand.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.
W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Cash Weights, Pulley and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

FOUNDRY AND IRON WORKS,
88, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS.,
Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.
Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.
A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.
Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.
Estimates given for Iron Buildings, Wrought-iron Roofing, Garden Entrances, Wrought-iron Girders, Fireproof Doors, Book-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.
Building at the
GLOVERS' IRONWORKS,
168, DRURY-LANE, and CHARLES STREET.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's, JONES and BLANDY, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Area Railing, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.
BAKERS' OVEN WORK, Force Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

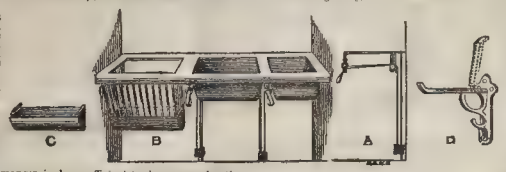
IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions may be seen, and estimates obtained on application to

E SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.



THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

e made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

represents the Patent ter-piece and Collar-rein. ball of which is taken to the e of the manger-works with lion and eye up or down guide-bar, and is noiseless its operation, as also a sure centative against the most dive horse being cast in the l.

. The Patent Portable Seed- can be instantly detached n the rack without disturb- the hay. The saving of the d in a clean and useful state, er for agricultural purposes,

nixing with the food in the manger, is alone sufficient to claim general notice.

. The Seed-box detach d, made of galvanized sheet-iron, light and durable.

. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an ct, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, able, and impervious to infection. Manufactured plain, galvanized, and enamelled.

MPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Pre- ing Saddle and Harness Bracket, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron rk for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

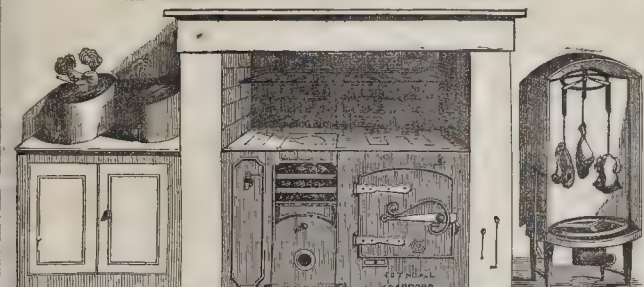
PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

PARKIN AND MARSHALL,



GENERAL MERCHANTS, AND MANUFACTURERS OF

TABLE CUTLERY, PEN and POCKET KNIVES, SCISSORS, RAZORS, ELECTRO-PLATED WARES, FILES, SAWS, EDGE and JOINERS' TOOLS, AUGURS, STEEL, &c. &c.

TELEGRAPH WORKS, SHEFFIELD.

OFFICES—{NEW YORK—71, JOHN-STREET. BOSTON—25, KILBY STREET, U.S. MELBOURNE—64, COLLINS-STREET EAST.

CORPORATE MARK—XLALL.—Granted by the Cutlers' Company, 1789.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undermentioned Articles, manufactured by Mr. ENOCH OLDFIELD TINDALL, Iron Works, Scarborough, viz:—TINDALL'S PATENT PORTABLE MANGLES, WASHING AND WRINGING MACHINES, NAPKIN PRESSES, COOKING RANGES, LAUNDRY STOVES, SANATORY GRATE AND BRAZE, CHAFF CUTTERS, OAT, BARLEY, MALT, AND LINSEED MILLS, BEAN MILLS, CHEESE BREAKERS, PORTABLE SAW-MILLS, TURNIP CUTTERS, &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are readily answering the highest Ranges of our country.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Flats at once, occupies only 13 inches in space, is removable from one room to the other, and will be found in reliable to the Hospitals, Infirmaries, Laundries, and Private Families.

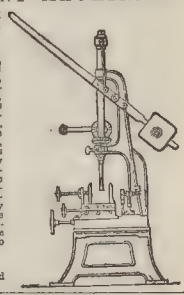
E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia (as well as not being liable to choke, and readily cleaned) that has been introduced.

THE MANGLES AND WRINGING MACHINES have been introduced into the Royal Household most of the Public Institutions, and all the Principal Families, and bear testimony to their effects and superiority over all others.

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be seen to be appreciated. They are of a handsome and durable character, and are fitted with Patent Knives, &c. with Addition of Double Iron Frame, Fly Wheel, &c.

Drawings of Ranges, &c. with Addition of Double Iron Frame, Fly Wheel, &c. forwarded on application to the Retail Agents, who are appointed in almost every principal Town in the United Kingdom.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.



PLANING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders; and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing and turning. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 29, Lawton-street, Liverpool, from whom full particulars may be obtained.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', JOWLS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 36, Wardour-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

IRONMONGERY.

or at 16, Great James-street, LONDON.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.
THIS IS THE ORIGINAL PATENT

for important improvements in stable-fittings, hay-box, manger, and water trough, as one fixture, including a method surpassing all others for conveying the straps and halter-weights to the back of the fittings, to prevent the horse being cast in the stall. Stable Fittings of every description, plain, enamelled, or galvanized. Also the newly invented Loose Box Fittings, Surface Gutters with moveable cover-plates, Stable Posts, Ramps, Sills, and all kinds of Stable Furniture in Stock.

JAMES BARTON, IRON FOUNDER, &c., 370, OXFORD STREET, London, MANUFACTURER of KITE'S PATENT VENTILATING and SMOKE-CHASING CHIMNEY CAPS, patronised by her Most Gracious Majesty (500 on Buckingham Palace. In use also on St. James's Palace, Windsor Castle, Government Offices, &c. &c. Zinc Cowls (not cased iron, 35s. each; the latter as durable as the building itself. Drawings and Price Lists forwarded on receipt of two postage stamps.—Address, BARTON'S Iron Works, 370, Oxford-street, London.

GREENWOOD'S PATENT INDIA-RUBBER STOPS render Doors, Windows, Show-cases, Closets, &c. perfectly air-tight, keep out Dust and Draught. Reduced price, 4d. per foot. Spring Sliders for the bottom of Doors, 4s. each.

J. GREENWOOD,
10, Arthur-street West, London-bridge.

FENDERS, STOVES, and FIRE-IRONS.
Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisite finish of workmanship. Bright stoves with bronzed ornaments and two sets of bars, 2l. 14s. to 6l. 10s.; ditto, with ormolu ornaments and two sets of bars, 5l. 10s. to 13l. 12s.; bronzed fenders, complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 18s. to 7l. 7s.; fire-irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges

Firstly—From the frequency and extent of his purchases; and

Secondly—From those purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS.
The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers, adapted for dining-rooms and dwelling-rooms, as well as to have some designed expressly for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two-light) to 16l.

THE BEST SHOW of IRON BEDSTEADS in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads, from 16s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s.; and Cots, from 20s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.

The alterations and additions to these very extensive premises (already by far the largest in Europe), which have occupied the whole year, are now nearly completed; they are of such a character that the entire FURNISHING of HOUSES is now devoted to the display of the most magnificent Stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated and Japanned Wares, Iron and Brass Bedsteads and Bedding), arranged in Sixteen Large Show rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

Catalogues, with engravings, sent (per post) free.

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 1, 2, and 6, PERRY'S-PLACE.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO., Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Richmond-place, Hampstead, March 9th, 1855.

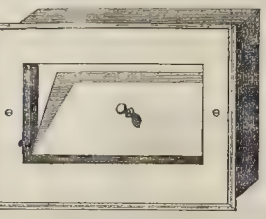
Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extensive gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels, mansions, club houses, private houses, and the army, having cooked in one day 1,000 fowls, and many cwts. of ham, beef, veal, mutton, lamb, sausage, &c.; roasting in one department a baron of beef weighing 330 lbs. in nine hours, fifty-three minutes, presented by J. Banister, esq. Threadneedle-street, to the directors, for the banquet given to the foreign masters. They have been in full operation for ten months, and are now in as perfect order as when first finished. They have not cost one shilling for repairs.

I am, Gentlemen, yours respectfully,
EDWARD HORNE.

Messrs. Deane, Dray, and Co.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of roasting a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (Class 30), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Entrance-halls, Libraries, and Ware-rooms.—CUTLER and SONS, Sole Licensees and Manufacturers, 16, Great Queen-street, Long-acre, London.



ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the sale of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the cheerful appearance of an open fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 14., Regent street, London.

HEATING BY HOT WATER.
JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with all the requisites can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 9s. 8d. This achievement in heating by hot water is unprecedented.

BUILDINGS HEATED by HOT WATER.

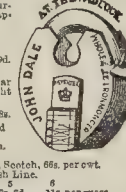
Price-lists on application.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.



Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.
JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

Register Stoves, 5d. 4d. 7d. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:

3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 8s.; 4 ft., 3l. 18s.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

ndon Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

ORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs aint the Public that he has entirely CLOSED his Estabent on the Surrey side of the Thames, and that Articles of anufacture can only be obtained at his Works, Mill-wall, r, or at his Warehouse, Praed-street, Paddington.

ICKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-Cement, that requires no colouring.—Sold exclusively by BAZLEY WHITE and BROTHERS, Millbank-street, minster; and Seel-street, Liverpool

OTICE.—BLUE LIAS LIME.— L. B. PEARSE and CO. beg to inform Architects, Engi-Builders, and Contractors generally, that they have now ined the AGENCY for the above valuable HYDRAULIC e, from the original quarries, Stockton, Warwickshire, and ow supplying direct from the works in their own boats, at a ed rate.

B. PEARSE and CO. beg further to give notice to conrs, that they have erected, at a considerable expense, large ngs and machinery for grinding lime and cement, so as to e genuine quality and large supply, at their extensive presituate on the Great Northern Railway, York-road, King's-

REY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

ILLIAM PETERS begs to inform the trade he is in a posto supply the best GREY STONE LIME in any quantities the above wharfs, or per barge direct from the kilns. ge Grey Stone, or Grey Chalk, free on board at Works, per ton.

all ditto, ditto, 4d. per ton.

ges loaded in a few minutes.

uldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

NOTICE.

REAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, h 20, 1855.—CHARLES RICHARDSON hereby informs iends he has taken another Wharf adjoining, where ally pa LARGER STOCK of the above valuable HYDRAULIC E always on hand, that in future all orders may be punc- attended to. Orders for export, or alongside rivers, canals, way stations, should be given a few days before required. BBS, CANNING, and CO.'s BLUE VITRIFIED BRICKS, S, JUNCTIONS, BENDS, and FIRE GOODS. MAN, PORTLAND, PARIAN, ANSTON, and LIAS ENTS of the best quality. CONDS, PAVIORS', STOCKS, and other BRICKS.

ORTLAND CEMENT.

CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

REAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

ATH CEMENT.

CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

ATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.

BRICK, LIME, and CEMENT MERCHANTS.

SOUTHAM BLUE LIAS LIME DEPOT.

th, Portland, Lias, and Roman Cements; Parian and Keene's ents, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire ks, Vitrified Blue Bricks, White Building Bricks, White melled Pans and Traps, and every description of Building erial.

B. Lump and Ground BLUE LIAS LIME delivered in bonby direct from the Works in Warwickshire, to any part of the or canal.

OUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

ATHAM & CO. have arranged for a constant supply of the very superior BLUE LIAS LIME, which for the last two s has been extensively used at the Houses of Parliament, conducted during that period or now in hand, and any orders they favoured with will command their best attention.

loads of either Lump or Ground Lime can be delivered t from the Works in WARWICKSHIRE to any part of Rivers Thames or Lee, alongside any wharf on canal, or by or rail to any part of the kingdom.

ORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable ment at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

ORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT RKS on Mill-wall, Poplar, for Manufacturing CEMENT, begs to inform the Trade in general that they can be plied with any quantity they may require, either at his Works, Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, sland-yard, Westminster. Manufacturer of Roman, Lias, and etic Cements, English and French Plaster, &c.

RTIFICIAL HYDRAULIC or PORT-LAND CEMENT combines the valuable qualities of the ural Cements with the additional advantage that it greatly ists them in its cementitious properties; it at it is not affected rost, and does not vegetate in damp situations. Account of MPARATIVE EXPERIMENTS on the strength of this and r Cements read at the Institute of Civil Engineers, to be ained from the Makers, JOHN BAZLEY WHITE and OTHERS, Millbank-street, Westminster, who prepare one ility only of Portland Cement.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on tne river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied or shipment, on advantageous terms.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c. will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7	0	0
Fine	3	0	0
Coarse	2	10	0

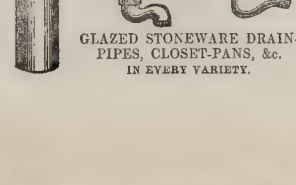
Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis

11 George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the purest quality, manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their continuity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article in both cement and lime. On moderate orders Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be afford for the mixing of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.



Agents in London—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c. IN EVERY VARIETY.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not BLISTER or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 30s. per 1,000; floor bricks and 6 inch pavings, at 37s 6d. per 1,000; 8-inch pavings, at 27s 6d. per 1,000; 9-inch pavings, at 22s. 6d per 1,000 Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REASONS OF THE JURIES," page 381, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambra Mosaics, manufactures of a highly ornamental character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Barrels, and Kitchen Ranges, to be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PRIZE BRICK-MAKING MACHINE.—CHAMBERLAIN'S PATENT.—This portable machine will make 20,000 solid bricks per day, with 3-horse power. One man to feed the machine with clay, and boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helen's, September 6th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 5th, 1855.—Apply for particulars to Mr. HUMPHREY CHAMBERLAIN, Kempsey, Worcester.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet-pans, Traps, Syphons, Channels, Gratings, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with every description of Articles of Fire-brick Construction at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Decorative Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 39 Nelson-square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Huxton Brick-fields, Grange-walk, near the Rotherhithe Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey ditto, 30s. per thousand; Grizzles, 20s. per thousand; Hough Stocks, 20s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G SMEED, Sittingbourne, Kent.

RICKETS'S CHEAP GAS STOVE, Price, £1. 15s.
Made of Sheet Iron, suitable for Heating small Countinghouses, Bedrooms, Cellars, &c. &c.
MANUFACTORY, AGAR-STREET, STRAND, LONDON.
Liberal Discount to Builders.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building Price from 8s. 6d. each, and per lineal foot to order.
IRON GIRDERS, and COLUMNS to MODEL or DRAWING IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, Oil Gutters, Sash weights, STABLE FITTINGS, pumps, tank piping, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LANCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Manufacturers and Importers of Canvas in any quantity. Orders per post receive the most prompt attention. WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

Just published, in 1 vol. fcp. 4to. price 28s. cloth, gilt top.
THE LIFE of LUTHER, in Forty-Eight Historical Engravings
By GUSTAV KOENIG. With Explanations by ARCHDEACON HARE. Translated by SUSANNA WINKWORTH
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Vol. I. in 8vo with Plates and Woodcuts, price 21s cloth,
ARAGO'S POPULAR ASTRONOMY.
Translated from the original and edited by Rear-Admiral W. H. SMYTH, For. Sec. R.S.; and ROBERT GRANT, M.A.
Lately published, Vol. II. price 18s.
ARAGO'S METEOROLOGICAL ESSAYS, with an Introduction by Baron HUMBOLDT. Translated under the superintendence of Colonel SABINE, R.A.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW ILLUSTRATED EDITION OF MOORE'S IRISH MELODIES.
On Tuesday, the 27th inst. will be published in One Volume, square crown 8vo, uniform with the edition of Moore's "Lalla Rookh," illustrated under the superintendence of the late Charles Heath, price 21s. cloth; or 31s. 6d. handsomely bound in morocco.
MOORE'S IRISH MELODIES, illustrated with Thirteen fine Steel Plates, engraved from original Designs by

C. W. Cope, R.A.	W. E. Frost, A.R.A.	W. Mulready, R.A.
T. Creswick, R.A.	J. C. Horsley.	J. Sant, A.R.A.
A. L. Egg, A.R.A.	D. Maclise, R.A.	F. Stone, and
W. P. Frith, R.A.	J. E. Millais, A.R.A.	E. M. Ward, R.A.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo with six plates, price 7s. 6d. cloth.
ELEMENTS of PRACTICAL HYDRAULICS for the Use of Students in Engineering
By SAMUEL DOWNING, M.A.
Professor of Civil Engineering in the University of Dublin.
LONDON: LONGMAN, BROWN, GREEN, and LONGMANS.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six penny stamps (the cost of postage). No. XI. for November, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and 8, SPENCER Hill, High Holborn.

Third Edition.
THE BUILDER'S FRIEND, Price One Shilling.
Office of "The Builder," and of all Booksellers.

Nearly bound, price 4s.
A HANDBOOK of ARCHITECTURE for the UNLEARNED, in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.
By GEORGE GODWIN, F.R.S. &c.
With Illustrations.
By the same Author, price 1s.
LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.
Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

1 vol 114 Illustrations, 2s. 6d. cloth.
COMMON THINGS EXPLAINED
By DIONYSIUS LARDNER, D.C.L.
Containing A—Earth—F—Water—Time—The Almanack—Clocks and Watches—Spectacles—Colour—Kaleidoscope—Pumps—From the Museum of Science and Art.
London: WALTON and MABERLY, Upper Gower-street; and Ivy-lane, Paternoster-row.

1 vol 110 Illustrations, 2s. 6d. cloth.
POPULAR ASTRONOMY
By DIONYSIUS LARDNER, D.C.L.
Containing How to Observe the Heavens—Latitudes and Longitudes—The Earth—The Sun—The Moon—The Planets: are they Inhabited?—The New Planets—Leverrier and Adams's Planet—The Tides—Lunar Influences—and the Stellar Universe.
From the Museum of Science and Art.
London: WALTON and MABERLY, Upper Gower-street; and Ivy-lane, Paternoster-row.

1 vol. 10s. Illustrated, or 2s. cloth.
THE ELECTRIC TELEGRAPH POPULARISED. By DIONYSIUS LARDNER, D.C.L.
From the Museum of Science and Art.
"The reader will find the most complete and intelligible description of the Telegraphic Apparatus in Dr. Lardner's admirable chapters on the subject."—*North British Review*
London: WALTON and MABERLY, Upper Gower-street; and Ivy-lane, Paternoster-row.

COMPLETE COURSE OF NATURAL PHILOSOPHY. New and cheap Edition, revised and greatly enlarged, with several Hundred Additional Illustrations.
Now ready, Parts I. and II. price 1s. each, and VOL. I. (Mechanics) complete, price 6s. cloth lettered, or 5s. sewed.
HANDBOOK of NATURAL PHILOSOPHY. By DIONYSIUS LARDNER, D.C.L.
Formerly Professor of Natural Philosophy and Astronomy in University College, London.
Being a Series of Treatises, composed in a popular and general intelligible style, independently of the language and symbols of Mathematics.
MECHANICS (now ready) ..... 1 vol.
HYDROSTATICS, PNEUMATICS, and HEAT, Dec. 1. ..... 1 vol.
OPTICS ..... 1 vol.
ELECTRICITY, MAGNETISM, ACOUSTICS, and METEOROLOGY ..... 1 vol.
London: WALTON and MABERLY, Upper Gower-street; and Ivy-lane, Paternoster-row.

Sold's volumes 1s. 6d.; double volumes 3s. 6d.
LARDNER'S MUSEUM of SCIENCE and ART. Illustrated by Engravings in Wood
Vols. I and II together, 3s. 6d.; or singly, 1s. 6d. each.
The Planets: are they Inhabited Worlds? Weather Prognostics—Popular Fallacies in Physical Science—Latitudes and Longitudes. Lunar Influences—Meteoric Stones and Shooting Stars. Railway Accidents
Light—Common Things: Air. Locomotion in the United States—Planetary Influences—Common Things: Water—The Potter's Art—Common Things: Fire
Vols III. and IV together, 3s. 6d.; or singly, 1s. 6d. each.
Locomotion and Transport, their Influence and Progress. The Moon—Common Things: the Earth—Electric Telegraph. Terrestrial Heat.
The Sun. Earthquakes and Volcanoes—The Barometer—The Safety Lamp. Whitworth's Micrometric Apparatus—Steam.
Vols. V. and VI. together, 3s. 6d.; or singly, 1s. 6d. each.
Steam-Engine—The Eye—The Atmosphere—Time—Pumps. Spectacles—Kaleidoscope.
Clocks and Watches—Microscope. Drawing and Engraving. The Locomotive—The Thermometer—New Planets—Leverrier and Adams's Planet. Magnitude and Multitudes.
Vols. VII. and VIII. together, 3s. 6d.; or singly 1s. 6d. each.
Common Things: the Almanac. Optical Images. How to Observe the Heavens—Common Things: the Looking-Glass—The Stellar Universe. The Tides.
Common Things: Man. Stellar Universe (concluded)—Magnifying Glasses—Instinct and Intelligence—Solar Microscope. Camera Obscura—Common Insects. Magic Lantern.
Continued in Weekly Numbers at 1d., in Monthly Parts at 3d., Quarterly Volumes at 1s. 6d.; and Half-yearly Volumes, at 3s. 6d. cloth
London: WALTON and MABERLY, Upper Gower-street; and Ivy-lane, Paternoster-row.

On Thursday, Nov. 22, will be published, price 1s.
THE BRITISH ALMANAC for 1856
THE COMPANION to the ALMANAC
Sewed in wrapper, price 2s. 6d.

THE BRITISH ALMANAC and the COMPANION together, in cloth boards, lettered, price 4s.
CONTENTS OF THE COMPANION FOR 1856.

PART I.
1. Notes on the History of the English Coinage
2. Agricultural Statistics.
3. Competitive Examinations for Public Service
4. Shipwrecks and Lifeboats
5. Fluctuations of the Funds.
6. Average Prices of Corn.
PART II.
7. Abstracts of Public Acts.
8. Abstracts of Parliamentary Documents.
9. Chronicle of the Session of Parliament, 1854-5.
10. Private Bills of the Session of Parliament, 1854-5.
11. Public Petitions, 1854-5.
12. A chronicle of Public Improvements (with Woodcuts).
13. Chronicle of Occurrences in India.
14. Necrological Table of Literary Men, Artists, &c.
15. THE CAMPAIGN.

In the days of dear books, "The Annual Register" was the popular record of passing events and of the legislation and statistics of the year. The "Companion to the Almanac," of which the volume for 1856 will be the 29th of the series, has taken its place as a cheap Manual of current information, and as a trustworthy Register for future reference. The first part of each volume is constantly varied, and the subjects selected are chiefly of a permanent and general interest. The second part presents the same features in each year, so that a ready comparison may be made from one year to another of the various matters comprised in the enumeration given above. For twenty-seven years "The Companion to the Almanac" was a Periodical. The altered circumstances of the country have rendered a new historical article necessary, and thus "The Campaign" was last year added to its contents.
LONDON: KNIGHT and CO. 90, Fleet-street; and sold by all Booksellers in the United Kingdom.

Just published, price 16s.
A MANUAL of ELECTRICITY, including GALVANISM, being the Fourth Edition, entirely rewritten, of Lectures on Electricity.
By HENRY M. NOAD, Ph. D.
Lecturer on Chemistry at St. George's Hospital, and Author of "Chemical Manipulation" and "Analysis," &c. &c.
Part II. comprising Magnetism, Electro-dynamics, Diamagnetism, and the Electric Telegraph, will be ready early in the ensuing year.
GEORGE KNIGHT and CO. Foster-lane, London.

Just published, Part IV. containing Four large Plates, in a new Wrapper, with Advertisements, price 2s. 6d. Also Division II. comprising the First Four Parts, or Sixteen Plates, price 9s.
EXAMPLES of BUILDING CONSTRUCTION, being a series of Working Drawings, to a large scale, of the Details of Public and Private Edifices.
By HENRY LAXTON,
Of the "Civil Engineer and Architect's Journal," author of "Laxton's Builder's Price Book," &c.
No. 19, Arundel-street, Strand; and of all Booksellers.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DEED, and WRITING BOXES, with their sizes fittings, and prices, will be sent by post on receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's-churchyard, London.

The Builder.

VOL. XIII.—No. 667.

THE "present condition and future prospects of architecture!" was the theme, and a wide one, on which Mr. Tite, M.P. addressed the Royal Institute of British Architects on the 5th inst. when, as chairman, he opened the session. Let us, preparatory to the observations which will necessarily follow Mr. Tite's remarks, place the latter in full before our readers, at least as fully as the able chairman's habit of rapid speaking will permit.

Mr. Tite commenced by observing that it had been generally the practice, at the opening meeting of the session, for the chairman to make a few remarks on the principal subjects which had occurred during the recess: he himself had occasionally followed that course, but on the present occasion his thoughts had been turned in another direction, and he had, therefore, announced his intention of occupying their time for a few moments "on the present condition and future prospects of architecture." He had been much led to this subject by an incident which occurred at a recent meeting of a small society called the Architectural Association. At their first meeting, about three weeks since, he was a visitor. The association was a body of young men who met to prosecute their studies, and with one of whose suggestions he had been much pleased. It appeared that the members of that body felt the necessity of something like a diploma, or some other recognition of their attainments, and that they were willing to submit themselves to an examination, in order to obtain an opinion on their professional merits and attainments. He (the chairman) thought this was a step in the right direction. The association, when he attended its meeting, was addressed by the chairman, a man of considerable talent, Mr. Bailey, in a very able and suggestive address, embracing much that was wanted by young men about to embark in an anxious and arduous profession; but the suggestion he had referred to was one which had strongly commended itself to him,—and he could not but regard it as a remarkable fact that these young men should feel it so desirable that their attainments should be recognized, that they should offer themselves voluntarily for examination. It was an important step in the history of their art. As Mr. Bailey had said, if they were exposed to competition, that competition could only be met by showing that architects possessed superior attainments to those with whom they had to compete for public favour.

He proposed to divide what he had to say into two subjects,—the present position of architecture and its professors, and their future condition and prospects.

In considering the present position of architecture, he could not but advert to what it was when he first embarked in life. At that time the number of architects who had any claims to that title amounted in London to about fifty; and there were not more than four or five leading men: to one of those he was articled. It was then the custom to devote six years of a young man's life in that way,—and that was a concession of one year from the ordinary period of seven years' apprenticeship. He was accordingly articled for that period. At that time there was a fallacy, which perhaps even existed to some extent at this day, that it was necessary to send a young man who desired to be an architect into the carpenter's shop,—or, as it was technically called, he went for "three years to the bench." He could hardly conceive how three years could be more completely wasted. The idea of sending a lad from school into a workshop to be qualified at the end of the term only in a very imperfect way to put together a door or a sash, did appear to him to be a most extraordinary waste of time. Luckily for himself and his friends, he escaped the ordeal. He served his articles, he hoped, faithfully and honestly, for six long years. In the present day he believed the practice had erred in an opposite direction, and it was now the custom to article a youth for three years only,—in which time very little could be learnt. Formerly, the opportunities which an architect had for study and improvement were few and costly. There was abundance of information of great value, but it was scarcely attainable; and the first move that was made to obtain information was by means of an Architectural Association, where a few earnest young men associated themselves together to make a design or a sketch from a given subject, or to discuss a short paper read by one of its members. That association memorialized the Royal Academy for literary assistance, and the Royal Academy opened their library to them once a week; and there they had access to books which were otherwise inaccessible. On looking through his own library he found that there was no want of books at the time referred to, which would teach a man the elements of his profession; but they were costly, and in some instances somewhat scarce. In 1762, Stuart published the first volume of his "Athens:" the second volume was published in 1787, and the third in 1794: the first volume of the "Ionian Antiquities" appeared in 1769, and the second in 1797; "Palladio," by Leoni, in 1715: and Adams's "Spalatro," in 1754: Chambers's "Elements of Architecture" was published in 1759, and he was building Somerset House in 1774. The well-known work of Desgodetz, "Les Edifices Antiques de Rome," was published in 1682: but all these books were very costly, and at that time there was no institute or society by which the information which those books contained could be reached by ordinary students. With regard to Gothic architecture, there was the "Vetusta Monumenta:" Carter commenced his "Ancient Architecture" in 1795. Britton produced the first volume of his "Antiquities," in 1806; and the fourth volume in 1816; and he commenced his "Cathedrals" also in 1816. But there were no books or literature generally accessible, and the young architect had enormous difficulties to encounter. At present every kind of information was easily obtained, and at a very trifling cost. Among the earlier steps leading to this result was the Architectural Society, which was founded in 1831, under the patronage of the Duke of Sussex. The Institute was later in point of time, and it was unfortunate that the profession was separated by the existence of two institutions. He himself joined the Architectural Society, and after some years became its President, and when the proper time arrived, he did his best to promote the union of the Architectural Society with the Institute, which was eventually accomplished. The Institute was founded in 1834, and obtained its charter in 1837. In 1835 they received Sir John Soane's donation of 750*l.*: in 1842 the two societies were united; and in 1848 the Queen first granted the Royal Gold Medal. At the time of the foundation of the Institute, it consisted of twenty-five fellows and fifteen associates; and although he had to regret that they were not more numerous than they were at present, he still thought that, comparing their present with their original numbers, and considering the many eminent men who had joined them, they were justified in congratulating themselves on their present position.

The next question that occurred to him in looking at the present position of architecture, was to inquire what was the influence of the Institute at the present day. Upon the profession itself, he believed the influence of the Institute was considerable and important. At the Institute the student had access to a valuable library, to lectures and discussions, and he believed that there were advantages in connection with it for the promotion of their architectural position, which without it they would altogether have failed to obtain. With regard to its influence upon society, though it would be wrong to assume that the Institute had its proper position among the literary societies of London, it had obtained a certain amount of influence, and that had been apparent in two recent instances. The one was in reference to keeping the land on the south-east side of St. Paul's open for the public. The Institute moved in that matter, and appointed a committee, and the public attention which they were able to call to the subject, he ventured to hope, had secured that great object, almost national in its importance. This was mainly to be attributed to the influence of the Institute as a united body. The next question was the Building Act. The old Act, as they knew, was very imperfect, and had existed for ninety years; but no two men could agree in amending it. About ten years ago, however, the Government brought in another Act, which was very complex in its machinery, and under which it was very difficult to obtain a decision on any contested point. The late lamented statesman, Sir William Molesworth, had the courage to undertake the matter, and with great success. He only regretted that Sir William Molesworth had not been spared to receive the congratulations of the Institute for having combatted the difficulties which surrounded the question. In that matter the Institute had made its influence felt. He had the pleasure of being the chairman of the committee appointed on that subject, and although he began by opposing the Bill, he became so satisfied of the perfect sincerity of Sir W. Molesworth, and of his desire to make the Bill useful and workable, to adopt any reasonable suggestions, that in the end he became a warm supporter of the measure, and by a train of fortunate circumstances had the honour of becoming a member of the Parliamentary Committee itself, and to assist in passing the Bill. He did not mean to say that everything was done that might have been done, but by sweeping away the complicated machinery of the previous Act, a great deal of good would doubtless be effected. The only unfortunate part of the Bill were the clauses introduced at the instance of the builders in opposition to the architects, and those clauses he believed would lead to difficulties hereafter; but he did claim for the Institute, as a body, that their influence in the question had been felt, and the Institute was now in the position of being the examining body for the district surveyors. It was a great step in advance that their position should be so acknowledged. There had been some difficulty in passing this provision of the Act. It was strongly opposed (he knew not why) by the present Duke of Somerset (then Lord Seymour), and supported by Lord John Manners, for which courtesy he was bound to thank his lordship, and to congratulate the Institute that it was now the law of the land.

He would now pass to the effect of the Institute upon architecture generally, and in that respect he thought they had nothing to be ashamed of. In visiting the French Exhibition, he had endeavoured to ascertain whether they were behind-hand with their neighbours; and with every desire to exempt his mind from the influences of national prejudice, he thought that there was nothing to be seen in Paris, in the more recent productions of the French artists, to make English architects ashamed of

the comparison. In London, he thought that the architects had done well, and, to use a common phrase, had held their own. As very recent instances, he would quote the British Museum and the Palace of Westminster. In the latter, all that the most refined taste and anxious industry could effect had been accomplished. Those who chose the style had to answer for that choice; but the work had been carried out with taste and judgment, and Sir Charles Barry had entered most thoroughly into the feeling and spirit of the architecture of our Gothic ancestors. He (the chairman) had the same remarks to make as to German architecture. The great works of Klenze, of Munich—the Walhalla, the Glyptothek, and the Pinakothek,—were splendid specimens of modern art, but his attempts at Gothic were absurd. The Museum at Berlin was a great work of Schinkel; but his "Entwurf" for the church of St. Gertraud, was so wretched, that it was well for the city of Berlin that it remained only a project. In St. George's-hall, Liverpool, architectural decoration had been carried to a great extent, and that building was certainly quite upon a par with the works of any of the French architects.

With regard to modern Gothic architecture, it was difficult to compare that of France or Germany with that of England; perhaps because English Gothic, as seen in our best examples, such as Westminster, York, Salisbury, or Beverley, was peculiar in taste and detail, to the pointed architecture of France or Germany. But, upon the whole, he considered modern French Gothic very inferior indeed to that of England, in its general effect as well as in detail. He thought the church of St. Clothilde, on the whole, a failure; but he had seen a church in course of construction, in Paris, near the Faubourg Poissonnière, in which there were cast-iron columns and cast-iron ribs, filled in with plaster, in such a manner as would not now be tolerated for a moment in England.

He was of opinion, however, that Gothic architecture was too fashionable in England; and he sincerely regretted it, — partly, perhaps, because of early teaching, and perhaps because his recent visit to Italy had revived his old impressions. Classical architecture appeared to be almost forgotten by English students; and he had been exceedingly struck by the fact, that in a clever and well-written book, by an architect, on "The Gothic Architecture of the North of Italy," classical architecture was ignored and despised. This was a sign of the times which, as an architect, he was bound sincerely to regret. At one time English architects had been mad for Grecian architecture; but now the great works of Wren, Palladio, Inigo Jones, and the great architects of Italy were neglected; and one gentleman (Mr. Ruskin) admired to the very echo the Ducal Palace at Venice—a feeling which he regretted should exist among the architects of England. The writer of the book to which he referred had engraved, as a beautiful example, a window in the very angle of the main story of one of the principal palaces: to effect this the angle was cut through, and the upper part, of very heavy architecture, was supported on corbels only a few inches thick. He had himself been taught that the weight should be carried consistently and honestly; and so violent a departure from that rule as this and many other instances he could quote in Venice, he could not consider consistent with architectural truth. He thought that architects and architecture were much indebted to Mr. Ruskin, but he regretted that his lot had been cast in Venice; for of all the ugly types of Gothic architecture to be found on the continent, that of Venice was, in his opinion, the most ugly; and although he agreed with Mr. Ruskin and Mr. Street that the origin and progress of Gothic architecture might be traced in Venice more successfully than elsewhere, his own opinion was, that the Venetians never attained any eminence whatever in that style of architecture, and that all that could be claimed for it was a certain amount of pictorial picturesqueness. He did not know whether these views were acceptable to the meeting, — but he wished to recall the serious attention of the profession to the beautiful architecture of Italy, and its exceeding fitness to English religious observances;—its facility for accommodating large numbers, and enabling them to join conveniently in the services, and to hear the sermon. At the same time he did not undervalue our attainments in regard to mediæval architecture, of which, especially in regard to decoration, we had every reason to be proud; and which contrasted favourably with those of French architects.

He wished he could speak in similar terms of the public improvements in London, on which, it is true, enormous sums had been expended; but the French had done the same thing in a way which put English parsimony to shame. The tower of St. Jacques, as restored, and forming the centre of a large open space, constituted one of the finest objects in that magnificent street of Paris, and redeemed it from tameness and monotony. This fact, together with the noble space round the Hôtel de Ville, showed there was an amount of taste and liberality in Paris which it would be well to imitate in London. The difficulty the committee of the Institute had had to contend with to secure the vacant ground at St. Paul's was a matter for which the people ought to take shame to themselves, when contrasted with the sacrifices which the French had made for the improvement of their metropolis.

In regard to the present position of architects, it was to be observed that they were now rather in a transition state. Formerly, architects and engineers were not separated as at present. Mylne and Alexander, both architects, constructed Blackfriars bridge and the London Docks; and if the engineers had gone ahead of the architects in later times, that was the fault of the architects themselves. They were quite able to help themselves. Every gentleman present might be an engineer, an architect, a builder, a decorator, or anything he pleased. The difficulty he had referred to was to be met simply by superior attainments on the part of architects; bearing in mind that in England men would always be estimated in proportion to their practical ability.

With regard to the future prospects of architecture, the great object to be hoped for was a test, by examination of the ability of its professors; and he hoped the time would come when the Government would employ architects and engineers because they were recognized by their professional brethren, and when an architect would be honoured because he had passed an examination before the Institute of British Architects; and the more so if they went to that examination voluntarily.

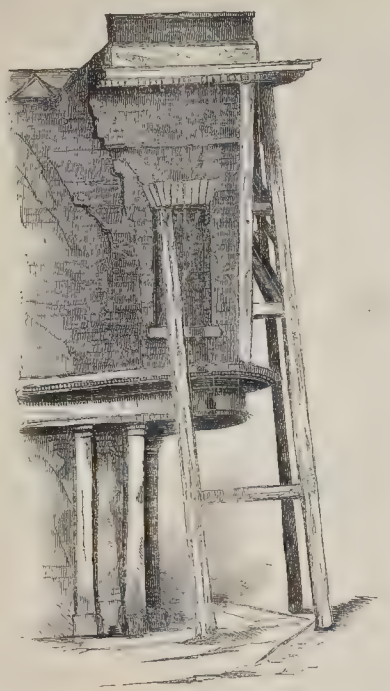
Mr. Tite proceeded to read the substance of the qualifications required from architects in Prussia, who were subjected to a short examination in literature and general and technical science, including the integral and differential calculus, projection of shadows, conic sections, perspective logarithms, road and railway making, the French and Italian languages, and shorthand! the examination being public and competitive.

He believed that those who, like himself, had practised as an architect for thirty years, must feel that, after a time, most of the things included in the Prussian regulations would be demanded of English architects; and he hoped that some system of examination would be carried out, for upon that alone would depend the advancement of the art. There was no other mode of getting "the right man in the right place," than to let the right man be properly informed of what he had to do. The council had authorised him to state, that some of the topics which he had introduced to the meeting should form the subject of discussion on some future evening. In the meantime he must congratulate the profession on the progress it had made (and particularly on the offer of the younger members to submit themselves to a voluntary examination); and would urge them to consider carefully the comparative merits of Mediæval and Italian Architecture.

LONDON HOUSE-BUILDING:

CORNER SHOPS.

MR. BUILDER.—PREMISING that I have not the privilege of being a member of the honourable and useful profession of architecture, or even skilled in the ancient craft of the builder, yet I hope that I am gifted with an average share of common sense and observation, and have not for several years walked through the streets of London with my eyes shut,—I therefore venture the following observations.



Amongst the curiosities of this great metropolis,—both human beings and the work of their hands,—I have been struck by some peculiarities of our street architecture, which seems as strange as most matters which have come under my notice.

In the first place, I hate shams, and nothing is more vexing to me than to see a church or other building set apart for a sacred purpose,—itself a cheat,—masked with Gothic forms and devices, a mere shell, behind which the natural roof, much lower than the shell itself, is distinctly visible from certain points to every passenger in the street. It seems to me wonderful that when these fronts are reared, it is not thought worth while to continue the mask to such a distance from the front, that at any rate those of small observation may be pleased with the idea of completeness.

Many of our taverns and other buildings are masked and stuccoed,—I dislike the latter almost as much as the former,—*it is in fact a mask*, which if applied with the greatest skill and taste, I can never help fancying the rough brickwork through it, and being uncomfortably impressed with the idea of premature decay, rottenness, and shiftyness, if I may be allowed to use such a word. I remember that monstrous effigy of George the Fourth at King's-cross,—a work of art which you have already noticed in your paper,—and although I never saw that *work* without a shudder, and a sort of feeling of shame and disgrace that money should actually have been expended upon such a thing in a place which we consider the metropolis of the world, and that too in the nineteenth century, I have often since regretted that it was not removed to some out-of-the-way place, where it might still be safely kept as a sort of *beacon and warning*. I would have had one half carefully skinned, showing the pantile nose, and other portions of the king, &c. in order that the finished or stuccoed part might be studied in contrast with the inward.

Paint and whitewash improperly applied I know you abominate: so do I. In the Chapel at Lambeth Palace, the carved stalls and other woodwork of richly coloured oak, is painted in imitation of maple-wood: at least, it was so a few years since. Let me hope that the paint is now scraped off. I could mention many instances of this kind of misapplication, which has caused a similar amount of painful feeling to that caused by viewing the fine Greek marble statues of a nobleman now dead, gilt from head to foot and burnished. Such work is a waste and disfigurement. I would like, in the street architecture of London, to see substantial materials skilfully and tastefully employed; brick to be known as brick, stone for stone, and stucco used, if at all, as stucco.

In our shop architecture the application of paint is often misapplied. Some years since, when Grey-street, Newcastle-upon-Tyne (in some respects as fine a street as we have in this country), was newly built, I have often heard the late Peter Nicholson say,—"It is a fine street, certainly; but when the shops are open,

LONDON HOUSE-BUILDING: CORNER SHOPS.

always have an uncomfortable feeling that se great buildings have only a glass foundaa: the piers are totally insufficient for the pport of such superstructures."

This was truthful criticism, for no building, even articles of furniture, can be entirely ceable to the eye, if associated with feelings instability.

The wish for room for display renders it ficult to remedy this fault in street architecve; yet, as we know and feel that iron is the y material which in the same space can give ength and safety, it seems to me a pity to guise the metals in imitation of woods and rbles, which if so placed could not possibly ar the weight above. What would be the ect if the pillars and girders of the Crystal lace were painted like marble? There is ore in fancy and association than may at st be supposed. I would like, however, in e street architecture of London, to see the olly glazed shops more frequently broken by re solid buildings, which might be applied to rious purposes of trade. We follow too much e same design, making rows of things the one o much like its neighbour.

There is, however, one phase of shop architecture which seems to me so inconsistent with e principles of sound construction, and is so fensive, not only to my own eyes, but also to ose of many others, that it has been the prinpal reason for this communication,—I mean e corner shops, which are still on the same an in the course of erection, in spite of the umerous failures which must be evident to ery one who walks our streets. The sketch hich I send will show better than words can escribe my meaning.

In the best cases, when the house stands ithout cracks and rents for a few years, what an be more unsatisfactory than the appearance such buildings as these. It is contrary to hat I, as a reader on the subject, consider to e the true principles of architecture, and looks oth awkward and dangerous. In many parts of London, where the houses have been built in the old and substantial brick manner, the corners on this plan have in most instances moved from the perpendicular. I have seen two corner houses of more modern and less careful work fall down, and others pulled down, to prevent a catastrophe, and rebuilt. Others, in many parts, are so cracked, warped, and propped, that few persons would like to venture past the place, much less into the shop. Now, sir, this arrangement, practised in so many instances, and with such general ill effects, is such a curiosity of London architecture, that I make no apology for submitting it to you, feeling at the same time how difficult a thing it is for even architects to get the people out of a beaten track. I have not forgotten your own observations on this same subject in previous volumes.

ONE WHO DOES NOT TRAVEL FROM DAN TO BEERSHEBA AND FIND ALL BARREN.

ON ARTISTIC METAL WORK*

IN venturing remarks and observations on artistic metal work, I propose dwelling more particularly on that portion of it which is connected with a style of architecture having its development in the Christian era, and owing much of its beauty to the aspirations, the self-denial, and the love inculcated in this faith, which has given to cathedrals the elevated roof, the pointed outline piercing the sky in its spires, which has exhibited its saints and martyrs in the dignity of sculpture, and in its frescoes and storied windows portrayed its works of mercy and of love.

It may be as well first to take that portion of it which more particularly belongs to the precious metals, and enrichments of enamel, niello, &c.; and I must express how much I owe to the writings of Mr. Wyatt and others for much historical information on these subjects. Many of the remains of the first centuries at Rome and elsewhere give evidence of the adaptation of the conventionalities of the age to the symbolism of the Christian faith. Thus, in the catacombs, the forms common to the Romans have received the impress of Christian ideas, and the Good Shepherd is represented in Roman costume, carrying his sheep. The conversion of Constantine the Great opened a vast field to the development of greater richness in the decoration of Christian churches. The fact of the removal of the seat of empire by him to Constantinople in the fourth century, joined to the vastness and beauty of his presents to the church, gave an impetus of the strongest kind to works in metal and other adornments of an ecclesiastical character.

The chalices of that period, which were large, with two handles, were frequently used, not only for the purposes of administration, but were hung in numbers near the altar. The same emperor gave to the churches he founded at Rome forty chalices of solid gold, each weighing 1 lb. and fifty of 2 lbs. each, and twenty of 20 lbs. each. At another period we find Charlemagne presenting one of solid gold, weighing the enormous quantity of 52 lbs. Again, still later, appear accounts of a circle of ten great chalices, with forty others arranged between the columns of the altar, weighing altogether 267 lbs. Time, and the subsequent refusal of the cup to the laity, have left few of these relics of the customs of the early church and the piety and liberality of these emperors. Patens of early periods were correspondingly costly,—sometimes of solid gold, at others composed of metals of various qualities enriched with gems and precious stones: they present in the descriptions ideas of costliness utterly exceeding the expenditure on these vessels in the present day. One is described, given by Constantine, of solid gold, weighing 15 lbs.; and another, given by Charlemagne, of gold and corresponding adornment, weighing 30 lbs. If at the present time it were required to produce a chalice and paten like those given by Charlemagne, the intrinsic value would be for the gold alone, without gems or workmanship, 4,200*l*. Again, the cost of the circle of chalices referred to would, in intrinsic value of metal, be no less a sum than 13,600*l*. With such an expenditure in metal unwrought, is it to be wondered at that the remains of ancient metal-work should leave immensely behind the corresponding productions of the nineteenth century, and that the goldsmiths of the present day required to emulate works of antiquity in artistic skill, and the decorative processes of enamelling and niello, &c. should find, from the small amount generally assigned for such purpose, in the result either a paucity of execution, or that the labour and care necessary to render the work perfect become on his part frequently a voluntary offering to his perception of the beautiful.

On the removal of the seat of empire by Constantine to Byzantium, Roman metal-work had engrafted on to it the peculiarities of Greek workmanship, and it is from this period we may date the rise of Christian art. In the wars by the Mahomedans upon the Eastern Christians, many of these works came to the use of Western Europe. The early Mahomedan conquerors, limited to the most hardy life by the then existing rules of their faith, sold to the Jews who flocked there vast treasures, which being purchased at a value set upon them by the children of the desert, afforded them at once a profitable speculation, and spread through the Western Church numberless models of Byzantine art.

At Santa Sophia, at Constantinople, rich mosaics and colour, and gold were to be found; vessels in gold perhaps unprecedented in quantity and richness, 6,000 candlesticks, and seven crosses of gold, each 200 lbs. in weight; also twenty-four copies of the Evangelists, with bindings of the same material, each weighing 200 lbs. and set with exquisite enamels, and covered with delicate filligree. These, and such as these, became at once the type for Moors, Persians, Russians, and Italians, while there is reason to believe the Oriental goldsmiths who continue this peculiar kind of workmanship to the present day, originally derived their knowledge from the court of Justinian and the works at Santa Sophia. Again, in Spain, a

* Read at the Architectural Museum, by Mr. F. A. Skidmore, Oct. 29th.

Moorish king of Cordova employed a Byzantine architect to construct his elaborate mosque: indeed, numberless instances might be adduced to show that Byzantine artizans and their productions were used by all those nations whose civilization was sufficiently advanced to enable them to appreciate works of art. Theophilus, who lived in the eleventh or twelfth century, speaking of the toil and weariness with which he had acquired a knowledge of the various processes requisite for the adornment of God's house, distinctly mentions having learned much from Greek teaching, and recommends his followers to study Greek ornamentation in the production of their works. As time rolled on, as in architecture, so in its accessory of metal-work, Byzantine forms and modes of working underwent a gradual change. During the twelfth to fourteenth centuries, much progress was made in works in the precious metals, aiding thus the intimate connection which sprang up between goldsmiths' work and art, and led the way to their indulgence in those aspirations which took the wider field of painting and sculpture. The early Italian painters were mostly one succession of goldsmiths, who, not relinquishing their first avocation entirely, yet devoted themselves to those works of art, commencing with Giovanni de Pisa, and continuing till the decline of art in the seventeenth century. The same also holds true of a name so well known in works of iron, Quentin Matsys, before whose painting in the Museum, and Well at Antwerp, I have lingered many hours, finding it scarcely possible to leave that which has no parallel in England.

Among the many records of the character and worth of the productions of the thirteenth and fourteenth centuries, a few will suffice to show their richness. In the year 1241 we find Henry III. directing sufficient sums of money to support the goldsmiths at work in Westminster Abbey, and an inventory informs us of various figures of gold enriching the throne that [illegible] was erecting, varying in value from 50*l.* to 300*l.*—about 3,000*l.* of our present value: the shrine was also adorned with gems of great price, among them a sapphire worth 1,000*l.* of present money: the only portion now remaining is a part of the frontal of the altar. On the tomb of William de Vallence, in Westminster, surfaces of great size are decorated with enamel.

During the reign of Edward I. great quantities of Limoges enamelled work was imported into England. The possession of Limousin and Aquenois by him will readily account for this fact. The taste of the reigns of Edward II. and Edward III. appears to have been very considerable in favour of enamelling, as in an inventory of the period mention is made of 200 vessels so enriched. In the cathedral at Aix-la-Chapelle I was much struck with the very beautiful effect produced by the use of champ-levé enamel, worked upon a gold ground, as also the use of translucent enamel, having its various tints increased or diminished by the greater or less degree of relief given in the carving of the surface of the silver or other metal on which it was fused. I found it difficult among offerings presented from so many countries and different ages (each and all anxious to pay honour to the resting-place of Charlemagne), to decide which process might claim the largest amount of careful study. The shrine of the three kings at Cologne also presents a fine example of beaten work combined with filigree, gems, and enamels.

Of changes, it may be well to remark that the bowls assumed various forms and depths: at an early period they were generally the half of a sphere: during the thirteenth and two following centuries this form became the exception, and the bowls were much deeper, the outlines following in harmony with the general characteristics of the foot and knob. The patens were made to fit the bowls, and were enriched on the outward flange by chasing, enamels, gems, and mello, and the centres by engraving.

A short account of the different kinds of enamel will more fully illustrate the character of the works referred to, and tend to show the care and thought by which these enrichments were produced. Byzantine or Cloisonné enamel was made after the following manner:—Small strips of gold were cut to the depth the enamel was intended to be inlaid, and were coiled into forms of flowers, animals, &c.; then soldered into their respective places. A preparation of silex with oxide of lead fused together, and coloured with oxide of gold, silver, iron, &c. according to the tint required, being ground to a powder, the interstices were filled with these colours, and under a strong heat fused: the whole was then ground down, exhibiting the various hues requisite in the subjects, and defined by the fine line of gold. Frequently small portions of stone were let in in addition to the enamel: among others, a choice example, protected by a thick crystal, occurs in Alfred's jewel in the Museum at Oxford.

Champ-levé enamel, which succeeded the previous, was treated differently, and afforded a greater variety of capabilities, from the fact that a subject being traced upon the metal (generally copper), the groundwork was carved out with small tools, leaving more or less of the metal standing according to the development required: the ground was then filled with powdered enamel, which, being fused, was subsequently ground off, polished, and gilt.

Another mode consisted of the surface being engraved or chased, in incised patterns, as before, filled with various opaque enamels, and among these some peculiar colours, which are only just being revived. And where spaces had been previously left, having the outline form of the figure preserved, a subject in low relief was attached on the surface of the metal. *It is here* that a large field is opened to the artistic efforts of the present day, where surfaces require enrichment. Take, for example, the plain groundwork of arcades or panels, in tombs or pulpits. A plate of copper might be incised, filled with rich hues of enamel, and on the face of this, raised groups of figures, illustrating appropriate subjects, attached in bronze or gilt.

In the fourteenth century, a style of enamel of extraordinary beauty attained perfection, and has never yet received that large revival of its use which it justly deserves. It consisted of a surface first prepared by carving groups of figures in low relief: these had enamel of various colours fused over their surfaces, giving greater or less depth of tone according to the undulations of the carving. In this class of enamel, the lines dividing the colours are boldly dispensed with, and the difficult process of fusing the colours without mixing at their edges of contact is accomplished.

I hope to be able to exhibit to the members of the Architectural Museum in a short time specimens of the revival of this class of enamel, as also of enamel on large surfaces of iron.

In the sixteenth century, enamel was used much in the same manner as a painting. A white ground was fused over the face of the metal without any incising, except such as would be sufficient to hold the ground on which, with different enamels, the subjects were painted. Some of these of a large size may be seen in most collections of antiquities, generally of grey tints: sometimes gems and stones are represented by minute lobes of enamel.

In the seventeenth century, painting in miniature became the prevailing method of using enamel.*

THE NEW PICTURE GALLERY AT DRESDEN.

Whoever has not seen the German Florence of late years, will be greatly surprised by the sight of this new building. But architecture has its strange fates. On the spot where once Duke August the Strong, of Saxony, intended to build the finest *residence* in Germany—a *temple of art* has been now erected. The court of the new Museum is formed by the two wings of the Zwinger, and the huge centenarian orange-trees impart, during the fine season, a rich southern aspect to this new building.

The plan and the first commencement of the new Dresden Museum were made by Professor Semper, then continued and completed by Messrs. Hähnel and Krüger, State's architects. The building consists of an oblong square, in the midst of which projects the mighty portal. The long northern front is towards the Elbe, the southern towards the Zwinger, to which it is connected by a large portal in the shape of a triumphal arch. According to this form of the space given, the whole plan was to be shaped. Viewing the *ensemble* of the exterior, a certain systematic, artistic idea is diffused over the whole. The *rustic* columns of the ground-floor might have been more imposing, but they fully accomplish their aim. The general plan also coincides with that of the Zwinger,—those smooth surfaces of walls with a contrasting variety of Corinthian pilasters, the round arch windows with their Ionic columns. The whole has been built of the fine-grained grit of the banks of the Elbe.

That, however, which distinguishes the Dresden Museum from all the buildings of the present time, is the number of plastic works with which the exterior is covered. They have been designed by Messrs. Rietschel and Hähnel, and a whole generation of able artists and artizans has grown up out of them. As the interior was destined for the finest bloom the human mind had ever produced, the exterior had to introduce and preface such high exertions. The middle portion of the building, the three portals, and their boldly-projecting Corinthian columns, have given, as it were, the motive for the arrangement of the bas-reliefs. On the postaments of the columns begins the representation of first culture-life, in its mighty champions, Hercules, Perseus, Jason, and Theseus. In the friezes and medallions we see the four *elements*, those conditions which encircle all human action; then the games of old Greece; the artists of a primordial world, Prometheus and Pygmalion, Orpheus and Amphion. On the upper story we perceive in the arches of the middle window Homer and Hesiod, who, foreshadowing Greek plastic art, have given it its eternal patterns. On the very top, on the columns of the principal story, stand the statues of Pericles and Phidias, by Rietschel, of Lysippus and Alexander, by Hähnel. In a similar way the southern front exhibits the images of Christian heroes, the patriarchs and prophets of the old covenant, and those of the new, apostles and evangelists. The mind of this series of plastic history resounds strongest in the two colossal statues of Raffaelle and Michelangelo, which stand in the niches beside the middle window of the upper story. After a number of similar adornments, the uppermost balustrade is crowned by the statues of Holbein, Giotto, Dante, Goethe, &c. Thus, the exterior of the Dresden Gallery exhibits that principle of employing the arts of the present time for the embellishment of a building intended to contain the art-treasures of the past.

In the interior, on the other hand, the principle of perfect simplicity has been adhered to, by letting all the spaces remain as plain as possible—spaces which receive an otherwise unattainable ornament from their very contents. Through an octagonal entrance-hall, which is large enough for carriages, we arrive on one side at the saloons, which contain the casts of ancient sculpture. Every thing here is simple and plain, and thus the error has been avoided, to shame, as it were, those monochrome works of art by the glare of marble. The other spaces of the ground-floor are occupied by the works of Canaletto and the collection of prints. The principal story contains, above the entrance-hall, a high cupola-shaped space, the walls of which are hung with the fine Raffaellean and Netherland carpets. The interior presents a sight harmonious and dignified, which is heightened by the view of the six large picture saloons, arranged in the line of the longitudinal axis. They are all well proportioned, and have a superior light from above. On the north side adjoins twenty-five smaller cabinets, which have a good lateral light, and the last of which contains the Sixtine "Madonna" of Raffaelle,—an arrangement much to be praised, as this unique art-work demands an isolated situation. The upper story contains sixteen pretty large rooms, which have each a top light. All these spaces are exclusively occupied by pictures, which appear in their full beauty and splendour. The walls are of a plain colour, and the vaults of the ceiling are merely ornamented with some relievo-paintings, grey in grey. The light is everywhere managed admirably; and as the spaces are not

ver large, the pictures are near enough to be ally viewed and examined. The former *locale* f the Dresden Gallery was above the Royal tables. This transplantation of art treasures effects great credit on a country of about ,000,000 of people. The arrangement of the ictures in the new gallery has almost entirely evolved on Director Carolsfeld, and the new atalogue was made by Professor Hübner.—*Great German Sources*.]

PROVINCIAL NEWS.

Windsor.—The local *Express* states, in reerence to the castle improvements, that the lerk of works, Mr. Turnbull, has of late been harking out the ground extending from Thamestreet, by the Dean's-mews, and up the Slopes o the North-terrace, indicating, as suggested, hat the alterations at the castle are about being ontinued in that direction. The outer works of the castle, and the new wall from Henry the Eighth's gateway to the hundred steps, were ast week inspected by Prince Albert.

Christchurch.—On Tuesday before last a ublic meeting of the inhabitants of this town as held, to take into consideration the propriety of removing the present market-house to a more eligible site. Admiral Walcott, M.P. ays the *Hampshire Advertiser*, offered a donaion of 200*l.* towards this object, and to add 100*l.* more provided the site chosen and the building erected be compatible with public conenience.

Hereford.—Water-works are being erected in his city. The pressure will be 25 or 26 feet, and many citizens, says a local correspondent, "Aqua," are anxious to have jets, fountains, &c. in their gardens, lawns, &c.; but they do not know the best way to get them cheap, good, and elegant. He asks if any of our readers could put them in the way of attaining their object.

Bath.—The new corn-market here was formally opened by the mayor on Saturday in week before last.

Birmingham.—It is proposed to erect National Schools in the parish of Aston. A piece of land has been purchased, and a design obtained from Mr. Empson, the architect selected; but the funds are very inadequate, only 500*l.* being provided, while the outlay must necessarily amount to 1,500*l.* as it is intended to provide instruction for 700 children. The committee, therefore, appeal to the inhabitants of the borough generally.

Jersey.—The base and the first stone of the obelisk of the Le Sueur Monument, says the *Jersey Times*, have now been laid; but in the intended second block some serious defects have been discovered, and the further elevation of the monument must consequently be suspended until another block can be cut.

CHURCH-BUILDING NEWS.

Norwich.—The subject of the lighting the cathedral with gas is said to be at present under consideration of the dean and chapter. The plan suggested appears to be like that at Ely Cathedral.

Bull.—The parish church of Piddington was reopened on Saturday before last, by the Bishop of Oxford. The galleries which so long disfigured portions of the edifice have been removed; arches thrown open to view, and the old-fashioned pews replaced by uniform low and open sittings.

Cubley.—The church of this place has been repaired and restored, and was re-opened for divine service on Tuesday before last. The cost of the restoration is about 70*l.*—30*l.* odds of which have been defrayed by a rate. The rector (Rev. R. W. Vevers) has restored the chancel at his own expense, and presented an oak octagonal font, &c.

Stockport.—An order has been received from the Privy Council respecting interments in the cemetery connected with the Hanover Chapel at Heaton Norris. The order provides "that interments be discontinued, except in now existing vaults in which each coffin shall be embedded in powdered charcoal and separately entombed with cement in an air-tight manner." The use of charcoal in an air-tight enclosure seems rather questionable. The chief purpose of charcoal in connection with decomposing bodies is to assist in combining the decomposing matter with the oxygen of the air itself, so as rapidly to consume it as it rises in offensive gaseous forms. If, therefore, both the charcoal and the decomposing matter be enclosed and isolated from the air by means of air tight cement, this sanitary process cannot be promoted by the charcoal, and there is, perhaps, on the contrary, risk in certain cases of an accumulation of the offensive gases till they burst out the cement which confines them. Leaden coffins, it is well known, when made air-tight, often burst from the accumulation of such gases, and they are, in fact, occasionally tapped to prevent this, allowing the offensive gases to escape continually in place of preventing such escape, as lead coffins may often be designed to do, and as the cement in the present instance must be also intended to do: should the cement cease to be air-tight, however, the charcoal may *then* be of some use in hastening the decomposition of the noxious gases. The arrangement should, nevertheless, be reconsidered, as there seems to be a want of fitness and of proper sequence in it.

Oldham.—The roof of Christ Church, Glodwick, was discovered to be on fire on Sunday before last, as the congregation was leaving church. A wooden cistern in connection with an over-heated flue was the cause. These church flues! Surely a notion must widely prevail that it is essential they should be "in connection" with some form or other of wood or timber, so many instances of this sagacious "connection" ever and anon turn up.

Leeds.—The congregation of Trinity Church, Leeds, have recently erected in that edifice a stained window in memory of a late pastor. The stonework is of the Norman period, and the window contains three double quatrefoils, interlaced with circles. The uppermost represents the cross, crown, and emblems of the Passion; the second, an angel with the Holy Book; the third, the emblems of the two sacraments, namely, the font and the holy vessels. Each of these, as well as the border, is filled in with foliage of conventional forms. At the foot is the dedication.

Kirkleatham.—On Sunday before last, the church at Kirkleatham, according to the *Darlington Times*, was re-opened for public worship. Extensive alterations and improvements have been made in it, principally at the cost of Mrs. Newcomen, of Kirkleatham Hall.

Holy Island.—A number of workmen are at present engaged removing the soil and other excrescences which, in the course of centuries, have been allowed to accumulate upon the masonry of the ancient priory in Holy Island, and which have not only concealed much of the intrinsic beauty, but were hastening the decay and annihilation of these fine relics. The work has been undertaken by the Archæological Society at Newcastle-upon-Tyne.

Alnwick.—The old churchyard of this town having been condemned, its place will be supplied by a new cemetery, comprising about six acres of a field, situate about a mile south of the town. The designs for the chapels and the laying out of the grounds, have been provided by Mr. F. R. Wilson, superintendent of the works of restoration at Alnwick Castle, the successful competitor. The buildings will consist of an arched gateway, conducting into a carriage way, forming the boundary between the consecrated and unconsecrated parts of the cemetery. On each side of the gate will be doorways in the centre of pierced walls. The keeper's lodge will be close to one of these. On either side of the carriage drive, will be the chapels, which are designed in the early decorated style of Gothic architecture, with considerable variety in the details. In the plans there is a feature said to have originated with the Bishop of Manchester, as being desirable in all cemetery chapels. This is a small projection at the west end of each building. Into this chamber the corpses will be laid during the time that the burial service is being read in the chapel. The chamber will be separated from the chapel by a screen, and thoroughly ventilated.

Glasgow.—For the new Free Church and College, the promoters have decided upon obtaining plans by competition among a certain number of architects already selected. The plans comprehend a design for a church, which it has been resolved to place beside the college, the ground purchased being large enough to admit of the erection of both buildings. At the south extremity of the new park, in Claremont-street, there is a new U.P. [United Presbyterian] church in progress, one in which, it is said, an effort is to be made to introduce an organ. Considerable progress has been made with another U. P. church in Berkeley-street, the street behind Charing-cross, on a line with Bath-street. Near this is Elgin-place Congregational Chapel. The building is now almost ready to be roofed in, and the flight of steps by which it will be approached has been laid down; but as the portico is the chief feature of the design, the work in its present condition does not give an adequate idea of the effect of the entire structure. The church will accommodate nearly 1,200 sitters, and the cost, inclusive of the site, will be 12,000*l.* It is said that in this church, also, an attempt will be made to introduce the organ. The congregation of Mr. Jonathan Anderson have obtained a site in Margaret-street, an opening off Eglinton-street. The building is to accommodate about 500, and has no gallery. At the junction of St. Vincent-street with Bothwell-street, an oblong Grecian building is in progress for the Unitarians. Mr. Rochead is said to be the architect.

Paisley.—The Free St. George's Church here was to be reopened for public worship on Sunday last. For a number of weeks past it has been undergoing a thorough internal renovation, under the superintendence of Messrs. D. Murray and Son, painters. The architecture of the church is Norman, and the decorations are in keeping with the style. The window cornices, window mullions, and tracery, ribs of the ceiling, and groined arches of the galleries, are all in polychrome. The effect of the sunk moulding is deepened by coloured lines of red and blue. The sides of the window recesses, the wall around the windows, the intersection of the ribs on the ceiling, and groined arches, are all decorated with coloured ornament. The ornament consists of the various modifications of the zig-zag and tooth ornaments. The corbels and capitals of the columns are gilded, and the sunk portions painted in deep red and green. The columns and staircase balusters are done in imitation of light artistic bronze. The pulpit bench and Gothic screen, together with the front of the galleries, are painted in white enamel, and the mouldings gilded. The panels are green, with its complementary colour, red, in the fieldings. Following the practice of the mediæval artists, the decorator has diapered over the surface of the green panels with small gold crosses. The pulpit and bench, the enrichments of which are not yet finished, are also ornamented with gilding and colour. The seats are painted of a deep dark oak colour. The lining of the area and galleries, with the vomitory doors, are of a deep red, diapered over with a black Gothic ornament, and between the lining and the walls there is run a deep gold moulding. The general effect is said to be somewhat subdued by comparison with the full emblazonment of the style adopted, in consideration of the public taste and as a transition, from the drab and whitewash style in general use throughout Scotland, towards one a little more accordant with and worthy of "the beauty of holiness."

FINE-ART EXHIBITION AT NEWCASTLE

The time for closing the Fine-Art Exhibition at Newcastle, in connection with the Northern Union of Mechanics' Institutions, has been extended, owing to the continued success of the undertaking. We observe with pleasure the sustained interest of such an exhibition, indicating as it does the settled taste and habits of a large class of the country. Architecture is largely represented by several local architects,—Mr. Dobson, Mr. Oliver, jun. and Messrs. Johnstone and Knowles. Mr. Dobson exhibits his original drawing of the Newcastle Central Station, Jesmond Cemetery, and some interior views of the old Norman Keep. Mr. Oliver has sixteen drawings, including baths and washhouses, cemetery chapels, mechanics' institutes, and several churches. Messrs. Johnstone and Knowles show cemetery chapels, design for a court-house, and the new buildings in St. Nicholas's-square.

FRENCH CONGREGATIONAL CHURCH, HALKETT-PLACE, ST. HELIER.—Messrs. Poulton and Woodman, Architects.

FRENCH INDEPENDENT CHURCH, ST. HELIER.

The church in Halkett-place, St. Helier, belonging to the French Congregationalists, having become much dilapidated, it has been taken down and replaced by a new building, which was on Friday, the 28th of September, formally opened for public worship. The church having attracted much public attention in the island, and possessing features of considerable novelty, we give views of the building, and subjoin a few particulars.

The Gothic style has been adopted, mainly of the Early Decorated period. The principal front is faced with grey native granite, in random masonry; the windows, doors, copings, turrets, &c. being formed in Caen stone. A central doorway leads to the main lobby, which opens right and left into inner lobbies communicating with the body of the chapel, with the view of preventing cold currents of air from finding access to the building. Two doorways, on the extreme sides of the front, conduct to the raised seats, and will also lead, by means of passages under the raised seats, to the schools contemplated in the rear of the church. The building is 71 feet long by 54 feet wide in the inside, and contains accommodation for 700 persons, and space for making it 1,000, when required.

The cost has been 2,500*l*. Ventilation has been aided by a shaft of considerable altitude. The light is obtained almost exclusively from a large lantern in the roof, from which the light is amply diffused through every portion of the building. Suspended from the roof is a central chandelier, containing seventy-two gas jets. The pulpit is of Caen stone, carved. The whole of the carving has been executed under the architect's directions, by Boulton, of London.

The windows are filled with stained glass, of simple character, by Mr. Lavers, of the Strand. The window in the recess behind the pulpit, has been presented to the church by Mr. Joshua Le Bailly. The communion-railing, organ-pipes, and chandelier, are decorated with white and gold. The internal woodwork is stained and varnished. The architects are Messrs. Poulton and Woodman, of Reading. Mr. Le Rossignol, of St. Helier, is the contractor.

The Greek Tombs at Paestum.—The *Illustrated News* of last week gives us engravings of some of the paintings found in one of these singular tombs, to the discovery of which we have heretofore alluded. No engravings have till now been published, in this country at least, to show the character of the paintings, and it is right we should indicate to our readers where they may be seen: they are curious, illustrating the state of ancient art and customs.

MEDALS TO BRITISH EXHIBITORS IN PARIS.

The following British Exhibitors in the classes more immediately interesting to our readers have received the prizes or honourable notices attached to their names:—

Large Gold Medal.—Sir E. Landseer, R.A.

First-class Gold Medals.—F. Grant, R.A., Sir J. W. Gordon, R.A., C. R. Leslie, R.A., C. Stanfield, R.A., G. Cattermole, R. Thorburn, R.A., J. H. Robinson.

Second-class Gold Medals.—E. M. Ward, A.R.A., D. Roberts, R.A., W. E. Frith, R.A., T. Webster, R.A., J. E. Millais, A.R.A., F. Taylor, L. Haghe S. Cousins, A.R.A.

Third-class Gold Medals.—R. Ansdell, W. Hunt (water-colours), G. T. Doo, P. F. Poole, A.R.A., John Thompson, F. Y. Hurlstone, D. Macnee, R.S.A.

Honourable Mention.—F. W. Topham, H. Warren, E. H. Wennert, J. Wilson, jun., J. Cross, F. Goodall, A.R.A., E. H. Corbould, E. W. Cooke, F. Danby, A.R.A., A. Elmore, A.R.A., J. D. Harding, J. Holland, J. C. Horsley, A.R.A., R. J. Lane, A.E.R.A., J. Nash, J. N. Paton, J. Phillip, John Pye, L. Stocks, F. Stone, H. T. Wells.

The names of Mr. Mulready, R.A., Sir W. Ross, R.A., D. Maclise, R.A., Creswick, R.A., Redgrave, R.A., Herbert, R.A., Dyce, R.A., Sir Charles Eastlake, R.A., and others among the painters were withdrawn from competition.

INTERIOR OF FRENCH CONGREGATIONAL CHURCH, ST. HELIER, JERSEY.

The following architects have received either medals or honourable mention:—

Sir C. Barry, R.A. (Grande Médaille d'Honneur), C. R. Cockerell, R.A., Owen Jones, T. L. Donaldson, P. Hardwick, R.A., G. Scott, E. Falkener, T. Hamilton, of Edinburgh; Decimus Burton, C. Fowler, Thomas Wyatt, Allom, Digby Wyatt, H. Kendall, H. Shaw.

There have been no medals awarded to British sculptors. Gibson withdrew from competition; Baily likewise.

FIFTH CLASS.—SPECIAL MACHINERY AND MATERIAL FOR RAILROAD AND OTHER MODES OF TRANSPORT.

First-class Medals.—T. Blackwell, London; J. Eastwood, Derby; Peters and Son, London; T. R. Starey, Nottingham; and W. Fairbairn, Manchester.

Second-class Medals.—J. Dunlop, Haddington; P. R. Jackson, Manchester; E. Kesterton, London; W. Lennon, Dublin; Rock and Son, Hastings; J. and G. Shipley, London; and C. Thrupp and Co. London.

Honourable Mention.—Isaac Adelbert, London; W. and G. Ashford, Birmingham; Bengough, London; R. Blythe, London; Davies and Sons, London; B. Ellam, London; H. and A. Holmes, Derby; Hooper and Co., London; J. F. Howard, Bradford; S. Hudson, Dublin; W. Langdon, London; W. Middleman, Birmingham; E. J. Rowland, Manchester; Swayne and Adny, London; W. J. Thorn, London; J. Ward, London.

SIXTH CLASS.—SPECIAL MACHINERY AND MATERIAL OF INDUSTRIAL ARTICLES.

Large Medals.—J. Whitworth and Co. Manchester.

Medal of Honour.—H. Clayton, London.

First-class Medals.—J. Buckton and Co. Leeds; J. Burch, Crag-hall, Chester; Clayton, Shuttleworth, and Co. Lincoln; R. Garrett and Son, Saxmundham, Suffolk; R. Hornsby and Son, Grantham, Lincolnshire; J. R. Johnson, London; Porter, Hinde, and Gorter, Carlisle; Robert Neate, London; W. Rodden, Montreal, Canada; Smith, Peacock, and Janet, Leeds; and J. Whitehead, Preston.

Second class Medals.—G. A. Harvey, Glasgow; G. Hurwood, Ipswich; Huxham and Brown, Exeter; J. R. Johnson, London; F. Lewis and Son, Manchester; A. Lyon, London; D. Munro, Montreal; W. Muir and Co. Manchester; B. P. Paige, Montreal; and Shepherd, Hill, and Spiuck, Leeds.

Honourable Mention.—Barrett, Exall, and Andrews, Reading, Berks; B. Corcoran and Co. London; Count and Son, London; MM. Dion and Lepage Rimouki, Canada; P. Dunn, Montreal; C. Kingsford, Cardiff; and W. H. Rice, Montreal.

EIGHTH CLASS.—ARTS CONNECTED WITH SCIENCE AND EDUCATION.

Medals of Honour.—C. Frodsham, London; and Ordnance Map Office.

First-class Medals.—Colonel James; T. Cooke, York; E. T. Loseby, London; Nicole and Capt, London; L. Obertling, London; and Smith and Beck, London.

Second-class Medals.—P. Adie, London; Aubert and Klaftenberger, London; T. D. King, Bristol; and M. Pillischer, London.

Honourable Mention.—F. B. Adams, London; P. Adie, London; T. C. Archer; Furnel, Brighton; A. Gerrard, Aberdeen; Negretti and Zambra; J. Pool, London; R. Sheepshanks, London; and Siemins.

NINTH CLASS.—INDUSTRY CONCERNING THE ECONOMICAL PRODUCTION AND EMPLOYMENT OF HEAT, LIGHT, AND ELECTRICITY.

Large Medal of Honour.—Elkington, Mason, and Co. Birmingham.

First-class Medals.—D. Bailey and Co. and Dr. E. Arnott, London; Edwards and Son, London; W. T. Henley, London; Ordnance Map-office.

Second-class Medals.—Aland; J. H. Bonham and

Son, London, Chinie, Simard, Methal, and Co. Quebec; Coal Company, Brookdale; G. E. Dering, Hertford; J. Daley and Son, Northampton; H. L. Hoole, Sheffield; W. Jeakes, London; Kuper and Co. London; R. S. Newall and Co. Gateshead; W. Pierce London; T. L. S. Prideaux, London.

Honourable Mention.—Cundy; Evans, Son, and Co. London; Feetham and Co. London; James and Co. Southampton; Sheringham; Thomas Walker, Sheffield.

FOURTEENTH CLASS.—CIVIL CONSTRUCTION.

Large Medals of Honour.—Rendel, London; Stephenson, London.

First-class Medals.—I. K. Brunel, C.E. F.R.S. London; Bunning, London, Office of Public Works, Montreal; Clarke Edwin, C.E. London; Fairbairn, C.E. F.R.S. London; M. J. Fowler, London; E. Hodgkinson, F.R.S. London, M'Donald, Aberdeen, M. J. Murray, C.E. London; Ostell and Co. Montreal; W. Thomas, Hull; Siebe, London; Saunders and Mitchell, London; Sir Proby Cautley; Board of Works, Dublin; J. Brown, St. Catherine, Canada; J. Costello, London; M. Herbert, London; James Jopez, London; C. E. Leather, London; G. Suff, Ipswich; M. B. Redmon, C.E. London; Stephen Salter, London; J. White, Portsmouth.

Honourable Mention.—Cheesewring Granite Company), Liskeard; Slaters' Company, Shipton, Canada; East-India Company; International Mining Company, Hamilton, Canada; Pierre Gauvreau, Quebec, E. P. Gribbon, Dublin; Samuel Holland and Co. London; Mont and Mitchell, New South Wales; General Penitentiary, Jamaica; Saiges and Green, London.

SEVENTEENTH CLASS.—SILVERSMITHS' ART, JEWELLERY, BRONZE WORKS.

Medals of Honour.—R. and S. Garrard, London; C. F. Hancock, London, Hunt and Roskell, London.

First-class Medals.—M. Bissau, Jersey; Cartwright, Hirons, and Woodward, Birmingham; J. R. Collis, Birmingham; Colebrooke Iron Company, Colebrooke-dale; J. Dixon and Son, Sheffield; R. and S. Garrard, London; R. Phillips, London; Watherston and Brogden, London.

Second-class Medals.—J. Goggin, Dublin; J. Higarth, Sydney, Australia; Prime and Son, Birmingham, Schaw and Fischer, Sheffield; Waterhouse and Co. Dublin.

Honourable Mention.—P. J. Brookes, Birmingham; Sanson and Davenport, Sheffield.

OPERATIVES.

First-class Medals.—J. Billcie, London; Jeannest, Birmingham; H. E. Armstead, London; Regley, London; A. Brown, London; T. Clive, London; E. Cotterell, London.

Honourable Mention.—W. Clark, London; W. Dax, London; C. Grant, London; F. Howard, London; G. Elliott, London; William Ryland, London; W. Theodorus, London, William Millewarel, London; T. Will, London.

EIGHTEENTH CLASS.—GLASS AND CERAMIC MANUFACTURES.

Large Medal of Honour.—H. Minton and Co Stoke-upon-Trent.

Collective Medal of the First Class.—Chance, Brothers, and Co. Oldbury; W. T. Copeland, Stoke-upon-Trent; J. Hartley and Co. Sunderland; T. J. and Joseph Mayer, Stoke-upon-Trent; F. Morley and Co. Shelton; Osler and Co. Birmingham; J. Ridgeway and Co. Cauldon-place, Stafford, Wedgwood and Co. Stoke-upon-Trent.

Second-class Medals.—W. Baker and Co. Stoke-upon-Trent; W. C. Copeland, Stoke-upon-Trent, Elsmore, Forster and Co. Stoke-upon-Trent; S. Green, London; J. Hardman, Birmingham; Kerr and Bins, Worcester; Pinder, Bourne, Hope, and Co. Stoke-upon-Trent; F. R. Pratt and Co. Fenton; Rose and Daniel, Colebrooke Dale; Shaw and Son, Burslem; Singer and Green, London; Swinbourne and Co. London; Walker, Podmere, and Co. Stoke-upon-Trent.

Honourable Mention.—Clark and Co. Wolverhampton, Cottam and Hallen, London; Doulton and Co. London; A. Kenrich and Son, Westbromwich; George Smith, London; T. Till and Son, Stoke-upon-Trent.

TWENTY-FOURTH CLASS.—HOUSE FURNITURE AND DECORATION.

Medals of Honour.—H. E. Hoole, Sheffield; Jackson and Graham, London; East-India Company; G. Jackson and Son; Jennens and Bettridge; T. Kurshaw, London; G. E. Magnus, London; C. Moxon, London; and G. Trollope and Son, London.

Second-class Medals.—Arbate and Clero de Clerville, London; Achima Purboo, East India; the Island of Ceylon; J. G. Crace, London; W. Drum, Quebec; Featham and Co. London; Fonseca-Mehandiram, Ceylon; Gates and George, London; J. and H. Hilton, Montreal; Holland and Son, London; Hood, Hobart-town, Australia; Lalla-Persaud, India; J. M. Levien, London; London and Penzance Serpentine Company; Manackee-Newraje, India; Mooragapah-Achary, India; Rancham-Chutteryé, East-India Company; Rhampdone-Nuatry, India; Rustenje-Nowgee, India. T. Smith, Holsham; T. Trebear, London; T. W. Wallis, Louth, Wildey and Co. London; Williams, Cooper, and Co. London; J. Woollams, London.

Honourable Mention.—J. Armstrong, London; J. Bevis, Hamilton, Canada; Cottam and Co. London; Dagnell and Tilbury, London; Finlay, Glasgow; W. Fry and Co. Dublin; Gillow and Co. London; Gewind-Hengi, India; J. and H. Hall, Derby; Jackisson-Mockerjee, East-India Company; Kowan, East-India Company; A. M'Donald, Aberdeen; O. M'Garvey, Montreal; W. Pierce, London; Rhagwan Madowpe, India; G. W. Stevens, London; Mass Widder, Toronto, Canada.

First-class Artisans' Medal.—Stevens, Sheffield.

Second-class Medals.—Messrs. Jackson and Graham, London; Priguet, London.

Honourable Mention.—A. Abercrombie, London; W. Boulton, London; J. Congden, London; Jefferies, London; James Leigh, London; Lester, London; Samuel Peel, London; Van den Brandt, London; Wills, London.

TWENTY-SIXTH CLASS.—DRAWING AND MODELLING APPLIED TO INDUSTRY, PRINTING IN TYPES AND COPPERPLATE (TAILLE-DOUCE), AND PHOTOGRAPHY.

Medal of Honour.—Lockett, Manchester.

First-class Medals.—Abaté, London, Stephen Austin, Hertford; G. Baxter, London; Francis Bedford, London; Besley, London; V. Brooks, London; Caslon, London; J. A. P. Claudet, London; Clowes, London; East-India Company; Cripps; W. Day and Son, London; Digby Wyatt; Eeles and Son, London; Fenton, Photographic Society, London; Figgins, London; M and N Hanhart, London; Harris, London; Holloway, London; J. Leighton, London; Leighton, Son, and Hodge, London; Llewelynn, Photographic Society, London; M'Queen, London; Maxuelle Lyte, Photographic Society, London; Rivière, London; Robertson, Constantinople; Sherlock, Photographic Society, London; C. H. Thompson London, Wright, London, H. White, London.

Second-class Medals.—J. Aresti, London; Black, Edinburgh; Bradbury and Evans, London; Clements, London; P. De la Motte, London; D. Diamond; W. Dickes, London; L. Gruner, London; J. K. Harvey, London; David Kilkardy; Kingsley; Lamb; Neale, London, G. Rowney and Co., Rylander, Miss Sheppart; Smith, London; Toway, London, Towsend; B. B. Turner, London; Waterloo; London; H. R. Williams, Paris; Wilson.

Honourable Mention.—Bishop, London, Bohn, London; Cole, London; J. C. Doan, Montreal; Adolphe Duperey, Jamaica; Hullmandel and Walton, London; Miss Ironside; J. Leighton; J. E. Mayal, London; Miller, Montreal, Canada; T. J. Palmer, Toronto, Canada, J. Posi, London, Reade; Ross and Thanson, Edinburgh; Sir W. Newton; Snelgrave and Thompson, Sydney; De Sulsa; T. Underwood, Birmingham; Wallis, Louth; Waugh and Cox, Sydney, West; Wilkes, H. Yates; and Young, Montreal, Canada.

THE LATE M. TAROUILLY, ARCHITECT.

WE regret to have to announce the death, on the 25th of October, at Paris, of Monsieur Paul Marie Le Tarouilly, Chevalier of the Legion of Honour, architect, and author of the admirable work on the "Palaces and Houses of Rome," which, for accuracy and beauty of execution, is, to the modern architecture of Rome, what Stuart and Revett's volumes are to the antiquities of Athens.

An intense ardour in the illustration of his theme, a deep love of his subject, a scrupulous accuracy, and all the beauty of delineation for which the French school is famous, combine to render his work one of standard authority. For the succeeding volume, he had with untiring perseverance, and at considerable cost, collected a mass of the most curious matter, derived from original drawings by the great masters in the art, and he was prepared to illustrate the history of St. Peter's at Rome by authentic materials existing, and hitherto unknown, in the archives of that church, and in the rich collections of the Roman princes.

During the last two years his health had become impaired by his unremitting application; and his brain becoming affected, he was forced to cease entirely from all occupation upon the favourite theme. He was partially recovering his former strength; but it was too late, and his shattered health has sunk in his 61st year, under his devotion to his task, worthy his ambition, but too laborious for his weak frame. The regrets and affection of all who knew him have followed him to the grave.

THE METROPOLITAN COMMISSION OF SEWERS.

ON the 8th instant, Mr. Bazalgette made a lengthened reply to the charges brought against him by Mr. Ward; and after a sitting of seven hours the following resolution, moved by Mr. Offor, and seconded by Mr. Redhead, was passed:—"That this Court, having most carefully considered the allegations and charges brought by Mr. Ward against Mr Bazalgette, the chief engineer of this Commission, and his reply to those charges, are of opinion that they have been founded on misconception, and that there is no reason to doubt the efficiency and rectitude of the chief engineer, nor of the consulting engineers of the Commission, and that they are entitled to the continued confidence of the Court, without pronouncing any opinion as to the intercepting sewer question."

Sir John Shelley had previously moved, and Dr. Lewis seconded the following as an amendment:—"That this Court, after having heard the statement of Mr. Commissioner Ward and the reply of Mr. Bazalgette, are of opinion that the objections of Mr. Ward, and the reply of Mr. Bazalgette thereto, should be referred to a committee of eminent engineers and distinguished mathematicians, for their consideration and joint report to this Court."

This however, with a second amendment adjourning the question, was negatived.

STAINED GLASS.

St. Wilfrid's Chapel, Preston.—The fresco-painting of "The Crucifixion," executed by Herr Franz Wurm, of Munich, at St. Wilfrid's Chapel, Preston, is just completed. It is placed over the high altar.

Burley Church, Leeds.—The east window of the chancel of this church has been filled in with stained glass, the work of Mr. F. Barnett, of Edinburgh. The window, as described in the *Leeds Intelligencer*, is of geometric decorated character, and consists of eight lights in breadth, divided by a strong mullion in the centre, and forming two fenestellæ: these fenestellæ carry a circle, containing four quatrefoils, the small complement being filled in with a trefoil. Each fenestella is subdivided into two smaller fenestellæ, carrying a circle enclosing three trefoils, whilst the smaller fenestellæ carry a sixfoil circle. The lower lights are trefoiled in the head. The general character of this design may be traced in the vestibule of the Chapter-house, York, and in the ruins of Tintern Abbey. The style adopted is that which prevailed about A.D. 1330. The window is 12 feet in width, by 22 feet in height. Each of the principal lights contains a full-length figure of a saint under a canopy, filled in with diapering, whilst beneath the light is completed with interlacing work, and foliage consisting of stone and maple leaves alternately. Commencing on the north or left side of the window, the figures are placed in the following order, viz.—Moses, St. Peter, St. Matthew, St. Mark, St. Luke, St. John, St. Matthias, Elias. The canopies have alternate white and gold crockets. The large circle in the head of the window encloses four quatrefoils, containing the symbol of the Trinity, the sacred monogram I. H. C. the Alpha and Omega, and the Lamb and Vexillum. The small vesica window in the gable has also been filled in with stained glass. The glass was obtained from Charleroy, in Belgium.

Harewood Parish Church.—An east window of painted glass has been put up in this church. The window, which is a large one, is divided by stone mullions into five compartments, with contracted space in each division. The lower half of the centre compartment embraces the Crucifixion, with the prostrate Magdalen at the foot of the cross; the upper half the Ascension. The lights on each side embrace the attendant figures; in the former, the Virgin, the weeping women, and the Evangelist St. John, while the

centurion and Roman soldiers on horseback complete the scene; and in the latter the Apostles gazing on the Ascension of our Lord: there are here only ten figures, however, in place of eleven. The two side compartments embrace the following six subjects, three on each side;—the Nativity, the Bearing of the Cross, the Appearance to the Two Disciples at Emmaus, the Appearance to Mary Magdalene in the Garden after the Resurrection, the Entombment, and the Baptism, with the motto "*Ecce Agnus Dei.*" Altogether there are forty-six figures. The tracery is filled with geometrical stained glass. There is little or no attempt at aërial perspective, and not much shading, the effect being obtained by strong lines and contrasts of colour, being an adaptation of the mosaics, a style characteristic of the artists, Messrs. O'Connor, of London. The late Mr. L. Brand left by will 300*l.* for this window.

Kendal Parish Church.—An east window of painted glass, given by Mr. Hilton Halhead, of Liverpool, as a memorial of his father, has been put up in this church. This window is also the production of Messrs O'Connor. The subjects are a large representation of the Crucifixion, occupying the lower half of three central main lights, and in the upper half of the same part of the window a representation on a similar scale of the Ascension. In the Crucifixion, our Lord on the Cross is attended by groups of figures, as the Virgin fainting, supported by the weeping women; also St. John, the Centurion, &c.; and in the Ascension our Lord is received in a cloud, while the Apostles are looking up with expressions of reverence. In the two outer of the main lights of the window are figures of the four Evangelists, and the subject of the tracery is the twelve Apostles. This window makes the twenty third painted window in the church, and the baptistry window, which is to be renewed from the bequest of the late Mr. Robinson, will make the twenty-fourth.

THE SCULPTURE OF THE GREEKS.

SHEFFIELD NEW SCHOOL OF DESIGN.

The first stone of the New School of Design, Sheffield, was laid on the 24th ult. by the president, Dr. Branson. Messrs. Manning and Mew are the architects, and Mr. Mycock is the contractor. In the course of his address, Dr. Branson said,—standing on this spot I see before me, a motto, carved on a neighbouring building. It is the first aphorism of Hippocrates, the great Father of Medicine. "Art is long, life is short." Now, at first sight, there is no very obvious connexion between an aphorism of Hippocrates and the building we are founding. A moment's thought, however, will show a very intimate alliance between the author of the aphorism and some of the works which will be placed within these walls. Hippocrates, according to the best chronologists, was twenty-eight years of age when Phidias, the great sculptor of the Parthenon, died. Living in Athens at that time, Hippocrates saw in all their freshness, with all the purity of the marble unsullied, with every touch of the chisel uninjured, those marvellous sculptures which will guide the taste of the student in this institution. He not only saw those sculptures, but conversed, doubtless, about their excellence with the learned of the most learned city of the world. It is just possible, therefore, taking the term "art" in its widest sense, that some thought of their excellence, some belief in their enduring fame, may have passed through his mind when he wrote the aphorism before us: at all events, the fact is proved in reference to these very sculptures by a period of between two and three thousand years, that "Art is long, and life is short." Generation after generation has passed away, nation after nation has passed away, and yet these marvellous sculptures still remain as lasting witnesses to the genius of the great sculptor who wrought them. As these sculptures will guide the taste of every student who wishes to attain to excellence in art, it is worth while for a moment to consider the conditions under which they were produced, and to see whether the opportunities which existed in Greece for the study of art bear any resemblance to the opportunities which we possess at the present day. In the first place, Greece possessed a climate of the greatest purity, which allowed the most beautiful works of art to be constantly exposed to the people. Greece, too, possessed marble quarries of abounding excellence. Next, the habits of the people led them to be constantly in the open air. Again, the state afforded every encouragement to the study of art: great generals and great civilians looked to art for their highest honours. In their games also, in the running and wrestling matches, the finest forms of muscular development were constantly to be seen, and last, though not least, the (comparatively speaking) small population which had to be educated in art. How art was taught we do not precisely know. It was probably taught as philosophy was taught: each great artist and each great philosopher had his train of followers, who listened to the great man's words with an avidity which we can scarcely appreciate.

ENGLISH PATENTS RELATING TO BUILDING.

From the lists of specifications of patents recently filed, as reported in the *Mechanics' Magazine* and elsewhere, we quote the following:—

Chance, James Timmins, of Birmingham. Improvements in the manufacture of pipes or tubes of glass, or other vitreous matter. Patent dated February 3, 1855. (No. 255.) This invention consists in forming tubes of glass, or other vitreous matter, by bending sheets or fillets of it over mandrels or otherwise, so that the edges may overlay, or come together, and be welded by pressure.

Imray, John, engineer, of Bridge-road, Lambeth, Surrey. Improvements in measuring instruments. Patent dated February 5, 1855. (No. 270.) The instrument described by the inventor consists of a graduated bar on which an inclined mirror is mounted, so as to slide rectilineally, and another half-silvered mirror is fixed opposite an eye-piece or telescope, so that when the inclinations of the mirrors are properly adjusted the distance of an object from the fixed mirror is ascertained by moving the sliding mirror along the bar a proportional distance from the fixed mirror, as determined by the coincidence of the direct and reflected images of the observed object.

Gibbons, Joseph, of Oxford-street, Middlesex. An improvement in fixing the spindles of door locks to their knobs. Patent dated Feb 5, 1855. (No. 271.) In carrying out this invention each spindle is formed with a slit or slits at one or both ends, and on one side of the spindle is fixed a plate of steel or elastic metal. The knobs as heretofore have screws which pass into their shanks, and the inner end of each screw on coming against the spring, near the end of the spring plate, bends out that end so as to enlarge the spindle. The passage in the shank of the knob is inclined or enlarged inwards, to admit of the end of the spring plate being bent outwards, so that the knob can be slided on its spindle into position, and be then fixed by expanding the size of the spindle, either by a screw or other suitable means.

Newton, Alfred Vincent, of Chancery-lane, Middlesex, mechanical draughtsman. An improved mode of constructing dry docks. (A communication.) Patent dated February 7, 1855. (No. 295.) This invention consists in making use of the natural clay foundation for the floor of the dock, the sides and back end being formed of piles, the puddling between the inner and outer piling resting upon the clay floor, and forming a continuation of it after the manner in which cofferdams are puddled.

Ransome, Frederick, of Ipswich. An improvement in the manufacture of artificial stone. Patent dated March 23, 1855. (No. 645.) This improvement consists in applying soluble silicate, obtained by first fusing the compound of silex and alkali for cementing sand and other substances, in the manufacture of artificial stone, which is subject to the action of fire to complete it.

Rimell, John, of Covent-garden, Middlesex, esquire. A substitute for the turpentine ordinarily employed in mixing paints and colours. (A communication.) Application dated March 19, 1855. (No. 607.) "I take," says the inventor, "a quantity of potatoes, and by washing, bruising, or pressing them, obtain therefrom an extract. I then add to the said extract of potatoes common salt, alum, and litharge. Having well mixed or incorporated together these said ingredients, I next add a sufficient quantity of water to the said mixture so produced, to reduce it to the required state for mixing with the paint or colour."

Newton, Alfred Vincent, of Chancery-lane, Middlesex, mechanical draughtsman. Improved machinery for forming moulds for casting. (A communication.) Patent dated March 20, 1855. (No. 630.) In carrying out this invention the sand, being placed in a chamber or piston box, is moved therein by a pattern, and piston plate surrounding the pattern, and the sand is thus caused to protrude from the piston box and enter a half flask, by which means it is, at the parting, more compressed than at the central portion of the half mould, while on the face of the mould it is sufficiently so to insure good castings and preserve an equal thickness of the metal.

Under the head of complete specifications, filed with applications, we find the following:—

Pidding, William, of Putney, Surrey. Improvements in the manufacture of building materials. Application dated July 17, 1855. (No. 1600.) This invention consists—1. In cementing together pieces of coke, pulverized pumicestone, stone, porcelain, stoneware, glass, shells, bones, and sand, and earthy or metallic matters, with a cement formed of pulverized silica dissolved in a strong or highly concentrated alkaline solution rendered caustic with lime, and combined with the above materials by powerful pressure. 2. In luting the joints of pipes with gutta-percha, caoutchouc, or both. 3. In combining coke, peat, wood, pumicestone, &c. with papier-maché pulp, the compound being pressed and dried.

Warner, Arthur, of New Broad-street, London, merchant. Improvements in coating or combining sheet-iron and steel with sheet-lead, zinc, tin, copper, or alloys of such metals. Application dated August 4, 1855. (No. 1770.) This invention consists in coating or combining sheet-iron and sheet steel with steel, lead, zinc, tin, copper, or alloys of such metals, by applying soldering metal between them, and subjecting them to heat whilst pressed together in a flat state, the heat being applied through one or both of the metals.

The following is a provisional specification not proceeded with:—

Dechauet, Jean Baptiste, iron-manufacturer, and Antoine Dominique Sisco, practical engineer, both of Paris, France. Improvements in the process of manufacturing metallic tubes and pipes, and in the machines or apparatus used for that purpose. Application dated March 26, 1855. (No. 657.) This invention consists in winding or rolling tightly round a mandril sheets of either iron, steel, or compounds of both these or any other suitable metals, as many times as is necessary to produce tubes or pipes of the required size and thickness. The layers of these rolled sheets are made to adhere together by soldering.

Provisional protection was granted on 5th ult. to François Charles Lepage, literary man, of Paris, French Empire, for a new composition or new compositions of materials, which may be employed as a substitute for wood, leather, bone, metal, and other hard or plastic substances, and the method of manufacturing the same.

SALT IN WALLS.—ACTION OF WATER ON LEAD.

The subject of *salt in walls, ceilings, &c* is one to which the attention of chemists and builders should be drawn, much more than it appears to be at present. The fault of your correspondents in general is, they do not give *the particulars* of the nuisance they are troubled with, but simply state the *fact*, and that somewhat vaguely.

Now, I am quite at a loss to account for the *salt water* in your correspondent's ceiling,—how it got there, and what he means by the term. Is the ceiling an ordinary one, and the phenomenon without apparent reason? or has sea-water or sea-sand been used in its construction? Perhaps an accident has furnished cause for the occurrence. If your correspondent will give me a circumstantial description of the matter, stating whether the salt is a deliquescent one, rendering the plaster damp, or the reverse, very probably I can assist him, otherwise, I may reason and experiment in the dark. The process I formerly recommended for *salt in walls*,* would very probably succeed in this case.

While on this important and imperfectly understood subject, allow me to appeal to such of the readers of the *Builder* as are troubled with an instance of *nitrification* of any kind. A good series of experiments, with analysis of the various salts formed, might throw a good deal of light upon the matter, and even elicit the true causes of this inconvenient phenomenon: at all events, the best methods of prevention and cure would be arrived at.

Will some of your correspondents, then (and I ask this most earnestly in the name of the many builders and house proprietors now exposed to a continuous and almost ruinous expense from the nitrification of their walls,—in the name of progressive science, and of scores of noble buildings prematurely crumbling to decay), will they send me ("care of the Royal College of Chemistry, Oxford-street") specimens of the *salt* (not *less* than half an ounce), or of the stone, brick, plaster, &c. containing it;—if the salt itself cannot be had in quantity, with accompanying remarks upon the nature of the soil built upon, the presence or absence of decomposing organic matter, &c.

The following, also, are deserving of notice, as important points in the investigation:—The situation: is it near the sea or salt springs? Is the concretion of salt affected by temperature? At what season of the year is it most abundant? Do thunder-storms produce any observable effect? &c. &c.

If I am favoured with a sample of the "*pretty white mould*," as some people call it, rest assured, sir, I

* See p 319, *ante*.

will do my part of the business. Two months will be the extent of time required for my experiments.

With reference to your paragraph upon the action of water on lead, I beg to offer a few remarks.

The oxide, chloride, and nitrate of lead, are decidedly soluble in pure, or tolerably pure water; but if a water contain sulphuric acid or a soluble sulphate, a film of insoluble sulphate of lead forms upon the surface of the leaden receptacle, and protects it from further action, therefore, I would advise all persons whose drinking water is not *very hard*, to protect themselves from the ill effects of lead poisoning by adding about once a month a little *pure* sulphuric acid to their cisterns, half a dram (fluid measure) to twenty-five gallons. Rain water forms and dissolves oxide of lead very fast, and that fallen during a thunder-storm, containing nitric acid, if brought in contact with lead, will leave a trace of that metal dissolved in it as nitrate.

Sea water attacks lead, with the production of chloride, and water highly charged with carbonic acid dissolves a large quantity. All the danger may be removed by the employment of sulphuric acid as above, at a cost of *eightpence* per annum for a fifty-gallon cistern. WENTWORTH L. SCOTT.

THE CRYSTAL PALACE AS AN EDUCATOR.

A FEW words of comment may not be deemed impertinent on the article which appears in your journal under the above heading, of Saturday last. The Crystal Palace depends for its present and future existence on its success as a commercial speculation; and its present object is evidently, in combining information with amusement, to familiarize the public eye with the noblest works of art, and by leading the thousands on whom it depends for support into a love of the grand and beautiful, to induce them to make the Palace their favourite place of resort. This is its primary object; the other—to be of illustrative use to the earnest student—although it fulfils this condition also, must be, and is, of secondary importance, seeing that a few students, however earnest, could not support the institution. Young as it is, it may be considered, even by those who admire a precocious infancy, to have done wonders for both objects, in a display of intellectual wealth and the acquirement of rich and varied means for imparting information; and its only *partial* success can hardly be attributable to the want (or supposed want) of classification, which is the only tangible objection offered in the article referred to.

The treasures of the Crystal Palace may be scattered somewhat promiscuously, presenting, as Nature does, a variety of characters at a glance; and it is of little importance to the earnest student of art that he should walk inevitably out of one art-epoch into that which followed it,—not alone that such an arrangement might be practically inconvenient to the public at large; but the student of past, and even living languages, must learn to read from left to right and right to left; and the stony record of art is not exempt from this inconvenience. Were it classified in the strictest progressive order, which every art-student knows to be an impossible feat, the contents of the Crystal Palace would STILL astonish, and the beholder would at first return from the contemplation bewildered and confused.

Nature is the alphabet of art. The Crystal Palace contains its history; and for the advantage of those who have no previous knowledge of either, a key has been furnished in the valuable handbooks from the pens of able instructors.—W. S.

BOMBAY WATER SUPPLY.

FROM the second report of Mr. H. Conybeare, published amongst the selections of the records of the Bombay Government in course of the present year, it appears that this gentleman has completely surveyed, estimated, and reported on the whole scheme for the supply of Bombay with water from surface collection in the valley of the Goper, on the main land. This valley, about sixteeen miles from Bombay, contracts, so as to afford two favourable sites for damming; while, above, it expands into a wide basin, extremely favourable for water-storing purposes. Four gaps in the hills forming the southern margin of the Vehar-basin will require to be closed by dams if the lower site for a dam be adopted. Two estimates have been prepared; the first, for a reservoir with four dams, including the whole of the Vehar-basin, and a portion of the Valley of Marole, and the second for a reservoir with three dams, excluding the lower portion of the basin. The quantity of water required for the supply of Bombay, including the villages and bungalows throughout the island, at twenty gallons per head per day, is 4,000,000,000 gallons, which the Goper valley is more than adequate to collect and store. Some of the arrangements in the second report, Mr. Conybeare informs us, he has since modified; but the main features remain unaltered. The most notable of these is the great size of the chief storage reservoir, namely, 1,300 acres, which, as he believes, is six times as large as the largest hitherto constructed in England. This reservoir will be capable of holding 9,117,514,470 gallons. The cost of the dams and waste weir will be 17,411*l.* The cost of main pipe, 41 inches in diameter, and 25,520 yards long, is estimated at 133,800*l.* (16,725 tons, at 8*l.* per ton), and the laying (at 1*l.* a yard), 25,520*l.* The cost of town distribution, including fifty-four miles of street mains, will be 43,200*l.*; and of village distribution, including 17,400 yards of masonry conduit, 4,973*l.* The total cost (including 11,710*l.* for contingencies) will be 245,916*l.* exclusive of 1,242 acres of land required, and of engineering expenses. The town distribution will be constant and at high service, with a public and gratuitous supply for the poor, within 100 feet of every house in every street.

HARTLEPOOL MARKET COMPETITION.

SIR,—If you can find room for some of the enclosed correspondence in your columns, it will explain what I think is a novel feature in competitions. The Market Commissioners at West Hartlepool offer by advertisement a *premium* of 20*l.* "for the most approved design" for their proposed market. The inducement seems a fair one enough to lead one to write for a copy of the instructions, from which it appears that the advertisement is a *mere* trap. The commissioners are too shrewd to throw away their money on a premium to encourage professional talent, for this miscalled premium is not to be paid to the successful competitor until one month *after receipt and approval of complete working drawings*, which by the instructions he is to furnish. As the proposed cost of the buildings is fixed at about 3,000*l.* the commissioners are in fact endeavouring to obtain their architect's work at less than one-third of the fair and usual professional remuneration (2½ per cent. exclusive of superintendence). As I cannot but consider this proceeding quite unworthy of a public body, I hope you will lend your aid to place it in its true light before your numerous readers.

CHARLES FOWLER, Jun.

*** It is unnecessary to print the correspondence, the above letter fully explaining the position. So long as architects respond to such invitations, the invitations will of course be given.

Notices of Books.

Brief Memoir of the late William Henry Bartlett, author of "Walks about Jerusalem," &c. By W. BEATTIE, M.D. Published by subscription.

IF this volume had been issued under ordinary circumstances, we should still have commended it to our readers, as a most interesting record of an interesting life,—calculated at once to amuse, stimulate, and instruct. But, published as it is, to supply means for the education and support of the family of the late Mr. Bartlett, who worked hard and well all his life for the advantage of the public, without reaping that pecuniary reward which ought to have followed his extraordinary labours, it has much greater claims on the consideration of the public. The biographical notices of Mr. Bartlett at the time of his decease from the pen of Mr. Britton, will have informed our readers of some of his works. Let us add that Mr. Bartlett made five distinct journeys to the East, and four to America; that the works chiefly or entirely illustrated by his pencil are, "The County of Essex," "Switzerland," "Scotland," "The Waldenses," "The Danube, "The Bosphorus," "American Scenery," "Canadian Scenery," "Scenery and Antiquities of Ireland," making, together,—

15 vols. 4to.

Next to these are,—

The Christian in Palestine	1	„	„
The Life and Epistles of St. Paul	2	„	„
Pictorial History of Scotland (in progress).....	2	„	imp. 8vo.
Castles and Abbeys, vol. ii.....	1	„	„
	21	volumes.	

[These twenty-one volumes do not include his contributions to Mr. Britton's admirable works—"English Cathedrals," and "Picturesque Antiquities of English Cities;"] and then we have,—due solely to the pen and pencil of Mr. Bartlett—

	VOL.	
1. Walks about the City and Environs of Jerusalem	1	1844.
2. Topography of Jerusalem (in folio)...	1	1845.
3. Forty Days in the Desert on the Track of the Israelites.....	1	1848.
4. Scripture Sites and Scenes from actual Survey in Egypt, Arabia, and Palestine, for the use of Schools, illustrated	1	1849.
5. The Nile-Boat, or Glimpses of Egypt	1	1849.
6. Gleanings on the Overland Route ...	1	1850.
7. Footsteps of Our Lord and His Apostles	1	1851.
8. Pictures from Sicily	1	1852.
9. The Pilgrim Fathers (of New England)	1	1853.
10. Jerusalem Revisited (in the press) ...	1	1854.
[Sketches of the "Seven Churches," 1854, MS.]	—	
Total, octavo	10	vols.
„ quartos.....	21	„
	31	

To the talents of an accomplished artist, and a pleasing and instructive writer, Mr. Bartlett united those higher qualities of mind and heart which endeared him to all who knew him.

While men remain amongst us, we do not give ourselves the trouble to remember their efforts and their good works. And this leads us to quote a passage in Dr. Beattie's Memoir with reference to one who, if he were less modest, would be oftener heard of—namely, Mr. Bonomi. When Mr. Bartlett was in the plain of Cœlo Syria, at the further extremity of which appeared the temples of Baalbec, he was seized with ague and a tendency to brain fever, and was removed to a ruinous upper chamber in a Saracenic castle, adjoining the great temple. His servant being afraid to be alone with him during the night, Mr. Bonomi, who was in Mr. Catherwood's encampment hard by, agreed to come every night and watch with him. "When the bats, rising from the vaults below," says poor Bartlett in one of his letters, "began to flit through the chamber, I used to hear the cheering cry of my friend Bonomi echoing through the winding passage. . . . And never did a sick child thrill more at his mother's voice than I at the hearty 'Well, how are you, old fellow?' which issued from his lips as he burst into the dreary apartment. Then the lamps were lighted, the pistols primed, Antonio planted on his mattress across the entrance, and every thing made snug for the night." It gives us pleasure to make prominent the kind act of a good heart still beating.

Subscriptions for the "Memoir" are still received by Messrs. Rogers, Olding, and Co. of 29, Clement's-lane, London, and we invite our readers to aid in a good deed.

Miscellanea.

SHIP-BUILDING.—A paragraph relative to tubular spars for ships in your journal for October 13th, p. 491, recalls a suggestion I made about two years ago to a nautical friend, which was of course pooh-poohed down with a gentle rebuke for a landsman's presuming to think anything nautical capable of improvement. I proposed to construct lower masts of large ships, and especially steamers, of hollow iron cylindrical tubes, the topmasts either of timber or iron, to slide within them, and being fitted at the heel with a cupped leather, like the ram of a hydraulic press, the topmast could be raised by hydraulic pressure, applied by means of a small force-pump between decks, the mast, when raised, being fidded, and the water allowed to run out. By employing a lever fid, which could be withdrawn without taking off the weight of the upper mast, it might be struck at once, the air contained in the hollow mast regulating its descent to any required speed by means of valves or cocks below.—D. W. R.

FIRE AT A TIMBER-YARD.—A fire, attended with considerable loss of property, took place on 5th inst. in premises belonging to Mr. R. Connell, in Church-street, Bethnal-green. It appears that some persons living in the neighbourhood were discharging fireworks, when a half-spent rocket fell into the veneer store on Mr. Connell's works, and his whole stock of veneers in the building, said to have been of great value, were immediately in a blaze. In a few minutes the roof fell in, and the flames soon extended to the large stage and stock in the open yard. The damage done in all is somewhat serious, but the premises and stock in trade were insured in the Phœnix Fire Office.

Sweeping and Repairing Turnpike and Township-Roads.—Our attention has been drawn by a correspondent, to the exertions of a surveyor of turnpike-roads about Harrogate and Knaresborough (Mr. Lambert Ellison), in the preservation, repair, and cleansing of roads, and also to a report by Mr. Ellison, published in a Harrogate paper, in which he urges the general substitution of broad for narrow wheels, by the imposition of a smaller toll for broad wheels throughout the country (to this point, if we mistake not, attention has already been drawn in our columns, at the suggestion of Mr. Ellison himself;) as also the uniform breaking up of old roads before laying on new metal, and rolling it in, thus preventing the pulverization of much of the new material; and the use of brushes in summer, as well as patent scrapers in winter for the cleansing of roads from dust and mud; these processes, and especially the summer brushing, tending to preserve the road from tear and wear, which proceeds with much greater rapidity when the road is covered with thick dirt, as well as for comfort both to wayfarers and to roadside householders. Mr. Ellison has tested the brushing process on fifty miles of road, and strongly recommends it. By sweeping with brushes, he remarks, all unevenness is easily and surely detected, and all defects exposed to the eye, all loose stones so dangerous and painful to horses' feet are entirely removed, and the dust so disagreeable to travellers is almost entirely got rid of, so as to be no longer a nuisance.

Sailors' Institute, Shadwell.—The foundation-stone of the new Sailors' Institute, Mercer-street, Shadwell, in connection with the British and Foreign Sailors' Society, has been laid. Mr. Searle is the architect.

"Silver from Paving Stones."—Under this title a paragraph is in circulation which announces that a French chemist, M. Plee, gives an account, in the *Siècle*, of a mode of extracting from quartzeous silex a metal so undistingnishable from silver that new tests must be devised, if possible, for the purpose of deciding which is which. The new metal, if new it be, is regarded as the metallic base of silicon, which is a brownish red powder, hitherto itself regarded as the base of silex of which common flint and quartz are composed. It would thus appear, as indeed has been long suspected, that as silex is an oxide of silicon, so silicon is still but an oxide,—a protoxide, doubtless, while silex is a peroxide,—of this new silvery metal, which may be called silicium, as the very analagous metallic base of alumina has been called aluminium, and that of magnesia, magnesium. Silicon, however, has been hitherto regarded as one of the non-metallic elements, such as carbon, boron, and sulphur, and since it would appear to have been proved to be as purely metallic as potassium, sodium, calcium, aluminium, &c. it is natural to expect that even carbon, boron, and perhaps sulphur, too, may yet be stripped of all *earthiness*, and transmuted, as it were, into pure metal. It is rather unlikely, however, that silicium is in all respects identical with silver: it will probably have, at all events, a much lower specific gravity; but it appears to be equally splendid and equally disinclined to oxidize, a circumstance exceedingly remarkable, considering the immense power with which it retains oxygen when once it is oxidized. The mode described in the *Siècle* for its attainment is briefly this:—Quartzeous silex is first converted by union with an alkali into soluble glass, and is then precipitated from the alkali into gelatinous silex, which is redissolved in a cyanuretted lixivium, so as to form a double cyanuret, in solution, wherein articles of copper, zinc, tin, or lead, may be coated with the metal silicium by the ordinary electrotype process.

Country Churchyards.—Dr. Webster, F.S.A. in reference to country churchyards, as a general means for ascertaining the salubrity of particular districts, says, in the churchyard of Ely the ages mentioned were generally much higher than at Cambridge, seventy to seventy-five being frequent; from eighty to eighty-five by no means uncommon, and one female having died at 102 years of age. Norwich likewise stands high; seventy-five to eighty and eighty-five being often observed on gravestones, although numerous individuals much younger were similarly reported. Cromer, on the northern coast of Norfolk, holds a medium place as to longevity; the ages upon churchyard gravestones were sometimes from seventy to seventy-five, but numbers were younger, while few were older. Great Yarmouth appeared to be the most salubrious of all places in the same county:—"In the extensive cemetery of that borough, eighty-five and ninety were common figures observed on the death-memorials it contained, some of the persons buried being even above that advanced age, whilst one female, it was stated, had actually lived for 111 years." Proceeding from Norfolk to Suffolk, the Doctor speaks strongly in favour of the longevity of the good folks of Southwold, on the sea-shore of that county.

New Method of Joining Iron Plates.—A patent has very recently been granted to Mr. Bertram, a practical engineer employed in the dockyard at Woolwich as foreman of the factory. His invention consists of a process of firmly joining together slabs of sheet-iron work, for boilers, building ships, and erecting bridges, &c. without the use of rivets, by fusing the two edges of the plates to be adhered, and striking them simultaneously on both sides. The structure, it is said, is thus rendered materially lighter, and much stronger. Some experiments, according to the *Times*, have been made by order of the Lords of the Admiralty, in presence of the officers of the Dockyard at Woolwich, who are authorised to report thereon. It has been hitherto considered impossible to make an unlimited surface of iron.

Sale of Mr. G. Lane Fox's Estate.—Mr. Watkinson, of York, is understood to be the purchaser of the Grimston estate, near York. The purchase is stated to be above 35,000*l*.

Chemistry of Building Materials.—I have perused with much pleasure the interesting papers read by Dr. George Wilson, at the Architectural Institute of Scotland, "On the Chemistry of Building Materials," as contained in your journal, and should be very glad to see similar useful information given on the other materials connected with and used in architectural works, by some equally competent writer; including, in iron, the quality in wrought and cast, and the brand-marks which denote the best and other descriptions useful for the various purposes which may be required My present object is, however, to notice a remark which occurs in Dr. Wilson's paper, as given in your number for September, p. 435, viz.; 1. That earth, as well as wood and snow, are especially the appliances of the savage or half-civilized man; 2. Of the subdivisions of earth (as he afterwards states) being sun-dried and kiln-burnt; and by inference I conclude also clamp-burnt bricks. Now, whatever may be thought of it in Scotland, where stone is so abundant, I do not think that in places less favoured with that material, bricks, whether clamp or kiln-burnt (nor indeed sun-dried, in places where alone they are applicable), can be fairly said to apply "especially to half-civilized or savage life;" seeing that they were largely used by the Romans, and by all civilized nations from their time to the present, in situations where stone is scarce and brick-earth plentiful.—A. B. C.

Gas.—The long talked-of Caistor Gas Company has been provisionally registered, and it has just been resolved by the shareholders, that the works shall be erected by Mr. George Bower, of St. Neots, at a cost of 1,137*l*.; and by the contract entered into by him, they are to be fully completed early in January next. ——The Barton Gas Company have concurred with their directors in a resolution that the sum of 1,300*l*. or upwards, shall be raised for the purpose of making such extensions and improvements in the company's plant as are found necessary to meet the increased consumption of gas.——The Cheltenham Gas Company have given notice of their intention to apply to Parliament next session for a new Act, for power, amongst other things, to supply the adjoining parishes of Leckhampton, Prestbury, Charlton Kings, and Swindon, with gas.——A correspondent of the *Birmingham Journal* suggests, for the better prevention of explosions, that in establishments where much gas is used, a Davy lamp should be provided for use, whenever an escape of gas is discovered. In a recent instance an ordinary lantern was used by way of precaution, but, as might have been anticipated, was of no avail, for the gas entered at the top of the lantern, and instantly produced an explosion. Gas, like its correlative fire, is an excellent servant, but a bad master. It only requires, like it, a little management and care. Naked lights, or even, as we see, common lanterns, ought never to be taken to see where the gas escapes: the nose is usually a better guide than the eye in such a case.——At Liverpool, on Wednesday evening before last, Mr. Flintoff delivered a lecture, in the Clayton-hall, to a crowded audience, "On the existing monopoly in gas, as detailed in the report of the Gas Committee of the Town Council of Liverpool, showing, in the presence of the audience, by actual experiment, how the various over-charges have been effected, and how the gas consumers may regulate their meters, to prevent the glaring impositions of the Gas Company." Much interest, and indeed excitement, was displayed by the meeting in regard to this question, which the lecturer declared to be a national one, as regarded false measure for gas, and by no means confined to Liverpool alone. A resolution was passed against a proposal that the corporation should purchase the Gas Company's stock, bonds, and general interest, or make good the large amount of capital said to have been squandered to increase the actual profits limited in per-centage by Act of Parliament, and from which the shareholders had already reaped for nearly thirty years the maximum of 10 per cent.

The Oxford University Museum.—Although the University, as a body, has voted the sum of 30,000*l*. for the erection of a new museum, the contract entered into provides for very little ornament in the interior. It was therefore proposed, that those who desired to give to the museum the most complete efficiency might do so by private contributions, by which the following additions, which would add to the scientific and artistic expression of the edifice, might be obtained:—Firstly, Shafts for the cloister, of different kinds of British rocks, useful and ornamental, selected in illustration of geological epochs; the igneous rocks to be employed in the ground-floor corridor, and the sedimentary rocks in the upper corridor. Of these there are 128, besides 64 piers, and the cost of each is estimated at 5*l*. Secondly, Capitals to the shafts and piers, illustrating the floras of various epochs, climates, and regions. Of these there are about 192, and the cost of each is estimated at about 5*l*. Thirdly, Statues of the great founders and improvers of natural knowledge, under two heads:—1. Ancients,—in the porch or entrance. The following are proposed as representing the investigators of mathematical, mechanical, and astronomical truths:—Euclid, Archimedes, and Hipparchus; and as representing the investigators of organised nature — Aristotle, Hippocrates, and Pliny. 2. Moderns,—to be placed within the quadrangle; and of these, first of all, Bacon, Galileo, Newton, Leibnitz, Oersted, Lavoisier, Linnæus, Cuvier, Harvey, Hunter, and Sydenham. It is estimated that these, executed in Caen stone, will cost about 70*l*. each. Fourthly, Illustrative inscriptions, to be worked by the architect into the mouldings or elsewhere; as, for instance, "Consider the lilies of the field." One hundred inscriptions can be appropriately placed, and the cost of each is estimated at two guineas. The donors are already numerous.

Oxford Architectural Society.—The first meeting of the term was held on Wednesday evening before last, in the society's rooms, in Holywell-street, Oxford. The president, the Rector of Exeter College, took the chair. The secretary read the report of the committee, in which much praise was bestowed upon the new front of Jesus College, and the buildings in course of erection at Exeter College, and it was hoped that the example of the latter building would lead to the general adoption of a better style of architecture for collegiate purposes. The president, after remarking that Mr. Scott and himself had lately discovered in Exeter College some evident remains of the original fourteenth-century building, called on Mr. Hingston, of Exeter College, who read a paper on the Ecclesiology of Cornwall, ancient and modern, in which the reader, having briefly described the remains of Saxon architecture at Tintagel, of Norman, First Pointed, Middle Pointed, in different churches in the county, proceeded to give some account of the old crosses, fonts, holy wells, and baptisteries. He then discussed the present aspect of ecclesiology in Cornwall, gave an amusing account of Chacewater Church, and others of the "compo" class, of the improvement manifested in St. Paul's, Penzance, and of the late restorations and new churches by various architects. The paper was illustrated by some plates of crosses from Mr. Hingston's own work on the subject, and by some drawings lent by Mr. G. E. Street, architect.

The Polytechnic Institution.—Nearly 1,100 persons filled the great theatre of the Polytechnic on the evening of Monday, the 12th inst. when a lecture was given by Mr. Godwin on the Homes of the People. We may be permitted to note, without any personal reference, but as serving to show in a gratifying manner the extent to which this important subject is now taking hold of the public mind, that this vast audience listened for an hour without a movement, beyond expressions of their sympathy.

Bells.—Since my last communication, I have recollected having read—probably in a Life of Dr. Parr—of a bell of *eighty* cwt. at a parish church in Gloucestershire. I presume rung in peal, and, if so, slightly heavier than at Exeter. Of course, heavier tenors than there specified would be found in London. The mention of "eight" in the "inventory of goods" at Tewkesbury shows that that number was known. Profounder disciples of Browne Willis might, perhaps, find further specimens. The following "note and query" may legitimately interest your antiquarian readers:—Goldsmith, in one of his works—"Citizen of the World"—gives a "Tour to Kentish-town," imitating travellers' style—not the worst of his day—and speaks of "the parish church with its *fine bells*" at "Pancras." Where and how could they have existed? Those who recollect the tower—pulled down about ten years ago,—whose little arch was at least ancient, know that it was very small—hardly sufficient for three small bells. It had one large bell about 30 cwt. now transferred, and, I was told, one *small* one before that. Was it a joke of Goldsmith's, —or could any one now ascertain whether, or how, "fine bells" existed at Pancras eighty years ago?—J. D. P.

LECTURE AT HALIFAX.—A lecture was delivered at Halifax last week to the members of the Halifax Church Sunday School Association, by the Rev W. Laycock, incumbent of Southowram. The subject was "Oriental Habitations." The lecture was illustrated by diagrams.

IMPROVED BORING TOOLS.—Patents have been obtained in America and this country for "improvements in boring-instruments, known as augers, bits, or gimlets," the invention of Mr. Ransom Cook, of the United States. The improvements consist in giving to the lips or cutting edges of boring implements a curved or gouge shape at their extremities, also in the under-cutting or back-sloping of those edges. The superiority claimed for these tools over anything hitherto known consists, first, in the ease with which the hardest woods may be bored with the largest-sized augers at any angle to the fibres, the perfectly cylindrical character of the hole, the tools neither bruising nor tearing the wood in the slightest degree. The formation of a fine-threaded female screw, by means of this instrument, on the interior surface of the boring, adds greatly to the firm hold of a "treenail" or bolt when driven home. Another valuable result is, the absence of any projecting spur, which is liable to be broken off by contact with metal when in use; while the slight exertion required in boring enables the workman to detect at once the presence of a spike or bolt. The question of sharpening may perhaps offer an objection.

SURVEYOR OF BARNSLEY LOCAL BOARD OF HEALTH.—At the fortnightly meeting of this Board, the testimonials of five parties who had been previously selected from a list of forty candidates were read, and Mr. W. Rowell, civil engineer, of Bradford, was unanimously elected. Mr. Rowell has been for some years past an assistant to Mr. Robert Rawlinson, of London.

MIDDLE-CLASS EDUCATION.—Lord Ebrington has had printed a memorandum on Middle-class Education, in reference to his prize of 20*l.* for the sons and relatives of Devonshire farmers, read at the October meeting of the Council of the Bath and West of England Society for the Encouragement of Agriculture, Arts, Manufactures, and Commerce. In this memorandum his lordship explains his object in offering the prize, to be, "not merely to give young farmers an incentive to exertion, but also to endeavour to ascertain—with a view to its amendment, if necessary—the means of education at present practically available for that class in Devonshire." There will be three successive prizes given during three consecutive years; the first to young men from eighteen to twenty-three inclusive, and a future one to younger lads. Lord Ebrington suggests that some plan of county honours and county degrees is very desirable for the promotion of Middle-class Education throughout the country, and it is by way of initiation or example, though not with the view of founding such a scheme, that he offers these prizes. Lord Ebrington's anxiety on the subject is most commendable.

SOCIETY OF ANTIQUARIES, NEWCASTLE-UPON-TYNE.—The monthly meeting of this society for November, was held on 7th instant, in the Castle of Newcastle, when, amongst other matters brought forward, Dr. Charlton reported that the Black Gate promised to be a very fine building, when completely disclosed The base was already uncovered. It would be better, perhaps, that the society should do nothing more on the subject, until the designs for the new street were sent in. The building should not only be preserved, but restored, and made subservient to some useful public purpose. The same gentleman afterwards read a paper on "Runic inscriptions from Carlisle and Falstone." The latter was noticed in the Society's Transactions forty years since. As reported in the *Gateshead Observer*, Dr. Charlton next referred to the Runic Inscription recently found in Carlisle Cathedral, surrounded by the marks of the working masons. The Carlisle Inscription is pure Scandinavian one of the few Norse records that have been discovered in the island. It was discovered in the present year, upon an ordinary wall-stone inside of the west wall of the south transept of the cathedral, by Mr. C. H. Purday, clerk of the works now in progress. It had been covered over with plaster and whitewash; and to this, in all probability, it owes its present state of preservation—for the letters are but faintly scratched with a tool. The words appear to be—"TOLF(O)HN(AR) RAITA THEKSI RUNE A THISI STAIN" (the letters between parentheses being doubtful). No proper name, known to Dr. Charlton, answers to the first word, or to any part of it; and perhaps no name is intended; but, in allusion to the masons' marks around the inscription, some waggish workman, using characters not commonly understood, may have inscribed—"Tolf (twelve) ohnar (idlers) cut these marks on these stones." And yet, in that case, the last word should be plural, *stainr*, and not *stain*; but such violations of grammar are not uncommon in Runes.

ST. GEORGE'S, SOUTHWARK.—The church of St. George the Martyr, Southwark, where considerable alterations have been effected, was reopened for public worship on Wednesday, November 7, by the Archbishop of Canterbury. The old-fashioned high pews have been removed, and others of a more modern character substituted, whereby accommodation for 263 additional persons has been obtained. Means of ventilation have been introduced, and the interior of the building has been redecorated and painted. The ceiling is divided into panels of very light blue, with white mouldings and ornaments painted upon it, in relief; and the styles between the panels are covered with a fret pattern of neutral red: a little primitive colour is introduced in the centres of the paterae, &c. The walls of the church are finished light green; the chancel, white and gold, with Sienna marble pilasters; and all the pewing and fixtures painted oak. The work has been done under the superintendence of Mr. Arthur S. Newman, architect. Mr. Willson is the contractor. The ornamental work has been executed by Messrs. Harland and Fisher.

SALE OF EXETER-CHANGE, STRAND.—On the 14th inst. Messrs. Farebrother and Co. the auctioneers, put up to auction, at Garraway's, the freehold estate, the property of the late Marquis of Exeter. The property was divided into two lots. The first comprised Exeter-Change, the arcade leading from Catherine-street to Wellington-street North, which had in it eleven houses, let at an annual rental of 311*l.* with eight other houses, in Catherine-street, Wellington-street, Exeter-street, and the Strand. These, with Exeter-Change, realized a rental of 1,146*l.* per annum. The lessees of these, as also those of the second lot, covenanted to pay land-tax, sewers-rate, and to insure from fire in the full value. That was knocked down for 21,000*l.* The second lot consisted of the premises, Nos. 343 and 344, Strand, and of Nos. 1, 2, and 3, Catherine-street. The annual rental from these was 600*l.* 4s. 10d. This lot was knocked down for 10,500*l.*

FREE LENDING AND REFERENCE LIBRARY FOR ISLINGTON.—In consequence of a requisition by eighty ratepayers of the parish of Islington, a public meeting of the ratepayers will be held at the Parochial School-room, Church-street, Islington this (Friday) evening, the 16th, at seven o'clock, to decide whether (by vote of two-thirds of the meeting in its favour) the valuable Public Libraries Act shall be applied to the parish. As there can be no ballot afterwards, it is earnestly to be hoped that all who desire to set up so commendable a rival to the gin-shop, will not fail to attend and give their vote, which cannot, under any circumstances, entail the levy of a rate exceeding 1d. in the pound, and more probably may only require one of ½d. or even ¼d.,—to a 30*l.* householder not more than 7½d. a year,—or about the price of a single pot of ale; in return for which, many who now find no amusement out of the gin-shop, may, by obtaining free and rational amusement at home, or in the library, with its books and newspapers, might thus be saved from ruin, and from being an additional burden on the heavier rates. In this way, in fact, the establishment of a free library cannot but bring about a great saving to the ratepayers of so extensive a parish as Islington, which, by the way, would thus, it appears, be the first single parish in any town which has taken advantage of the Ewart Libraries Act. This Act has in general been gladly adopted in towns by large majorities of the voting ratepayers, the City of London a—not very brilliant—exception.

SALTAIRE TESTIMONIAL.—Mr. Milnes, of London, is executing a testimonial which the numerous *employés* of Mr. Titus Salt, of Bradford (nearly 4,000 in number), are about to present to him. A broad pedestal forms the base, bearing a representation of the great factory at Saltaire, of which we some time since gave an engraving. On the top are figures of the Alpaca and Angola goat, with the cornucopia. A column springs from between the two animals, which will be surmounted by a bust of Mr. Salt.

TO CLEAN PAINT.—Smear a piece of flannel with common whiting, mixed to the consistency of common paste, in warm water. Rub the surface to be cleaned quite briskly, and wash off with pure cold water. Grease-spots will in this way be almost instantly removed, as well as other filth, and the paint will retain its brilliancy and beauty unimpaired.—*Stockport Advertiser.*

INSTITUTE OF BRITISH ARCHITECTS.—At the next Ordinary General Meeting of the Session, to be held on Monday evening, the 19th of November, the following paper will be read: "An Abridgement of M. Lance's Essay 'On a Diploma in Architecture.'* with Remarks and Suggestions by Mr. John W. Papworth." At the last meeting Mr. C. H. Smith was elected an honorary member.

* *Du Diplome d'Architecte*, par Adolphe Lance. 8vo. Paris. 1855.

BIRMINGHAM AND MIDLAND INSTITUTE.—The first stone of the new buildings will be laid by his Royal Highness Prince Albert, on Thursday, the 22nd of November. The ceremony will take place at one o'clock, when, after an address from the Council of the Institute to Prince Albert shall have been read by the president, Lord Calthorpe, his Royal Highness will reply, and the stone will be laid with the usual formalities. Immediately after the stone is laid, a luncheon will be given in the Town-hall, which the Prince will honour by his presence. The ambassadors of France, Turkey, and Sardinia, and a number of noblemen and gentlemen, distinguished in science, art, and literature, have been invited.

SOMETHING NEW IN RUSSIA.—"Lately, at the fair of Nijegorod," say the Russian journals, "an iron house was to be seen, composed of ante-chamber, bed-room, sitting-room, dining-room, and kitchen. The front was ornamented with columns, and had three windows. The walls, the roofs, the staircases, &c. were all in iron. Its weight was 800 pouds (nearly 26,000 lbs.), and its price 1,600 silver roubles (6,400 fr.) Two men could take it down in one day, and it only required two days to put it up again."

SOCIETY OF ARTS.—The opening meeting of the one hundred and second session of the Society of Arts, is fixed for Wednesday, the 21st inst. On this occasion the Rev. Dr. Booth, F.R.S. Chairman of Council, will deliver an introductory address, and the medals awarded in the last session will be presented. The papers to be read and discussed at the successive meetings, prior to the Christmas recess, are by Mr. P. L. Simonds, "On the Gums and Resins of Cornwall;" Mr. G. N. Hooper, "On the construction of Private Carriages in England, and on the Carriage Department of the Paris Exhibition;" Mr. J. Bailey Denton, "On the Progress and Results of the Under-drainage of Land in Great Britain;" and Mr. J. K. Blackwell, on "The present position of the Iron Industry of Great Britain, with reference to that of other countries."

THE IRON TRADE.—The following is a monthly statement forwarded to us from Glasgow, by Mr. Thomas Edington, of date 6th inst. showing the principal orders for castings, machinery, rails, &c. ascertained by him to be in the iron markets of Great Britain and Ireland:—1. Orders contracted for during the last few months, in the following places:—in Glasgow—railway chairs for Calcutta, 5,000 tons; Canada, 1,000 tons; Nova Scotia, 700 tons; socket pipes for Bombay, 1,000 tons; Liverpool 3,000 tons; and quantities for Sydney, Italy, Canada, Buenos Ayres, Ireland, &c.:—in Newcastle-upon-Tyne district—railway chairs for London, 4,000 tons, and a quantity for the Geelong and Melbourne railway; socket pipes for Sunderland, 500 tons; Rome, 300 tons; and quantities for London:—at Ipswich—large quantities of railway chairs for London, Calcutta, &c.:—in Staffordshire district—railway chairs for Cheshire, 4,000 tons; Liverpool, 1,200 tons; socket pipes for Copenhagen, 10,000 to 11,000 tons; Cheshire, 170 tons, and quantities for Liverpool:—in Ireland—large iron roof for a theatre at Buenos Ayres:—in London—a large cast-iron lighthouse for the West Indies. 2. New orders—300 tons lamp-posts, a steam-boiler, 400 tons sleepers and rails, for London; two steam-engines for Wolverhampton; five miles pipes, steam-engine, &c. for Heanor, Derbyshire; a portable steam-engine for South Wales. 3. Contracts in view—an English gentleman has just contracted to light the town of Constantinople with gas. The City Water Company of Edinburgh have resolved to apply to Parliament for power to bring in a further supply of water from the estate of Colziun

TO CORRESPONDENTS.

"*Plans for Wooden Houses*" -One about to emigrate to New Zealand asks to be referred to any existing cottages which are stamped with professional approval, being desirous, as every emigrant should be, of carrying to the land of adoption the most perfect plans which the mother country has devised. "The cottages are to be built of wood, and not two storied, on account of earthquakes: coal is difficult to be procured, and, therefore, with reference to grates, such only as burn wood can be used."

"*Cement for Wood and Metal.*"—A correspondent, "K. D. P." wishes to know of some cheap cement means of joining small pieces of wood to tin and iron, he says he has tried many things such as marine glue and cements, but has failed in all: he does not mention whether gutta-percha was amongst the means tried: we have heard of a means of uniting India-rubber with metal: can any of our readers suggest such a cement as is wanted?

TO ARCHITECTS, CIVIL ENGINEERS, AND OTHERS

WANTED, a SITUATION in London, by a young gentleman of first-rate professional ability. In architecture he is capable of designing in every style, and applied to public, ecclesiastical, and domestic edifices; is thoroughly efficient as a draughtsman, in detail colouring, and perspective, and fully competent in writing specifications, measuring work, and getting out quantities; has had considerable practice in civil engineering as applied to railways, canals, water supply, sanitary measures, &c. and is a superior surveyor and ornamental plan writer. Can produce most satisfactory specimens in drawings and sketches, and, if necessary, excellent testimonials as to ability and integrity.—Apply by letter, O. G. Office of "The Builder."

TO ARCHITECTS.

THE Advertiser, of fifteen years' experience, is desirous of a RE-ENGAGEMENT; is a good draughtsman up to perspective, Gothic, and classic work. Age 30. Terms moderate, and references good.—Address, A. CLAYTON, 4 Bloomfield-terrace, Pimlico.

TO ARCHITECTS.

THE Advertiser, having been nearly five years with a Surveyor, wishes for an ENGAGEMENT. He is a neat draughtsman, and is well acquainted with the general routine of the office.—Address, S. A. B. care of Mr Dudlow, News Agent, 16, Little Knight Rider-street, Doctor's-commons.

TO ENGINEERS AND CONTRACTORS

THE Advertiser, who is thoroughly acquainted with surveying and levelling, and all the consequent calculations, is a good mechanical draughtsman, and is able to measure and estimate quantities, wishes a situation as SITUATION as CLERK to an ENGINEER or CONTRACTOR. Best testimonials. A moderate salary only required.—Address, W. S. 14, Charterhouse square.

TO BUILDERS, &c.

THE Parents of a respectable Youth, aged 14, wish to APPRENTICE him to an Office where he will have an opportunity of learning the Building Trade in several Address, A. B. Mr. Walker's, 26, Maddox-street, Regent-street.

TO BUILDERS

THE Advertiser, who has had considerable experience in almost every description of building, including railway work, wishes to JOIN a BUILDER, either at a salary, or to take a share of the profits. He has worked at the bench, understands taking out quantities, and can make drawings of every description. Has been engaged in architectural and engineer's offices, would be competent to take an active part in the business, and being well connected, would also be able to increase it. The highest references can be given.—Address, F. M. at Mr. S. Rowe's, Stationer, 134, Cheapside

TO ARCHITECTS, &c.

THE Advertiser, who has served to an Architect in the City, and has had seven years' practice in other offices, is desirous of an ENGAGEMENT with a view to a PARTNERSHIP. A premium would be given.—Address H. 33, Mornington-road.

TO ARCHITECTS.

THE Advertiser, who is acquainted with Classic and Gothic Architecture, is desirous of a permanent ENGAGEMENT with a London Architect of good practice. Salary moderate.—Address, C. P. No. 6, Upper King street, Bloomsbury.

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

TEMPORARY ASSISTANCE AFFORDED to the above in making and copying out plans, specifications, quantities, &c. Terms strictly moderate.—Address, G. S. 3, 6, Exmouth-street, Clerkenwell

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, aged 30, a thorough competent and practical person, is desirous of an ENGAGEMENT as CLERK of WORKS or MANAGING FOREMAN, in town or country. Has a general knowledge of drawing plans, writing specifications, taking out quantities, measuring, estimating, &c. &c. The best of testimonials.—Address, W. H. Brix's Railway Terminus Coffee-house, Landport, Portsmouth.

TO MAHOGANY, DEAL, AND TIMBER MERCHANTS, BUILDERS, AND CABINETMAKERS.

THE Advertiser, possessing a thoroughly competent knowledge in buying, selling, and converting every description of wood, wishes to obtain who'e or partial EMPLOYMENT.—Address, prepaid, E. S. Office of "The Builder."

TO ARCHITECTS.

A CLERK of WORKS, who has completed very extensive works, and has first-class testimonials, is open to a RE-ENGAGEMENT.—Address, HOPE, 9, Eastcheap, City.

TO ARCHITECTS AND SURVEYORS.

A GENTLEMAN, aged 21, is in want of a SITUATION, in an Architect's office, either in town or country. He has been five years studying the profession, and is well up in the Gothic and Classic styles. Is a good draughtsman, understands perspective, surveying, taking dilapidations, and all duties of the office. Good testimonials.—Address, E. C. Old Bell Hotel, Holborn.

AN Assistant, having two or three days in the week disengaged, will be happy to render TEMPORARY ASSISTANCE to Architects requiring it.—Address, B. H. 17, Berkeley villas, Loughborough park, Brixton.

AS SURVEYOR'S, ENGINEER'S, or LAND AGENT'S ASSISTANT.—A Gentleman, aged 26, a good Land Surveyor, Draughtsman and Valuer, Accountant and Correspondent, with a knowledge of Farming, is now open to an ENGAGEMENT. References to last employer, Gentleman's agent. Salary about 100 guineas.—Address, W. B. 95, Hattongarden, London.

TO BUILDERS, SURVEYORS, AND OTHERS.

AS MANAGER of a large JOBBING BUSINESS, PRINCIPAL CLERK or MANAGER of a BUILDING ESTATE, the advertiser OFFERS his SERVICES, being practically acquainted with the building trade. References and testimonials of a most satisfactory nature will be given, and security if required. Permanency is the advertiser's chief object. Address, Y. Z. Retreat Cottage, Dorking, Surrey.

A GENTLEMAN, 32 years of age, seeks a RE-ENGAGEMENT. Has been employed for sixteen years by the first contractors in the kingdom, on railway and other works, to whom he can refer. Address, O. P. 20, Half Moon-street, Piccadilly.

TO ARCHITECTS AND SURVEYORS.

A THOROUGHLY PRACTICAL and first-rate architectural DRAUGHTSMAN and SURVEYOR desires a RE-ENGAGEMENT, either in London or the country. References to gentlemen of eminence.—Address, to H. S. S. 2, Grove-terrace, Bedford-road, Clapham-rise.

TO ARCHITECTS, BUILDERS, &c

A SITUATION WANTED, by a good DRAUGHTSMAN, who understands perspective, practical working drawings, specifications, surveying, &c. Terms, 30s. per week.—Address, E. K. 5, Walcot-square, Lambeth.

A RESPECTABLE Middle-aged Man wishes a SITUATION as CLERK in a BUILDER'S office; has had many years' experience, and is thoroughly acquainted with its duties. The most satisfactory references given. Address, prepaid, to A. B. No 10, King-street, Chelsea.

TO ARCHITECTS.

A GOOD and expeditious DRAUGHTSMAN, who is perfectly capable of setting up working and finished drawings, perspectives, &c. is a good colourist, and understands the routine of an office, is desirous of meeting with an ENGAGEMENT. Terms moderate.—Address, C. R. 87, Stanhope-street, Regent's park.

TO PROPRIETORS OF LARGE ESTABLISHMENTS AND OTHERS, WHERE A GENERAL MECHANIC IS KEPT ON THE PREMISES.

A YOUNG MAN is desirous of a SITUATION as GAS-FITTER, BLACKSMITH, BELL-HANGER, PAINTER, and GLAZIER; is thoroughly competent in each branch. Good reference given.—Address, G. P. M. 18, Parkside, Knightsbridge.

TO BUILDERS, CARPENTERS, &c IN TOWN OR COUNTRY.

A STEADY Young Man, who has just left a London firm, wants EMPLOYMENT; would have no objection to commence at a small price.—Address, J. Shoe Warehouse, 1, Queen's Head row, Newington Butts

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marbles, and with that careful attention to the detail and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black and Gold, Buralilla, Sienna, Veri Antique, Brocatella, Dove st. Anne's, and Serentine Marble, suitable for Dining Rooms, Libraries, Vestibules, and Entrance Halls; and a great variety of others to Veined, San Juan, Emperor's Red and Amber Marble, for Billiard, Breakfast-rooms, Best and Secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statuary, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18, Wharf Road-side-street, North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.
July 20, 1855. C. ADENEY, Secretary.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of the Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 29, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 3, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sienna, Brocatella, Dove, and other Marbles, in blocks full dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates. For further particulars apply at the Offices of the Company, 18, Cannon-street, City.
WILLIAM W. DONNIN, London Secretary.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tenfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truck-loads of five tons. Pavings, Landings got out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

JOHN BAZLEY WHITE and BROTHERS MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER. Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beetham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace. Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Mill-bank row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. CHATHAN, Liskeard This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

PIMLICO MARBLE WORKS, BELGRAVE-WHARF, LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD call the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town. W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potterne-down, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curbs and Pitching, all at the very lowest prices.
N.B. Good 2-inch Tooled Paving, at 40s. per 100 feet, cash.

AUSTIN'S ARTIFICIAL STONE.—This material (frequently confounded with Portland Cement) has now been extensively used among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulated, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000 and 5,000. In no branch of construction from Terra-cotta, and the coarser kind of pottery there is no limitation of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof.—AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.
*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED, Manufactured by MACHINERY, which produces the greatest degree of fineness.
WILCOX & CO.
Flint Mills, Mill Wall near Scott Russell's.
CARRIAGE FREE.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

SCAGLIOLA done on an IMPROVED PRINCIPLE.—I refer to the Gothic Arch by D. Lee, in the Great Exhibition of 1851, which gained the only Prize Medal awarded for the manufacture of the above work.—Specimens to be seen at 92, Drury-lane, two doors from Holborn, superior to any yet offered to the public, with a choice Collection of Ornaments for building purposes, Trusses for Shop-fronts, &c. &c.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Wine Model Prison, Pentonville, and other Penitentiaries, Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Pooley-street; and at Messrs. Braby's, Belvidere road, where terms may be obtained.

LLANGOLLEN FLAG and SLATE COMPANY. The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag Stone Company and the Llantysilio Slate Company, are now prepared to supply arch ticks, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney-pieces, Baths, Filters, Lariers, Mangers, Ridging, and every other article made for this beautiful material, all of superior quality. The Llangollen Slabs, from the great dimensions and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices.—Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SON, 5, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4, Wharf, South Wharf-road, Paddington, or to Mr. GEORGE F. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c. ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 5 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

UNITY JOINT-STOCK MUTUAL BANKING ASSOCIATION.
PRINCIPAL OFFICES.
Unity-buildings, 8 and 10, Cannon-street, City.
BRANCH OFFICE.
1, New Coventry street, Leicester-square.
CLOSING OF THE SHARE LIST.
The directors are happy to announce that, in consequence of the large number of shares which have been allotted and paid upon, the share list will be closed on Friday, the 30th November, after which date no applications will be received
Arrangements have been made which will enable the bank to commence business early in January next
This bank, to be in operation by royal charter is established for the purpose of founding the principle of MUTUAL BANKING, whereby customers, who create the profits, become entitled to a participation in them, by way of interest on their cash balances. The principle of mutuality has been for many years acted on by fire-insurance companies and their policy-holders have participated to a very great extent in the bonuses, with much advantage to the institutions and the shareholders. By banks, however, to this period MUTUALITY has been neglected. The whole of the profits resulting from successful operations have been given to the shareholders only.
ADVANTAGES OFFERED BY THE UNITY BANK.
I. To shareholders, 5 per cent from the date of payment, on all paid up capital, as well as 5 per cent on deposits.
II. To customers in addition to the customary amount paid on deposit and current accounts, interest on their cash balances, equivalent to 5 per cent on the profits
This is the plan on which the UNITY JOINT-STOCK MUTUAL BANKING ASSOCIATION is established. By it is created, for the first time, an identification of interest between the customers and shareholders of the bank, who thus become mutually concerned in the extension of its business. It will be the means of opening up new business, preserving a connection once formed, and productive of practical benefits to the public generally.
CONDITION OF LONDON JOINT STOCK BANKS.
The success of Joint-stock Banks in London is readily admitted, as well as proved, by the statements periodically issued by these great commercial institutions. In support of this, the following table is submitted, showing the condition of each of the six metropolitan Joint-stock Banks which have published accounts, the original cost of the shares, their present market value, and the dividends payable thereon:—

Name of Bank.	Time when Bank opened.	Paid up Capital.	Amount Paid each Share.	Present Value of each Share.	Rate per Cent. of Dividend Paid.
		£.	£.	£.	Per ann.
London and Westminster	1834	1,000,000	20	47	16
London Joint-Stock	1836	600,000	10	32½	12
United Bank of London	1836	1,200,000	10	30	10
London and County	1836	250,125	20	39½	12
Commercial Bank of London	1840	500,000	20	31	10
Royal British Bank	1840	500,000	5	6	2

The above banks publish the following facts with regard to their positions:—
I. The entire amount of subscribed capital in the six joint-stock banks in London is £2,712,125.
II. The amount thereof paid up is £2,317,625.
III. The amount of deposits, or customers' balances, is 29,578,000.
IV. The total number of shareholders is 4,697.
V. The number of shares issued, 187,481.
Thus is presented proof of known quarter, extent of business, and general financial resources. These establishments hold half-yearly meetings, and lay before their connections full accounts of their progress and general operations. This course cannot fail in inspiring with confidence all who have any dealings with them, while it gives to the public the means of forming an opinion as to their responsibility.
INCREASED VALUE OF JOINT-STOCK BANK SHARES.
It is proved to demonstration, that joint-stock banking, under proper supervision, affords almost estimable and unusually profitable field for the investment of capital. The dividends paid by the banks above quoted vary from 6 per cent to 32 per cent and the latest quotations of their shares show an increase of from 55 to 225 per cent on their paid-up capital. The real increase, however, in the value of the shares may be better understood by the fact that the paid up capital of these six banks is 2,317,625 and that its present market value is 5,212,125. It has thus increased two and a half fold, so that every £1 has now become £2 15s. and there is every prospect of this amount continuing to increase in value.
COURT OF DIRECTORS OF THE UNITY BANK.
CHAIRMAN.
J. J. Mechi, esq. Tarpee Hall, Kelvedon, Essex.
William Joseph Bruce, esq. 16, Duke-street, Westminster, and 44, Hyde-park-place, Cumberland-gate.
G. L. P. Lyne, esq. (Messrs. Crosley and Eyre), 1, John-street, Bedford-row.
Thomas Carale Hayward, esq. (Messrs. Hayward and Sons), 93, Minories; and 4 Highbury park North
Major Henry Stones, L.L.B. 33, Nottingham-place, Regent's-park.
Robert Garland, esq. Phanes chambers, York-buildings, Adelphi; and Bedford-lodge, Highbury.
Thomas H. Baylis, esq. Cannon-street, City; and 4, Nottingham-terrace York-gate, Regent's-park.
Dr. Lloyd, 4, Suffolk-place, Pall-mall.
Robert James Snape, esq. 3, Stone-buildings, Lincoln's-inn.
Edward Gould Bradley, esq. Benthall-lodge, Hampstead.
Major Martin Mahoney, Ignfield House, Alop terrace, Regent's-park.
BANKERS—The London and Westminster Bank.
SOLICITOR—Thomas Taylor, esq. 37, Bucklersbury, London.
BROKERS—Messrs. R. and J. Sutton, 22, Royal Exchange, London.
GENERAL MANAGER—George Chambers, esq. (from Messrs. Barnett, Hoare, and Co.)
SECRETARY—Henry Lake, esq.
Each of the directors is duly qualified, having subscribed for twenty shares, and paid the deposit of £100 in accordance with the deed of settlement.
THE NEW PRINCIPLE INTRODUCED BY THE UNITY BANK.
Regarding the distinctive principle of the Unity Bank, it has been suggested that there must be a detraction from the profits of the shareholders, by reason of so large a percentage being given to the customers of the bank. This idea can only have arisen, however, from the want of a careful consideration of the whole subject. In the first place, it is necessary to remember from whom the profits of a bank are derived. They are not made from the share capital. The very first ingredient for the formation of profits is a customer. The amount of profit must depend, to be sure, on the amount of business transacted; and the larger the business, provided it be properly conducted, the larger will be the profits. It must be borne in mind, also, that the real receipt of the dividends must depend on the number of cents of profits; and that 5) per cent of the profits, extending over large transactions, may be far greater than 10 per cent derived from more circumscribed business. If, then, the customers of a bank constitute its profits, the customers should be induced to transact their business with the bank, and thereby the profits of the shareholder, instead of being reduced, will be augmented. The inducement held out to the customer, however, should be such as does not involve or complicate the business of banking. It should not be by the promise of some peculiar accommodation, or some particular and increased rate of interest, or by any departure from the sound system of joint-stock banking which has stood the test of years of experience, and procured so great prosperity. But it should be, as it is in the Unity Bank, an advantage which interferes in no degree with established principles, but merely allocates a portion of that which has hitherto been declared to be profit to those who have been the makers of it. Assurance companies have been accustomed to apportion certain of their profits, by way of bonus, to their assurers; and so general has become the recognition of the right of the assurer to this participation, that no assurance association would now be established without this essential to success. The justice of the principle consists in this—that as the assurers make the profits of the company, they ought to be participators in its prosperity. What is just in assurance will be found just also in banking. The customers of a bank make the profits of the bank, and they ought also to be participators in its prosperity.
It has been asserted, also, that the 50 per cent of the profits proposed to be divided, while it would detract from the profits of the shareholders, would be but a trifling benefit to the customers. It might, in the first place, be replied that no benefit is considered "trifling" by those who rightly estimate pecuniary affairs; that the benefit, if trifling, is in addition to all the other benefits usually derived by banking at a joint stock bank; and that no correct data can yet be formed of the profits which will be made. On the other hand, it must be remembered that hitherto persons have taken their banking account where personal feeling, accommodation, or convenience of locality might lead them. Now, for the first time, by the introduction of the principle of mutuality, self-interest is appealed to. And when, to the large number of the public attracted by this all powerful stimulus, is added the number of the connections of the Unity Insurance Associations in all parts of the country, who have a peculiar identification with and interest in its success, it may fairly be stated, that antecedent data are not sufficient to form an estimate of the advantages which both the shareholders and customers will derive from the Unity Bank.
Great difficulty exists in estimating the effects likely to be produced by the establishment of this new and most desirable feature in banking. It is one that must become highly popular with every commercial interest, and with every class of the public, because its simplicity and advantages are at once to be seen and appreciated.
To those great commercial bodies which are compelled to have large cash balances constantly at their bankers', it will prove to be a serious consideration, and a most important source of profit. The railway, dock, gas water, steam navigation, insurance, and other companies, professional men, merchants, brokers, gentlemen of fortune, and traders of all kinds, will duly estimate the difference in the system now proposed, from that heretofore existing. In fine, as joint-stock banks became a public necessity, as is now proved as well the principle of mutuality whereby these admirable institutions may be rendered still more serviceable to the public, and in no way less safe—demand the best consideration of the community at large.
BUSINESS TO BE UNDERTAKEN.
All the usual business of banking will be undertaken; and arrangements will be made for extending the transactions of the Bank in every desirable quarter
CURRENT ACCOUNTS will be made up half-yearly, namely—to the 30th of June and the 31st of December, and interest will be allowed at the rate of 5l per cent. on them.
DEPOSIT ACCOUNTS.—With respect to these, the rate of interest allowed on money placed at seven days' notice will be 3l. per cent. under the rate of discount on first class bills adopted by the Bank of England, resulated thereby. The bank will give receipts for the sums so deposited, or, for the convenience of depositors leaving England, promissory notes, or bills, including interest as well as principal, at not less than six months' date.
The bank will undertake the agency of country and foreign banks, whether joint stock or private, and will afford every accommodation to travellers and others, with respect to circular notes and letters of credit. It will receive all kinds of income for its customers, including annuities, dividends, military, naval, and civil officers' pay. It will undertake the sale and transfer of stock in the public funds, &c.; and will be responsible for the safe custody of title deeds and other securities belonging to its customers, to which they will at all times have convenience of access.
Applications for prospectuses and forms of application for the remaining shares, to be made to Messrs. R. and J. SUTTON, Stock Brokers, 22, Royal Exchange; or to the Secretary, at the Principal Offices, 10, Cannon-street, City.
HENRY LAKE, Secretary.

FORM OF APPLICATION FOR SHARES.
TO THE DIRECTORS OF THE UNITY JOINT-STOCK MUTUAL BANKING ASSOCIATION
GENTLEMEN,—I request that you will allot me ... shares of 100l. each in the above Association: and in consideration of such allotment, or any less number you may appropriate to me, I hereby undertake to pay the deposit, or first call of 5l. per share thereon, and 20l. at the time of incorporation. I further undertake to execute the deed of settlement when required.
Dated this ... day of ..., 185...

UNITY JOINT-STOCK MUTUAL BANKING ASSOCIATION.
Principal Offices; Unity-buildings, 8 and 10, Cannon-street, City.
CLOSING OF THE SHARE LIST.
NOTICE is hereby given, that no further applications for SHARES in this bank will be received after Friday, the 30th of November. By order, HENRY LAKE, Secretary.
Unity-buildings, 9th November, 1855.

TO BLACKSMITHS & BELL-HANGERS. A good BUSINESS TO BE DISPOSED OF in the above line, on very advantageous terms, in a populous neighbourhood, in consequence of the advertiser being compelled to leave town, owing to a bereavement necessitating other occupations.—Apply to A. PUTTER, on the Premises, Messrs. Wills, Builders, Starcorner, Bermondsey.

TO BRICKMAKERS, BUILDERS, and OTHERS.—TO BE DISPOSED OF, a BRICKMAKING BUSINESS, working under Bearle's Patent for Perforated Bricks, now in full work, with steam-engine and machinery of the newest and best construction. The clay makes a very superior facing brick for the London market.—For particulars, apply, by letter only, A. H. L. 166, Aldersgate-street, London.

TO ENGINEERS, IRONFOUNDERS, &c. TO BE DISPOSED OF, a snug, compact FOUNDRY, in one of the midland counties, employing about twenty-five men: in full work. Is entered with every convenience for carrying on a good trade.—Address, M 134, Post office, Liverpool.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.
No. 1 quality, inches diameter, and price per yard.
¼ ⅜ ½ ⅝ ¾ ⅞ 1 1¼ 1½ 1¾ 2 2½ 2¾ 3 3 in.
9d. 11d. 1s. 1d. 1s. 3d. 1s. 5d. 1s. 7d. 1s. 9d. 2s. 2s. 3d. 2s. 6d. 2s. 9d.
No. 2.
2 2½ 2¾ 3 3 inches.
2s. 2s. 3d. 2s. 6d. 2s. 9d. 3s. per yard.
No. 3. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.
1 1¼ 1½ 2 2½ 3 inches.
9d. 10d. 11d. 1s. 1s. 3d. 1s. 6d. per yard.
The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
WE and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 31 Wharf, Harrow-road, to 2, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE SEVRES GLASS COMPANY.

Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Whole-sale and Retail Agent, 8, Tottenham-court, New road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21 and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 19, Manchester-buildings, Westminster

TERRA-COTTA WORKS, Blackfriars-road, London. The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, to the adornment of our noblest buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very Low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Enrichments, Moulded, Sunk, and Plain, and in the best manner, and warrants it to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Pratt street, Paddington.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of withstanding the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe unions, hose and tubing, also for gas-holders, acid pumps, alkali cisterns, &c. &c. Articles moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Diving dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions Inflating Portable Baths, Invalid Cushions, and Articles of this Kind made to order pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAMANOOJAH MUDLIAR, Bart., VENKOJEE TWIGHT. Second Testimonial.—"March 10th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

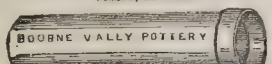
AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
B. S. HOGGART, Engineer.



Royal Arsenal, Woolwich, June 24, 1849.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crack or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the best quality, the produce of the estate, and will bear comparison with any Pipes in the Kingdom, and can be had upon application to

THE AGENTS:—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 15s. 6d. each.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britten-street, Chelsea; and at the Pottery.

BROOKE-STREET, HOLBORN.—To PUBLICANS, FIXTURE DEALERS, BUILDERS, and OTHERS.

MR. SANDERS has received instructions from the Proprietor, who is about to rebuild the "Greyhound" Public House, as above, to SELL by AUCTION, on the PREMISES, on THURSDAY, NOVEMBER 22, 1855, at ONE o'clock precisely, the BUILDING MATERIALS, comprising several thousand old bricks, lead and other pipes, stables fitted with slate mangers, gas-fittings, &c. &c.; street-lamps, furniture, casks, cabinet-work, and other effects, which may be viewed on Wednesday, and catalogues had on the Premises and at the Auctioneer's Offices, 373, Oxford-street, Bloomsbury.

TO BUILDERS, MASONS, &c.—THREE HUNDRED MARBLE CHIMNEY-PIECES having been offered for SALE by AUCTION, and a portion remaining undisposed of, consisting of the larger class chimney-pieces, suitable for mansions and public buildings, they are now offered by PRIVATE SALE at a considerable reduction in price. In consequence of the death of one of the company, the accounts must be balanced by the 1st JANUARY next. An early inspection is recommended. Westminster Marble Company, Earl-street, Holywell-street, Millbank

HOUSE PROPERTY WANTED.—Money advanced by way of MORTGAGE, on freehold or leasehold properties, at 5 per cent. Wanted also to PURCHASE similar PROPERTIES to a large amount. Parties desirous of effecting an immediate sale, and having a good investment to offer, will be immediately attended to.—Apply, prepared to give full particulars, at Mr. MILLYARD SCOTT'S Offices, 19, Commercial-road East, London.

REMOVAL of OFFICES.—SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY, from 43, LOMBARD STREET, to No. 3, THREADNEEDLE-STREET, Royal Exchange.

VOTES for the County.—Merton.—TWO PLOTS of FREEHOLD GROUND, for building, on the high road—no road to make—frontage 65 feet, depth, 120 feet 6 inches. Houses opposite side of the road.—Apply to W. C. 51, Queen-str et, Edgware-road.

BUILDING LAND (with advances) TO BE LET, at Burner-street, Greenwich, close to the Pier and Station. Two-thirds of the street are now built upon. Also land at Norwood, Wandsworth, Wimbledon, and Forest-hill.—For particulars, apply to JAMES COE and SON, 1, Carpenter's-buildings, London-wall.

HAVERSTOCK-HILL.—To BUILDERS. TO BE LET, in the MALDEN and QUEEN'S ROAD (both main roads), some commanding FRONTAGES for Shops and Private Houses. All the sewers are in on the estate, roads all formed, and now making. Terms nicely moderate. Low ground-rents. Bricks supplied at a low price and liberal cash advances. Apply to Mr. JOHN MOORE, 85, Chalton street, Euston-square.

ELIGIBLE PLOTS of GROUND TO BE LET for Building, at Castlebear-hill, seven miles from London, and ten minutes from the Ealing Station, on the Great Western Railway. For particulars, apply to GEORGE LESLIE, Upper-mall, Hammersmith.

TO BUILDERS and OTHERS. — For DISPOSAL, a PLOT of GROUND, for Building Eight Residences. May be had on very moderate terms, as a trifling ground-rent, if purchased directly. Also the Leases of Five Houses to be Sold; let to respectable tenants, and in good repair.—For terms and cards to view, apply to Messrs. HULL and MARTIN, Auctioneers and Estate Agents, 6, Chapel-street West, May-fair.

CORNHILL.—TO BE LET, on a Building Lease, the PREMISES No. 16, on the south side, facing the Bank and the Royal Exchange. Sealed Tenders addressed to the Clothworkers' Company, to be sent to the Hall, in Mincing-lane, by TUESDAY, the 27th inst. Further particulars may be obtained upon application at the Hall, or at Mr. ANGELL'S Office, 18 Gower-street, Bedford-square, between the hours of TEN and FOUR.

E. B. TOWSE, Clerk.

Clothworkers' Hall, November, 1855.

THE HACKNEY and GUILDFORD ESTATES. The CONSERVATIVE LAND SOCIETY.—Next THURSDAY, NOVEMBER 22, at the Offices, 33, Norfolk-street, Strand, London, the HACKNEY ESTATE, in Middlesex, close to the Station of the North London, or "All round the Town" Railway; and the GUILDFORD ESTATE, West Surrey, will be ALLOTTED.—For plans and all particulars in obtaining lots, apply to CHARLES LLWYD OSBORNE, Sec.

TO BUILDERS. — There is an immediate demand for several HOUSES, near an important town in South Wales. The owner of a large estate in the neighbourhood will give a builder of spirit and capital every encouragement.—Application to be made to W. BULLOCK WEBSTER, Esq. Gnoll Castle, Neath.

PREMISES WANTED.—A GROUND-FLOOR, containing seventy squares or more, wholly or partly covered, or Ground suitable for the Erection of a Factory. Address G. B. 168, Ivory-lane.

TO IRONFOUNDERS AND OTHERS

WANTED to RENT, for a limited time, in or near London, PREMISES, to be used as a foundry. Must have a steam-engine, chimney-shaft, and a dry pit 10 feet deep.—Address B. B. Watson's Printing-office, 3, Kirby-street, Hatton-garden, London.

TO BE SOLD, one or two CARCASES in the best part of Kentish Town; slated roofs, lead gutters, iron rain pipes, and well drained stonework in the front, complete, and front cemented; nine rooms, wash house, and bath-room, and all garden walls. Term, 6 years, direct from freeholder, for the next 8½. Price £60 each, or freehold 40l. Apply to Mr. WRIGHT, Baker, 6, Willow-walk, Junction-road, Kentish Town.

TO CARPENTERS, BUILDERS, &c

ONE or MORE HOUSES, in CARCASE, with Garden Walls and Wash-use, TO BE LET, on a ground-rent, or TO BE SOLD; the purchase money can stand over a given time at five per cent. Inquire of Mr. CHARLES MARSHALL, Builder and Brickmaker, Albert-terrace, Kentish-town.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer to the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, and 10 ton Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

TO BE SOLD, some SCAFFOLD-POLES and BOARDS (have been once used), consisting of Nos. 25 poles, each 26 feet long, and 8- to 12-inch rough Boards, 12 feet long, now lying at the Vassall road, North Brixton, Surrey.—For particulars, and to view, address, post-paid, to W. D. 1, Bride-lane, Fleet-street.

TO SEWER CONTRACTORS, BARROW MAKERS, &c.—TO BE SOLD, a large quantity of 1-inch ELM BOARDS, mill-sawn. Price 10s. per hundred feet super.—May be seen by applying to S. C. 14, Hanover-street, Walworth.

TO CARPENTERS, BOX-MAKERS, &c. A LARGE STOCK of DRY PINE and SPRUCE DEALS and PLANK, ready cut and at reasonable prices, always on hand at EDWARD SHEFFIELD'S Timber yard, Colchester-street, Whitechapel-church.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

½ inch White, 13s. 6d. per square.		½ inch Yellow, 15s. per square.	
1 ditto	15s. "	1 ditto	16s. 6d. "
1 ditto	18s. "	1 ditto	20s. "

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.

ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Panoras-road.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.

Address, E. SIMMS, SAWING, PLANING, AND MOULDING MILLS, King's-road, Chelsea, and Wilton-road, Pimlico.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY begs to inform the Trade, that he has REDUCED the PRICE of YELLOW DEALS 3l. p. 120, and solicits their attention to the following low prices:

Yellow Deals	From £24	0 p. 120
Spruce ditto	" 17	10 "
Pine Planks, 12 ft. 9 in. by 11 ft.	" 7	0 "
Spanish Mahogany, in logs	"	7½d. per ft.
Honduras Mahogany, in logs	"	4½d. "
Prepared flooring	"	3s. each.

Prepared flooring and cut stuff of every description at equally low prices. A list forwarded on receipt of postage-stamp.

Borough-road, Southwark; and Elm street, Gray's-inn-lane.

PADDINGTON TIMBER-YARD.—SAWING, PLANING, and MOULDINGS.—3, Ironside Wharf, Praed-street, Paddington, and 96, St. John's-wood terrace, St. John's-wood.—GEORGE WILLIAM FRY begs to draw attention to his large stock of SEASONED and PREPARED WOOD GOODS, at the lowest current prices. Liberal allowance for cash, and facility for immediate despatch by rail or canal, which affords every advantage to country as well as town buyers. Illustrated and priced sheets of moulding designs and several price lists of goods forwarded post free on application. Goods free to any part of town, including the various railway and canal stations.

N.B.—Sawing and planing for the trade.

EDWARD SIMMS begs to inform builders and the trade, that he has now on hand at his many factory (the first of its kind ever established), a large assortment of PREPARED FLOORINGS and MATCH BOARDING, seasoned, and ready for use, from 4-inch to 14-inches thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses. Slating Battens, Panelled Lids, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the public, builders, surveyors, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floor boards, mouldings, pine and fast deals, slating battens, laths, English oak plank, and sashes, at reduced prices for cash. The Monthly Price Current forwarded on application.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, for cash only, at C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 21, Museum-street, Bloomsbury. A large quantity of PAPER-HANGINGS, CHEAP. 2s. per cwk. given for old lead.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are recommended by the principal leading architects, and those who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of marble and stone work also manufactured on the premises, by steam machinery. NEW WORKS, No. 29, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by inclosing six penny stamps. Please note the address, 29, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns composing, at 3s. per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

A HANDSOME PULPIT SOUNDING-BOARD, of wainscot oak, inlaid, and carved moulding round, hexagonal, to suspend from the roof by a chain. Price 30s.—EDWD. SPENCER and CO. Carpenters, 18, Bulliter-street, City.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent RICHARD REDGRAVE, Esq. R.A.

Head Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develop its relation to the requirements of trade and manufacture and its application to the common uses of life. Special courses are arranged for the training of Masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c. the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees of per session, or part of the session. For Lecture Classes only, of per session.

The Classes for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of if per session.

Students have full access to the valuable collections of the Museum and Library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

MANCHESTER MECHANICS' INSTITUTION EXHIBITION 1856.—The Directors of the Manchester Mechanics' Institution propose to inaugurate the New Building with an Exhibition of the Fine Arts, Architecture, Machine Inventions, Raw Materials, Industrial Products, Machinery at rest and in motion, and everything else in the mechanical and philosophical departments. The Exhibition will occupy a suite of rooms, with the addition of a commodious gallery 250 feet long, and 30 feet wide, for the display of the larger objects, especially those for the Fine Arts, &c. With this space at their disposal, and with the experience the directors possess of the successful working of similar Exhibitions in this Institution, they confidently hope to make the present one surpass in extent and interest that which established the reputation of the Institution in 1838, and which was attended through all the densely populated districts of which Manchester is the centre. To aid them in the undertaking, the directors earnestly solicit the loan of objects suitable for exhibition, and they will gladly assist in the packing and forwarding of such articles as may be sent. Every care will be taken of the articles confided to the Institution, and a policy of insurance will be effected on the building and its contents, sufficient to cover any damage that may be occasioned by fire. The new building is lighted with gas throughout, and it is proposed to keep the Exhibition open on Sundays as well as on other days of the week. Those gentlemen who may wish to assist the Board by the loan of objects, &c. &c. are respectfully requested to communicate as early as possible with the president of the Institution, LEVEN HEYWOOD, Esq. or with the Secretary. By order of the Board,

E. HUTCHINGS, Secretary.

Manchester, 17, Cooper-street, November, 1855.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, NOVEMBER 30, Mr. C. F. HAYWARD will read a Paper, "On the Architecture of the Nineteenth Century: Paris and London Compared."

The Committee will meet at SEVEN p.m. The Class of Design will meet DECEMBER 7. Subject for Sketch, "The Vaulting of a Space Triangular on Plan."

T. W. GOODMAN.
J. A. BUNKER.

Lyon's Inn Hall, Strand.

ARCHITECTURAL EXHIBITION, Suffolk-street Galleries, Pall-mall East.—All Articles for the Department of Materials and Manufactures connected with Architecture (for which the rooms are set apart) must be delivered on the 3rd or 4th of DECEMBER next. The Council of the Royal Institute of British Architects will appoint a jury, who will award certificates of merit as they may think proper and the committee believe that this will confer a great benefit upon exhibitors, as it will tend to bring into notice and to recommend for adoption all those things which may deserve attention. All fixing, &c. must be done by exhibitors. The committee do not charge for the space, but as an associate profit and advantage is reaped, subscriptions will be gladly received towards the necessary expenses.

JAS. EDMEST. N. Jun. 5, Crown-court, Old Broad-street, } Hon. Secs.
JAS. FERGUSSON, F.R.A.S. 20, Lancham place,

COMPETITIONS.

PREMIUM for DESIGN.—To ARCHITECTS, LANDSCAPE GARDENERS, and Others.—The Council of the Leeds Cemetery are desirous of obtaining DESIGNS for LAYING OUT and PLANNING their BURIAL GROUND at Ore, near Bramley, containing about nineteen acres. The latter will require the addition of the requisite Chapels, Lodges, and Buildings describing their several purposes by references, &c. Plans, Sections, and Perspective Drawings of the same will be paid to the person who, in the judgment of the Council, has produced the best Design. All designs not approved will be returned. Each design is to be distinguished by a motto; and a sealed letter, containing a duplicate of such motto, and the address of the person sending it, is to be delivered at the Cemetery Office, Leeds, on or before WEDNESDAY, the 12th day of DECEMBER next, between the hours of TEN and FOUR o'clock. The Council will not be responsible for any loss or damage that may happen to the Designs, but every care will be taken of them. The Council do not bind themselves to accept the lowest or any Tender.

By order of the Council,
JOHN G. SUTCLIFFE, Town Clerk.

November 7, 1855.

SUPPLY of WATER to the town of Neath.

Twenty-five guineas will be given for the best PLAN of supplying the town with water from the Gnoll property. There is no doubt as to quantity and quality. For further particulars, apply to WILLIAM BULLOCK WEBSTER, Esq. Gnoll Castle, Neath, Glamorganshire.

CONTRACTS.

Royal Engineer Office, Portsmouth, 14th November, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer, Portsmouth, hereby gives notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on or before WEDNESDAY, the 12th day of DECEMBER, 1855, from persons desirous of contracting for certain ADDITIONS and ALTERATIONS to Cambridge Barracks, Portsmouth, the plans and specification of which may be seen, and all necessary information obtained, therein, and with printed forms of Tender, at the Office, between the hours of TEN and FOUR each day (Sundays excepted) until the 11th proximo. The person whose Tender may be accepted, will be required to provide two eligible securities, to be bound with him jointly and separately in a bond of 4,000l. for the due performance of the contract by the 30th NOVEMBER, 1857. The War Department reserve the right of rejecting the whole or any of the Tenders.—No notice will be taken of any Tender unless upon the printed form.

NOTICE to BUILDERS.—Royal Engineers' Office, Portsmouth, November 8, 1855.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, from such persons as may be desirous of entering into a CONTRACT for the ERECTION of proposed HOSPITAL at Winchester Barracks, county of Hants. Plans and specification may be seen at the Royal Engineers' Office, Portsmouth, where also forms of Tender may be obtained every day (Sundays excepted) until DECEMBER 3, 1855. Tenders to be delivered on or before DECEMBER 3, 1855. The War Department reserve to themselves the right to reject the whole or any of the TENDERS. No notice will be taken of any Tender unless upon the printed forms, to be obtained at the Royal Engineer Office, Portsmouth.

PLYMOUTH BREAKWATER.—Contract for Granite.—The Lords Commissioners of the Admiralty propose CONTRACTING for upwards of 25,000 TONS of GRANITE for Plymouth Breakwater, the conditions and specification for which may be seen at the Office of Messrs. WALKER, BURGE, and LAWRENCE, Civil Engineers, 24, Great George-street, Westminster; and at the Office of COMMANDER WALKER, Superintendent, Oreston, Plymouth, from the 15th to the 30th instant.

London, Nov. 8th, 1855.

NEWARK CEMETERY.—To BUILDERS and CONTRACTORS.—The Burial Board for Newark-upon-Trent hereby give Notice, that any person desirous of CONTRACTING for the ERECTION of the CHAPELS, LODGE, &c. &c. Fencing (of wood and iron), and forming Roads, Paths, and laying out the New Burial ground, may inspect the plans, specifications, and forms of Tender at the Town-hall, in the parish of Newark-upon-Trent aforesaid, after the 23rd day of NOVEMBER instant to the 1st day of DECEMBER next. Sealed Tenders for the execution of the works, endorsed "Tender for the Cemetery Buildings, &c." are to be sent to me not later than TWELVE o'clock at Noon on the 3rd day of DECEMBER next, the Board reserve to themselves the right to accept or reject any Tender submitted. Any other information may be obtained on application to me, or to Messrs. BELLAMY and HARDY, Architects and Surveyors, 5, Bridge-place, Newark.

By order, WILLIAM NEWTON, Clerk to the Board.

Kirkgate, Newark, 15th Nov 1855.

MISTLEY LOCAL BOARD of HEALTH. The Local Board of Health for the Parish of Mistley in the county of Essex, legally to receive TENDERS for SUPPLYING and LAYING DOWN about 1,400 feet or there-abouts of IRON and PIPE SEWERS, with other works in connexion therewith, according to the drawings and specification which may be seen at the Office of Mr. HENRY DOOLNCOTT, Surveyor, Ipswich, and at my Office in Mistley. Tenders sealed, addressed to the Chairman of the Board, and endorsed "Tender for Drain ge," must be sent to my Office on or before WEDNESDAY, the 5th DECEMBER next. The Board do not bind themselves to accept the lowest or any Tender.

By order,
D. MUSTARD, Clerk to the Board.

Mistley 17th November, 1855.

BOROUGH of DOVER.—To IRONMONGERS and OTHERS.—Persons desirous of CONTRACTING with the Dover Local Board of Health, for SUPPLYING and LAYING GALVANIZED IRON and other PIPES and PIPE WORK required for the sewerage of the Town, are to forward Estimates and their prices, stating the number of feet they can supply and lay down per week, to the Surveyor, Mr. HENRY T. MOXHAM, Jun. Sutherland-terrace, Dover, on or before the 30th instant, when the Tenders will be opened by the Board. Specimens of the pipes to be sent to Mr. JAS. JESSOPP, on MONDAY, DECEMBER 10, at Seven o'clock p.m. when the Board do not bind themselves to contract with the lowest or any Tender.

[For remainder of Contracts see next page.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give notice that they will be ready at the Court-house, No. 1 Greek-street, Soho-square, on TUESDAY, the 27th day of NOVEMBER instant, at 10 o'clock precisely, to receive SEALED TENDERS from parties willing to CONTRACT for EXECUTING the following WORKS, viz.:—

No. 1. Greek-street, Soho-square.

Dated this 13th day of November, 1855.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give notice that they will be ready at the Court-house, No. 1 Greek-street, Soho-square, on TUESDAY, the 4th day of DECEMBER next, at ONE o'clock precisely, to receive SEALED TENDERS from parties willing to CONTRACT for EXECUTING the following WORKS, viz.:—

No. 1. Greek-street, Soho-square.

Dated this 13th day of November, 1855.

TO CONTRACTORS

WILLIAM DENNIS, [illegible]

CONTRACTS.

CONTRACTS for MAKING ROADS and DRAINS.—Parties willing to CONTRACT for MAKING ROADS and the requisite SURFACE DRAINS on a connexion therewith, on the Wilbraham Estate, Weston-super-Mare, are requested to send in sealed TENDERS on or before the 3rd day of DECEMBER next to the Public Library, Weston-super-Mare. The contract will be required to provide sureties for the due performance of the whole of the Contract. The prospectus of the works may be seen, and all particulars obtained, on application to W. H. MOFFAT, Esq. Architect and Surveyor, 9, Adelaide-place, London-bridge, London; HENRY DAVIES, Esq. Solicitor, Weston-super-Mare, or to J. WHEREAT, Public Library, Weston-super-Mare.

TO BUILDERS

PERSONS willing to TENDER for various ADDITIONS and ALTERATIONS to the Union Workhouse, at Hay-street, may see the drawings and specifications at the office of the Architects, Messrs. EDWARD HABERSHON and Pite, 3, Bloomsbury-square. The Board do not pledge themselves to accept the lowest or any of the Tenders.

TO MANUFACTURERS in GLASS, POTTERY, PAPIER MACHE, METAL, ELECTRO PLATE, and SILVER.—TENDERS are required for the MANUFACTURE of various ARTICLES of HOUSEHOLD UTILITY, not to be above mentioned, for the home and for ign trade—Specifications, conditions of contracts, drawings and models may be seen and full particulars obtained on application to WILLIAM BULL, Esq. 10, Adelphi-chambers, London.

HEYWOOD CEMETERY.—To CONTRACTORS and OTHERS. The Burial Board for the Township of Heap, in the parish of Bury, in the county of Lancaster, is desirous of receiving TENDERS for the following WORKS, to be executed at the above Cemetery, viz.:—The Boundary Wall, Draining, Excavations, &c.; also, an Approach-road thereto. Persons willing to Tender for any or all of the above works may see the drawings and specifications on and after MONDAY next, the 19th inst. at the Office of Mr. T. D. BARRY, 47, Bedford-street North, Liverpool; or at the House of Mr. T. WOLSTENHOLME, Clerk to the Board, St. Luke's, Heywood, and for her information, if required may be had upon application at Mr. WILLIAM GAY, Cemetery, Br dford.

N.B. Tenders to be delivered on MONDAY, the 26th, to the undersigned, not later than TWELVE o'clock at noon, the Board not being pledged to accept the lowest or any Tender.

THOS. WOLSTENHOLME, Clerk to the Board.

Town's Office, Heywood, Nov. 7, 1855.

TO BUILDERS

TENDERS are required for BUILDING a SHOW-ROOM, &c. at No. 29, Tottenham-court-road. The drawings and specification may be seen, and further particulars had, on and after THIS DAY, the 20th of NOVEMBER, where Tenders are to be sent in on or before SATURDAY, the 1st of DECEMBER. The lowest Tender will not necessarily be accepted.

WILLIAM MUNT, 28, Moorgate-street, City.

TO DEALERS IN BRITISH TIMBER, CONTRACTORS FOR FENCING, AND OTHERS

PERSONS desirous of TENDERING for the EXECUTION of PARK PALE FENCING, with GATES &c. are requested to apply at Mr. SIMPSON'S Office, 29, Great George-street, Westminster, for particulars, &c.

PHŒNIX FOUNDRY, De by, Sept. 1st, 1855.

JAMES HAYWOOD, Jun. begs to inform his friends and the public generally, that he has PURCHASED the whole of the STOCK of GOODS, as well as the large and valuable collection of WOOD and IRON PATTERNS belonging to the above Foundry, and has made arrangements to carry on the business on his own account from the 1st of September last. He will continue to conduct the same in all its branches as heretofore. The several additional contracts which have been executed at this foundry render it almost unnecessary for him to state that he possesses every facility for executing orders either for castings or wrought-iron work of any description whatever, upon the best terms, and in the shortest possible time. He respectfully solicits a continuance of that patronage which has hitherto been so liberally bestowed upon the Phœnix Foundry.

JAMES HAYWOOD, Jun. PHŒNIX FOUNDRY and ENGINEERING WORKS, Derby. Manufacturer of every description of CASTINGS, from the smallest iron metal Work to Castings weighing twenty tons each, railway bridges, iron roofs for railway stations and other purposes, railway chairs, mill gearing and spur and bevil castings, conservatories, vine pots, window sashes, and bars, cast and wrought iron ornamental garden vases and chairs, pipes for steam and water, and every description of work required by engineers, architects, builders, ironmongers, &c. Heating by hot water or steam.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"18, Hyde-park Gate, Kensington, February 24, 1854.

"My dear Sir.—The Air Warmer continues to work very satisfactorily in keeping, with regard to warmth, by far the most equable I have ever had in the house, and during this weather is charming, even in the painting-room. Mrs. Redgrave is extremely pleased with it in her drawing-room, and says that she never enjoyed a winter as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

Mr. J. Jobson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq., late M.P. for Sheffield.

"Stanhope lodge, St. John's-wood, London, January 27th, 1855

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Air Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England, and this has increased with increasing years and decreasing strength; I therefore, had recourse, from time to time, to various stoves and other modes of warming the halls and passages of my house; but I have never succeeded till now in producing an equal temperature in every part, and having that temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature in halls which are ordinarily produced in passing from warm rooms to cold halls and passages, and save the climate of May within doors in the months of December and January. The servants, by its proper management in a few days without difficulty, and its economy in fuel as remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and I lose no opportunity of heartily advising its adoption to all who desire to protect themselves against the changes of temperature in their dwellings.—I am, dear Sirs, yours faithfully.

"JAMES SILK BUCKINGHAM.

To Messrs. Stuart and Smith, Roscoe-place, Sheffield."

M. E. HADFIELD, Esq. Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855.

"My dear Sir,—We have kept the Gill Stove in full operation during the past severe weather, and have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable close and stagnant odour produced usually by Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective.—I am, my dear Sir, yours faithfully,

Mr J. Jobson Smith, Roscoe-place." "M. E. HADFIELD.

WILLIAM HUTSON, Esq.

"Newby Wiske, Thirsk, 19th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house rece tly built. In spite of the severity of the weather, an unobstructed and unfurnished house with all the doors open, and the whole of the rooms at a temperature decidedly above that of the external air. It is keeping up a very genial influence even in the severest weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 10s. 8d. per ton, the rate at which it has been fired for the last two or three months, is 1l. per hour.

"I am, Sirs, yours truly, "WILLIAM HUTSON.

"Messrs. Stuart and Smith

"P.S.—Mr. Hutson, on looking again sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3s. 6d. for coke say about 5d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop-road, February 27th, 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the comfort has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase, and passages, being a reservoir of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have had the general run of the house without the fear of a relapse. To many invalids the invention will prove invaluable, giving them the freedom of their hall, and instead of confining them prisoners to one apartment. Believe me, my dear Sir, very truly yours,

"Mr. Jobson Smith." "EDWARD MARTIN.

E. F. SANDERSON, Esq.

"West-street, Sheffield, 27th March, 1855.

"Gentlemen.—The Gill Air Warmer you put up for me last year at Penistone, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a very genial climate, my family have been painfully conscious of the damp and chilly air of this country; but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling-houses most equably comfortable in point of temperature.—I am, yours very truly,

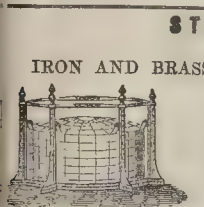
"Messrs. Stuart and Smith, Roscoe-place." "E. F. ANDERSON.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

As Stores for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

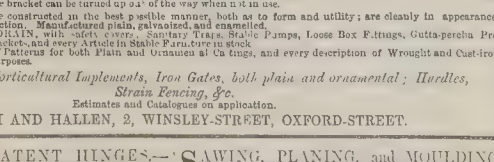
GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.



Signals for communication between Guard and Engine Driver Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

have made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

This represents the Patent Hay-guide and Collar-rein, all of which is taken to the top of the manger-works with room and save up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most vicious horse being cast in the manger.

The Patent Portable Seed-pan can be instantly detached from the rack without disturbing the hay. The saving of the hay is a clean and useful state, for agricultural purposes,

preventing with the food in the manger, is alone sufficient to claim general notice.

The Seed-box detached, is made of galvanized sheet-iron, light and durable.

The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAMS MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE DRAIN, with safety covers. Sanitary Traps. Stable Pumps, Loose Box Fittings, Gutta-percha Pressure Tube and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogues on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

COLLINGE'S PATENT HINGES.—Manufactured by CHARLES COLLINGE and Co. 24 and 25, Bridge-road, Lambeth, where a great variety are always on sale, suitable for all doors, and their cases. Doors of all small dimensions, as for wardrobes, &c., these hinges as easily as a wicket. Ornamental hinges for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. FENDERS, STOVES, and FIRE-IRONS.

Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves with bronzed ornaments and two sets of bars, 2l. 14s. to 7l. 15s.; ditto with ormolu ornaments and two sets of bars, 3l. 10s. to 15l. 12s.; bronzed fenders, complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 18s. to 7l. 7s.; fire-irons, from 1s. 6d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges.

Firstly—From the frequency and extent of his purchases; and

Secondly From these purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS.

The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to select from the various manufactories, for Metal and Glass, all that is new and recherché in Brackets, Pendant, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him. These are ON SHOW over his SIXTEEN LARGE ROOMS, and [illegible] cent. for novelty, variety, and purity of taste unequalled by any [illegible]. They are marked in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the largest and most remarkable in the kingdom. viz. from 12s. 6d. to eight guineas.

THE BEST SHOW of IRON BEDSTEADS

in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads, from 18s.; Portable Folding Bedsteads, from 22s. 6d.; Patent Iron Bedsteads, fitted with dove-tail joints and patent sacking, from 17s. 6d.; and Cots, from 30s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 17l. 15s.

The alterations and additions to these very extensive premises already by far the largest in Europe, which have occupied the whole year, are now nearly completed; they are of such a character that the entire of EIGHT HOUSES is now devoted to the display of the most magnificent Stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated and Japanned Wares, Iron and Brass Bedsteads, Bedding, arranged in Sixteen Large Show-rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, as it supersedes the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

TO SMITHS, GAS-GITTERS, &c.—TO BE SOLD CHEAP, a portable FORGE and HOOD complete, anvil, hammers, vice, benches, a lever drill, 6-inch slide-rest, and sundry tools, drills, &c. FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition 1851.
These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.
The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.
They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.
They are admirably adapted for the Cure of Smoky Chimneys.
SOLE AGENTS:
BENHAM AND SONS,
19, WIGMORE-STREET, LONDON
and at the Crystal Palace, Sydenham.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42 Poland-street, Oxford street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

ROYAL POLYTECHNIC GAS FIRE, BACHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent street, London.

HEATING BY HOT WATER.
JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c &c to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

Also, Aberdeen, Guernsey, and Haytor Granite Curbs and Pitching, all at the very lowest prices.
N.B. Good 2-inch Tooled Paving, at 40s. per 100 feet, cash.

AUSTIN'S ARTIFICIAL STONE.—This material (frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000l and 5,000l. In no stratification from Terra-cotta, and all other kind of Pottery there is no distortion of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being water-proof.—AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.
*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED,
Manufactured by MACHINERY, which produces the greatest degree of fineness.
WILCOX & CO.
Flint Mills, Millwall, near Scott Russell's.
CARRIAGE FREE.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the Trade. The best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

GREEN SLATE.—For SALE, about 200 tons of WELSH GREEN SLATE, the produce of a late discovery. The slate is well adapted to church and public buildings. For colour, grain, and capability of splitting, it is superior to any hitherto obtained. Terms, at the quarry, 60s. per ton. Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street; or to Mr. W. G. JENNINGS, Penyr-Groes near Carnarvon.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag Stone Company and the Llandysilio Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney pieces, Baths, Filters, Lavers, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices.—Price and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr. GEORGE P. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall Wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

The hose is impregnated at an extra charge of 3d. per yard.
Union Joints, Branch Pipes, and Jets, are also supplied.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, &c.
W. and J. STUDDS, Sole Proprietors of THEIR WEST DRAYTON GRAVEL, Pits lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

BRICK EARTH.—TO BE LET, a FIELD of Freehold Land, with Residence, Cottages, &c. situate near Millbank, next Stangate, and having the right to There is an ample supply for the Immediate possession may be had.—Apply to Mr. T. CLARK, 5, Dean's-court, St. Paul's Churchyard.

MOORE-PARK BRICKFIELD, in FULHAM, two miles west of Sloane-street. A large stock of BRICKS on hand, comprising Malms and Stocks, at 32s. and 34s. per 1,000. Rubbish at very low prices. A quantity of rough Bricks and Burrs to be sold unusually cheap.—Apply to Mr. F. A. GUSH, 13, Stamford Villas, Fulham.

POTTERS' CLAY FOR SALE.—An ESTATE, of nearly 400 acres, with residence, suitable for a gentleman and family, and most desirable as that of Potters' Clay, situate 4 miles from a port and 2 miles from a railway station. For particulars, &c. apply, post-paid, to T. RAWLINS Esq. Spicer-st., Wimborne.

UNITY JOINT-STOCK MUTUAL BANKING ASSOCIATION.

PRINCIPAL OFFICES.

Unity-buildings, 8 and 10, Cannon-street, City.

LEICESTER-SQUARE BRANCH.

1, New Coventry-street, Leicester-square.

CLOSING OF THE SHARE LIST.

The directors are happy to announce that, in consequence of the large number of shares that have been allotted and paid upon, the share list will be closed on Friday the 30th November, after which date no applications will be received.

Arrangements have been made which will enable the bank to commence business early in January next.

The bank, having obtained a royal charter is established for the purpose of combining the principle of MUTUAL BANKING, whereby customers, who create the profits, become entitled to a participation in them, by way of interest on their cash balances. The principle of which has been for many years acted on by insurance and other companies and their policy holders have participated to a very great extent in the bonuses, with much advantage to the institutions, and to the shareholders. In banks, however, to this period of UNITY ALLIANCE has been reflected. The whole of the profits resulting from successful operations have been given to the shareholders only.

ADVANTAGES OFFERED BY THE UNITY BANK.

I. To shareholders, 5 per cent from the date of payment, on all paid-up calls, and a bonus per cent of the profits

II. To customers, in addition to the ordinary amount paid on deposit and current accounts, interest on their cash balances, equivalent to 4 per cent, on the profits

This is the plan on which the UNITY JOINT-STOCK MUTUAL BANKING ASSOCIATION is established. By it a certain, fixed, and limited rate of interest between the customers and shareholders of the bank, who thus become mutually interested in the extension of its business. It will be the means of opening up new sources, presenting a connexion never formed, and productive of practical benefits to the public generally.

CONDITION OF LONDON JOINT-STOCK BANKS.

The success of the Joint-Stock Banks in London is readily admitted, as well as by the frequent statements recently issued by these great commercial institutions. In support of this, the following table is submitted, showing the condition of each of the six metropolitan Joint-Stock Banks which have published accounts the original cost of the shares, their present market value, and the dividends upon them:—

Name of Bank.	Date when Established.	Paid-up Capital.	Amount of Fund over Paid-up Capital.	Present Value of Shares.	Rate of Dividend Paid.
		£.	£	£	
London and Westminster	1834	1,000,000	297,000	37½	7 per cent.
London Joint Stock	1836	630,000	95,000	24½	5
Union Bank of London	1839	500,000	150	15	5
London and Counties	1836	500,000	150,000	14½	12
Commercial Bank of London	1840	250,000	70,000	31	10
Royal British Bank	1840	500,000	95,000	5	10 per cent.

The above banks publish the following facts with regard to their positions:

I. The entire amount of subscribed capital in the six joint-stock banks in London is £3,780,000.

II. The amount of paid up capital is £2,817,000.

III. The amount of deposits, or customers' balances, is £9,258,849.

IV. The total number of shareholders is 4,007.

V. The number of shares issued, 187,984.

Thus is presented proof of human security, extent of business, and general financial resources. These establishments hold half-yearly meetings, and publish their transactions, full accounts of their progress and general operations. This course cannot fail to impress with confidence all who have any dealings with them, while it gives to the public the means of forming an opinion as to their responsibility.

INCREASED VALUE OF JOINT-STOCK BANK SHARES.

It is proved to demonstration, that joint-stock banking under proper supervision, affords a most legitimate and unusually profitable field for the investment of capital. The dividends paid by the banks above quoted vary from 6 to 25 per cent and the latest quotations of their shares show an increase of from 25 to 225 per cent. on their paid-up capital. The real increase, however, in the value of the shares is by no better understood, the fact that the paid up capital of these six banks is £2,817,000 and that its present market value is £12,211,000. It has thus increased two-and-a-half fold, or by £9,394,000. It has grown since 1834, and there is every prospect of this amount continuing to increase in value.

COURT OF DIRECTORS OF THE UNITY BANK.

GOVERNOR.

J. J. Mechi, esq. Tiptree Hall, Kelvedon, Essex

William Joseph Bruce, esq. 16, Duke-street, Westminster, and 4a, Hyde-park-place, Cumberland-gate.

G. L. P. Estc, esq. (Messrs Trinder and Eyre), 1, John-street, Bedford-row.

Thomas Carisle Hayward, esq. (Messrs. Hayward and Sons), 24, Minories, and 3, Highbury park North.

Major Henry Stone, M.L.B. 53, Nottingham-place, Regent's park.

Robert Garland, esq. Thames chambers, York-buildings, Adelphi; and 1 Belfast Villas, Highbury.

Thomas H. Baylis, esq. Cannon-street, City; and 4, Nottingham-terrace, York-gate, Regent's park.

Dr. Lloyd 4 Sadoil place, Pall-mall.

Robert James, esq. 6, Stone-buildings, Lincoln's-inn.

Edward Bould Buckley, esq. Heathland-lodge, Hampstead.

Major Martin Malkern, Ightfield House, Alexander-terrace, Regent's park.

BANKERS.—The London and Westminster Bank.

SOLICITOR.—Thomas Taylor, esq. 27, Bloomsbury-square, London

BROKERS.—Messrs. R. and J. Sutton, 22, Royal Exchange, London.

GENERAL MANAGER.—George Chambers, esq. (from Messrs. Barnett, Hoare, and Co.)

SECRETARY.—Henry Lake, esq.

Each of the directors is duly qualified, having subscribed for twenty shares, and paid the deposit of 1,000l. in accordance with the deed of settlement.

THE NEW PRINCIPLE INTRODUCED BY THE UNITY BANK.

Regarding the distinctive principle of the Unity Bank, it has been suggested that there must be a deduction from the profits of the church capital, of 10 per cent. for lending given to the customers of the bank. This idea can only have arisen, however, from the want of a correct understanding of the whole subject. In the first place, it is necessary to remember from whom the profits of a bank are derived. They are not made from the share capital. The very first ingredient for the formation of profits is a customer. The amount of profits, therefore, is governed by the amount of business transacted; and the larger the business, provided it is properly conducted, the larger will be the profits. It must be borne in mind, also, that the real extent of the shareholder's deposit cannot be made. It depends [illegible] upon the profitable character of the transactions, or by any departure from that sound system of joint-stock banking which [illegible] Bank of England, and which has carried [illegible] Bank an advantage which in reference to progress with every principle [illegible] all other joint-stock banks [illegible] companies have been established to [illegible] the profits [illegible] the [illegible] prosperity. What is just in accordance will [illegible] banking. The customers of a bank make the profits of the bank, and they ought also to be participators in its prosperity.

It has been asserted, also, that the 50 per cent of the profits proposed to be divided, whilst would detract from the profits of the shareholders, would be but a trifling benefit to the customers. It might, in the first place, be replied that no benefit is considered as "trifling" by those who rightly estimate pecuniary affairs; that the benefit, if trifling, is in addition to all the other benefits usually derived by banking at a joint stock bank; and that no correct data can yet be formed of the point at which will be made On the other hand, it must be remembered that hitherto persons have taken their banking account where personal feeling, accommodation, or convenience of locality might lead them. Now, for the first time, by the introduction of the principle of mutuality, self-interest is appealed to. And when, to the large number of the public attracted by this all powerful stimulus, is added the number of the customers of the Unity Insurance Associations in all parts of the country, who have a peculiar identification with and interest in its success, it will be seen that the amount of data are not sufficient to form an estimate of the advantages which both the shareholders and customers will derive from the Unity Bank.

Great difficulty exists in estimating the effects likely to be produced by the establishment of this new and most desirable feature in banking. It is one that must become highly popular with every commercial interest, and with every class of the public, because its simplicity and advantages are at once to be seen and appreciated.

To those great commercial houses which are compelled to have large cash balances constantly at their bankers', it will prove to be a serious consideration, and an important source of profit. The railway, dock, gas water, steam vessel, insurance, and other companies, professional men, merchants, brokers, gentlemen of fortune, and traders of all kinds, will duly estimate the difference in the system now proposed, from that hitherto existing. In fine, a joint-stock banks became a public necessity, as is now proved so will the principle of mutuality—thereby rendering available institutions may be rendered still more serviceable to the public, and in no way less safe. Demand the best consideration of the community at large.

BUSINESS TO BE UNDERTAKEN.

All the usual business of banking will be undertaken; and arrangements will be made for extending the transactions of the Bank in every desirable quarter.

CURRENT ACCOUNTS will be made up half-yearly, namely—to the 30th of June and the 31st of December, and interest will be allowed at the rate of 2l. per cent. on them.

DEPOSIT ACCOUNTS.—With respect to these, the rate of interest all will on money placed at seven days' notice will be 1l. per cent. under the rate of discount on first-class bills adopted by the Bank of England, regulated thereby. The bank will give receipts for the sums so deposited, or, for the convenience of depositors leaving England, promissory notes, or bills, including interest as well as principal, at not less than six months' date.

The bank will undertake the agency of country and foreign banks, whether joint-stock or private, and will afford every accommodation to travellers and others, with respect to circular notes and letters of credit. It will receive all kinds of income for its customers, including annuities, dividends, military, naval, and civil officers' pay. It will undertake the sale and transfer of stock in the public funds, &c.; and will be responsible for the safe custody of title deeds and other securities belonging to its customers, to which they will at all times have convenience of access.

Applications for prospectuses and forms of application for the remaining shares, to be made to Messrs. R. and J. SUTTON, Stock Brokers, 22, Royal Exchange; or to the Secretary, at the Principal Offices, 10, Cannon street, City

HENRY LAKE, Secretary.

FORM OF APPLICATION FOR SHARES.

TO THE DIRECTORS OF THE UNITY JOINT-STOCK MUTUAL BANKING ASSOCIATION.

GENTLEMEN,—I request that you will allot me [illegible] shares of 100l each in the above Association: and in consideration of such allotment, or any less number you may appropriate to me, I hereby undertake to pay the deposit, or first call of 10l. per share thereon, and 40l at the time of incorporation. I further undertake to execute the deed of settlement when required.

Dated this day of 185

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,

1, Waterloo-place, London, and 18, Brown-street, Manchester.

DIRECTORS.

THE CHAIRMAN, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman,
Deputy-Chairman.

This Society is established on the strict and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the next annual premiums. Policy holders participate in profits after payment of five annual premiums.

The Annual Report and Statement of this Society was held on the 24th of March last, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that during the two first years, 18 and 1854, between 600 and 700 new Assurances had been effected, producing an income of premium in one year amounting to 1l. per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the year, the Society possessed the assets in full to [illegible] liabilities, and a large surplus, being at the rate of 1l. per cent. per annum, to the Policy holders.

Credit is allowed for half the Annual Premiums for the first five years.

A. R. IRVINE, Managing Director.

1a, Waterloo-place, London.

The Builder.

VOL. XIII.—No. 668.

THE sanitary movement seems to be entering into a new phasis of its development. Last year we heard of little but tubular drainage; and furiously enough the battle raged. There was the Croydon case, in which, to judge by the adverse reports, the whole system had broken down in a crash of ruin and failure. The sanitary leaders, however, rallied their forces, showing that while a few local blunders and consequent stoppages, easily curable, and easily preventible for the future, had been exaggerated into proof of failure, the Croydon pipe drainage was all the while quietly doing its work; and that so efficiently, as to bring on the Local Board more applications for house connections than they could satisfy at once; so that while the system was being trumpetted as a failure, parties were actually paying to be taken out of their turn to have their drains laid on to it.

Nevertheless, an impression against pipe-drainage was made on the public mind; and this served to enhance the suddenness and force of the re-action when Mr. Ward wrote his often-quoted letter in defence of pipe drainage, on the receipt of which letter, transmitted by Lord Palmerston, the Metropolitan Commissioners of Sewers protested by a resignation *en masse* against the espousal of these views by the Government.

Lord Palmerston appointed the writer a commissioner in the Board which succeeded, naming as his colleagues three gentlemen known to hold the same views, and (probably by way of a constitutional opposition) retaining also on the new Board the chairman and four members of the old one. These, so to speak, were the hostile armies drawn up in battle array; and the parishes nominated eight Commissioners, equally indifferent to either view, and forming a species of jury to watch the contest, and give their verdict on the side on which, in their opinion, the balance of right reason and sound economy might incline. Soon after the opening of the Commission, the advocates of pipe-drainage set forth their views on the policy which, according to them, should be pursued; and from the first this seems to have obtained the support of a majority on the main points in debate. In order to settle the pipe question, the Commissioners ordered a thorough investigation: hundreds of pipes were dug down upon and examined, including those previously reported as failures by Mr. Bazalgette, and the results, it is affirmed, proved the successful working of the pipe principle.

So very different are the two reports on the same examples, that it is scarcely possible, notwithstanding explanations given since, to view both as honest documents. There appears to be extreme difficulty in obtaining information on the subject that can be relied on. Even with personal inquiries in some of the towns drained either partly or wholly on the pipe principle, we have found it impossible to arrive at a satisfactory conclusion, so contradictory were the opinions expressed. The success of the tubular system would seem now, however, to be generally admitted, due care and judgment being employed.

The pipe battle then being fought out, Mr. Ward proceeded to settle the question as to the combined back drainage of private houses; with which view, finding the powers of the Sewers Act inadequate, he procured the passing of the House Drainage Act, to which we adverted in a recent number of this journal, and which was carried in spite of the strenuous opposition of the other Commissioners. This Act, after many delays, has been got into successful operation; large numbers of groups of houses being now in course of drainage on the new plan, with a degree of economy sufficiently proved by the fact, that cases with which it was found too costly to deal on the separate front drainage system previously in vogue, have been efficiently treated on the combined plan of drainage, under the new Act. The numerous models of combined works thus scattered through the town will, we have no doubt, bring about the complete overthrow of the old prejudices still surviving in some quarters against the combined principle, which, on the most moderate estimate, reduces the expense of house-drainage to half, often to a third, and sometimes even to a fourth, of the cost on the old mode. For a time, however, there will of course be difficulties, and individuals, rather than run the risk of suffering through the carelessness of a neighbour, will be found to protest against it.

Thus much having been accomplished, the same Commissioner, with a tenacity to which different parties of course give different names, has, within the last few weeks, transported the battle on to new ground,—supporting the Small Tunnel system in opposition to the scheme of Big Tunnels put forth by the opposite party; and declaring small tunnels to be "the logical consequence of small tubes." He proposes a reduction of more than fifty per cent. on the sectional area of the main outfalls, and an equivalent diminution, amounting to three-quarters of a million sterling, in their cost. This is for the north side only; on the south side it is considered that an economy of still larger relative amount may be effected.

Opposed to this view are Sir W. Cubitt, Mr. Stephenson, Mr. Hawksley, Mr. Bazalgette, and their engineering friends,—who maintain the old formulæ in respect of tunnels as they maintained them in respect of brick sewers. To these formulæ Mr. Ward opposes the practical experience of Mr. Roe, who passed twenty years in periodically measuring the flow of the Fleet sewer, at various points along its course, from Hampstead down to the City boundary; and whose table of sizes, published in 1852, assigns for the larger sewers nine times the amount of town area which, by Hawksley's tables, published in 1845, each size respectively was set forth as capable of draining. Mr. Roe, it appears, has put in a plan of small intercepting tunnels, in conformity with his tables, and in opposition to the tunnels of double capacity and cost designed by Messrs. Stephenson, Cubitt, and Bazalgette. Mr. Ward charges these gentlemen, in terms to which their courtesy lends a poignancy, with having resorted to unfair modes of calculation for the purpose of defeating Mr. Roe, and proving his tunnels too small.

The Commissioners of Sewers have voted against the continuance of the debate; a vote, however, which can hardly settle the question, considering the large money interests depending on the issue raised; a vote, indeed, which the minority met by a written protest against a decision, in their judgment, so premature. Mr. Ward has replied at considerable length to a coarsely worded letter (let the merits of the case be what they may) published by Mr. Bidder, and shows what certainly looks like a misquotation by Mr. Stephenson of the flood area and slope of Mr. Bazalgette's high-level sewer,—a misquotation described by Mr. Bidder as only "an apparent discrepancy," but which his opponent maintains is a real one. Mr. Stephenson's words are,—

"The high level sewer is already explained must act as a drainage sewer for seven square miles, and remove the sewage, and a portion of the storm-waters, from another seven square miles, estimated at about 45,000 cubic feet per minute. The lower portion of the sewer, designed for this purpose, would discharge 47,000 cubic feet per minute, being 12 feet 6 in. in diameter, with a fall of 1 in 600."

"Can a fall of 1 in 600 be more plainly affirmed than here?" asks Mr. Ward. "Can such language be fairly construed to imply a fall of 1 in 1,359, brought up to an equality with 1 in 600 by working the sewer under pressure, so that the sewage, accumulating in the tunnel above, would, by its hydraulic head, force a passage below?" Most persons would probably say no; but we do not propose to go into the controversy. The real point at issue is, must we have the tunnels of large size proposed by Mr. Bazalgette, or would the arrangement proposed by Mr. Roe, with a saving of three-fourths of a million sterling, on the north side of the river only, serve efficiently? Reserving our opinion, we must confess that we have more faith in Mr. Roe than in the engineer of the present Commission; and notwithstanding the evil of delay, we must earnestly exhort the new Board not to proceed with the scheme without further investigation.

THE COMING ARCHITECTURAL EXHIBITION.

WE know not that there is any necessity for adding to what has been so often said in our pages, as to the ensuing ARCHITECTURAL EXHIBITION. We are not disposed to recognise the possibility of any mere half-success, like that of last year. But, as it need hardly be said, architects do not unfrequently show themselves quite apathetic where their interests are at stake; so that some of our readers this week must even bear with what, from us, is really a "twice-told tale."

On the 3rd and 4th of next month drawings are to be received at the Suffolk-street Galleries, and we take leave to say that every architect in the United Kingdom who sets a proper value upon his art and upon his own *personal* interest, will be prepared to contribute, or to satisfy himself that he has good reason not to do so. No one can *afford* to be at all careless in this matter. With the utmost respect for the older members of the profession, we urge upon them that they are not exempt from the duty of *maintaining* a position, or the alternative which there is in all professions of being supplanted. To the young, we say, that the opportunities that an exhibition affords are the most valuable which are open to them. We see no reason why the Architectural Exhibition should not be made to supply all that can be got out of architects' competitions—with their degrading influence upon the profession, their sacrifice of much that is important to the result in art, and their confessed failure as to the attracting men of established reputations, which it is of course one of their objects to do. The main excuse for the numerous responses to any sort of offer, has been that "competing" was a means of education in the preparation of designs. The question is whether similar advantages along with others, might not be made to accrue from other sources. We know of several positive instances in which professional employment and *status* have come from the exhibitions that have already taken place—moderately successful as these have been. We may remark, that the Architectural Association has already done good service by its class of design, and might, we think, easily give all the advantages as to study, by the occasional choice of subjects of greater importance and magnitude, in connection with particular sites of ground. Committees will perhaps one day begin to doubt whether their interests are served by the present system of architects' competitions.

But we should take a very limited view of the benefits to be effected through the Architectural Exhibition, were we to say that these are such as the young members of the profession mostly are concerned with. Rather, we have all a higher personal interest than in what appears immediate and personal. It is for the interest of the profession that the public

eye should be enamoured of architectural art. It is for the interest of every architect that each one should be aware of what is being done by others.

Public interest in the art, and the position of the profession would be served by somewhat greater unanimity amongst architects, on many questions, than is at present found. Again, the ideas of the most fertile imagination, left to themselves, are soon run out, and at any time are of little worth without constant correction from comparison with the ideas of others. The gain to each is immense, the individual contribution quite insignificant. How often are the following words quoted:—"The greatest natural genius cannot subsist on its own stock. He who resolves never to ransack any mind but his own, will be soon reduced from mere barrenness to the poorest of all imitation; he will be obliged to imitate himself, and to repeat what he has before often repeated." At the same time it should be understood, that there is a right and a wrong way of using a collection of architects' designs. There is much talk about the discreditable practice of *copyism*,—the allusion being to the use of old models. There should be the same feeling as to the manner of using the advantages of the Architectural Exhibition, or it will be vain to expect that men of particular ability will contribute, merely to supply forms for others. Whether "sketching" in the rooms is to be allowed or otherwise, is not so much the question. We want both the feeling of honour, and the sense of what is due for *art*,—which together, allowing all that might be good and original in designs to be perceived and remembered, would require that every fresh design should not be traceable to an original. In short, though it may seem paradoxical, one use of an old model or a new design, should be to show the means of avoiding a copy of it.—We have learnt that there are architects, without whose works the exhibition could not be said to give an accurate reflection of the state of architecture in England, who have hitherto taken a view of the results from exhibiting, as regards their designs, which view has prevented their sending drawings in previous years. In the cases we refer to, it would be absurd to say, as we might in ordinary cases, that where persons are miserly of their ideas, they have usually few that are worth having. We simply know that nothing of this sort could be applicable. But, that there is some foundation for the view taken by these architects, we fear is too true. There are architects, both in London and the country, whose misfortune it is to be copied and re-copied,—with, of course, a falling-off at every stage. Sometimes, it is only a characteristic detail that is set up on the opposite side of a road: sometimes the general manner is caricatured: sometimes a whole house is "taken off" bodily as it were, and built afresh. And the speculative builders are not the only delinquents. Thus the original designer gets disgusted with what was at first his own work; and the result generally is like that which has been arrived at by the use of the Greek details, and which is probably approaching as to the Italian window-dressings: that is to say, the greatest beauty in forms degenerates to the greatest ugliness; and members are applied under un-artist-like combinations, until a whole style is abandoned in unreasoning disgust, for the sake of another, perhaps less copious, though more *bizarre*, and of which the new lesson has to be learned through years of misconception and failure, only at length in its turn to be abandoned. Now, if the Architectural Exhibition is to become a national institution, and to realise all that we believe it is capable of, and indeed that which we cannot obtain otherwise, it is essential that all architects should take a proper view of it, in certain points. With little individual effort, the collection may be such as to induce repeated visits, and to afford what could hardly be gained by individuals during many years of study. There should, therefore, be no mean desire to escape contributing whatever ideas each one may have. It is essential that there should be both the proper feeling, and appreciation of the their influence to be exerted without a result in any way approaching to copyism. There are some leading builders, we may say, who require a little ventilation of their opinions on the moral obligation which there is—of copyright.

Individuals such as we have referred to, will, we trust, under any circumstances, on this occasion, throw aside every feeling but that of doing their part to contribute to an exact reflection of the state of art amongst us. We shall never advance as we should, unless we know more clearly where we are. *We* should not hesitate to show that there is no profession which suffers so much as ours does, by isolation of practice and study amongst its members; or which is so little exempt from the ordinary laws of progress, as regards the necessity of interchange of ideas. It may be well to point to the Institute, and to many advantages which the architect of the present day has:—we say, that even these are incomplete and partial in their effects on art, unless there be added an annual exhibition. No one can have visited an exhibition of competition designs without feeling the full force of what we say, and of what we have indeed often before expressed.

As regards the existing state of art, it is exceedingly difficult at present to form a definite opinion. The collection of works sent to the French Exhibition was incomplete in this respect. The committee of architects, doubtless, did their best with the works presented to them; but it is beyond question that blunt refusals had been sent, by some one in authority, to offers of works of high merit which would be essential to a view of the state of architecture in England.

Whilst in one way self-interest is concerned with the success of the Architectural Exhibition, the other means—the education of the public eye and taste—is not less in every way of moment. With all the prominence of architecture—or at least, buildings—the public attention seems to require to be still made alive to the fact of the importance of architecture as an ART, and its interest as a study. We have no cause to complain of inattention to archæological study: perhaps we should rather speak of the excess of it: but it is yet, we fear, undeniable that the *art* of architecture has something of its proper position to recover, even with those who apply themselves to special branches of architecture. And it is also desirable that architectural drawing should be better appreciated, and better understood. The public would be led to a higher view of the preliminary labours which are essential to the production of a good design, could they have the opportunity of seeing more of what those preliminaries are; and the knowledge of the technical language of plans, elevations, and sections, it is most desirable should be no longer a dead language to the public. Drawings of this kind, therefore, should not be omitted: and although the rooms are not at all too large for such an exhibition as architects might be expected to get together, a small scale for the several drawings of each design, would perhaps allow space for all the works that there need be, whilst it would give ready facility for reference. We would also suggest that some attention beyond that of former years, should be paid to classification. When the writers to whom architecture is consigned in the newspapers, find a drawing of an old Gothic church occupying a central space, they are apt to walk away under the belief that modern architecture is nought, instead of being what it is,—auspicious of a glorious future.

It is important that the public eye should be led to appreciate even these works: and on every account we would have them exhibited: but if there be one object more than another which is to be kept in the foreground, it is that of the present state of art. We believe that the existing race of English architects have the capacity for great works: and we hope that for once the opportunity will be taken to show what they have done, or might do. We shall look closely to the result.

THE GLASS TRADE.—Messrs Hartley and Co. of Sunderland, says the *Darlington Times*, have received a large order from the Sardinian Government for their rough plate-glass, and have just forwarded a consignment to his Majesty the Emperor of the French for the use of his vineries at St. Cloud, &c.

ARCHITECTURAL EDUCATION AND EXAMINATION AT BERLIN.

THE following are the general abstracts of Regulations for Architectural Education and Examination at Berlin—translated from the original papers—which were referred to in the address of Mr. Tite, at the Institute of British Architects, on the 5th inst.:—

Regulations for the Royal Architectural School at Berlin, 1849.

1. Title, &c.
2. The school is under the Minister of Trade. A committee manages the details, consisting of a managing director, named by the minister, and two members of the Upper Board of Works, one for architecture proper, the other for civil engineering.
3. The regular lecturers are appointed by the minister, on a recommendation from the committee.
4. Extra professors, &c. may be appointed by the committee for special purposes.
5. Applications for admission must be made in writing four weeks before the commencement of each half-year (8th October and 8th April).
   In October of each year a new series of lectures, &c. will be commenced.
6. On application for admission the following certificates must be brought:—
   I. By those who wish to enter Government service—
      a. That they are first-class men in some approved gymnasium, &c.
      b. That they have had at least one year's practice under one or more architects.
   II. By those who only wish to become private builders—
      That they have passed the prescribed examination for masons or stone-cutters, and carpenters.
7. Foreigners will be admitted (on same terms) so far as there is room.
8. A fee of ten dollars is to be paid upon matriculation. The course of study will at first be fixed for five years, but the term may be extended by the director.
9. Relates to details about attendance of the students at the lectures (*i.e.* they must at the commencement of the half-year signify what lectures they purpose attending, and upon payment of the fees they will receive tickets of admission).
10. If there is room, the director may grant admissions (on payment of the fees) to specific lectures to any person, not a student.
11. Upon request, the students may have certificates as to the lectures they have attended.
12. The halfyearly sessions commence on the 8th October and 8th April, and close on the 20th March and 31st October. A week's holiday at Christmas, Easter, and Whitsuntide.
13. The lectures are so arranged, that the surveyors' course may be completed in two years, that of architects proper in one, and that of civil engineers in one.

Course of Lectures at the Royal Architectural School in Berlin.—Winter Session, 1851-2.

[N.B. The fees are all calculated at the rate of a three-quarter dollar (2s. 3d.) per hour of weekly instruction.]

	Hours per Week.	Fee in Dollars.
1. Stereometry, Spherical Trigonometry, Analytical Geometry	4	3
2. Simple Analysis, Differential Calculus, Law of Curves	4	3
3. Descriptive Geometry	6	4½
4. Physics, with relation to Heat, Light, Electricity, and Magnetism	4	3
5. Chemistry, with relation to simple Materials connected with Building	4	3
6. Construction of Buildings, Drawing	6	4½
7. Ancient Architecture, Application to present Time, Outline Drawing, first part	8	6
8. Line and Architectural Drawing, first part (Ornamental Drawing)	4	3
9. Dynamics, first part	10	7½

	Hours per Week.	Fee in Dollars.
10. Planning and Drawing Buildings, first part	4	3
11. Farm Buildings, with Internal Arrangements	6	4½
12. Ancient Architecture, third part (Drawing)	6	4½
13. Line and Architectural Drawing, third part	4	3
14. Elements of Road and Bridge Making, and Hydraulics, first part	3	2¼
15. Machinery	6	4½
16. History of Ancient Architecture	6	4½
17. History of Architecture when the Arts flourished in Italy	6	4½
18. Drawing from Models, &c.	6	4½
19. Plans of Public Buildings	4	3
20. Ornamental Drawing, first part	4	3
21. Doctrine of Probabilities (applied to the Theory of the Correctness of Observations)	4	3
22. Hydraulics and "Waterworks" in general	12	9
23. Railways	3	2¼
24. Machinery	8	6

The extra lectures comprise,—"Further Practice in the Differential Calculus," "Conic Sections," "Integral Calculus," "Warming and Ventilating Buildings," "History of Greek Architecture," "Coloured Decorations," "Greek Forms of Art" (Buildings, Vessels, Implements), "English, French, and Italian Languages," and "Short-hand."

Regulations for Candidates, 1849.

1. The degrees of proficiency are,—
   - I. Surveyors.
   - II. Architects.
     - *a.* Architects proper.
     - *b.* Civil engineers.
   - III. Builders.
2. Relates to the certificates to be handed in by candidates for the surveyor's examination.
3. If these certificates are found satisfactory the candidate will be examined.
   - *a.* On the scientific and technical subjects which are the basis of the further studies of building students.
   - *b.* On knowledge of land surveying (no long practice required).
4. Relates to the certificates to be produced by architects and builders.
5. If these are satisfactory, some suitable design will be entrusted to the candidates, proper time and means of assistance being afforded.
6. After this is completed the examination will take place.
7. The Royal Upper Board of Works ("Bau Deputation") constitute the Board of Examination, but the Minister of Trade may appoint additional examiners if he think fit. Their report is to be confined to the results of the particular examination, specifying each department of the subject.

   The *viva voce* examinations are public, and the drawings, &c. of the candidates are at the same time to be exhibited. Unsuccessful candidates are allowed a term, after which they may try again; failing again, no further trials will be allowed.
8. The surveyors, when sworn, are competent to manage the execution of plans, under the supervision and technical responsibility of an architect. Their statements as to size and quantities are to be relied upon (*i. e.* as evidence).
9. Surveyors who only wish to become "road inspectors" need not pass the architect's examination, if they can prove a five years' satisfactory practice in road making.
10. Architects may undertake the completion of designs, &c. on their own responsibility, and are competent to fill any suitable Government office.

    Builders may execute designs on their own responsibility, but only for simple "Country architecture" ("nur für die Gegenstände des Landbaues").

    They are not eligible for Government appointments, and may only fill a "Communal" office when that does not require attention to roads and "waterworks" (wege-und Wasser-Bau).
11. Surveyors, architects, and builders may only execute such land surveys as are immediately involved in the practice of their profession.
12. Architects may only carry on any building trade (carpenter, mason, &c.) on their own responsibility when they have passed the examination for the trade in question.

Mode of Procedure at the Examination of the Candidates.

1. Examinations for surveyors take place half-yearly after the close of the lectures at the Royal Architectural School in Berlin.
2. Candidates must prove—
   - *a.* That they come from the first class of a gymnasium, or of one of the "real-schulen," approved by the Government.
   - *b.* That after leaving school they have had one year's practice, in counting-house duties and in out-of-door building work, and that, after this—
   - *c.* They have passed through a course of two years' study at the Berlin Architectural School, or one of the affiliated establishments; in which case the course of study must be stated in detail.
3. Candidates must also hand in—
   - *d.* A plan of a plot of ground with buildings, at least 5 acres extent, to a scale of 4 rods to an inch; also a table of levels with drawings (100 rods in length will suffice).
   - *e.* Sketch of a building or a machine, slightly coloured with Indian ink.
   - *f.* Other drawings, among which the perspective of a building, or an ornament, must be clearly shown.
4. In cases where the preceding are not satisfactory, or cannot be rectified in proper time, the candidates must wait till the next half-year.
5. Relates to time for the examination.
6. The examination commences with one week's work in private; and in the succeeding week follows the *viva voce* examination, lasting two days. According to the result in unsuccessful cases, a period of six or twelve months will be fixed, after which application may be renewed.
7. See also c § 8. Relates to the swearing in of surveyors, merely provided that they are to be sworn before the Royal Building Commission, if they have not been previously examined and sworn as land surveyors.
8. Candidates for the examination for architects must prove—
   - *a.* That they have passed the surveyor's examination.
   - *b.* That they have been actively engaged under one or more architects for two years.
   - *c.* That they have passed through at least one year's course of study after their having been examined for surveyors. So that no person can become an architect within three years of his having become a surveyor.
   - *d.* That they have had proper practice and experience in land surveying. (The superficial area must not be less than 500 acres, or if difficult, at least 200, and about 1,000 rods of levelling.)
9. Candidates for the builders' examination must prove—
   - *a.* That they have passed the masons', carpenters', or stone-cutters' examination; and—
   - *b.* With respect to course of study, the same as in § 2 c.

10, 11, and 12. Relate to the time to be fixed for the examinations.

13. Candidates for examination in both branches (country and decorative architecture, and civil engineering) must in addition to the preceding (§ 8) prove—
    - *a.* That they have practically learnt the trade of a mason, carpenter, or stone-cutter.
    - *b.* And have gone through a three years' course of study after having been examined for the above trades.
14. Unsuccessful candidates will be told when they may apply again for examination. If they are unsuccessful a second time no further application will be received.

By a supplement to the above, it is enacted that the integral and differential calculus shall, after 30th September, 1851, form part of the examination of surveyors—the same being now taught in the Architectural School.

Examination Subjects.

I. Surveyors (Bau-fuhrer).

Mathematics proper—
- *a.* Algebra, analysis (simple), logarithms.
- *b.* Geometry, stereometry.
- *c.* Descriptive geometry, projection, perspective, shadow.
- *d.* Trigonometry, superficial and spherical elements of law of curves, conic sections, cycloids, proficiency in algebraic and arithmetical calculations, and in use of logarithms, and in use of the methods of descriptive geometry.

Practical Mathematics—
- *a.* Land surveying, levelling.
- *b.* Elements of statics and mechanics, acquaintance with the standards of measure, hardness, friction, strength, &c.

Natural Sciences—
- *a.* Physics and chemistry (relating to materials used in building).
- *b.* Mineralogy and geology, signs and peculiarities of minerals used in building.

Country Architecture (Landbaukunst)—
- *a.* Knowledge of materials, their peculiarities, means of obtaining and preparing them, what taken from the vegetable world, their botanical relations.
- *b.* Acquaintance with the simple construction of all buildings (Baugewerke).
- *c.* Construction and arrangement of simple dwellings, farm and factory buildings, lime and brick kilns, &c.
- *d.* Ancient architecture, forms of, and application to buildings of our time.
- *e.* Making plans and corrections (revisions-machweisungen).

Road and Railway Making; Waterworks (*i. e.* Buildings or Works in, or at, the Water)—
- *a.* Foundations in water, bridges, embankments, tide-walls, mill-races.
- *b.* General earthworks necessary in making a railway, with plans, sections, &c.

Construction of engines and machines, composition and working of those most frequently used in building,—mills, steam-engines in general.

II. Architects.

A.—For Country and Decorative Architecture.

The principal styles of architecture of all countries and ages, peculiarities, and advantages.

Laws of construction, applied to large and difficult designs, apparatus for heating, ventilation, cooking, washing, drying, filtration, &c.

Dynamics.

Decorative architecture, in all its branches, for public and private buildings.

Business arrangements, generally during progress of works.

B.—Waterworks, Roads, Railways.

Analysis (compound), law of curves, probabilities, land surveying.

Analytical dynamics (applied to Nos. 3, 4, 5).

Waterworks (Wasserbau)—
- *a.* Waterworks in general; atmospheric products; springs; irrigation; drainage; foundations, &c.
- *b.* Making canals, &c.; flow of water in beds of rivers; hydrotechnic measurements; means for regulating the current; for making rivers navigable; cleansing and deepening the channel; weirs; floodgates; rafts.
- *c.* Making dykes; drainage of embanked low lands; draining machines; sluices; breaches in the dykes.
- *d.* Land communications; ferries; bridges of wood, stone, and iron.
- *e.* Erections by the sea; succession of waves; ebb and flow; currents; strengthening or securing the shores, harbours, moles, docks, sluices; securing roadsteads and lighthouses.

Construction of Engines—

Knowledge of different forces, arrangements for their use; winches; levers; water-wheels; windmills; steam-engines; machines for rubbing, crushing, tearing, pressing, and condensing building materials, &c. &c.

Construction of railways—

Works underground with bridges over; works above ground; ascents and curves; optic and electric telegraphs; precautions against snow and quicksand; stations, with all buildings belonging; plant and rolling stock.

III. Builders.

The same II. A, 1, 2, 3, 4, and 5, reference being made when required to the points mentioned sub. I.

The examination in mathematics will not be confined to mere theories, but special cases will be given, the treatment of which will show whether these theorems are clearly understood.

One week will be devoted to exercises done in private: on the first day, a sketch must be handed in, the chief outlines of which must be adhered to afterwards.

Fall of a Large Building near Holborn.—On Wednesday in the present week a warehouse, occupied by extensive cutlers and hardwaremen in Eyre-street-hill, Holborn, fell to the ground shortly after some old houses adjoining it at the back were removed for the purpose of erecting new lodging-houses. It is said that a raking shore had been displaced contrary to the direction of the district surveyor, Mr. Legg. No one was hurt, fortunately; but much of the stock was buried in the *débris*.

THE NEW GRAMMAR-SCHOOL OF ST. OLAVE'S AND ST. JOHN'S, SOUTHWARK.

TRAVELLERS from the London bridge Railway-station will have noticed on their left hand, almost immediately after starting, an important-looking building, of red brick and stone, in the Tudor style of architecture, with gables and tower over entrance, according to rule. This is the new school of St. Olave's and St. John's, which has been erected under the direction of Messrs. Allen, Snooke, and Stock,—but mainly the latter; and on Saturday last, the 17th, the school was opened, on the occasion of the commemoration of the accession of Queen Elizabeth, whose name the school bears, and who granted its first charter of incorporation in 1571.

Let us say, in a parenthesis, because of our love for these old customs, that the proceedings commenced with the presentation of a bunch of roses to the warden and governors of the school, by the churchwardens and overseers of the parishes of St. Olave and St. John. A bunch of roses is the annual rent payable by these parishes to the governors for certain estates at Horsleydown, Meopham, in Kent, and Rudgwick, in Sussex. These estates are, from the peculiarity of the tenure under which they are held, called the Red Rose Estates.

We may get an outline of the history of the school from the address of the warden, Mr. J. W. Ledger, at the close of the proceedings.* "This being the first anniversary of Queen Elizabeth's accession to the throne which has been commemorated within these walls [said Mr. Ledger], I think it incumbent upon me to trace the history of our school from its earliest years. The first we hear of it in history is that in 1560 a benevolent and far-seeing man of the name of Leeke, a brewer in Southwark, left the sum of 8*l.* per annum for either of the parishes of St. Saviour's or St. Olave's, which should first be in a position to claim the legacy from having a school established. St. Olave's claimed it first, and the foundation of the school was laid in 1561. In 1571 it was incorporated by Queen Elizabeth. In 1579 the churchwardens of the parishes made over to the governors for the time being a piece of land of about 16 acres, called Horsleydown, which was then a field of common land where the poor could graze their cattle, dig gravel, &c. The archery butts were also placed there. The governors wishing to make the most of their property, immediately enclosed it, and were thus led into a great deal of litigation, which lasted for several years. Horsleydown was soon covered with houses, and it now forms the principal revenue of the school. This building is a part of it. The school continued to prosper. The parish of St. Olave was afterwards divided. In 1830 the old school, which was in Churchyard-alley, near St. Olave's Church, was required for the approaches to New London-bridge. The City gave a piece of ground near it, which was soon afterwards required by the London and Greenwich Railway. The ground in Bermondsey-street, upon which the school was built, was required by the railway company, who were obliged to invest the sum of 30,000*l.* in the Bank of England, unless they could find a site before three years were passed. This they could not do, and the present school was built.

The building comprises a Classical or High School, 88 feet by 40 feet, and 52 feet (a very satisfactory work, notwithstanding the windows), and an English school, 70 feet by 35 feet, 35 feet high. On the keystone of the vaulting to the entrance under the tower are the arms of Henry Leeke, the first benefactor to the school. They bear the following inscription:—"Henricus Leeke primus Inceptor. A.D. MDLX." The stone staircase, leading to the Court-room, is adorned with the arms of the Bishop of Winchester (visitor of the school), and also contains other appropriate devices. The Court-room is a spacious apartment, fitted with handsome oak panelling and having windows of stained glass, containing the arms of the present and late governor of the school. The cornice displays a series of shields on which the arms of former governors, from the first foundation of the school (as far as they could be ascertained) are emblazoned. The ceiling is panelled and ornamented with gilt pendants.

Beneath the Court-room is a library of equal dimensions and of similar character, but not so highly decorated, the only stained glass being an ancient relic preserved from the old school formerly in Churchyard Ally. It represents a Dial with a Bee, and contains the motto, "Aspice, Respice." There are, moreover, two convenient residences for the principal masters, and a neat porter's lodge.

The cost of the schools, with fittings and warming apparatus, supplied by Messrs. Haden, of Trowbridge (no small item), will be about 24,000*l.* Mr. J. Jay was the builder. We shall, probably, have occasion to return to this noble foundation.

* Full particulars of the proceedings will be found in the *South London Journal*, a very good penny just-now started, in the number for November 3; with a full and interesting article on the "Ancient History of Horsleydown," by Mr. G. R. Corner.

ARCHITECTS' CHARGES.

MAY I, a constant reader of your journal, ask you to oblige me with an answer as to what is the correct practice of architects in the following cases. In alterations and repairs of buildings, where old lead is exchanged for new, should not the commission be upon the full value of the work done, including the new lead, and not upon amount of the builder's bill reduced by the price allowed by him for the old lead?

In cases of alterations, or other works, where old materials are re-used, should not the commission be allowed upon the value of the old materials so re-used? I think the answer must be in the affirmative, but as there seems some little doubt in certain quarters, I am anxious to have the best opinions. A. E. P.

*** In answer to the first inquiry, the commission is justly chargeable upon the full value of the work done, including the value of new lead, and irrespective of deduction for old lead. As to the second, it is usual not merely to charge the commission on the value of the *old* materials as re-used, but upon the value of such materials when *new*. One moment's reflection will show the perfect correctness of such a course. Many architects charge more than the ordinary commission, and with justice, for "alterations and repairs."

FOREIGN INTELLIGENCE.

Vienna Competition. — The Vienna municipality have offered a prize of 300 ducats (150*l.*) for the best plan of a bridge over the Wien, near the Caroline Gate. Its form and arrangement are left to the architect, but it must have but one arch, be calculated for the greatest weights, and possess great durability. The plan of the site is to be had of the municipality, and a term of six months allowed for the sending in of the plans.——The well-known pyrotechnic, M. Stüver, has invented a detonating signal for railways: besides the detonation a flame of different colours is developed, which will give certain directions to the engine-drivers, &c.

The Picture of Columbus, by Moritz Rugendas.—For some time past no picture has excited such interest as the above canvas of M. Rugendas, painted by order of King Maximilian. In a lifeful and true interpretation: we see before us that historical moment when Columbus descends with his followers on the shores of a new world. The task was difficult, but has been solved well by the German painter, who possesses the advantage also, that the depicting of tropical nature (animate and inanimate) has become familiar to him by his long residence abroad.

Remuneration of German Painters.—The picture which Frederic Overbeck has lately made for the Cathedral of Cologne, is now nearly ready. It has been presented to the cathedral by the Art-Union of the Rhine Lands and Westphalia, at Düsseldorf, which transmitted to Overbeck successively to Italy the sum of 5,230 thalers. Later, the chapter of the Dom added 2,000 thalers; making altogether 7,230 thalers—upwards of 1,000*l.*—a sum rather large in Germany and Italy.

France.—Working Men's Regulations.—The institution of *livrets*—a sort of behaviour-books for all sorts of working people—has been in existence for some years past, having originated during the first Revolution. A new law of 22nd of June last modifies it to the extent that the *livrets*, which hitherto remained with the masters, are to be in the hands of the journeymen, to whom they have to serve as passports, and for legitimation of good behaviour, &c.

The Catalogues of the Munich Universal Exhibition.—This most deserving *résumé* has been compiled under the direction of States-Councillor Hermann, and is a work possessing merit, describing the subjects exhibited under the grand point of view of industrial development. The twelve parts of the catalogue answering the twelve divisions of the exhibition, are also sold separately. Amongst them are the engines by Dr. Hülse, of Dresden; on tissues and leather, by Dr. Weinling; on earthenware and glass, by Dr. Knapp, of Munich, on minerals and fuel, by Councillor Schmitz, of Munich, &c. which all deserve the attention of those interested in these pursuits.

PROVINCIAL NEWS.

Wilburton (Ely).—The new schools in this village are now completed, and form the principal buildings in the village. They occupy a central situation, and are built with residences attached, faced with red bricks, and white brick and Bath stone dressings. The funds for liquidating the expenses have been raised by subscription, and grants from Government Board of Education and National Society. The works have been carried out by Mr. Freeman, of Ely.

Ipswich.—At a public meeting here, a plan has been brought forward for erecting a new Post-office, with convenient accommodation and shelter for the public, on the site of the present Post-office and adjoining houses at the corner of King-street. It is proposed to raise the money required, estimated at 2,500*l.* in 10*l.* shares, and nearly 100 shares were taken in the room. The erection is to be of white brick, with stone facings, rusticated basement, and a loggia for the public, supported by two pillars in the centre. The design is by Mr. Woolnough

Cleveland.—The development of the mineral wealth of Cleveland, in the North Riding of Yorkshire, on the completion of the North Yorkshire and Cleveland Railway (now in course of construction), has already caused the origination of several companies to erect blast furnaces and manufacture pig-iron, as it is generally considered that pigs can be made in this district cheaper than in any other part of the kingdom. A joint-stock company of this description has just been formed at Bishop Auckland. One or two are projected at Newcastle-on-Tyne for a similar purpose, and others are being originated. It is said that one very large company is about to be formed, with a capital of 300,000*l.* to make all descriptions of iron on an immense scale.

Bradford.—The first stone of a pile of new buildings about to be erected in Well-street was laid on Thursday before last, and in the evening a dinner was given by the proprietors to the successful and unsuccessful contractors and various friends, about eighty in all. The premises will be extensive, though not specially ornamental. The length of frontage to Well-street will be 180 feet, and the height from the causeway to the top cornice, 76 feet. There will also be frontages into Swaine-street and Hall Ings. It is adapted for either one or two stuff warehouses, with market-rooms, &c. and will have fire-proof hoists and staircases, and the ground story will also have a fire-proof floor, constructed with iron girders and hollow brick arches. It will be seven stories in height, including the attic, the roof being supported from cast-iron jackings. By an arrangement with the Corporation, according to the local *Observer*, the narrower portion of the street opposite the building will be widened to the width of 15 yards (now short of 12 yards), and this arrangement causes the front to Well-street to be of the crescent form. The contractors for the masons' work are Messrs. James Burnley and Co.; carpenters and joiners' work, Messrs. J. Wilson and Son; plumbers and glaziers, Messrs.

J. Keighley and Co.; plasterers, Messrs. Smith and Dixon; and slaters, Messrs. Joshua Hill and Sons. The ironfounders' and painters' work are yet unlet. The whole will be carried out according to the plans and under the superintendence of Mr. Milnes, of Bradford, architect. It is proposed as early as possible to extend this improvement in Well-street to the bottom of Kirkgate, so as to form one of the most spacious approaches into the town.

Sheffield.—The local Board of Guardians have resolved that it is necessary to erect a new workhouse for the Sheffield Union. The ratepayers had a meeting shortly before the guardians came to their decision, but were violently opposed to it; nevertheless the guardians passed their resolution by a majority of nine to three, and they have the power to proceed independently of the decision of ratepayers on such a question.

Stockport.—At a recent meeting of the town-council of Stockport, the question of erecting a town-hall over the present court-house was referred to the General Purposes Committee of the council.——At same meeting the question of the establishment of public baths was referred to the council's Sanitary Committee.

Thurso.—At a meeting of a committee lately appointed for carrying into effect improvements at the Watermouth, according to the *John o'Groat's Journal*, a plan of a new harbour, by Mr. Magnus Tait, architect, Wick, was approved of, and Mr. Tait has been authorized to draw out a plan, in extension of the sketch already submitted, with relative specifications, with a view to advertise for contractors, so that the work may be proceeded with without any further delay. New water-works, it appears, will be commenced here in the beginning of spring.

CHURCH-BUILDING NEWS.

Dorking.—The new cemetery here has been completed, and is about to be consecrated and opened. The whole has been done, it is said, considerably below the estimated cost.

Hemel Hempstead.—The church, schools, and residences, now completing here, were opened on 13th inst. They consist of boys' and infants' schools, each 48 feet long, and 18 feet wide, with class-rooms attached, 18 feet by 15. The residences each contain living-room, kitchen, scullery, three bed-rooms, and necessary conveniences. The buildings are erected in the Decorated style, the materials used being red bricks, with dressings of Caen stone. The roofs, which are surmounted by a light spire, are open timbered, varnished. The ground is enclosed with a stone coped dwarf wall and ornamental railing. The institution has been erected by subscription, headed by Sir Astley P. Cooper, bart. of Gadebridge, and aided by a grant from the Government. The architect is Mr. George Low, of London; and Mr. Groom, of Hemel Hempstead, is the builder. The cost, exclusive of ground, is upwards of 2,000*l.*

Ilfracombe.—The new church at Ilfracombe, the completion of which has been delayed from want of funds, will, in the course of the next twelve months, it is expected, be consecrated. It is understood that a London merchant, visiting Ilfracombe, and hearing that there was no hope of carrying out the original design, has undertaken to finish the structure, to endow it, and to build a parsonage-house for the incumbent, all on condition that his own name shall not transpire. The cost of completing the church alone, it is said, cannot be less than between 2,000*l.* and 3,000*l.*; while the endowment and the erection of the parsonage-house will raise that amount to upwards of 4,000*l.*

Broadwater.—The reopening of the chancel of Broadwater Church took place on Sunday in week before last. A subscription had been started for placing an obituary window in the chancel, and during the preparation of the works necessary, Mrs. Thwaytes contributed a stone reredos, &c. The old window at the east end of the chancel selected, was in a very dilapidated state, so much so that its removal was determined upon. From further examination it was found that there formerly had been a three-light Early English window: this gave rise to the wish of adopting the present triplet of Early English character, although of somewhat later date. The window is divided by detached clustered columns, with deeply moulded arches and tooth enrichments in the heads. The spandrils are filled up with diaper work and sunk moulded trefoil panels of carved scroll foliations, intertwining initials, and the whole surrounded by an inclosing arch of zigzag ornament. This work had been set when it became apparent that the painted glass and reredos could not be fixed with safety without further and extensive repairs being first executed. An examination, therefore, was directed to be made of the roof, groining, and walls, all of which were found to be in a dilapidated and dangerous state: it was, therefore, determined to take down the groined ceiling and walls, and to restore the walls, if possible, to their original position, from their having become deflected from the perpendicular some 14 or 16 inches each side outwards, crushing the stone buttresses. After removing the groining, the righting of the walls was performed by placing on the outside at the back of the buttresses half balk timbers resting upon strutts; and through these and the openings of the side windows passing iron screw tension rods, with square outside nuts, three to each window: to two of the bolts of each set heat was applied, by covering them with lighted charcoal, supported in iron troughs running parallel with the rods. The rods thus heated expanded in length, and whilst expanded were screwed up tight, then allowed to cool and consequently to contract, the unheated bolts being preserved as safeguards. This process was repeated of course, as in previous instances, and the walls were eventually brought back to the perpendicular. The crushed buttresses were removed where necessary, and new lancet windows have been inserted on either side of the chancel, the groined ceiling renewed, and the whole newly roofed. The work which had been suspended in the inside was again resumed. The reredos, like the window, is of Early English work, and is divided into three compartments, the centre of which has three deeply mounted arches trefoiled on the inside and enriched with carved spandrils and tooth mouldings, clustered columns with shafts of polished Purbeck marble enlivened with tooth enrichment of Caen stone between the shafts. The columns rising from a high base of polished Purbeck, have caps of Caen stone, carved in foliated work, adaptations from Lincoln, St. Alban's, Winchester, and Salisbury. The whole spandrils above the arches are diapered, and have trefoil panels enclosing foliated initials. The centre compartment has an illuminated cross in gold on azure ground of diapering, dotted with stars and labelled with a text. The side compartments are surmounted with carved canopies. The side walls, on either side of the reredos, have an arched arcade running to the altar rail, with slight detached annulated Caen stone columns, with draperied spandrils above, while on either side are recesses for sedilia. The walls between the columns are lined, and the floor is laid, with Minton's encaustic tiles. The painted glass of the new window is by Mr. Willement. The centre light has the Ascension of our Lord: the upper and lower portion of each light is of tabernacle work with labelled texts, and the head above the canopy has a monogram of the Holy Trinity. There has been placed on the south side of the altar an obituary window, by Capt. and Miss Stringer.

Gloucester.—We lately gave some account of the progress made in the restoration of the cloisters of this cathedral by the introduction of stained-glass memorial windows. Further restorations are proposed for the body of the edifice, and operations have been commenced in a portion of the nave and a north aisle, in order to see what effect the restoration of the whole would have upon the interior. The white and yellow wash upon the stonework of one of the piers has been removed, and the stone painted. On removing the wash, it was found that the lower portion of the pier was calcined by the burning of the old wooden roof prior to the erection of the present vaulting. The vaulting-shafts were discovered to be of marble, and are now cleaned and polished. Remains of colour sufficient to make a correct restoration were discovered on the capitals and bases of the vaulting-shafts and the mouldings connected with them, particulars of which are preserved. On removing the bases of the pier (which is modern), and excavating below the present level of the nave, the original floor was discovered about 10 inches deeper than the present paving. It appears to have been composed of encaustic tiles, and the pier itself stood on a large square base below that which now appears. During the recent examinations which have been carried on by the chapter architect, several interesting discoveries have been made.

Presteign. — The parish church here was lately re-opened, after having been closed for about twelve months for renovation and repairs. An addition has been made to its size by doing away with galleries. The chancel has been considerably heightened. The east window is of stained glass. The pews are of pinewood, stained and varnished. The church contains now 120 large pews, in addition to which a large space, formerly called the "Little Chancel," is converted into sittings. The chancel pillars and arches have been scraped, and the stonework freed from plaster, and the walls and monuments renovated. The chancel is paved with encaustic tiles from the manufactory at Lugwardine. The window was the gift of Mrs. Evans, of Greenfield, near the town. It is formed of two divisions—upper and lower—having five compartments in each. In the lower division is represented the Saviour on the Cross, with a Mary on either side; the outer compartment on each side being filled with a border. In the upper division is represented the Ascension of the Saviour with the Apostles on either side. Arranged above all are several passages from Scripture. Mr. Page, of Leominster, was the contractor for the restorations.

Keighley.—The Burial-board of this place has instructed their clerk to borrow 4,000*l.* for the purchase of 11 acres of land at Utley, about a mile from the centre of the town, on the Skipton turnpike road.

Sheffield.—The parish church is to have its chancel thrown open, by the removal of the organ and screen from its present position, and otherwise improved, at a cost estimated by Mr. Flockton, architect, at about 500*l.*

Crosby.—The consecration of the newly-erected church at Crosby was performed in week before last by the Bishop of Carlisle. The edifice is of new red-sandstone, in the Florid Gothic style of architecture, with a round tower.

THE BIRMINGHAM AND MIDLAND INSTITUTE.

Birmingham is moving. The want of a Literary and Scientific Institution there, commensurate with the character and requirements of a town where the occupations of the great majority of its artizans demand a certain amount of mechanical, chemical, or artistic knowledge, induced a number of gentlemen, some time ago, to endeavour to supply that deficiency. In January, 1853, they obtained the sanction of a public meeting, presided over by the Mayor, to the scheme of a Literary and Scientific Institute. In 1854 the Institute was incorporated by Act of Parliament, and the town council granted a site adjoining the Town-hall for the proposed buildings, on condition that 10,000*l.* were raised and available for their erection.

The liberality of the noblemen and gentlemen of the neighbourhood, of the ironmasters of the district, and of the inhabitants of Birmingham, placed a considerable portion of the required sum in the hands of the Council of the Institute, and several friends to the undertaking having entered into a personal guarantee for the balance of the stipulated 10,000*l.* designs were obtained from ten architects, and from these, as our readers have already been informed, the design submitted by Mr. Edward M. Barry, the younger son of Sir Charles Barry, was selected. The full development of the scheme of education will require at least double the amount of the funds now in hand, and the Council appeal to the inhabitants of the town and district, and to the friends of education generally, for the means of founding this great Industrial College.

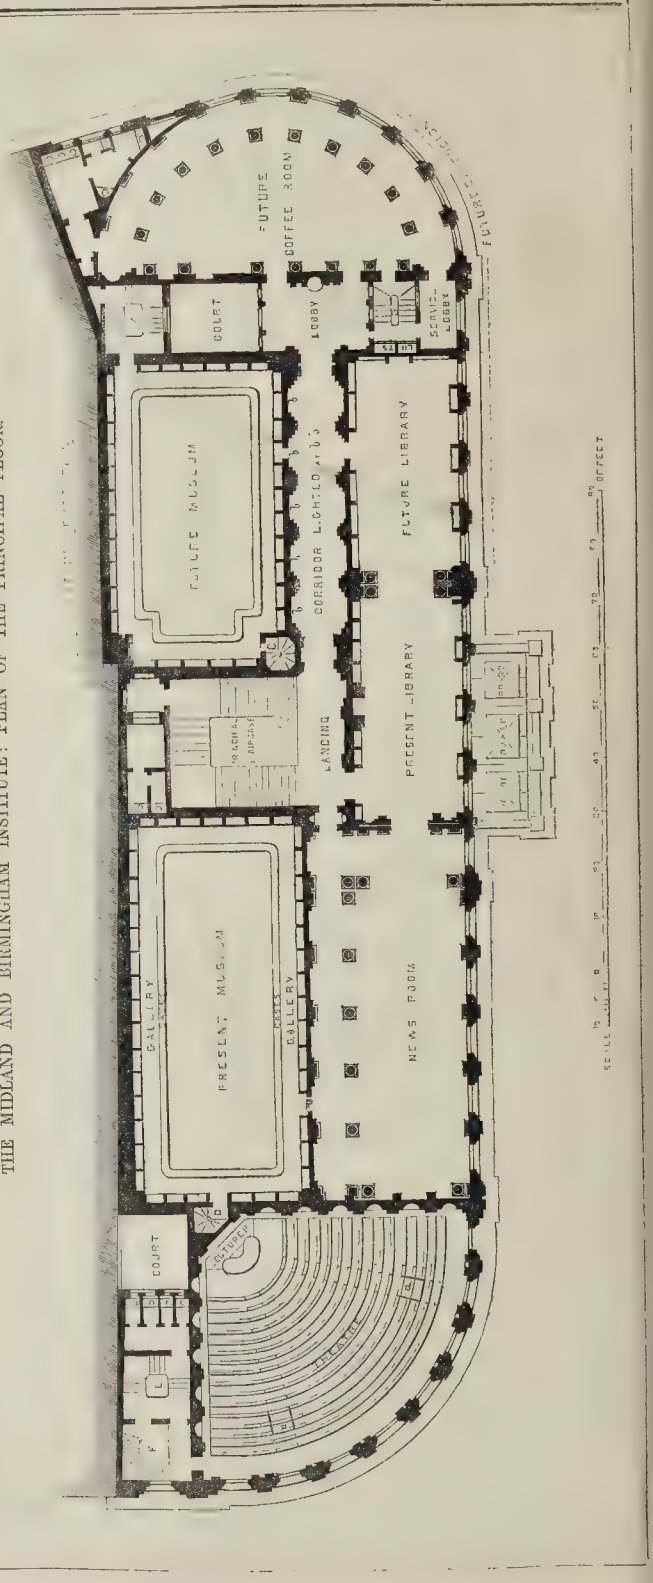
The plan of the Institute embraces a General Department and Schools of Industrial Science.

Under the former head are—1st. The Literary Branch, comprising libraries, reading-rooms, and lectures on subjects kindred to this branch. 2nd. Museums. 3rd. A Collection of Mining Records. 4th. Lectures on general Scientific Subjects. 5th. Periodical Meetings for the reading and discussion of original communications, upon the plan of the sections of the British Association; and 6th. A Gallery of Fine Arts, for the reception of examples of painting and sculpture.

The other department is a School of Industrial Science, the members of which are provided with systematic lectures and class instruction in the various branches of science, with especial reference to their particular occupations; and will also partake of the advantages of the General Department. The classes, some of which are already in operation, will include chemistry, as applied to the various manufactures and agriculture, mechanics, metallurgy, mineralogy and geology, ventilation of mines, and mining engineering. The education of artisans, practical miners, and others, in the scientific principles of their daily avocations is thus a primary object of the Institute.

The Museums will be devoted to geology, mineralogy, their economic application, such parts of natural history as illustrate these sciences; those animal and vegetable productions used as raw materials in manufactures; manufactures, particularly those of the district, comprising specimens of articles in their different stages of process, and finished articles of different dates and countries; to models and specimens of machinery, tools, furnaces, and other instrumental means and appliances used in the various manufactories.

It is evident, as the council say, that the museums will be of great utility to persons engaged in the arts and manufactures; to the ironmaster, by the exhibition of the different kinds of ores and iron, and models of furnaces and machinery used in different parts of Britain, America, and the Continent; to the architect and builder, by the exhibition of building materials, with records of their cost and durability; and to the manufacturer, designer, and modeller, by the exhibition of raw materials and finished articles, remarkable for their artistic beauty, novelty of construction, or excellence of workmanship. The collection of mining records will be of peculiar value in this district, by affording information as to the position of old workings, and the situation and peculiarities of the strata in which the minerals occur; and the classes of industrial science will confer an important benefit on manufacturers and artisans, in placing within the reach of the pupils a knowledge of the scientific principles involved in the various departments of manufactures and art.



On Thursday last (the 22nd), too late for us to do more than mention the fact, the first stone of the proposed building was laid by His Royal Highness Prince Albert, and we here give a view of the building and the plan of the principal floor. A general description has already appeared, page 442, &c. The site for the building is a plot of land against a block of houses, with Paradise-street at one end of it, and Edmund-street at the other.

The chief difficulties the architect had to contend with were, first,—the peculiar shape and levels of the ground; second,—the necessity of keeping the several departments (namely, the General, the School of Art, and the Industrial) distinct and with separate entrances; third and chief,—the prescribed condition that a part only of the Institute, also prescribed, was to be erected at present, but that the remainder was to be so arranged as to be merely an extension of the present arrangements.

We may say, broadly, that the General Department occupies the ground, principal, and basement floors, and is devoted to museums, meeting-rooms, mining record-room, news-room, libraries, coffee-room, theatre, and secretary's residence.

The School of Art occupies the whole of the two-pair floor, and comprises class-rooms, master's rooms, library, &c.

The Industrial Department occupies the whole of the three-pair floor, and comprises accommodation of a similar description, but less in amount.

THE MIDLAND AND BIRMINGHAM INSTITUTE: PLAN OF THE PRINCIPAL FLOOR.

THE MIDLAND AND BIRMINGHAM INSTITUTE.—Mr. Edward. M Barry, Architect.

THE PARIS EXHIBITION.

The following English members of the International Jury are named of the Legion of Honour, in consideration of services rendered to sciences, agriculture, industry, and the fine arts: —

To be Commanders.

Lord Hertford—Encouragement given to the arts.
Lord Ashburton—Services rendered to commerce.

To be Officers.

Sir David Brewster—Discoveries and works in optics.

Mr. Thomas Graham, Grand Master of the English Mint—Services rendered to science.

Mr. Bazley, President of the Chamber of Commerce of Manchester—Extensive manufactures.

To be Knights.

Sir William Hooker, Director of the Royal Gardens at Kew—Important services rendered to natural sciences.

Mr. Wilson, Professor of Agriculture at the University of Edinburgh—Remarkable collection of English agricultural productions.

Mr. Crampton, engineer of the Submarine Telegraph—Invention of a locomotive of great speed.

Mr. Robert Willis, Professor of Natural Sciences at Cambridge.

Mr. Wheatstone, Professor of Natural Philosophy at King's College — Application of the Electric Telegraph.

Mr. Hoffman, Professor in London — Chymical operations applied to glass.

Mr. Walter Crum, manufacturer at Glasgow—Perfection of his printing on cloth.

Mr. Gibson—Services rendered to manufactures and commerce.

Mr. Digby Wyatt, architect—Services rendered to manufactures and to the arts—Establishment of Schools for Industrial Drawing.

Mr. Thomas Delarue (England) — For the importance of his manufacture of paper and his numerous inventions.

Mr. Twining—For the initiative taken by him for the exhibition of articles of domestic economy — Services rendered to the working-classes.

Lord Elcho (England)—Painting.

Rank in the Legion of Honour has been conferred also on the following gentlemen, in their character of exhibitors, or as having contributed to the success of the Exhibition, viz.:—To be Commander—Professor Michael Faraday. To be Knights—Messrs. Lawes, of Rothamstead; W. Fairbairn, London; Mr. Platt, sen. Oldham; Lord Rosse; Professor Airy, Greenwich; Mr. Brett, London; Mr. Tennant, Glasgow; Dr. Neil Arnott, London; Mr. Robert Napier, London; Mr. Brunel, London; Mr. Stephenson, London; Mr. Samuel Jackson, Sheffield; Mr. Elkington, Birmingham; Mr. Minton, Stoke-upon-Trent; Mr. Titus Salt, Bradford; Mr. Baxter, Dundee; Mr. Crossley, Halifax; Mr. Mulready; Sir Charles Eastlake; Mr. Gibson (sculptor); Mr. Cockerell (architect); and Mr. Lupton, Darnton (Vice-President of the Chamber of Commerce, Leeds).

ARCHÆOLOGICAL MEETINGS.

The Kilkenny Archæological Society.—The November meeting of this very thriving society was held in the Tholsel-rooms, Kilkenny, on Wednesday in week before last, the Dean of Leighlin in the chair, when another lot of new members, eleven in number, was elected, and various presentations made to the society, some of them by Continental and American associations, and others from the London and Edinburgh Societies of Antiquaries and other British societies. Articles of interest were also exhibited. Mr. H. O'Neill sent a paper on the Cross of Cong, and the Rev. J. Graves read a paper by Mr. J. P. Prendergast, on the Ulster Creaghts.

The Bedfordshire Archæological Society.—The public annual meeting of this society was held in the Bedford Library, on Monday before last, Capt. Stuart, M.P. in the chair. After an address by the chairman, the annual report was read by one of the honorary secretaries, and was unanimously adopted, and a list of office-bearers approved of. Mr. G. Hurst, the Mayor of Bedford, then read a paper on the "Manor-House of Cople Wood End," where Butler is supposed to have written "Hudibras." The Rev. W. Monkhouse read a paper on "The nominal Definition of Bedfordshire Villages." Several presentations were afterwards made to the society.

The Norfolk Archæological Society.—The quarterly meeting of this society was held on Thursday in week before last, at the Guildhall, Norwich, when a communication from Mr. G. Johnson was read, respecting some discoveries of Roman remains at Gooderstone. A letter was also read as to the discovery of several urns at Ditchingham. A paper was then read by Mr. Harrod, hon. secretary, on the visit of Queen Elizabeth Woodville to the city of Norwich in the ninth year of Edward IV.'s reign, as given in the City records. The same gentleman gave an account of some recent investigations by him at Burgh Castle. He had not only discovered portions of foundations similar to those he had found in 1850, but also of the wall itself, and of oak piling, on which it had been built. He had traced the foundations for 200 feet. Other discoveries were made, including an immense mass of Roman concrete. Mr. Harrod considered the foundations he had traced to have been those of the west wall of the castrum.

INSTITUTION OF CIVIL ENGINEERS.

On the 13th instant the session was opened, Mr. James Simpson, president, in the chair, with a paper "On the Construction of Buoys, Beacons, and other Stationary Floating Bodies," by Mr. G. Herbert.

Floating sea marks, as ordinarily constructed, were, it was stated, admitted to possess the defect of riding uneasily on the waves, under which they were frequently buried, so as to be scarcely visible, when most required, besides which, it was not an uncommon circumstance, in heavy weather, to find that a buoy had broken its chain and floated away. The present form of the buoys, and the fact of the mooring chains being attached to a point far below the centre of gravity, sufficiently accounted for these and other acknowledged defects, and induced the proposition of a form of stationary floating body, which should have a tendency to ride easily, and to retain its perpendicularity, whilst the point of attachment of the mooring chain would be in such a situation as to subject it to the least amount of strain, and not be liable to draw the buoy down into the trough of the waves. With this view a wrought-iron pear-shaped buoy was constructed, of a circular form in plan, and terminating above in an apex, so distributing the weight, as that the centre of gravity should be situated a little below the centre of the plane of flotation, and the bottom was made concave and raised up internally, so as to form a cone, to the internal apex of which the mooring chain was attached.

This form was found so completely to answer the purpose, that several buoys were made by Messrs. Brown, Lenuox, and Co. for the Corporation of the Trinity House, and were pronounced to be superior to any previously built.

Encouraged by the success of the first experiments, the Trinity House authorized the construction of a wrought-iron Sea Beacon on the same principle. The floating base was 20 feet in diameter, divided by radiating bulk-heads in six water-tight compartments: it drew 4 feet 6 inches water, and supported a tower, also of wrought iron, 28 feet high, 7 feet diameter at the base, and 3 feet 6 inches diameter at the top, surmounted by an iron ball of the same diameter. This beacon was moored in the overfall of the sea, at the South-Sand Head of the Godwin Sands, and was admitted to have been the best and most conspicuous sea mark ever laid down.

It was now proposed to carry out this principle of construction upon a larger scale, and to erect upon the floating base a tower sufficiently large to serve as a substitute for a lighthouse. A plan for such a structure, as submitted to the Trinity-house by Sir Charles Fox, was described. The floating base was 80 feet in diameter, and drew 20 feet water: the tower was 130 feet high, 24 feet in diameter at the base, and 14 feet at the lantern: the weight of the tower and lantern was 117 tons; and the total displacement of the whole building was 1,602 tons; the centre of gravity being 2 feet 6 inches below the surface of the water.

The new form of sea light-tower was proposed to mark the sites of shoals, or rocks, or islands, which were difficult of access.

The lighthouse on the Skerryvore rock occupied seven years in building, and cost upwards of 90,000*l.*, whereas, by means of the Sea Light Tower, the same object might be accomplished in one year, at a cost of 30,000*l.* The site of the Bell Rock could be equally efficiently marked, at a cost of about 20,000*l.* instead of 60,000*l.*; and that of the Eddystone, at about 15,000*l.* instead of 40,000*l.*; and the new form of light towers would possess the advantage of being accessible in all weathers. The observations were limited to sea marks, but if the principle of construction proved to be correct, it would evidently be applicable to floating forts, and to almost every other description of stationary floating body, several designs for which were exhibited.

The Council of the Institution of Civil Engineers have awarded the following premiums:—

1. A Telford Medal, to James Barton, M. for his paper "On the economic Distribution of Material in the Base, or vertical portion, of Wrought-iron Beacons."
2. A Telford Medal, to Edward Ellis Allen, Assoc. for his paper "On Steam and Sailing Colliers, and the various Modes of Ballasting."
3. A Telford Medal, to Richard Alexander Robinson, Assoc. for his paper "On the Application of the Screw Propeller to the larger class of Sailing Vessels."
4. A Telford Medal, to Joseph Philips, for his "Description of the Iron Roof, in one Span, over the Joint Railway Station, Birmingham."
5. A Council Premium of Books, suitably bound and inscribed, to James Leslie, M. for his paper "On the Flow of Water through Pipes and Orifices."
6. A Council Premium of Books, suitably bound and inscribed, to Peter William Barlow, M. for his paper "On some peculiar Features of the Water-bearing Strata of the London Basin."
7. A Council Premium of Books, suitably bound and inscribed, to James Brunlees, M. for his "Description of the Sea Embankments across the Estuaries Kent and Leven, in Morecambe Bay, for the Ulverstone and Lancaster Railway."
8. A Council Premium of Books, suitably bound and inscribed, to Frederick Braithwaite, M. for his paper "On the Infiltration of Salt Water to the Springs of Wells under London and Liverpool."
9. A Council Premium of Books, suitably bound and inscribed, to George James Munday, Assoc. for his "Description of the Coffer-dams used in laying the Lines of Water Pipes from Richmond to Twickenham, across the Thames."
10. A Council Premium of Books, suitably bound and inscribed, to Lavington Evans Fletcher, Assoc. for his "Description of the Landore Viaduct, on the South Wales Railway."

SYMBOLS ON THE PENNY.

I apprehend that the Mint authorities will scarcely be thankful to "Penny Royal" for his attempt at a justification of the defects which I ventured to point out in our pennies. He alleges that the Scotch saltire is verily on Britannia's shield, but that it is invisible, being overlaid by the Irish saltire,—much as Albert Smith's photographic friend assured him that, on the blank sheet triumphantly submitted to his admiring gaze, there was a highly romantic scene in the dark depicted, only it was invisible.

"Penny Royal" might in the same way justify Britannia's uneasy seat on the edge of the round shield, by assuring us that there is in fact a smooth heap of rock quite convenient just behind the shield: no doubt there may be; but we would like to see it. So Caledonia's sons want to see their national emblem on the union jack, and are not content to be put off with a paltry "fimbriation!"

"Penny Royal" appeals for justification to some article in a defunct periodical; whereas, I appeal to all the union jacks in the British navy. Are the mint authorities, or are the dockyard authorities right? *Both cannot be.*

"Penny Royal" seems quite disposed to go the whole animal, for he even defends the putting the trident into Britannia's *left* hand. Surely that is not "the right thing in the right place," anyhow.

S.

PRIZES FOR ARCHITECTS AND SURVEYORS.

The courtesy with which you give insertion to the correspondence of your subscribers makes me bold enough to ask you to give publicity to a few remarks on some advertisements that appeared on the first page of the *Builder* last week. *Lowestoft* wants a man (they say a *surveyor*). The commissioners feeling the full importance of securing a properly qualified officer, determine to make the appointment public: so far so good. And as your *Builder* is the organ or representative of surveyors, through the channels of your pages, Lowestoft makes public its *want*, and likewise its munificence. You pay your gardener 1*l.* per week. The *very* light porters and messengers would scorn a situation of less value, and also that is paid weekly. Well, Lowestoft wants a *surveyor* for a *town* and *two parishes*. A man who can *make* plans, drawings, estimates, test materials, and see to the fulfilment of conditions of contracts; arrange sewerage and paving works; attend to the highways and byeways, even to surface cleansing, and superintend the execution thereof. For these various duties 50*l.* per annum, *payable quarterly*, with the servant's qualification, three months' notice before leaving. Mr Norton, the clerk of the commissioners, has boldly signed his name as the representative of this *want;* and I think that, for the information of the present state of the profession, he should give the result of his advertisement of the candidates and their testimonials, &c. &c. In the same number of your journal, the town-clerk of Hastings appeals to architects, *in any number*, to send in drawings for laying out nineteen acres of land as a cemetery, with chapels, lodges, and buildings, and promises that *one* of the candidates shall have 10*l.*—a sum, I will venture to affirm, that will not cover the expense the lucky man has incurred in tinting

the drawings; while another burial board (Northwood, Isle of Wight) offers similar terms for similar work, unless they make it optional with themselves either to employ the architect in the superintendence, or to keep his drawings for 10*l.* 10s. This is complete robbery; for I think after all it would be better to be paid for superintending the surface cleansing at Lowestoft at 50*l.* per annum than prepare all the requisite drawings, specification for nineteen acres of land, go down to the Isle of Wight (spend two days in the journey) to properly survey the site, and receive by a lucky chance in return 10*l.* 10s. If this be the payment for high art, I think many will have to end their existence either like Haydon, or in the workhouse. In making these remarks, Messrs. Norton, Shorter, and Damant have no right to complain, for *if they are right*, the effect will be for their benefit, viz. increased publicity to their *want*. J. B.

STAINED GLASS.

Memorial to late Lord Eldon.—Mr. Oliphant, of the New-road, has just completed a fourteenth-century window, designed as a memorial of the late Lord Eldon.

Trinity Church, Coventry.—Messrs. Heaton and Butler have obtained an order (in a competition of nine artists in glass) for placing a memorial east window in Trinity Church, Coventry, in honour of the late Mr. R. S. Cox, a benefactor to that city.

St. James's, Paddington.—Mr. Warrington has recently completed an east window for his parish church,—St. James's, Paddington.

Tralee.—Messrs. Gibbs have just executed sixteen stained-glass memorial windows for the Protestant Church, Tralee, Ireland.

St. Asaph.—The same artists are engaged to execute the stained-glass memorial window to the memory of the late Rev. Rowland Williams, many years one of the canons of St. Asaph Cathedral. The memorial is to be placed in the large west window of the cathedral, and will be finished in the early part of next year.

NEWCASTLE-UNDER-LYME SCHOOL OF ART.

The annual meeting of the Government School of Art at Newcastle-under-Lyme, was held in the lecture-hall of the institution, on Wednesday before last. The meeting was most respectably attended, and included a large number of ladies. Mr. S. Child, M.P. having taken the chair, addressed the meeting in an able speech.

The present meeting, he remarked, was an educational one, but it was to promote education of a special and peculiar kind, and which, perhaps, might be looked upon as merely ornamental, and nearly superfluous. He thought, however, that the arts of design had a material value, and were of great commercial importance. He had lately read a practical book written by a very practical man, the late Mr. Loudon. It was the last work of his life, and did not savour much of romance. It was called "Self-instruction for young Gardeners." There was a chapter in it upon architectural and mechanical drawing, which might be fairly called the commercial view of the question. The author said we were indebted to architectural and mechanical drawing for that application of science and art to manufacture which had contributed to our ease and luxury, had rendered mankind more wise and more happy, and which in the present state of society was necessary to our comfort. As to the utility of beauty, the speaker urged that all beauty consisted of symmetry, and the adjustment and proportion of form which constituted symmetry, was only the source of strength and endurance. Take, as an example, a few of the familiar things used by us in common life. Of tables, chairs, cups and saucers, the ugliest were always the clumsiest and most inconvenient, for they were wanting of a due proportion of parts. On the contrary, those which were the most elegant were also the most convenient, the strongest, and the most economical. The same principle obtained in the animal world. Especially must it be apparent to us in those animals of whose physical strength man availed himself. If we wanted to buy a horse we chose the handsomest we could find or could afford to purchase, not merely because his beauty was agreeable to our taste, but because we knew full well that in his elegant proportions was the best indication of his health, vigour, speed, and endurance. And the human form furnished the same example. Almost every one was familiar, either from engravings or casts, with the beautiful statue of Apollo. It presented a perfect image of health and strength, and it did so because it was the very perfection of form;—and that was beauty. He had spoken of those who professed to be purely utilitarians, and were not disposed to regard with any interest any pursuit or occupation which did not directly produce pounds, shillings, and pence. There was a class—he hoped it was a small one—who were nevertheless disposed to look upon the arts of design as something idle and frivolous. If it was a foolish and an idle thing, however, to admire and copy the beautiful, why was the earth so beautiful? Why the gay flowers? Wherefore the bright plumage of birds? Why the sparkling stream, and the varied foliage, and the endless variety of hill and dale, and sunshine and shadow, which adorned this beautiful world? Why should not one form and colour pervade all nature, if it be foolish to admire and imitate the varied beauty with which our earth was adorned?

Mr. Wyse, M.P. Mr. James Bateman, and other gentlemen also addressed the meeting, and the report was read, which congratulated the friends and patrons of the school on the circumstance that it had maintained its position. There was an adverse balance, however, to a small amount. After these proceedings the prizes were distributed.

MEASUREMENT OF COMBE DOWN STONE.

We have received letters from the Combe Down quarry-owners, complaining of the "sweeping" nature of the assertion. The question is, is it the general custom at the Combe Down Quarries to measure what the sellers call "close," but the buyers call "fraudulently;" or is this mode restricted to particular firms? We have seen copies of a correspondence on the subject (forwarded by the original complainant in our pages), wherein the parties complained of certainly admit the truth of the complaint, but attribute it to a custom of the Downs, which they cannot alter, and state that the price is fixed accordingly; in other words, that if full measure be given, the price per foot must be increased! If this really be the mode of doing business at Combe Down, the sooner an alteration be made the better. One of the results of course must be great loss to any contractor who should adopt in his estimates the price per foot advertised by the quarry-owners.

IS TOWN DRAINAGE BENEFICIAL?

SUNDERLAND.

The corporation of the borough of Sunderland are about to drain the town at an estimated cost of nearly 100,000*l.*; and as the few existing sewers are of an imperfect construction, perhaps, with the exception of those laid within the last seven years, the whole town will thus be included in one comprehensive system. The population is rapidly increasing, buildings are extending in every direction, open spaces are being closed in, and in a few years the fresh air will have still greater difficulty in penetrating the narrow lanes of the old town, or in sweeping away the effluvia from the conveniences and ash-places attached to every house in the new town. The town is naturally well disposed for draining purposes, the gradients being uniform, continuous, and steep, and the arrangement of the leading thoroughfares convenient, running, as they do, towards the sea. Before entering into the responsibility of expending the large sum of 100,000*l.* the council have halted at the outset, and now ask the following questions:—1st. Is drainage beneficial? 2nd. If so, whether is surface or underground the most so?

A difference of opinion appears to exist on the question; in some instances probably the result of an imperfect acquaintance with the subject, or resulting from the ever-vexing question of rates; but in the main it is a difference of opinion—and an opinion held in abeyance till further information be obtained—based on the experience of other large towns as represented through their rates of disease and mortality. The discussion and settlement of this great question, in addition to the many others already discussed in the pages of your journal will be a world-wide blessing; and in order that additional weight may be conveyed to your non-professional readers, I would suggest that the names of your contributors who may be interested in the matter, and favour you with information, should in every case be given.

T. Oliver, Jun.

Notices of Books.

A Lecture on the Position of Schools of Art. By E. Potter, President of Manchester School of Art. London: Chapman, King William-street. 1855.

The lecture by Mr. Potter here announced, was read at a *soirée* given by the Manchester School, on 30th ult. It contains a pretty full development of the author's ideas as to the important question of the position and prospects of schools of art in this country. Mr. Potter differs widely from the heads of the Government Department of Practical Art as to the best mode of administration for the promotion of art-education in the provinces. He objects to this being made a mere trade question. One thing, he remarks, is certain, and in this we cannot but agree with him, that local schools of art have as yet not been established on a permanent basis. The sum annually expended by Parliament or the Government in the promotion of art-education, he thinks, ought to be more equally distributed amongst the schools, and not so much restricted to the normal and other schools in the metropolis; but were the few thousands of pounds referred to so distributed, it seems very doubtful whether any benefit worth speaking of, either general or special, would result from such a subdivision of so small a sum. It is the author's opinion that a distinct and separate ministry of art ought to be instituted, or, in other words, that the Department of Practical Art, remodelled, should be entirely separated from the Board of Trade. The example of Paris, as a centre of art, the author thinks, should be inverted in this country, not imitated; that is, art-education requires to be diffused rather than centralized, and perhaps indeed it may be time enough to concentrate when the Government has radiated or diffused such a taste and knowledge of art as may be admitted already to exist in the provinces of France. Mr. Potter, however, appears to be much more anxious to point out the shortcomings of the Government than those of the provincial manufacturers and dealers, whose more immediate pecuniary interests will be largely benefited by the cultivation of a taste for and knowledge of art amongst the people.

VARIORUM.

A portable edition of the "Nuisances Removal and Diseases Prevention Acts, of 1855," by W. G. Lumley, Barrister-at-Law, has been published by Knight and Co. (Fleet-street). It contains some useful notes, and a report of the case, Jewell *v.* Etwall and another.——The fifteenth part of the "Micrographic Dictionary"* has been issued, and still sustains the interest of its previous issues. It is to be hoped that the authors and publishers will not hurry or shorten such a work on account of any mere impatience of its purchasers to have it completed. By-and-by people will not ask how long it took in the issue, but rather how the work is done.——The "Autobiography of a Beggar-boy" (Tweedie, Strand) describes the vicissitudes and adventures of a person of active mind and no little ability, but of very questionable worldly wisdom,—a "rolling stone" that seems to have been a long time in gathering any "moss," and a great politician withal, but who appears to have seen the errors of his ways, and at last to have settled down into gentlemanly respectability. The main purpose of the publication is said to be "to stimulate young men, to an endeavour to overcome the obstacles and difficulties which may surround their early positions in the world;" but we rather think it will be useful more as a beacon for the avoidance of many such obstacles and difficulties, than as a stimulus to face them, or a guide to conduct a young man through them.——"A Plan for the Effectual Improvement of the River Thames, by Mr. H. Robinson, C.E. has been published as a tract by Johnson, of St. Martin's-lane, Charing-cross. The author proposes to run a dam, with locks, &c. across the river near London-bridge, by which means the permanent level of the water would be raised, the feculent mud and accumulations of sewage sediment drained off by degrees, without the possibility of returning; and hence the water above bridge be made comparatively clear and innoxious, notwithstanding the constant influx of sewage as heretofore. Various other supposed or actual advantages are pointed out, and disadvantages and objections considered. The objections to such a scheme are very obvious, but all such proposals have the good effect of sustaining and promoting the public deliberations on the subject of this monster nuisance, and there may be valuable suggestions in many different schemes, which may tend towards the solution of the problem when well considered and discussed.

* "The Micrographic Dictionary; a Guide to the Examination and Investigation of the Structure and Nature of Microscopic Objects." By J. W. Griffith, F.L.S. and Arthur Henfrey, F.R.S. Professor of Botany, King's College, London. J. Van Voorst, Paternoster-row.

Miscellanea.

The Society of Arts.—On Wednesday, the 21st, the inaugural meeting of the 102nd session of this society was held at the Adelphi, when the medals awarded by the council for papers read at the weekly evening meetings during the last session, and for articles submitted to the society's committees, were presented to the various gentlemen entitled to them. An introductory address was delivered by the Rev. Dr. Booth, F.R.S. Chairman of Council. In the course of it Dr. Booth said,—"The council have gone to the expense and trouble of having a Bill carefully drawn, which, if accepted by the Government, and passed into a law, will settle the question of the *rating of Literary and Mechanics' Institutions* on a satisfactory and simple basis. I cannot, however, conceal from you my own impression that the Government will scarcely, at the present juncture of public affairs, accept a Bill which would necessarily open up a very wide and complicated financial question, and one, too, on which the best friends of the institutions are by no means agreed. It will be the duty of the council, however, to urge the matter on the attention of their Parliamentary Committee and the Government, and to use their best endeavours to bring the matter to a successful issue."

Lava Gas-burners.—The corrosion or rusting and choking up of metallic gas-burners is an old grievance, of which there has long seemed but little chance of getting rid, unless, indeed, by the use of some such unrusting metal as platinum or gold,—the sulphur in ordinary gas rendering even the less costly silver ineligible, though otherwise incorrodible. Some one, however, appears to have at length hit upon, and realized, the at least feasible idea of substituting a stony incombustible substance, which had already not only passed through the fire, but had lived, as it were, in, and been nourished and matured by, the fire itself, as may be said of *lava*, above all other stony matter. The gas-fitters and others are accordingly now, it seems, in course of being supplied with burners of this description, made of a close-grained and firm lava which admits of being turned, polished, and bored, to the requisite fish-tail, batswing, Argand, or other form, and either fitted with brass sockets, or simply shaped in the material itself, for mere insertion into the extremity of the branch-pipe or pendant. They are only of recent introduction, but have now been tested in the City, we are told, by nearly a year's constant use, without being either cleaned or touched, yet continuing, all that time, to yield the same full, clean, and well-shaped flame as at first, so as to be still equal to new, and, in fact, it is said, rather improved than otherwise by the action of the heat. Should the idea thus prove to be as practically useful as it certainly is feasible, metallic burners may at length be dispensed with.

The Bells for the Houses of Parliament.—Messrs. Warner, of Jewin-street, London, are about to cast the bells for the great clock of the Houses of Parliament. The principal bell is to be 9 feet diameter and to weigh about fourteen tons, and will be the largest bell (they say) ever cast in England. It is calculated that the four quarter-bells will weigh about ten tons more. The work is to be done from the directions of our correspondent, Mr. E. B. Denison, Q.C. from whose designs the clock has been made; and the bells are to be subject to the final approval of that gentleman and the Rev. W. Taylor, F.R.S. and Professor Wheatstone.

Cambridge Architectural Society.—The first meeting of the society for Michaelmas Term was held on Wednesday evening, November 7, the Rev. W. M. Campion in the chair. On the motion of the Rev. W. M. Campion, it was agreed to take some steps towards getting the subscription-list for a memorial window to the late Dr. Mill, in St. Andrew's Church, Barnwell, filled up. Mr. Bailey, of St. John's College, then read a paper on Cologne Cathedral. He dwelt chiefly on the history of the buildings, and read some extracts from Herr Bintzer's work on the Cathedral, which is now scarce. After describing the ceremony of laying the first stone, and the works till A.D. 1163 the relics of the three kings were deposited there, he stated how spread their legion was, and mentioned that even in Carinthia their initials E. M. B. were found carved over house-doors. After giving a vivid description of the consecration of the choir in 1321, he drew attention to the dimensions of the cathedral.

Lambeth Palace Chapel.—I am not able to ease the mind of your correspondent, "One who does not Travel from Dan to Beersheba and find all barren," on the subject of the removal of the sham maple decoration on the ancient oakwork in the chapel of Lambeth Palace; but I can tell him this, and any one may see it from the steam boats on the river, that the exterior of the said chapel has just been covered with a neat puritanical coat of yellow ochre, and looks horribly ill. Alpha.

Electro-Telegraphic Progress. — The completion of the telegraph from London to Constantinople, has been announced On the 1st and 2nd of October, says the *Malta Mail*, a submarine cable was most successfully laid down between Fort Kilia, near the entrance to the Bosphorus, and Varna, by Messrs. R. S. Newall and Co. of Gateshead-on-Tyne, the same firm that completed the lines between Varna and the Crimea a few months since. A land line of telegraph crosses the hills from Kilia to Therapia and Pera, so that instant communication may be made to and from all parts of Europe and the Crimea. The length of the Varna and Constantinople line is 200 miles, and the whole has been completed within three months. Messrs. Newall and Co. are now engaged in making a line of upwards of 800 miles in length, which will unite Constantinople and Alexandria.——The telegraph from England to India—a dream but yesterday as it were—bids fair to become a reality. The submarine line having been completed across the Mediterranean, the inventor is desirous to extend it to the Indian Peninsula. As far as Suez, says the *Friend of India*, he will be supported by the British Government, and his success is certain. From that point, however, he must trust to the East-India Company for official aid, without which it is impossible to raise the required capital.——The trial of persons at Berlin, accused of unlawfully revealing telegraphic intelligence for stock-jobbing purposes, came to a conclusion on 12th inst. Jauck, the clerk, was condemned to three years' imprisonment, with loss of social rights as a citizen for five years, for having transgressed his official duties; Julius Reichenheim, for having bribed an official, to two years' imprisonment, with loss of social rights for two years; and Isidor Reichenheim, to half this term; Meyer, the banker, for being an accomplice in the bribery, to two and a half years' imprisonment, and three years' social degradation.

Waterworks.—The new waterworks for Ipswich are progressing. The great distributing reservoir at the top of Christ Church Park is finished, as also the auxiliary reservoir in St. Helen's. For months past gangs of workmen have been laying down the mains, and progress has been made with the machinery at the central works. The great reservoir holds upwards of half a million of gallons, and was filled on Thursday in last week. —— The Cheadle Waterworks were opened last week, and the completion of the works was celebrated by a public dinner. The water was got by piercing the sandstone strata at Monk's-hill, an elevated piece of ground overlooking the centre of the town. At 60 yards in depth an abundant supply of fine sparkling water was got. Reservoir buildings, and machinery for raising the water, were then formed, and the contracts for a general house supply are just completed. Service pipes have now been laid down to most of the houses. Mr. E. S. Gisborne, of Derby, is the engineer.——A committee has been formed at Taunton, for the purpose of obtaining information relative to the probable cost of supplying this town with water from the surrounding districts. ——The corporation of Oldham have begun to make a road from Ogden Chapel to Piethorn Clough, where they intend to erect their new waterworks. There are to be three reservoirs formed out of valleys in Ogden and Butterworth, near Milnrow. Each of these reservoirs will only require one single embankment, straight across a valley. The largest embankment will not exceed 400 yards.——The Selby Waterworks, under the superintendence of Mr. John Linton, will soon be completed: they now allow the inhabitants to have an abundant supply of spring water from an Artesian well 110 yards deep. Many persons have already got pipes and taps into their houses, and receive a regular supply of water.

Exhibition of Art, &c. at Cardiff. — In the early part of December, an exhibition of art, manufactures, natural curiosities, &c. is to be held, with *conversazione* and dress concerts, in the Town-hall, Cardiff, and it is hoped that this spirited project may lead to the establishment of an institute and museum for the town: at all events, of the pecuniary profit of the undertaking, there appears to be every assurance. The Bridgewater exhibition yielded 1,350*l.* of which only 500*l.* were required for expenses, so that 850*l.* remained for the church restoration, to which it was devoted.

St. Peter's Church, Notting-hill.—The first stone of a church, to be called St. Peter's, has been laid on the Kensington Park estate. We are informed that it is to be in the Italian style of architecture, and Mr. Allom is the architect. The entire cost is estimated at about 5,500*l.*; and provision is made for 1,400 sittings. The extreme length is to be 100 feet; breadth, 62 feet, and it will have a tower 110 feet high. The interior will contain galleries, and be lighted from the roof.

Thames-tunnel. — During the week ending 17th November, 20 505 passengers passed through, and paid 85*l.* 8*s.* 9*d.* in tolls.

Fire-engines in Paris Exhibition.—The trials of fire-engines in Paris appear to have been very indifferently managed. The feat most spoken of was performed by a London Brigade fire-engine, exhibited by Mr. Merryweather, of Long-acre, and named "The Emperor," worked by twenty-six men: it threw a three-fourth-inch jet upwards of 120 feet. Some of the engines produced could not be worked, because part had been mislaid.

The "Black Gate" at Newcastle-upon-Tyne.—The *Newcastle Chronicle* urges the destruction of this ancient landmark as an improvement; but chiefly because a penny rate may be requisite for its preservation, and recommends the application of such a rate, in preference, to the establishment of a free library. The *Gateshead Observer* expresses surprise that the destruction of the Black Gate, one of the most interesting archæological relics of the town should be advocated as a measure of improvement. "Great need, indeed, must there be, of free libraries in Newcastle," remarks the *Observer*, "Of the Black Gate be an eyesore to the inhabitants, and they be blind to the propriety of preserving the 'unsightly structure.'"

Statue of Lord Melville at Edinburgh.—Operations have at length been commenced for placing Mr. Steel's colossal statue of Lord Melville, in bronze, on its site in the centre of the open space in front of the County-hall. The design and execution of the pedestal, which is to be an elevated one, have been entrusted to the superintendence of Mr. Bryce, architect.

The Working Classes.—Lord John Russell, in presiding, the other evening, at the annual dinner of the Warehousemen and Clerks' School, in London, said—"It was somewhat of a misnomer to attach to any particular classes of the community the appellation of 'the working classes.' The fact was, that with the exception of a very few, all persons in Great Britain belonged to the working classes. From the Queen on her throne, who had her anxieties and cares, and who must dedicate some hours of each day to the consideration of matters connected with the public welfare, down to the humblest labourer, who was earning his few shillings per week, and including between these extremes statesmen and merchants, and landed gentry, who really did their duty to their tenantry and their labourers—they all belonged to the working classes. And shame to those who did not belong to them."

Destruction of Ancient Remains at Southampton.—Mr. Philip Brannon, in a letter to the *Hampshire Advertiser*, as to the south castle or old gaol and other remains of the town fortifications of Southampton, complains that one after another of these interesting remnants of antiquity are disappearing, and he charges the corporation formally with a determination to persevere in their destruction, and protests against such Vandalism, and urges the public and the writers for the press to lose no time in annulling such discreditable doings. The point at present in danger appears to be the south gate and castle or old gaol. A writer in the *Hampshire Independent* denies, however, that its destruction is already planned, and says he cannot believe that the town council will be such Goths as to destroy it, more especially since it may be made useful as well as ornamental by being restored.

The Proposed Free Library for St. Mary's, Islington.—It is much to be regretted that mainly on the already somewhat hackneyed, and in this case most irrelevant, plea of the war and its expenses, a veto has been put upon the useful project of a free library in St. Mary's parish, Islington, the majority at the meeting of Friday last having been against its establishment, or rather against the halfpenny or farthing rate which its establishment implied. That it would have ere long been the means of diminishing the poor-rate by much more than the full penny a pound rate which forms the maximum under the Free Libraries' Act, there can be no doubt, so that the refusal to incur the requisite outlay was, to say the least of it, very shortsighted, even as a mere pecuniary calculation of profit and loss.

Tottenham Cemetery Chapels' Competition. —In response to the advertisement of the Tottenham Burial Board, for designs for the new Burial-ground Chapels, there were forty-seven competitors. The design selected was sent under the motto, "Labor et Spes." On opening the sealed envelope, it was found to have been sent by Messrs. Pritchett and Sons, of Darlington, architects, who are, therefore, the successful competitors.

Rating Keighley.—The Local Board of Health at Keighley having advertised for tenders for the making of a valuation-book of all the rateable property within the district, the following were received:

Mr. B. Hopkinson, Keighley	£35 10
Mr. J. Smith, Bradford (accepted)	30 0
Messrs. Parker and Rendall, Leeds	23 10
Mr. J. F. Higgins, Keighley	15 0

FOUNTAINS FOR HEREFORD.—In the *Builder* of last week you give the substance of a letter from a Hereford correspondent, signed "Aqua," in which he asks your readers to put him in the way of erecting fountains in the lawns and gardens of the citizens "*cheap, good*, and *elegant*." "Aqua," before making these suggestions, should make himself acquainted with the available pressure and the quantity of water likely to be consumed by the fountains: he says "*the pressure will be 25 or 26 feet*," whereas it is nearly 60 feet. The quantity of water that is proposed to be pumped is only 40,000 gallons per hour, to serve a population of 12,000, so that a limit must be placed to the fountains; and the only fountain which is likely to be erected will be a public one in the square, the overflow from which is to be used for a swimming-bath, and will be erected under the superintendence of the engineer for the Hereford Improvement Works. —JUSTITIA.

PROPOSED EXHIBITION AT THE MANCHESTER MECHANICS' INSTITUTION.—The readers of our advertisement columns will perceive that the directors of this very useful Institution intend to inaugurate their new building with an exhibition of works of fine art and industry, and they invite those who recognise the educational value of such institutions to aid them by the loan of fitting works and specimens. We cordially second their appeal.

ARCHITECTURAL ASSOCIATION.—At a meeting of this society, held on the 16th inst. at Lyon's Inn Hall, Strand, Mr. Arthur Allom in the chair, Mr. T. R. Smith read a paper "On the Fine Art Department of the Paris Universal Exhibition, with notes on the mode of Lighting employed there." At the close, some discussion took place, in which the Chairman, Mr. Sayer, Mr. Hayward, and other gentlemen joined.

SOAP.—As every necessary is advancing in price with a prospect of continuance, I feel it to be the duty of every lover of his country, to prevent as far as in his power such an affliction, particularly to the poor. I will not enter into detail, but offer a few remarks on one article, viz. tallow: a large quantity is consumed in the manufacture of soap, and as a considerable quantity of yellow soap is used for the washing of common articles, both linen and woollen, also for scouring and cleansing tables, floors, &c. I have proved the following composition to answer in every respect, full as well as soap for these purposes, viz. Fuller's earth and common soda, prepared as follows:—Dry perfectly by a moderate heat, 7lbs. of Fuller's earth: dissolve 1lb. of soda, in two quarts of water (soft is the best), which pour upon the Fuller's earth: stir them well together, so that they become intimately mixed, and add more water till reduced to a soft paste, so that it may be rubbed smooth with a knife, or ground as colour through a mill. This used in the same proportion as soap, will be found equally efficacious, at one half the cost. Thus our consumption of Russian tallow may be considerably decreased, a further advance in tallow and soap prevented, and our enemy's means for carrying on the war partly frustrated.—AN ENGLISHMAN.

THE LEWISHAM DISTRICT. — THE QUEEN *v.* BADGER.—In this case heard at the Court of Queen's Bench, Westminster, on the 14th inst. the justices of Kent, by an order of sessions, had dismissed a surveyor from his office of surveyor under the Metropolitan Buildings Act (the 7th and 8th Victoria, chap. 84), for receiving a fee to which he was not entitled under the Act. A *certiorari* had issued to bring up the order, and motion was made to quash it, upon the ground that it was bad upon its face, as not showing that the magistrates had jurisdiction. Mr. Pashley, Q.C. Mr. Deedes, and Mr. Rose, showed cause against the rule, which was supported by Mr. Bramwell, Q.C. Mr. Horne, and Mr. F. Russell. The Court took time to consider their decision.

MONUMENT TO MAJOR DALTON.—A crocketted Gothic pinnacle and stem, so to speak, on three steps and a plinth, has been put up in Fillingham Churchyard, to the memory of Major Thomas Dalton, who fell at Inkerman. According to the *Illustrated News*, it was designed and executed by Mr. Keyworth, of Hull.

RAILWAY SLEEPERS AND CHAIRS.—"Wright's Patent Bedplate-tie-sleeper and Vice-jaw Chair Fastening" is one of the modifications of Wright's Patent Continuous Bedplate Sleeper Iron Roadway, which stretches across the way, in one casting, without transverse joints, and is composed of one compound sleeper, two vice-jaws, and four locking bolts, consisting of two nuts and two pins. The Bedplate-tie-sleeper is intended to reduce the complication and number of loose parts now existing, and to add more absolute weight to the formation of the road, to which the rails are secured at once thus dispensing with loose chairs, spikes, and keys, and superseding the punching of holes through the rails, with the application of bolts and [illegible] other advantages in connection with the vice-jaw rail fastening.

CLEANSING TUBULAR DRAINS.—My practice with tubular drains is as follows:—Flushing pipes are brought up to the surface, at convenient distances from each other, and flushed from a hose, and a circular brush is put down the pipe to stir up any sediment that may be deposited on the bottom of the pipes. If this is practised periodically, it will keep the pipes always thoroughly cleansed, and completely obviate the necessity of large tunnels to allow men to travel through them and cleanse by hand. If this system of sweeping the drains and sewers were generally carried out, there could be no danger of any nuisance arising from stoppages in pipes. I find that a gutta percha pipe, with a stiff rope drawn through the bore, with a brush fixed on the end, answers the purpose very well: it can be coiled up in 100 feet lengths, and one man can work a 100 feet brush with great ease.—WILLIAM BURNS.

THE SOUTHAMPTON SHIPWRIGHTS have been unable to obtain the extra 1s. a day, and are now working at their former wages of 5s. a day.

A "WORKING MAN'S COLLEGE" is to be tried at Durham. The instruction is to be given in evening classes. The fee will be all but nominal.

A TOWN-HALL ON FIRE.—At Sheffield, on Tuesday before last, some woodwork adjoining a passage leading to the receiving-office, at the Town-hall, was ignited by a hot-air pipe used in the heating of the building. Part of the woodwork and fittings of a water-closet, behind which the ignited wood was placed, were removed, and the flames extinguished fortunately before much damage was done

IRON BALANCE-BRIDGES. The workmen of Mr. Finch's iron foundry, at Chepstow, have just completed the ironwork of one of three balance-bridges, ordered by the Monmouthshire Railway Company, for crossing the canal at Newport. The bridge is supported by four pillars, each 2 tons 15 cwt. of cast-iron, which, with the girders and other appurtenances, of wrought-iron, will make the whole weight nearly 22 tons.

WANTED IN LONDON.—In Mr. John Simon's last Report to the Commission of Sewers for the City of London, just now printed, the writer says,—"In modes to which I have referred so much has been done, or is doing, and the promise of advantage is so great, that it seems almost invidious to point out what remains undone. Yet I hope you will allow me to remind you of one very great intended good, which hitherto exists only in intention. The City of London possesses no public baths, no public laundries, no model dwellings. These institutions which, in their relation to the poor, are beyond most things reformatory and educational, and which seem in a peculiar manner to claim support from the wealth and authority of your great municipal government, have hitherto not made a beginning within the City. But I have reason to believe that many members of the corporation feel a warm interest in their projected establishment, and, without expressing any opinion as to the degree in which such an undertaking belongs to this commission, I do very earnestly hope that, either by your agency, or through some other section of the Corporation, there may soon be bestowed upon the industrious poor of the City, east and west, the incalculable boon of baths and washhouses, and that instead of many a noisome court, and in contrast to the wretched hovels of to-day, there may soon arise some fruitful types of model dwellings, built as becomes the richest municipality in the world, thoughtful for its labouring poor, and seeking to be recorded in the monuments of a wise beneficence."

CASTINGS IN MALLEABLE IRON.—Mr. John Crowley, of York, ironfounder, has patented some improvements in the manufacture of malleable cast iron. The inventor combines chloride of sodium, carbonaceous matter, oxide of manganese, carbonate of lime, and wrought-iron scraps, and the application thereof to the manufacturing of malleable cast iron. ——Mr. J. D. Morries Stirling, who has a process for rendering cast iron tough and malleable, in a communication to the *Birmingham Journal* on the subject, states, in quoting the opinions of Messrs. Eaton Hodgkinson, Owen, Lennie, and others, founded on direct practical experiment, that the strength of his iron is very nearly double that of the average strength of the iron of Great Britain, and *not* one-fourth only or one-fifth, as had been erroneously stated. Mr. Hodgkinson's experiments are said to have proved that in transverse strength, Blaenavon iron bore a test of 1·220 lbs.; Low Moor, 1·207 lbs.; while the toughened iron, with 20 per cent. of malleable scrap, stood a resistance of 2 174 lbs. In tensile strength, the average of sixteen different kinds of iron per square inch was 6·605 tons; Mr. Stirling's, 11·502 tons. Thirty-two steels, with per square inch the average of sixteen different kinds was 35·520 tons; Mr. Stirling's second quality, 54·640 tons.

A STATUE OF THE LAT. EARL OF BELFAST has been raised at Belfast, in Ireland. It stands in College-square, and was executed by Mr. Macdowal.

LEVELLING INSTRUMENT.—A levelling instrument, under the title of an inclinometer, was recently patented by Mr. Gillespie, of Edinburgh, and is now manufactured by Messrs. Young, Peddie, and Co. of that city. It is said to be useful for measuring, finding, and adjusting the depth and outfall of drains, water courses, conduits, surface slopes of land, embankments, roads, railway gradients, and in all levelling and sloping operations required in civil engineering. It consists of a rectangular parallelogram, or frame of mahogany or oak, strengthened at the angles with metal plates. On the top is a hinged horizontal bar, mounted with a spirit level, depending from which bar is a vertical arm, graduated, and carrying a plumb line, in such manner that any slope on which the base is placed is represented on the graduated scale at top. It is said to be light and portable. There seems to be much in common between this instrument and one some years since described in our columns, but by whom invented we do not recollect.

SMOKE-CONSUMING FURNACES. — Mr. George Napier, of Glasgow, has recently patented an apparatus for the prevention of smoke from furnaces. It is stated to be of simple construction, and applicable to furnaces now in use. The improvement is effected by means of a retort, heated by the waste gases, through which the cold air, entering by an air-flue, passes, and thereby becomes heated to a high temperature, previous to entering the furnace.

MONUMENT IN CANADA WEST.—A mural monument, designed by Messrs. Smith and Beattie, architects, is being erected in the church of St. Paul, by the citizens of London, Canada West, in memory of the late Colonel Chester, and the men of his regiment, who fell at the Alma. It consists of a trefoil-headed mural panel, surmounted by a crocketted canopy, all of freestone, with a quatrefoil of marble beneath the arch, to bear the inscription. Around the quatrefoil the back of the arch is diapered. It is altogether very creditable.

ANTIQUARIAN DISCOVERIES AT LENTON PRIORY, —In the course of laying down water-pipes in the streets of Old Lenton, several discoveries of considerable interest have been brought to light by Mr. J. Froggatt, of Lenton Poplars, and others taking an interest in archæology, in the vicinity of the once extensive Abbey or Priory of Lenton; of which, besides the shell of the old church, or probably of a separate chapel, there are now only portions of two pillars remaining in a garden. The recent excavations in Old Church-street and along the main street of Old Lenton, as well as along the street specially denominated the Abbey, including an area of many acres, have, however, revealed the great extent of the Abbey grounds, and shown, by the exhumation of the bones of men and animals, of the carved and moulded architectural stones of the former ecclesiastical buildings, such as the volutes of pillars and the mullions of windows, as well as occasionally of a rare old coin, that all traces of the monks are not yet absolutely extinct. Particulars of the recent discoveries are given in the *Notts. Guardian*, at the office of which some of the remains have been exhibited.

TENDERS.

For erecting two chapels, lodge, and boundary walls, at the Hadleigh cemetery. Mr. Edwin G. Pennington, architect. Quantities supplied by Mr. R. D. Benuett:—

H. Luff	£2,350 0 0

ADVERTISEMENTS.

BOROUGH of HALIFAX.—To ENGINEERS and SURVEYORS.—WANTED, a SURVEYOR, fully competent to take charge of the borough waterworks, gasworks, sewerage, and other public works of the borough, besides the usual business of the Corporation, including that of the Local Board of Health. He must be familiar with the practice of engineering in connection with the above-mentioned works, able to conduct surveys, prepare plans, drawings, and estimates of works of every description, and will be required to devote the whole of his time to the duties of his office. Salary, £250 per annum. Applications, with testimonials of qualification and competency, to be addressed to the General Purposes Committee, endorsed, "Application for office of Surveyor," and to be forwarded, under cover, to the undersigned, on or before the 1st day of JANUARY, 1856.—By order,

EDMUND MINSON WAVELL, Town Clerk, and Clerk to the Halifax Local Board of Health.

Town Clerk's Office, Halifax, November 13th, 1855.

WANTED, by the Engineer of a Public Company in London, a Young Man, from 17 to 20 years of age, as DRAWING CLERK and ASSISTANT, who has before been engaged in an Engineer's or Architect's Office, and is a good draughtsman.—Address, by letter, containing particulars of previous employment, &c. to Mr. P. G. B. care of W. H. Miller, esq. 6, Bridge-road, Lambeth.

WANTED, at the Effingham Works, Rotherham, for about three months, a man to act as CLERK of WORKS in the erection of new workshops, warehouses, &c. Liberal wages will be given to one who has been accustomed to contract work, and whose character for competency and integrity is approved.—Address, YATES, HAYWOOD, and CO. Rotherham.

WANTED, a respectable Youth, as an OFFICE LAD, 16 years of age, at 5s. per week. He must write a good hand, and if acquainted with geometrical or outline drawing it will be more desirable.—Address, P. W. J. care of Mr. Blight, Stationer, Fenchurch-street.

WANTED, in a Mahogany, Deal, and Timber Yard, a SALESMAN, accustomed to the Retail Department of the above Business. Salary, 100l to 120l per annum.—Address, by letter, to A. B. Alley's Newspaper office, 89, Chiswell-street, Finsbury.

WANTED, by a Surveyor in the City, a CLERK, who perfectly understands taking out quantities for Builders, and who is a fair draughtsman. State age and salary.—Address, post-paid, to H. Y. Office of "The Builder."

WANTED, immediately, a steady, energetic Young Man of single, preferred, from 20 to 27 years of age, who thoroughly understands general TOMB-STONE WORK and LETTERING, and must be capable of managing a business in that line, twenty or thirty miles from London. References indispensible.—Apply by letter, stating terms, to Messrs. BOULTON and HARRIS, Sculptors, 191, Carlisle-street, Westminster-road, Lambeth.

WANTED, FOUR good LAND SURVEYORS and TWO DRAUGHTSMEN.—Apply by letter to A. B. 29, Camden-street North, Camden town, London.

TO BUILDERS, CONTRACTORS, &c.

WANTED, by a respectable and well-educated Young Man, aged 33, a SITUATION as CLERK, &c.; understands the measurement of timber, and would make himself generally useful. No objection to the country, or to go abroad. Good references.—Address, A. B. Post office, Sidney-place, King's road, Chelsea.

TO NOBLEMEN AND GENTLEMEN.

WANTED, by a CLERK of WORKS, who has just completed his engagement in the country, where he has had the entire charge of everything, an ENGAGEMENT to take charge of a Gentleman's Estate for Repairing and Building. Can be well recommended by the architect where last employed.—Address, J. G. C. 8, Rochampton-street, Vauxhall-bridge-road.

WANTED, EMPLOYMENT, by two Young Men, Carpenters, to do the repairs of houses, or any other kind of work, by piece, or otherwise.—Address, H. B and J. W. 9, Gilbert's-buildings, Westminster-road.

WANTED, EMPLOYMENT, by a thorough practical Bricklayer. Can be strongly recommended.—Address A. W. 9, Queen-street, Battersea.

TO ARCHITECTS, BUILDERS, &c.

WANTED, by the Advertiser, aged 25, a SITUATION; he is a fair and quick draughtsman either in detail or finished drawings; fully competent to take out quantities or keep builders' books; is a first-class surveyor by chain or instrument. Salary not so much an object as a permanent engagement, but a temporary one would be accepted. Country not objected to. Address A. B. care of Mr. Pettifer, Somerset-road, Kingsland.

TO MASTER BUILDERS.

WANTED, by a Young Man, from the country, a PERMANENT SITUATION, as a THREE-BRANCH HAND (Plumber, Painter, and Glazier). Can do lead glazing.—Address, H. D. 1, King-street, Soho.

TO PLUMBERS, BUILDERS, &c.

WANTED, a SITUATION, by a Practical Hand, aged 35. As a competent master of the three branches—plumbing, painting, and glazing. Would be found useful in paper hanging, graining, and writing. Reference from his last employer, where he held the situation of Foreman.—Appy to L. T. 10, Park street, Dorset-square.

WANTED, by a Young Man aged 20, a SITUATION in a Timber Merchant's or Broker's office. Was four years in a Broker's Office, and can give satisfactory references as to character, &c. -Address, W. B. 5, Charlotte-street, Old Kent-road.

WANTED, for a Youth, a SITUATION as OUT DOOR APPRENTICE to a Carpenter and Joiner, in the vicinity of Tottenham court-road. A small premium will be given.—Direct to Y. Z. 4, Clarence-gardens, Regent's park.

WANTED, to take JOINERS' WORK, Preparing or Fixing, or Repairs. Good references can be given.—Address, J. A. 5, Mead-place, Westminster-road.

TO PLUMBERS AND BUILDERS

WANTED, a SITUATION, by a Young Man, aged 30, who thoroughly understands his business, as a PLUMBER. No objection to fill up time with painting and glazing. Good references if required, in or near town.—Address, A. B. C. 2, Edward street, York road, Lambeth.

TO CARPENTERS, BUILDERS, AND OTHERS.

WANTED, by a Young Man, aged 28 years, a SITUATION as FOREMAN or CLERK, who has been in business for himself for six years in London, and would not object to fill up his time at the bench within three miles of the City would be preferred. Can give unexceptionable reference as to character, &c.—Address, A. B care of Messrs. Pugh, Auctioneers, &c. 6, Blackman-street, Southwark.

TO BUILDERS, MASTER BRICKMAKERS, AND OTHERS

WANTED, a SITUATION, by a respectable Man, as FOREMAN of a BRICKFIELD, who has had practice in the various branches of malm bricks, common stocks, white and red close kiln bricks, and tiles, such as Suffolk or Norfolk. Upwards of thirty years' practice in London and Suffolk. Unexceptionable references.—Address, A. B. 1, Park-terrace, Lower Norwood, Surrey.

TO ENGINEERS AND CONTRACTORS

THE Advertiser, a student and prizeman of the Engineering Department, King's College, London, is thoroughly acquainted with surveying and levelling, and all the consequent calculations, plotting, &c.; is a good mechanical draughtsman, and able to estimate and measure quantities, wishes to obtain a SITUATION as CLERK to an Engineer or Contractor. Best testimonials. Salary required, 1l. 1s. per week.—Address, W. S. 14, Charterhouse-square.

TO ARCHITECTS.

THE Advertiser is disengaged; is a good Draughtsman and Colourist, well acquainted with Mediæval and Classic Architecture; has been fifteen years in the profession; aged 30. Terms moderate, and references good.—Address, Q. E. D. 3, Bloomfield-terrace, Pimlico.

TO ARCHITECTS, CIVIL ENGINEERS, IRONFOUNDERS, AND OTHERS

THE Advertiser wishes for an ENGAGEMENT as ASSISTANT; has had nine years' experience in the office and on the works, is a first-rate draughtsman, and thoroughly acquainted with building. Terms moderate.—Address, S. W. 278, High Holborn.

TO ARCHITECTS, SURVEYORS, AND BUILDERS

THE Advertiser, aged 20, the son of a builder, desires a RE-ENGAGEMENT in either of the above offices; has been accustomed to superintend works, can make fair and working drawings, and is well acquainted with the routine of the office. Address, A. D. Mr. Bryceson's, Green's-end, Woolwich.

TO ARCHITECTS.

THE Advertiser, who is a first-rate draughtsman, and has a thorough knowledge of detail and construction, is open to an ENGAGEMENT.—Address, G. G 30, Michael's place, Brompton.

TO ARCHITECTS, SURVEYORS, LAND-AGENTS, AND OTHERS

THE Advertiser, aged 22, is open to an ENGAGEMENT: is a neat draughtsman, can assist at taking out quantities, &c. Salary a secondary consideration. Unexceptionable references. Address, E. J. W. City Newsroom, Cheapside

TO TOWN-TRAVELLERS.

THE Advertisers wish to arrange with a TRAVELLER (one in the timber trade preferred) who has a good connection with first-class builders, for the SALE on COMMISSION, of ARTICLES which are largely consumed by them, and who could undertake their agency as an addition to his present business; no others need apply.—Reply, with real name, address, and particulars, to K. L. 18, Brudenell-place, New North-road.

TO ARCHITECTS, BUILDERS, &c.

THE Advertiser, who has been carrying on the Building Business for several years, but through reverse circumstances is desirous of relinquishing it, begs to give notice that he is ready to engage himself, either in the office or as general Foreman, or Clerk of Works. Has a thorough knowledge of the business, and is quick at drawing, taking out quantities, and accounts. No objection to the country. Address, F. L. Mr. Burr's, 12, Paternoster-row.

THE ORGAN.—An Architect, who well understands this instrument and its construction, will be happy to PLAN, DESIGN, and SUPERINTEND, for those who may require such services. He also dispenses the front pipes in gold and colours, at a moderate price.—Address, T. C. L. 8, Cannon-row, Westminster.

OCCASIONAL, or PERMANENT EMPLOYMENT, WANTED, by an active, Middle-aged Man, of address, a rapid penman, accurate accountant, and well conducted with business, to put up his books that may have fallen into arrear, prepare and make out current accounts, or to assist generally in the counting-house, at a moderate salary.—Address, Z. Office of "The Builder."

TO ARCHITECTS

A GOOD and expeditious DRAUGHTSMAN, who is perfectly capable of setting up working and finished drawings, perspectives, &c. is a good colourist, and understands foreshortening, or otherwise is desirous of meeting with an ENGAGEMENT. Terms moderate. Address, C. B. R. 87, Manchester-street, Regent's park.

A CLERK of WORKS, who is practically acquainted with every department, and who has had charge of large extensive works, is required. Highest references will be given and required. Address, A. Mr. Williamson's, 17, Great Ailie-street, Goodman's-fields.

TO LAND AGENTS AND SURVEYORS.

A YOUTH is desirous of obtaining an ENGAGEMENT as an ASSISTANT in the above capacity. Is capable of drawing, plotting, printing, &c. For specimens, address A. B. Mr. Bateman's, Law Stationer, Took's court, Chancery-lane.

TO BUILDERS.

AN experienced PLASTERER wishes for EMPLOYMENT; has had the care of work in Town,—day work or contract. Security given. Finishing at a reasonable price.—Address, A. L. Office of "The Builder."

TO ARCHITECTS, &c.

A GENTLEMAN (aged 27), of first-class abilities as Draughtsman, and with great practical experience, is OPEN to an ENGAGEMENT.—Address, F. P. W. 17, Marlborough-square, Chelsea

TO BUILDERS, PAINTERS, &c.

A GOOD GRAINER, desirous of being employed, will UNDERTAKE WORK, either in town or country, at a very moderate price.—Address, W. ELLIS, No. 133, Wardour-street.

AS ASSISTANT ENGINEER, or CONTRACTOR'S AGENT.—A GENTLEMAN, 34 years of age, is open to an ENGAGEMENT. He is a good surveyor, level and draughtsman, and has also had much practice as a mechanical engineer. Has been several years upon the continent, engaged on railway and other works. Speaks the Spanish, and has a tolerable knowledge of the French language.—Address, E. H. O. Office of "The Builder."

TO ARCHITECTS.

A GOOD DRAUGHTSMAN, well acquainted with English and classic Architecture, and accustomed to the general routine of an Architect's Office, requires a SITUATION at once, in town or country.—Address, G. B. D. Office of "The Builder."

TO PLUMBERS, BUILDERS, AND OTHERS

A YOUNG MAN wishes to ENGAGE himself for twelve or eighteen months, as an IMPROVER in PLUMBING. He is willing to fill up time in painting and glazing, at which he is quite competent. No objection to the country.—Address (prepaid), C. W. 7, Walton-street, Hans-place, Chelsea.

AN ASSISTANT, who has been seven years with an Architect and Surveyor, desires a PERMANENT SITUATION.—Address, C. L. Office of "The Builder."

A COPYIST and GENERAL DRAUGHTSMAN has made arrangements to undertake the preparation of COMPETITION and DETAIL DRAWINGS, at the shortest notice practicable, and upon very reasonable terms.

N.B. Drawings traced, specifications, reports, bills of quantities, &c. copied with precision and despatch.—Address, L. H. Z. Office of "The Builder."

AS SURVEYOR'S, ENGINEER'S, or LAND AGENT'S ASSISTANT.—A Gentleman, aged 26, a good Land Surveyor, Mapper and Valuer, Accountant and Correspondent, with a knowledge of Farming, is now open to an ENGAGEMENT. Reference to last employer (a nobleman's agent). Salary about 100 guineas.—Address, W. B. 96, Hatton-garden, London.

TO ARCHITECTS.

A YOUNG MAN, who has served his time to an Architect in the City, and subsequent years' practice in other offices, is desirous of an ENGAGEMENT in a first-rate Office. Salary not so much an object as the practice. Good references.—Address, J. H. 7, Guildford-road, Greenwich.

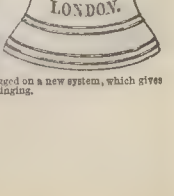
TO BUILDERS AND TIMBER MERCHANTS.

A YOUNG MAN, who has had good practice in measuring, estimating, and preparing working drawings, is OPEN to an ENGAGEMENT as CLERK. Three years' reference can be given to present employers.—Address, T. H. 33, Bouverie-street, Fleet-street.

TO CARPENTERS, BUILDERS, &c. IN TOWN OR COUNTRY.

A STEADY YOUNG MAN, who has just left a London shop, wants EMPLOYMENT. Wages not so much import as constant work. Apply to V. Bechive Coffee-shop, 7, Cumberland-place, Newington, Surrey.

COMPETITION and other DRAWINGS coloured by an experienced Architectural Colourist on reasonable terms. Specimens produced. Drawings coloured and transmitted to the country by post.—Address, G. BATHOLME, 3, Great James-street, Bedford-row, Holborn.



ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing, Colouring, Shading and Tinting, Ornamental and Water-Colour Drawing, Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near the Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, ready in tune, true in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, ready in tune.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the chromatic scale, with improved Clappers, and hanged on a new system, which gives a superior tone and facility for ringing.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and Temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM FIGGOTT, 135, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO WEBBING and INDIA-RUBBER MANUFACTURERS and CAPITALISTS, generally.—Whereas the Advertiser having patented an invention for an article of general utility, in which Webbing and India-Rubber is largely consumed, is OPEN to treat with Manufacturers of the same, and Capitalists generally, in reference to the said invention—Address, A. B. C. No. 100, Dean-street, Oxford-street, London.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—" March 10th, 1853. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N B From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON

AMERICAN VULCANISED INDIA-RUBBER, for Engineering, Mechanical, and Manufacturing Purposes; Steam Packing, Valves, Discs and Joints; Washers for Steel and Cold Water Joints; Machine Belting or Driving Bands; Steam, Fire-engine, Brewers' Conducting, and Garden Hose; Drain and Gas Tubing, Printing Blankets for Steam and Hand Presses. Sole Manufacturers of India Rubber Combs.

DUBUC, BACON, and CO. 44, St. Paul's-churchyard, London.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagnelle tables.

Diving-dresses of superior make, and improved Vulcanized Rubber Soup, by-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions suiting Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order

N B All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambrdge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c is foreign, is adopted by many in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of HAS. MACINTOSH and CO. Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act up on it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in oil; also for Plaster Coatings, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT—and if not so stamped, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND and ROMAN CEMENT, TERRA COTTA POTS, &c. J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that the whole of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

---

NOTICE.—BLUE LIAS LIME.— L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Rockton, Warwickshire, and are now ex pleting direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 6d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Woodham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855. CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, super ably to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.

BRICK, LIME, and CEMENT MERCHANTS,

NORTHAM BLUE LIAS LIME DEPOT

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lea, at a sale any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORT- LAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not effervesce in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. PUDENS and Co. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes for which applicable.—Orders received at Cleat's-wharf-yard, near the Works.

PORTLAND CEMENT.— FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and Others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use among them; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers, and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTH- FLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first class quality, for the home and foreign trade. Portland Cement is manufactured at these works with special reference to its destination, whether for stuccoing, brick-work, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth

---

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied or shipment, on advantageous terms

---

PARIAN CEMENT, for Internal Use, to be painted in a few hours and covered within a couple of days. FRANCIS BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London

---

GEO. & THOS. EARLE, CEMENT MANU- FACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs. Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

---

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architecture, Embellishments, &c., will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine do.	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis

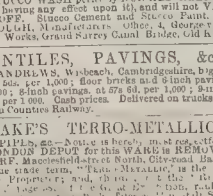
---

11 George-yard, Lombard-street, City

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand in added and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses These well-known hard Stuccoes dry so quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and their friends that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enables them thereby to transact and orders they may receive to any station on the line, or shipped on board any steamboat or barge they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, as printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.



Agents in London: Messrs. GEORGE POTTER and CO. Lime Merchants, Patent Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, Jun. ROMAN and PORT- LAND CEMENT MANUFACTURER, Crown Wharf, Grent Scotland-yard, Westminster

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH purifies it NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUN OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers. Office, 4, George-yard, Lombard-street Works, Grand Surrey Canal Bridge, Old Kent-road.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6-inch pavings, at 37s. 6d. per 1,000; 8-inch pavings, at 57s. 6d. per 1,000; 9-inch pavings, at 75s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road, Basin. Secondly that the trade term, "Terro-Metallic," is the exclusive right of the Proprietors; and, therefore, to the Messrs. or Mr. [illegible] Peake, [illegible] Peake, or Peakes, [illegible] Stafford Ware, &c. [illegible] the Road in the world.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 69, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. Be a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PRIZE BRICK-MAKING MACHINE.— CHAMBERLAIN'S PATENT. This portable machine will make 20,000 solid bricks per day, with 3-horse power. One man to feed the machine with clay, and boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helen's, September 26th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 9th, 1855. Apply for particulars to Mr. HUMPHREY CHAMBERLAIN, Kempsey, Worcester.

THE PATENT BRICK-MACHINE COM- PANY invite ORDERS for their improved machines, the only ones that manufacture solid bricks equal to hand-made. A machine, and bricks made by it, may be seen in a field near London. H. C. MOUNT, Secretary.

37, King William-street, City.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.—Grey stocks, 23s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet-pans, Furnace-blocks, Fire-bricks, Gas-retorts, Crucibles, &c. &c. The completion of the Kinson Pottery Paves the Proprietors in a position to supply Builders and the Trade generally, with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found upon the estate. There is also a plentiful quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London purchasers, upon favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works

---

WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent — Mr. J. UNWIN, Private Residence, 69 Nelson-square, Blackfriars-road

---

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of a mile's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, Malm Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-and-red Paving Sand supplied in any quantity on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

TO CONTRACTORS, BUILDERS, &c.

HARD-BURNT CLAMP, 22s. 6d. per Thousand. Red Malm Bunting and Paving Bricks. Black and Red Tiles, Land Drain-pipes, &c. delivered to any station on the London and Brighton Railway. Apply to E. A. COLWELL and Co. Burgess-hill; or No. 6, Old Fish-street, Doctors' Commons, London

---

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the Rave Levels, or by rail to any station on the Eastern Counties Railway, with which company they connect it with it. Also, flints for building boundary walls, stables, cottages, &c. by quoting with each order the expense of cartage. Also, lime, chalk, chalk rubble, gravel, land, and ballast. Whatever of the best quality, lime, both white and blue, bricks, fire goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex, or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

BRICKFIELD TO BE LET, most eligibly situate in Kent. Good steam and horse power on the river, with capital wharfs and plant, &c. Peculiarly worthy will be highly remunerative. Terms very low. Apply to Mr. COLLINS, Architect, &c. 34, Montague-place, Russell-square.

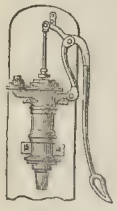
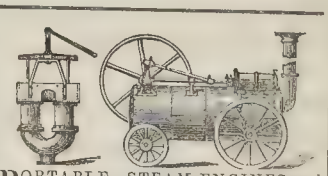
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.



REDUCTION IN THE PRICE OF CLOSET-PANS.



DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

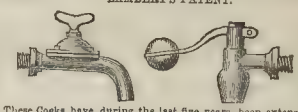
A FOUR-HORSE POWER PORTABLE STEAM-ENGINE FOR SALE.—Apply to WILLIAM DRAY and Co. Swan-lane, Upper Thames-street, London.

A TWELVE-HORSE HIGH-PRESSURE STEAM-ENGINE and BOILER to be DISPOSED OF, for 100. It must be removed immediately by the purchaser, in order to make room for new machinery.—Apply to DOULTON and WATTS, High-street, Lambeth.

TO WATER COMPANIES AND PLUMBERS.
BURDEN'S PATENT HIGH-PRESSURE COCKS.—These cocks are remarkably simple in their construction, very durable, cheap, not liable to get out of order, and have been most successfully used for a period of three years, under a continuous test pressure, varying from 200 to 450 feet. The following is one of the latest testimonials received:—"Stirling, 4th September, 1855. At a meeting of the Water Commissioners held this day it was unanimously resolved to recommend Burden's Water Cock for general use. It has been on trial here for nearly three years. During that period it has successfully resisted the high pressure of water in Stirling, amounting to from 200 to 450 feet, about the highest pressure in the kingdom. The Commissioners confidently recommend to the public generally the above cocks, as the very best for high-pressure purposes, from the simplicity of their construction, cheapness, and durability. Owing to the entire absence of leakage, they will effect a saving of from 15 to 20 per cent. of water over the cocks that have been hitherto in use.—By order of the Commissioners, JOHN SAWERS, Provost, Chairman."

SAMUEL SHEPPARD, Sole Manufacturer.
JAMES STREET, SAINT PAUL'S, BIRMINGHAM.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London

---

PRIZE MEDAL, CLASS 2.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short street, New-cut, Lambeth.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

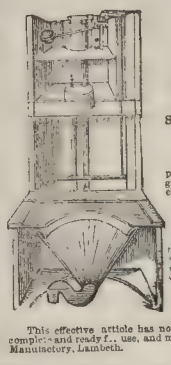
Pan, 3s. 6d.



Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN, Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

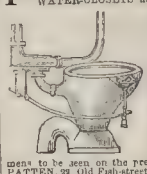
LAMBERT'S SELF-CLOSING
LAVATORY AND CLOSET VALVE,
No 7

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.
N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.



E. and W. STURGE invite special attention
to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c., also, to their Paving, Sinks, &c.; Stone of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.
N.B. The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.
January, 1855

BOARD of TRADE DEPARTMENT of SCIENCE and ART — INSTRUCTION in ART. — TRAINING SCHOOL, MARLBOROUGH-HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them, to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufactures, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still life, &c. the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving in Wood, and Lithography in Chalk and Colour The two Last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees £1 per session, or part of the session. For Evening Classes only, £1 per session.

The Class for Practical Geometry and Perspective, or that for Modelling and Casting, may be attended separately on payment of a fee of £1 per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. Mann. Fee £2 per session,—Advanced Class, £2, and £1; Elementary Class, £1; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

SURVEYOR WANTED.—The Local Board of Health and the Council of the Borough of Great Yarmouth are desirous of engaging a qualified person to perform the duties of SURVEYOR and INSPECTOR of NUISANCES to the Board of Health, and Surveyor to the Town Council; to be restricted from any other occupation or employment. Total salary, £150. Applications, stating age, with testimonials, are to be addressed to the Town Clerk, not later than the 20th DECEMBER next. Great Yarmouth, 27th November, 1855.

ROTHERHAM and KIMBERWORTH LOCAL BOARD of HEALTH WANTED by the above Board, a GENTLEMAN of experience as SURVEYOR. The candidate must have a knowledge of engineering, especially in connection with works of water-supply, drainage, sewerage, and surface cleansing; competent to conduct surveys, take levels and sections, prepare plans, drawings, and estimates for works of every description, and able to superintend the execution thereof, test the materials, and see to the fulfilment of the conditions of the contracts for executing such works. He also will be required to report upon all new buildings within the district, as to their drainage, levels, and other conveniences, and also upon cases of nuisance, and generally possess a thorough knowledge of the repair of highways, and of all the duties required by the Public Health Act, 1858. The whole time of the surveyor is to be devoted to the duties assigned to him, and he is to be restricted from undertaking any other employment. Candidates are to state their age, previous occupation, and the salary they would expect to receive, but are not required to attend personally until summoned; and no canvassing will be sanctioned—Applications, with testimonials of character and competency, addressed to "The Chairman," must be forwarded to me on or before the 14th day of DECEMBER next, at TEN o'clock a.m.—By order,

JNO BARRAS, Clerk.

Public Offices, Rotherham, November 22, 1855.

BOROUGH of HALIFAX.—To ENGINEERS and SURVEYORS.—WANTED, a SURVEYOR, fully competent to take charge of the borough waterworks, sewerage, and other public works of the borough, besides the usual business of the Corporation, including that of the Local Board of Health. He must be familiar with the practice of engineering in connection with the above-mentioned works, able to conduct surveys, prepare plans, drawings, and estimates of works of every description and will be required to devote the whole of his time to the duties thus above. Salary £250 per annum. Applications, with testimonials of qualification and competency, to be addressed to the General Purposes Committee, endorsed, "Application for Office of Surveyor," and to be forwarded, under cover, to the undersigned, on or before the 1st day of JANUARY, 1856.—By order,

EDMUND MINSON WAVELL, Town Clerk, and Clerk to the Halifax Local Board of Health.

Town Clerk's Office, Halifax, November 17th, 1855.

ARCHITECTURAL EXHIBITION. Suffolk-street Galleries, Pall-mall East.—All Articles for the Department of Materials and Manufactures intended to be delivered at the Architectural Exhibition next, DECEMBER next, and Drawings of Buildings of British Architects will report upon such of the Articles exhibited as may seem meritorious and deserving of notice, and the committee believe that this will confer a great benefit upon exhibitors, as it will tend to bring into notice and to recommend to adoption all those things which may deserve attention. All Articles for must be done by each Exhibitor. The committee do not charge for the space, but as an absolute profit and a guarantee is required. subscriptions will be gladly received towards the necessary expenses.

TO BUILDERS.

THE ABERYSTWYTH CLOCK-TOWER. Parties desirous of TENDERING for the WORKS in connection with the above, may inspect the plans and specification at the office of Mr. WELLS, Llangibby, Usk, Mon., or at the Office of the Architect, Mr. E. TOWLIN SMITHSON, Clear Building, Birmingham, on and after the 1st DECEMBER next. Tenders will be received by Mr. WELLS, Aberystwyth, up to the 18th DECEMBER.—The committee do not bind themselves to accept the lowest Tender.

CONTRACTS.

Royal Engineer Office, Portsmouth, 14th November, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer, Portsmouth, hereby gives notice, that sealed TENDERS will be received at the Office of the Director-General of Works, War Department, Pall mall, London, on or before WEDNESDAY, the 12th day of DECEMBER, 1855, from persons desirous of contracting for certain ADDITIONS and ALTERATIONS to Clarence Barracks, Portsmouth, the plans and specifications for which may be seen, and all necessary information obtained, together with printed forms of Tender, at this Office, between the hours of TEN and FOUR each day (Sundays excepted) until the 11th proximo. The person whose Tender may be accepted, will be required to produce two eligible sureties, who must join with him in and severally in a bond of £600 for the due performance of the contract by the 30th NOVEMBER, 1856. The War Department reserve the right of rejecting the whole or any of the Tenders. No notice will be taken of a Tender unless upon the printed form.

NOTICE to BUILDERS.—Royal Engineers' Office, Portsmouth, November 8, 1855. Notice is hereby given, that SEALED TENDERS will be received at the Engineer Office, Pall-mall, London, from such persons desirous to contract for executing the UNDERMENTIONED ERECTIONS at ROYAL HOSPITAL at Windsor Barracks, country of Hants. Plans and every information may be seen at the Royal Engineers' Office, Portsmouth, at all usual hours of Office business (excepting Saturdays, which excepted) until DECEMBER 11, 1855. Tenders to be delivered on or before that day. The War Department reserve to themselves the right to reject the whole or any of the TENDERS. No notice will be taken of any Tender unless made on the printed forms, to be obtained at the Royal Engineer Office, Portsmouth.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that sealed Tenders will be received by the Director General of the Ordnance, War Department, Pall mall, London, on or before the 12th DECEMBER, 1855, for the LIKE TENDER for a NEW BLOCK of SOLDIERS' BARRACKS, for the Welsh Militia Barracks, St. James's park. The specification and plans for the above work may be seen and forms of Tender obtained at the Royal Engineer Office, 10, New Palace Yard, Westminster, between the hours of TEN and THREE o'clock, from the 14th to the 27th of DECEMBER. The War Department reserves to itself the right of rejecting the whole of the Tenders.

Royal Engineer's Office, London District, 21st December, 1855

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 11th day of DECEMBER next, at ONE o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT, for the LAYING DOWN, in CONSTRUCTING, and COMPLETING, the several Sewers, certain intended BRICK and PIPE SEWERS, 15,620 feet in length, or thereabouts, with other Works in connection therewith, in Northumberland-street, Strand, Downing-street, Great George-street, Little Chapel-street, Old Pye-street, Petty-France, Westminster, Gloucester-street West, Inner-mews, and other streets and places in the parish of Middlesex, and the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, can be inspected, and particulars obtained, at the principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 3rd day of DECEMBER next. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted, will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square.
Dated this 22nd day of November, 1855.

TO CONTRACTORS

LINCOLNSHIRE.—NEW TUNNEL, with SLUICE DOORS, SEA RACE, LAND DOORS & c. at BOSTON.—ALL persons willing to CONTRACT for Building a New Tunnel of Brick and Stonework, with Sluice Doors, New Channel, Sea Race, Land Doors, &c. in the parish of Skirbeck, in the county of Lincoln, may inspect the plans and specification at the Office, which may be seen, in readiness, on Mr. LEWIN, Engineer, Boston, or at my office in Spilsby, and desired to deliver their proposals in writing, sealed up, at a Court of Sewers to be held at the Sessions House, in Spilsby, on MONDAY, the 3rd, at 11 o'clock precisely, at which time such proposals will be opened and read, with such sureties, for the performance of the Contract.

By order
W. WALKER, Jun. Clerk of Sewers.

Clerk of Sewers' Office, Spilsby, Nov. 24, 1855.

Note.—Engineering and Surveying work may be treated for by applying to Mr. JOHN DAVEY, of Ingoldmells, Dis rict, who will point out the same.

Tewkesbury, Dec. 1, 1855.

TO BUILDERS AND OTHERS.

THE BURIAL BOARD for the Parish of WEST HAM, in the county of Essex, require TENDERS for the GOOD PLAIN BRICK WALLS of the West Ham Cemetery, at the Romford-road, to build such parts of the said walls as may be required, and to build a dwarf wall of about 1,600 lineal yards in length, with a coping, to range, and to form a proper building line, and also to supply new lock gates and stiles, and to repair such parts of the outer wall of the church-yard, and to supply the stone for new steps, and for any other purposes that it may be wanted, and to do and perform all the Brickwork and other work; and also to level such of the paths and other parts of the said ground as may be required, and to find all the materials, and to do all such other works incidental to the execution of the same as may be ordered by Mr. F. KNIGHTLEY, Architect, Surveyor, and Clerk of Works, until the 15th of DECEMBER, between which day of DECEMBER and FOUR o'clock in the afternoon of the 31st day of DECEMBER the Board will proceed to themselves to accept the lowest or any other Tender; and the party whose Tender shall be accepted will receive notice thereof, and have to execute a contract or agreement for the due performance of all matters therein contained. Persons attending at the meeting may tender. Each Tender to be sealed and marked "Tender for Brick Walls," and to be delivered or sent by post, addressed to Mr. JOHN SIMSON, Clerk to the Burial Board, Bakers-house, Stratford, Essex, and to be delivered by TWELVE o'clock on MONDAY, the 10th of DECEMBER now next, after which hour no Tender will be received.

Date November, 1855.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; also for water, high-pressure cocks, &c. Manufacturers of Dr. ARNOTT'S improved ventilators.—HULETT and CO., 85, High Holborn.

CASTINGS for ENGINEERS, BUILDERS, and CONTRACTORS, supplied extensively by
J. DIXON & CO.
WINDSOR WORKS, CITY ROAD, LONDON.
NB The Trade should call for a Copy of their Circular.

Brick Moulds kept in stock. Any size made to order.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT Wood and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', JOHN JAMES, and Co.'s, Wharf, Builders and Cabinet Makers, Ironmonger, Bethlehem-st. 26, Watling-street, City, and see in action this very simple, powerful, and cheap 4-tool machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

NAILS and IRONMONGERY, from BIRMINGHAM direct. Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

IRONMONGERY.
PFEIL AND STEDALL.
THE LARGEST STOCK AT
THE LOWEST PRICE,
5 AND 6, BROAD-STREET, BLOOMSBURY.

COMPACT SAW-MILL.—TO BE DISPOSED OF the MACHINERY and POSSESSION of a compact SAW-MILL, in Southwark. The machinery is quite new, and includes one deal frame circular saw-bench, 8-horse power, direct acting engine and boiler, shafting, driving gear, &c. The premises are held at 45l. per annum. The machinery will be sold in one lot, for removal, if desired.—For further particulars, apply to Messrs. FULLER and HORSEY, 5, Bitter-street, City.

TO MACHINISTS.
WANTED, a thoroughly good-conditioned, second hand VERTICAL DEAL SAW FRAME, to cut 18-inch deals, with saws, &c. complete. Address, E. JENNINGS, Surveyor, Windsor, with lowest cash price, name of maker, and other particulars.

IMPORTANT to BUILDERS, SAW-MILL PROPRIETORS, CONTRACTORS, TIMBER MERCHANTS, and OTHERS.—TO BE SOLD by PRIVATE CONTRACT, a very powerful DOUBLE DEAL FRAME, and TWO excellent CIRCULAR BENCHES, with the necessary saws and tackle for working the same; or to a respectable party wishing to open a timber and deal trade, the premises would be let, with the above machinery, now in first-rate working condition. This is an opportunity that rarely occurs having a siding on the railway, that goods come in direct from the docks or the river, and to a business man cannot fail to answer. Immediate application must be made, as the present proprietors are disposing of this branch in consequence of the rapid increase of their machine trade.—Apply at the Works, St. James's-road, Croydon; R. MATHERS and CO., Engineers, Millwrights, Ironfounders, &c. and Sole Makers of Ashby's Patent Flour Dressing and Wheat Cleaning Machine.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

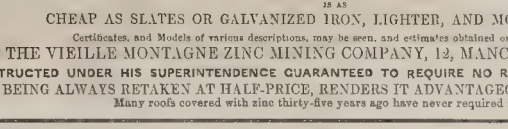
IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.



THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTION FOR STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street,

Have made important additions to their original Invention of PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, the main features of which are shown in the Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken in the back of the manger-works with freedom and ease up or down the guide bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAMS MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

Estimates and Catalogue on application.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

SKAIFE'S GALVANIZING WORKS,

COMMERCIAL-ROAD, LIMEHOUSE, LONDON.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form. Sheets plain and corrugated. Roofs fixed complete.

J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbe Zinc, and Tiles.

AN ALLOWANCE TO THE TRADE.

STEWART'S PATENT CAST IRON GAS and WATER PIPES.

Office, No. 7, Sise-lane, London.

PHŒNIX FOUNDRY, Derby, Sept. 1st, 1855.

JAMES HAYWOOD, Jun. begs to inform

his friends and the public generally, that he has PURCHASED the whole of the STOCK of GOODS, as well as the large and valuable collection of WOOD and IRON PATTERNS belonging to the above Foundry, and has made arrangements to carry on the business on his own account from the 1st of September last. He will continue to conduct the same in all its branches as heretofore. The large and important contracts which have been executed at this foundry render it almost unnecessary for him to state that he possesses every facility for executing orders either for castings or wrought-iron work of any description whatever, upon the best terms and in the shortest possible time. He respectfully solicits a continuance of that patronage which has hitherto been so liberally bestowed upon the Phœnix Foundry.

JAMES HAYWOOD, Jun. PHŒNIX

FOUNDRY and ENGINEERING WORKS, Derby, Manufacturer of every description of CASTINGS, from the smallest Ornamental Work to Castings weighing twenty tons each, railway bridges, iron roofs for railway stations and other purposes, railway chairs, machinery and sugar-mill castings, conservatories, vineries, hot-houses and stoves in great variety, cast-iron ornamental garden vases and chairs, pipes for steam and water, and every description of work required by engineers, architects, builders, ironmongers, &c Heating by hot water or steam.

BRAMAH LOCKS, FIREPROOF IRON

SAFES, WATER-CLOSETS, and PUMPS. BRAMAH and CO have the pleasure to state that an first class Silver Medal has been awarded to them by the jurors of the Paris Universal Exhibition. Manufactory and Warerooms, 124, Piccadilly, London.—Every article made by BRAMAH and CO. bears their address—124, Piccadilly.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BROBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron-mongery, Brass Foundry, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s; and the new registered Venetian Ventilator, so much admired, &c 6s 6d. each.

J. H. BROBBYER (late STURCH and BROBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

SAWING, PLANING, and MOULDING

MACHINERY.—SAMUEL WORSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kingsland, Close, and added to their very extensive and priceless Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

FENDERS, STOVES, and FIRE-IRONS.

Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS, which contain such an assortment of FENDERS, STOVES, RANGES, FIRE IRONS and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or consistence of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l 14s. to 5l 15s.; ditto with ormolu ornaments and two sets of bars 3l 10s. to 11l 15s.; bronzed fenders, complete, with standards, from 7s. to 3l; steel fenders, from 2l 12s. to 6l; ditto, with rich ormolu ornaments, from 2l 12s. to 7l 7s.; fire-irons, from 1s. 9d. the set to 4l 4s.; sylvester and all other patent stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges.

Firstly—From the frequency and extent of his purchases; and Secondly—From these purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS.

The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers, in Metal and Glass, all that is new and choice in Bracket-, Pendant-, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some peculiar designs made for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. two-light to 16l 16s.

THE BEST SHOW of IRON BEDSTEADS

in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads, from 16s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d.; and Cots, from 30s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 25l 18s.

The alterations and additions to these very extensive premises (already by far the largest in Europe), which have occupied the whole year, are now nearly completed, they are of such a character that the entire of EIGHT HOUSES is now devoted to the display of the most magnificent Stock of GENERAL HOUSE-IRONMONGERY (including Cutlery, Nickel Silver, Plated and Japanned Wares, Iron and Brass Bedsteads and Bedding), arranged in Sixteen Large Show-rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

Catalogues, with engravings, sent (per post) free

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established A.D. 1820.

ROYAL POLYTECHNIC GAS FIRE.

BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accident-from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S office, 145, Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 9s. 6d. This advancement in heating by hot water is unprecedented.

BUILDINGS HEATED by HOT WATER.

G. B. COOPER, IRONWORKS, 124, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO., Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Ridgmount place, Hampstead, March 30th, 1855.

Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extended new Gas Cooking Apparatus, being the largest and most perfect yet in use, suitable for hotels, mansions, club houses, private houses, and the army; having cooked in one day 1,000 lbs. and many cwts. of ham, beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 330 lbs. in nine hours, fifty-three minutes, presented by J. Baxter, esq., to the Directors of the Crystal Palace, for their banquet given to the foreign ministers. They have been in full operation for ten months, and are now in as perfect order as when first finished. They have not cost one shilling for repairs.

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray and Co.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their ECONOMIC COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO., opening to the Monument, London-bridge. Established A.D. 1700.

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (Class 4 G), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Entrance Halls, Libraries, and Ware-rooms. CUTLER and SONS, Sole Licensees and Manufacturers, 16, Great Queen-street, Long-acre, London.

SPANISH and PORTUGUESE JEWS' BRANCH SYNAGOGUE, WILMORE-STREET, Cavendish square.—The Committee of this Synagogue are desirous to ascertain the best and most economical method of warming the building by hot water or otherwise. Parties competent to carry the same into effect, are requested to furnish all particulars by letter, to the Secretary, addressed to No. 11, Bevis-marks, St. Mary Axe, on or before the 5th instant. The premises can be seen any day up to TEN A.M. and FOUR P.M. by applying at the private door, No. 4, Wilmore-street.

THOMAS EDINGTON, PURCHASER and INSPECTOR OF CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS, THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

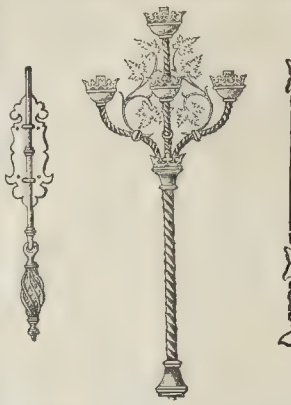
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER,

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quadruple patents of 1839-51-54 and 1855, including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).



THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX and SAFE WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47a, Moorgate-street, City. Circulars free by post.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND.

CHANCEL AND PEW FOR GAS OR CANDLES.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article marked in plain figures. JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

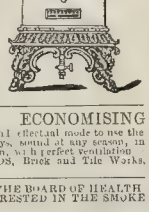
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.



TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and cast on a new system, which gives a superior tone and facility for ringing.

NO CHIMNEY WANTED for RICKETS'S PATENT CALORIFERE GAS STOVES in CHURCHES, HALLS, or SHOPS;

And for Conservatories, or any close apartment, a pipe can be attached to carry away the burnt air.

RICKETS'S CHEAP GAS STOVE, Price, £1. 15s.

Made of Sheet Iron, suitable for Heating small Countinghouses, Bedrooms, Cellars, &c. &c.

MANUFACTORY, AGAR-STREET, STRAND, LONDON.

Liberal Discount to Builders.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying most moulded goods, sound at any season, in time of turning and cooling the kiln, with perfect ventilation. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE; it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

DRAUGHTS ROUND DOORS and WINDOWS.—GREENWOODS PATENT INDIA-RUBBER STOPS, to supercede list or leather, for the purpose of keeping out dust and draught round doors, windows, closets, show-cases, &c. making the same air-tight. Price 4d per foot. Spring Slides for bottoms of doors, 4s. each.

JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London-bridge.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD. This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

NEW PATENT SMOKE PREVENTER.

The Rev. James Burrow, of Ashford Parsonage, Bad ewell has appointed WILLIAM S. BURTON, of 39, Oxford-street, sole Metropolitan Agent for the sale of his SMOKE PREVENTERS. They have been used under many varied circumstances with great and uniform success. They are very simple, and not liable to get out of order. Prices 5s. 12s. 6d. 20s. and 40s. each. The alterations and additions to WILLIAM S. BURTON'S very extensive premises (already by far the largest in Europe, which have occupied the whole year, are now nearly completed; they are of such a character that the entire of EIGHT HOUSES is now devoted to the display of the most magnificent Stock of GENERAL HOUSE-IRONMONGERY (including cutlery, nickel silver, plated and japanned wares, iron and brass bedsteads, and bedding), arranged in sixteen large show rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere. Catalogues, with engravings, sent (per post) free.—39, Oxford-street; 1, 1a, 2, and 3, Newman-street; and 4, 5, and 6, Perry's-place. Established A.D. 1820.

TO BUILDERS.—INVESTMENT WANTED.—A gentleman holding a commission in the oil and colour trade, is desirous to invest from 700l. to 800l. in freehold or leasehold property, the amount to be paid by instalments.—Address, W. care of Mr. Hodgkinson, Stationer, 1, Queen-hithe, Upper Thames-street.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

THE PERMANENT WAY COMPANY, 26, Great George-street Westminster.

The Second Edition of this Company's Circular, just published, is now being forwarded, post free, to Directors, Engineers, Managers, and others interested in Railways.

The Circular contains Engravings, detailed Estimates of cost of construction, and descriptions of many valuable Patents, with the latest results of experience in the working of the various patented systems of Permanent Way, either the property of, or worked by the Permanent Way Company.

These patents' system are now adopted by Companies owning several thousand miles of Railway, are approved of by most of the eminent Railway Engineers in this country and abroad, and the system of Fish jointing, in particular, has received the unqualified approval of H. M. Commissioners of the Board of Trade and their Inspecting Officers.

The Permanent Way Company are prepared to grant licenses on liberal terms to Railway Companies and Manufacturers, for the use of all or any of the Patented Inventions, which have for their object the safety and comfort of the travelling public, and economy in construction of the Road and Rolling Stock.

That the objects are accomplished, the following extracts will confirm:

"There can be no doubt that the practice of Fishing the Rails, which is becoming very general, is a great element of safety; the principle cannot be too much encouraged."—Extract from Report of Colonel Wynne, R.E. Chief Inspector of Railways to H. M.'s Commissioners of the Board of Trade, dated April 25th, 1854.

"My Lords direct me to refer you, that they trust that the remarks of the Inspecting Officer, as to the desirability of the Fished Joint be made to a greater extent upon the Railway, will receive the attentive consideration of the Directors."—Extract from letter of Captain Galton, R.E., Secretary to the Railway Department of the Board of Trade, in reference to the foregoing Report.

"Dear Sir,—In reply to your favour of the 1st instant, I beg to say that I experience no difficulty whatever in keeping the nuts of the bolts tight."—Extract from a letter by Mr. H. Woodhouse, Engineer, of the London and North Western Railway.

"I would, however, beg to state that, in point of safety, the first and most essential element of railway working the Fish Joint, on your system, is, in my opinion, indispensible. Extract from letter of Mr. J. E. McConnell, Locomotive Engineer of the London and North-Western Railway.

"On a district of about thirty miles, where the greatest length has been Fished, the saving in the item of maintenance amounts fully to thirty per cent."—Extract from Mr. R. Jacomb Hood, Engineer to the London, Brighton, and South-Coast Railway.

Among others, the Company call attention to the following Patents recently placed under its management:—Mr. William Pole's important Improvement in Fish Joints, and Mr. Paul Barnett's Improvements in Iron Railway Chairs.

Licenses, and every information may be obtained upon application to CHARLES MAY, F.R.S. Managing Director of the Company, 26, Great George-street, Westminster; or to WILLIAM HOWDEN, Secretary.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter. FROM RAYMOND DARVELL, Esq., VENTNOR, ISLE of WIGHT. Second Testimonial.—"March 18th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction it answers perfectly. Many Builders, and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON

AMERICAN VULCANISED INDIA-RUBBER, for Engineering, Mechanical, and Manufacturing Purposes; Steam Packing, Valves, Discs, and Joints, Washers for Hot and Cold Water Joints; Machine Belting or Driving Bands; Steam, Fire-engine, Brewers', Conducting, and Garden Hose; Drab and Gas Tubing, Printing Blankets for Steam and Hand Presses. Sole Manufacturers of India-Rubber Combs.

DODGE, BACON, and CO. 44, St. Paul's-churchyard, London.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hose-pipe Couplings. Vulcanized Rubber Door springs, and Solid Round Rubber Cord of all sizes of any length. Bullard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Driving-bands of superior make, and improved Vulcanized Rubber Suction-pipes for ditto

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Airbeds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing, mats for gas-holders, and pumps, detail cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer and is about 50 per cent. cheaper than Gutta Percha Piping. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

¼	½	¾	1	1¼	1½	2	2½	3	3½	4 in.
9d.	11d.	1s.	1s.	1s.	1s.	1s.	1s.	2s.	2s.	2s.

Super-extra stout quality.

2	2½	3	3½ inches.
2s.	2s.	2s.	3s. per yard.

No. 3. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1½	2	2½	3 inches.
9d.	10d.	11d.	1s.	1s. 3d.

The hose is Burnetized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Bee the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, or Queen Anne or flat, Louis XIV in much variety, and to any degree of cost. Italian, and Greek, Renaissance, and many moulded characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cases, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the traits of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture glass frames, tables, window cornices, screens, candelabra, and the whole range of face impaniments to reception rooms of the first class, as well as more subdued

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

PAPIER MACHE, COMPOSITION, CARTON PIERRE, AND CEMENT WORKS.

WHITE AND PARLBY

Beg respectfully to inform Architects, Builders, and Decorators, that they are prepared to execute in the above materials, all internal or external decorations, at exceedingly moderate prices. They solicit attention to their varied ENRICHMENTS of the highest class, and in every style of ornament, as suitable for the above purposes, comprising Ceiling, Panel, and Pilaster Decorations; enriched Mouldings, Bosses, Ornamental Cornices, Trusses, Caps, and every other requisite for the Decoration (either simple or elaborate) of all classes of Public or Private Buildings; also to their Stock of Glass Frames, Vases and Console Tables, Candelabra, Wind w Cornices, Candelabra and other Articles of DECORATIVE FURNITURE for GILDING, of which they have an extensive assortment executed in the highest style. They also invite attention to their Designs for DECORATIVE SHOW-CASES, and other ornamental Shop Fittings.

CEILING FLOWERS in great variety, ready for immediate use, always on hand, at prices lower than any hitherto offered.

ARCHITECTS' DESIGNS CAREFULLY EXECUTED, AND ORNAMENTS EXPRESSLY MODELLED, IF REQUIRED.

SPECIAL DESIGNS MADE FREE OF EXTRA CHARGE.

WHITE AND PARLBY, 4, RATHBONE-PLACE, LONDON.

LLOYD'S WEEKLY LONDON NEWS,

Edited by DOUGLAS JERROLD.

AVERAGE WEEKLY CIRCULATION, UPWARDS OF [illegible]. A GREAT FACT FOR ADVERTISERS)
It contains SIXTY COLUMNS, including the VERY LATEST INTELLIGENCE, price TWO PENCE, or Threepence
Post Free, of any News Agent, or Direct from
E. LLOYD, Salisbury-square, London.

Third Edition.

THE BUILDER'S FRIEND,
Price One Shilling.
Office of "The Builder," and of all Booksellers.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of extensive practice, assisted by several eminent Measurers or Surveyors. Illustrated with nearly 100 Engravings and numerous Wood Cuts. Royal 12mo, price 9s. cloth.
London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen, founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 30s; containing upwards of 120 Steel Plates, many of them Wood Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING; revised by TREDGOLD. With additional Practical Information, a New and complete System of Lines for Stone-Cutting, for the use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c., and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Nine Steel Plates, Engravings on Wood, &c.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for drawing and Executing them in the purest style; including an historical Description of Grecian and Roman Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s., or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. Brooks, Architect. Beautifully engraved on steel, with Directions for Building, and the estimated Cost of each Edifice. Two Parts at 3s., or in boards, 3s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views, and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other Buildings for public purposes. By S. H. Brooks, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 30s. in boards.

6. THE HOUSE DECORATOR and PAINTERS' GUIDE containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION, containing a complete Treatise on the Art of House Painting, Graining, and Marbling; to which is added the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HUGHES, Esq. Accompanied by actual specimens in Hand-rush Graining and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of Two Hundred Engravings, by LOUIS BEBIE, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1836, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the special attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the skilful selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In Two large 8vo. volumes, cloth, lettered price 30s.

Now ready.

THE CAMPAIGN in the CRIMEA: an Historical Sketch.
By GEORGE BRACKENBURY, late Secretary at Kadikoi to Lieut.-General Sir J. Lysons, K.C.B.
Accompanied by Forty Plates from drawings taken on the spot by William Simpson. Size, royal 8vo. Price, elegantly bound, 21s.
PAUL and DOMINIC COLNAGHI and CO., 13 and 14, Pall-mall East, Publishers to her Majesty.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. XII. for December, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

LABARTE OF MEDIEVAL ART
On December 15, with 300 Illustrations, 8vo.

AN ILLUSTRATED HANDBOOK of the ARTS of the MIDDLE AGES and RENAISSANCE, as applied to the Decoration of Furniture, Arms, Jewels, &c. including—

Sculpture in Stone.
Carving in Ivory and Wood.
Metal Work.
Painting in Oil.
On Glass.
Embroidery.
Enamels.
Goldsmiths' Work.
Pottery, Italian, French, and German.
Glass, Venetian and other.
Armour.
Lockets' Work.
Clock and Watch Work.
Furniture, Ecclesiastical, Civic, and Domestic, &c.

By M. JULES LABARTE.
Translated from the French, with Explanatory Notes.
JOHN MURRAY, Albemarle-street.

FERGUSSON'S HISTORY OF ARCHITECTURE
On December 10, with 1,000 Illustrations on Wood, 2 vols. 8vo.

THE ILLUSTRATED HANDBOOK of ARCHITECTURE; being a concise and Popular Account of the different Styles of Architecture prevailing in all Ages and all Countries.

By JAMES FERGUSSON, F.S.A.
Author of "Palaces of Nineveh and Persepolis Restored."
JOHN MURRAY, Albemarle-street.

Neatly bound, price 1s.

A HANDBOOK of ARCHITECTURE for the UNLEARNED: in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.
By GEORGE GODWIN, F.R.S. &c.
With Illustrations.
By the same Author, price 1s.
LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.
Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

Just published, Part IV. containing Four large Plates, in a neat Wrapper, with Advertisements, price 2s. 6d. Also Division I. comprising the First Four Parts of Sixteen Plates, price 10s.

EXAMPLES of BUILDING CONSTRUCTION, being a series of Working Drawings, to a large scale, of the Details of Public and Private Edifices.
By HENRY LAYTON,
Of the "Civil Engineer and Architect's Journal," author of Laxton's Builders' Price Book," &c
No. 19, Arundel-street, Strand; and of all Booksellers.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DEED, and WRITING BOXES with their sizes, fittings, and prices, will be sent upon receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's churchyard, London.

AFRICAN EXPLORATION.
In 16mo. price 2s. 6d. cloth; or Two Parts, 1s. each.

NARRATIVE of the NIGER, TSHADDA, and BINUE EXPLORATION, including a Report of the Position and Prospects of Trade up those Rivers, with Remarks on the Malaria and Fevers of Western Africa.
By T. J. HUTCHINSON, Esq.
H.B.M. Consul for the Bight of Biafra.
Forming Parts 91 and 92 of The Traveller's Library.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

On Wednesday next will be published, in 2 vols. post 8vo.

THE PAST CAMPAIGN: a Sketch of the War in the East, from the Departure of Lord Raglan to the Capture of Sebastopol.
By N. A. WOODS,
Late Special Correspondent to the Morning Herald at the Seat of War.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In imperial 8vo. price 31s. 6d. elegantly bound,

FLOWERS and their KINDRED THOUGHTS. Beautifully illustrated in Illuminated Printing by OWEN JONES.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published in 8vo. price 14s. cloth.

ANALYTICAL VIEW of SIR ISAAC NEWTON'S PRINCIPIA.
By HENRY LORD BROUGHAM, F.R.S.
Member of the National Institute of France, and of the Royal Academy of Naples; and
E. J. ROUTH, B.A. Fellow of St. Peter's College, Cambridge.
London: LONGMAN and CO.; and C. KNIGHT. Edinburgh: A. and C. BLACK. Glasgow: R. GRIFFIN and CO.

Just published, in 8vo. with Six Plates, price 5s. cloth,

ELEMENTS of PRACTICAL HYDRAULICS, for the Use of Students in Engineering
By SAMUEL DOWNING, M.A.
Professor of Civil Engineering in the University of Dublin.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

MADAME I. PFEIFFER'S NEW TRAVELS.
On Wednesday next, will be published, in 2 vols. post 8vo.

A LADY'S SECOND JOURNEY ROUND the WORLD:
From London to the Cape of Good Hope, Borneo, Java, Sumatra, Celebes, Ceram, the Moluccas, &c., California, Panama, Peru, Ecuador, and the United States.
By IDA PFEIFFER,
Authoress of "A Lady's Journey Round the World," &c.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

ISSUED UNDER THE SANCTION OF THE DEPARTMENT OF SCIENCE AND ART, MARLBOROUGH HOUSE.
In December will be published, in post 8vo.

THE ALMANACK of SCIENCE and ART for the Year 1856.
London: CHAPMAN and HALL, 193, Piccadilly.
*** Advertisements for insertion in this publication must be received by the 10th of DECEMBER.

PROFESSOR WILSON'S NOCTES AMBROSIANÆ,
Edited by his Son-in-Law, Professor FERRIER.
To be completed in four volumes, crown octavo. Vols. I. and II. are published, price 6s. each.
WILLIAM BLACKWOOD and SONS, Edinburgh and London.
Sold by all Booksellers.

Complete in Two Volumes.

PROFESSOR JOHNSTON'S CHEMISTRY of COMMON LIFE. With numerous Engravings on Wood. price 12s. 6d.
"A book which ought to be in every house where the inhabitants have time to think of 'what to eat, drink, and avoid.'"—*The Globe.*
WILLIAM BLACKWOOD and SONS, Edinburgh and London.
Sold by all Booksellers.

In imperial quarto, half bound morocco, price 21s.

ATLAS of ASTRONOMY.
By A. KEITH JOHNSTON, F.R.S.E. &c.
Edited by J. R. HIND, F.R.A.S.
"For care of drawing, fulness of matter, and beauty of arrangement, we have seen no popular atlas of astronomy to compare with this volume. . . . The illustrations are eighteen in number, —lunar, solar, stellar; and are so constructed as to present to the eye a series of lessons in the most captivating of human studies, simple in outline and cumulative in result. To say that Mr. HIND'S 'Atlas' is the best thing of the kind is not enough,—it has no competitor."—*Athenæum*, Sept. 8, 1855.
WILLIAM BLACKWOOD and SONS, Edinburgh and London.
Sold by all Booksellers.

On 1st of December, price 3s. No. CXI. (LXXV. New Series),

THE ECCLESIOLOGIST. Published under the Superintendence of the Ecclesiological late Cambridge Camden Society.
CONTENTS: De Witt's Palestrina—Moveable Benches or Chairs—Cologne Cathedral—The Friedenskirche, Potsdam—Reminiscences of a Tour in Holland—Screen as an Altar Colour—An Architect's Tour to Munster and Soest, with Engravings—De Guilhermy's Archæological Paris—Bedminster Church—Ancient Gallican Liturgies—Inchmahome Priory—St. Mark's College and Church—Church's Proposed Cathedral of Lille—Reprint of the Sarum Breviary—Reports of Societies—New Churches, Church Restorations, Notices, &c.
London: J. MASTERS, Aldersgate-street, and New Bond-street.

EXHIBITION of CRIMEAN PHOTOGRAPHS, 5, Pall mall East.—Evening Exhibition, from 7 till 10, and from 10 till 5 daily. Admission, 1s.—In foggy weather the gallery is brilliantly lighted with gas.

TO ARCHITECTS.

EXHIBITION and COMPETITION DRAWINGS, coloured or tinted, and superior LITHOGRAPHY, in its various branches, executed by Mr. T. J. RAWLINS (Author of Elementary Drawing Classes, adopted at Marlborough House; Outlines of Sculpture; Modern Architecture, &c.), 38, University-street, University College, London.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS, External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with backgrounds, on terms that will ensure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.
Address, 8, Rathbone-place.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil, Engineering, and Mechanical Drawing, Colouring, Shading and Tinting, Ornamental and Water-Colour Drawing, Perspective, Isometrical, and Geometrical Drawing, Models Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms—Day Pupils Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

The Builder.

Vol. XIII.—No. 669.

IS the Diploma question occupies the architectural mind very considerably at this moment, and is to be further discussed at the Royal Institute of British Architects on Monday evening next, the 3rd instant, for which purpose the evening is specially set apart, we have displaced some observations on *Birmingham* and the important speeches recently delivered there by Prince Albert and Lord Ashburton, in order to insert the abstract of M. Lance's Essay "On a Diploma in Architecture," which was read at the Institute by Mr. J. W. Papworth, with remarks and suggestions,* on the 19th ult.

Legislation on public instruction has undergone, in the last few years, very serious modifications, which seem to have attracted general attention to the question of education as a whole, and also to the questions of organisation which relate to it *in France and in England*. This movement is especially observable in relation to the profession of the architect *in both countries*. Important reforms in the laws, or in the customs which regulate that profession, had been previously brought forward, *and in England had been partly adopted*. Their object *in France* was to give to the public more positive guarantees of the skill and experience of the artists whose competition that public demands; *and in England, as* well as in France, to give to the body of architects more unity, more strength, more cohesion, and a more defined, and consequently, more respectable, position; so as to ameliorate their worldly condition as managers of a very considerable branch of industry, and thereby to open to architecture, as an art and a science, a more open path in which it might proceed with more consistency, and with a firmer and more assured stride. Such, we say, was the object intended: this is not the time to discuss if the means then sought were those to lead with the greatest certainty to it *in France: it cannot be denied that the establishment of this Institute has done much in this country towards attaining it*.

The notions which were at one time subjected *in France* to searching discussions, and whose realization was pursued in vain with unusual perseverance, though never completely abandoned, appeared for a time to slumber, so much were they laid aside for others causing more general anxiety. At present, if we are not mistaken, these ideas are aroused, and the minds of our colleagues return, with marked predilection, to the study of these difficult questions. It is the general opinion that "something is to be done," and the moment seems favourable for agitating afresh these problems, and for opening the way to a definite solution, whatever that may be.

The profession of architecture is absolutely free. Whosoever likes may practise: whosoever chooses may call himself an architect: no one is compelled, in order to obtain the title, to prove before competent authorities that he possesses any of the knowledge requisite for the discharge of his duties. He is an architect by the same right that another is a manufacturer, a dealer, a speculator in any enterprise: the law supposes that clients find either in private connections, in public notoriety, or in their own discernment, sufficient guides for their appreciation of the skill of those men who represent themselves architects, and offer to direct the construction of works. An observation in the "Dictionnaire d'Architecture," by Roland le Virloys, published at Paris in 1770, is precisely applicable at the present time: "As soon as a man knows a little of drawing, he sets himself up as an architect. Draughtsmen, decorators, and others of that description, are not the only ones who are so bold. If a bricklayer has built two or three houses, he calls himself an architect; and forthwith gives plans and designs to all who are kind enough to listen to him, intimating that they will save the small but useful expenditure of the fee due to an architect; while the real object is only to withdraw from subordination, and exercise the tricks to which the building trades are but too much addicted." *It must be recollected that this is the language of French architects; the English architects have other grounds of complaint; and that the English builders profess to have grounds of counter accusation.*

Is this legal liberty of the profession a novelty? Is it peculiar to our country? Certainly not: for the quotation just given is dated, as before mentioned, in the year 1770; that is to say, at a period when the restrictive system of sworn guilds and corporate freedom, was in full vigour *in France, and apprenticeships in England*; and we know that it was not applied to architects. (*I may observe that M. Lance has not admitted the tradition of the Freemasons into his Essay; but he adds that* in fact the regulations very anciently imposed upon master builders, and the more special and later institution (*in* 1574) of sworn surveyors, cannot be considered as relating to architects.

M. Gourlier, in a report which we shall have occasion to cite presently, justly observes, "It does not appear that any measure was ever adopted to investigate the claims, more or less founded, which individuals might have to call themselves architects, and exercise their profession. Architecture, properly so called, was in this respect considered as a 'free art,' and it was permissible to any one to exercise it at his own proper risk and peril, as also at the risk and peril of those whose confidence he obtained."

Evidently unaware of the Prussian system which Mr. Tite laid before us at our last meeting, M. Lance continues to say that if we examine foreign legislation, it does not appear that it can give any answer other than that from our own country. Everywhere, with a single exception, it is "liberty." At least, the Société Centrale des Architectes, which had maturely studied this interesting question, cites only one country in which the exercise of the profession of architecture is subjected to conditions which are intended to prove the skill of the artists who dedicate themselves to it: that country is Spain; and the date of the institution is recent. The first statutes relative to architects were presented in the last century to King Ferdinand VI. by a Frenchman named Hérard, member of the Academy of Madrid; and they received the royal sanction. They were modified and renewed 29th July, 1801, by King Charles IV. on the proposition of Don Pedro de Cevallos and Isidore Bosart, also members of that academy.

From that time the following custom has existed:—No person may call himself an architect, or practise the profession, if he is not affiliated and approved by the Royal Academy of S. Fernando, and if he has not received a diploma from it. This diploma is obtained under the following conditions:—

Production of a document from some architect affiliated to the Academy, certifying that the candidate has worked under him, and is conversant with the practice of building.

Deposit at the Academy of a design, with its working details, an explanation of the proposed mode of construction, and a specification (the subject is chosen by the candidate).

Actual manipulation of a tinted sketch, &c.

Public examination in the subsequent week, for two or three hours, on practical geometry, the theory and the practice of architecture.

Foreigners are admitted under the same conditions. When this diploma has been obtained, the artist may practise at any place in the dominions of his Catholic Majesty. Private persons need not employ an architect affiliated to the Academy, but if they do not, they have no right to enforce responsibility at law. Only architects affiliated to the Academy can be employed by the Crown.

The two systems are thus brought face to face: — the rule of unlimited liberty, without any guarantee of capacity; — the rule of freedom limited by the necessity of satisfying the conditions of skill which a public authority is charged to obtain. Which of these two rules should be preferred? Which of them presents the most security to the public? Which assures the highest consideration to the artist? Which promises the greatest development of the art? Such are the questions which we want to examine and which it is opportune now to agitate. Before entering into these questions, it will be well, and we believe, not without interest, to consider the very anxious, very elaborate, and very noteworthy inquiries which the Société Centrale des Architectes at Paris has dedicated to this subject. A simple analysis, as succinct as possible, is all we shall ask permission to place before you: *as the two countries differ much in their political institutions, so several of the questions discussed by that Society are peculiar to France, and twenty-four pages of the Essay* by M. Lance, must be condensed into as many paragraphs.

Struck with the isolation in which their fellow-labourers were living, and with the danger resulting from that isolation to the profession, some of the French architects proposed in 1840 the foundation of some central body.

At that time M. Gourlier gave his attention to the question of a diploma, which he treated in an excellent report presented on behalf of a committee to the future founders of the Société Centrale. It might even be said that the study of this subject was one of the objects of the institution. . . . . The report shows that the complaints of the architects are long standing ones. It does not ask for the restoration of guilds and corporate privileges, the revival of the defunct *Académie*, or of the corps of sworn surveyors; but it points out the existence of privileged professions, privileged, that is to say, for the public good; such as barristers, solicitors, proctors, physicians, surgeons, apothecaries, &c. The report asks if there is not an evident analogy between those professions and that of architecture, and whether there is not, consequently, a good ground for subjecting the one, like the others, to certain conditions of capacity; that is to say, to render imperative the possession of a diploma which shall be a mark of that capacity.

The report answers in the affirmative; but as to the application of the principle, it glides away into observations on that topic which are very general, but perhaps wiser ones, and more in harmony with French legislation than those which were put forward at a later time. This report supposed the Ecole d'Architecture, with an altered system of education, to be made a special college, like those of the physicians and the surgeons *in England and in France*; but making it the duty of the Ecole to give instruction, as well as to see that it was acquired; to

* The translator said:—"I have endeavoured to give the passages, which are extracted from M Lance's Essay, as nearly as possible in his own words, and have therefore only to add, that the remarks in italics are either very much abridged from the Essay by M. Lance, or are suggestions for which I am alone responsible."

examine the candidates, as well as to deliver the diploma: *it also insisted that even a formal attendance in the Ecole should be required of each candidate who had not been educated therein.* . . . . *In* 1843, *the Société was chartered.* . . . . In 1844, the Société Académique of Lyons requested the opinion of the Société Centrale as to a statement prepared for presentation to the Minister of the Interior upon the faults which existed in the organization of the profession of architecture, and on the necessary remedies. . . . .

The subject was referred to a committee, and in March and June, 1845, *Messrs. Blouet, Caristie, Duret, Gilbert, sen., Gourlier, Jay, Lebas, Ch. Rohaut, and Leon Vaudoyer, reported* unanimously in favour of the establishment of a diploma; and by a majority, that it should be imperatively required from all architects; and they also pointed out the composition of the board of examiners; the cases in which the diploma should be granted without examination, &c. The council of the Société took that report into consideration, and in June, 1845, drew up a new and excellent work, entitled "Results of the Deliberations of the Council," which was distributed to the members previously to the first meeting held on the 17th June. Both in the committee and in the council, there were some objections to the principle of the creation of a diploma: these objections were founded upon reasons that really did not want weight: a diploma seemed to compromise the freedom of art. Another ground was the difficulty in appreciating artistic acquirements, and fears were expressed lest, in consequence of that very difficulty, scientific acquirements should obtain an invidious preponderance in the examinations. This reasoning failed.

I must here point out that the reason why success did not ultimately attend the efforts of the Société towards the establishment of a diploma, was connected with the second determination to which the committee gave utterance, viz that it "should be imperatively required from all architects;" a view which was finally adopted by the Société, and which therefore required the assistance of the Government.

Upon the question of the imperative or voluntary character of the diploma, some persons alleged in favour of the more rigorous view, that not to require the diploma from every man before he was allowed to practise, was to fail in the object proposed; that such a step would allow the public to confound ignorant practitioners who usurped the title of architect, with approved artists who merited the rank; . . . . and that besides, if the diploma only authorised the possessor to adopt the title, it was not indispensable to any one in actual practice.

Others replied in favour of the voluntary system, that the profession of architecture, both as an art and as a science, had always been, and ought always to be, open to every one; that it was puerile to make the title essential, if the functions might be discharged by anybody; that in asking too much, there was the risk of obtaining nothing; and finally, that it would be sufficient to stipulate that the architects in the civil service must be possessed of a diploma. This reasoning prevailed, and the council, differing with its committee, adopted the idea of a voluntary examination; . . . *and also negatived suggestions for the creation of a secondary diploma for assistants and clerks of the works; as well for fixing an age which must have been attained by the candidates.* The council, however, adopted the suggestions of its committee as to the nature and amount of knowledge to be required; as to the composition of the board of examiners; and as to the classes of exemptions. . . . . *It also called attention to the reforms that were desirable in the system of education conducted under the auspices of the Academy, in the section of architecture at the Ecole des Beaux Arts; and noticed the necessity of improvement in the position of the Government architects.* . . . . *The memoir of the council concluded by adopting as a standard of merit the knowledge to be acquired by earnest study during a whole year in the first class of the* Ecole des Beaux Arts. . . . .

These results of the deliberations of the council, communicated, as we have said, to the Société at its meeting on the 17th June, 1845, were remitted to sub-committees, one of which carried a proposal that before a general discussion the results should be submitted to a fresh committee chosen by the Société: the new committee consisted of Messrs. de Joly, Armand, Chatillon, Chargrasse, Girard, Nourrigat, Quicherat, Vigoureux, sen. and Gounod, and it finished on 25th February, 1846, its labours, which were laid before the members at their own homes. The new report was perhaps less methodical than that of the council, but very detailed, and full of interesting and carefully studied facts, which rendered it well worthy of the attention which it received. . . . It asks, after some preliminary remarks, if the very existence of the Société Centrale did not render the creation of the diploma useless, and if the Société did not sufficiently distinguish, by its elections, the architects who really deserve the title. The report had no difficulty in giving an answer in the negative; and we are surprised that such questions were even put. Whatever opinions may be expressed upon the subject of the diploma, it is impossible to confound the public and official character which, if given by authority, the diploma would confer upon its bearer, with the truly honourable notice and the favourable inferences which a society like the Société Centrale (*or this Institute*), unshackled but possessing no official authority, can convey in the elections of its members. The new committee did not separate the character of the proposed diploma from the relation that it might have with the body, which ought (*in the opinion of the French architects as well as in my own*) to be completely distinct from it; as distinct, for example, to continue our comparisons with analogous professions, as *the Church from the universities, the Geological Society from the School of Practical Geology.* . . . *There were other difficulties into which we need not examine, as they were chiefly connected with the Ecole des Beaux Arts.* The report of the new committee contained the following recommendations, viz. the creation of the diploma as a matter of necessity; its obligatory character; no dispensation from examination in any case; transitory measures in favour of positions already acquired; the age of thirty years (which is that absolutely of admission to the Société Centrale, twenty-eight generally in the class of Fellows, to this Institute) and the delivery of the diploma by the offices of a cabinet minister. . . . .

It will be seen that as the matter progressed, the regulations became more severe. . . *Like the council, the committee* refused, as we think with great wisdom, to enter into any discussion upon details. such discussion would be fruitless, while principles are not decided. . . Before taking it to the general meeting, the report of the new committee was discussed afresh by the council, and this division gave rise to a remarkable vote, which preceding votes would not have led us to expect, and which, it might be easily foreseen, would not be approved by the body. The council turned round, abandoned its first opinion, and negatived the principle of a diploma. . . . . The discussion of the last report took place at the general meeting of the 11th June, 1846: it was continued on the 24th June and 1st July. The société did not consider itself prepared to discuss the questions relative to the formation of a board of examiners, and to the system of education! these were referred back to the council; and it was not until the 28th October, 1846, that the Société was called upon to decide on these points as treated in a final report of the council. It then resolved,—

That a diploma or certificate of capacity should be instituted, which should be indispensable in future before any person could legally take the title of architect, and practise as such either for individuals or for Government in any part of the country;

That the diploma should be delivered immediately and without examination to all architects actually engaged, and practising honourably; so that existing interests and already acquired positions should be respected;

That a programme should be adopted of the theoretical and practical acquirements which should in future be required, without any exception, for the delivery of the diploma after examinations and competitions;

That a board of examiners should be appointed, consisting of architects;

That the Ecole des Beaux Arts should be remodelled;

That the civil service should be so far reorganised as to assure better treatment to architects who entered into the service of the public. . . .

Here ended what may be called the deliberate phase of the subject: it lasted for six years: the Société had arranged and decided upon its intentions, and had only to push them to realisation. . . . .

It is only necessary to add that the Société circulated in influential quarters an essay on its wishes, accompanied by the programme; that in 1847, *the Société learnt that the previous Minister of Public Works had spoken favourably of the Société, that the acting Minister had promised his attention to the matter, and that a decree was all but signed when the events of February occurred.* . . . .

The Council, however, applied to the Provisional Government, and reported an interview to the Société on the 6th March, 1848; *whereupon another committee was appointed to produce a new edition of the essay just mentioned. Messrs. Henri Labrouste, Brunet-Debaines (replaced by Haron-Romain), Constant-Dufeux, Gounod, Jay, Adolphe Lance, Lepreux, Lucas, Tougard, and Gourlier, accordingly commenced operations, but the report submitted* 10*th November,* 1848, *contained only four articles; viz. the alteration of the Ecole; the institution of an imperative diploma; its delivery to practising architects; and the reform of the public service.* . . . .

It would be painful to enter into a statement of the new discussions which arose in the council, and at the meetings of the Société on 23*rd and* 30*th November, and on* 7*th December,* 1848, *which resulted in the adoption of the new essay, with the exception of the passages as to the public service and the Ecole; a vote which appears to have put an end for the present to the whole matter.*

The lesson which this history, as given by M. Lance, is calculated to afford to ourselves, is one of the highest importance. The Société Centrale des Architectes, having become very exacting in its requirements, was not content to put its own shoulders to the wheel, and look after the interests of the profession, as a profession, so far as its constitution allowed it; but, perhaps involuntarily,—perhaps obliged by the peculiar institutions and customs of France, it was led to interfere with the Académie des Beaux Arts and its school, to invoke the aid of the Government, and to enter into arrangements between the public service and its architectural officers.

There can be no wonder that having such different objects combined in one project, the Société has not yet gathered any fruit from its exertions.

The questions which arose naturally out of the subject, and which we have seen successively discussed by the council and by the society, were the following: we give them now collectively, *so as to concentrate attention:*—

1. Is a diploma for architecture necessary?
2. Shall the diploma be the result of a voluntary or of an imperative examination?
3. What body shall test the fitness of candidates?
4. What body shall give the diploma?
5. Is it desirable to fix any limit of age in candidates?
6. Shall the examination be open to all candidates?
7. Shall any candidates be exempt from examination?
8. What measures shall be taken to facilitate the adoption of the diploma?
9. What acquirements shall be tested in the examinations?

Does any one suppose that the diploma would take away from the profession of architecture its liberal character, and from the artist himself any portion of his independence? Can the medical man in that respect envy the architect? We think not. But it may be said that architecture should not be compared to medicine, but to its sister arts,—painting and sculpture. We think otherwise. Architecture truly is one

of the imaginative arts, but it is at the same time a positive science. The inspirations of a happy genius are not enough for it: it requires an amount of knowledge which the imagination cannot give. In practice, the architect cannot be compared to the artist, who only requires a canvass or a block of marble to show all that he can do: the architect in some respects is more than that: he is an officer in command of a regiment that does not know the precise result intended by its manœuvres: he is an agent who disposes, it may be said, arbitrarily of the fortune of his client: he is almost a magistrate, compelled to decide upon separate and generally conflicting interests, often of very considerable importance.

Whatever may be said or done, the man, whether he be an artist or not, who is likely to be invested with so much power, and whose position obliges him to accept such a responsibility, cannot pretend legitimately to the independent freedom of artists in other walks, who execute their works with their own hands and at their own risk, without having to give any account of their management. This is so true, that while the painter and the sculptor can give with impunity proofs of their unfitness, the law has a hold, and a tolerably firm one, upon the careless or unskilful, or unfortunate architect. . . .

We say that a diploma would have the advantage of adding to the consideration which the profession of architecture more or less enjoys; and, indeed, it is easily conceivable that in making a preliminary demand upon those who wish to exercise that profession for proof of some amount of acquired knowledge, the presumption of capacity resulting therefrom would place the body of diplomatized architects in a new position. . . . . Without doubt this diploma will not make a *William of Wykeham* nor a *Christopher Wren*, any more than a call to the bar makes a *Cicero* or a *Burke*; but as it would represent a minimum of the knowledge indispensable to the public, it would be at one and the same time a recommendation to its possessor, and a guarantee to the public.

We would say further to the advocates for absolute liberty in the exercise of the profession of architecture,—suppose for a moment that medicine was to become free from all obligation of this sort; that is to say, accessible, as heretofore, to horse-doctors, to farriers, to vendors of nostrums, to barber-surgeons, to all such adventurers, and to any one else who had no other skill than that of boldness and quackery —suppose that; and imagine the condition of suffering humanity under the scourge of such disguised assassins; disputing greedily for the bed's head of the patient, purging here, bleeding there, amputating one extremity, trephining another; in short, having the right to kill anybody under authority of a licence granted for 2*l.* per annum.

Yet this is very nearly the situation in which we are placed by the liberty which we enjoy;—"*an abandonment to destruction rather, in which we are left to perish.*" There is this difference, it is true: the parasites of architecture are less dangerous than those just mentioned, because they attack the purse more than the body of our fellow-citizens; but society owes protection equally to the property as to the person. . .

And, moreover, whatever may be said, the public ought not to be left to assure itself beforehand as to the capacity of architects: the public cannot possibly be a good judge of merits which it cannot itself test. We may even say that the public should in such cases be treated as a minor, and that some authority, some guardian, should exist, not to hinder it from speculating foolishly if it likes, but to give it the means of saving property if it chooses. . .

We have spoken also of the law; and, indeed, there is a relation between that profession and architecture which it is impossible to overlook, because, like the lawyers, we are employed to defend the interests of others. Still there is this difference between an advocate and an architect: the first, properly speaking, is only a counsellor, who in disputes between parties has only a deliberative voice, while the architect's is administrative. In other words, the advocate may plead more or less forcibly the cause of his client, may even be so unfortunate as to compromise the success which he seeks, but sees above him competent and enlightened judges seated to perform justice, and to give a chance that the truth may appear in spite of the ignorance or carelessness of the lawyer, who may risk the interests of his client, but cannot always sacrifice them. Our part in business has a very different importance. The architect is not merely the advocate charged to enlighten a tribunal which has to pronounce judgment; he is more, for he is a judge, who can take no opinion but his own, *and whose decisions are not open to public inspection:* now if this judge be unskilful or dishonest, we guess, and it may be boldly said, we know the abuses and dirty actions which may result from this uncontrollable power, if it is exercised without conscience and without talent. Nevertheless, incredible as it may seem, the law requires that the mere advocate shall have given proof of capacity and experience, while it demands nothing, absolutely nothing, of that arbitrator, referee, umpire, who, under cover of that quality, can commit the grossest errors, nay, even crimes, at the expense of the parties who have honoured him with their confidence.

There is evidently a gross anomaly here which it is of the highest importance to ourselves to remove: *the establishment of the Institute, and its severity in carrying out its law of expulsion, are guarantees to the public of the unimpeachable honesty of its members; but where is the guarantee of their possessing that amount of skill which only can elevate the architect above the self-assumption of uneducated persons.*

The remainder of M. Lance's essay relates to the position of affairs in France so much, as to render it less interesting than I feel certain the preceding portion has proved.

This is, perhaps (continued Mr. Papworth), the proper occasion for submitting my own views as to the practical solution of the question in England.

The necessity for a diploma is apparent from the fact that the junior branches of the profession have for many years been seeking it, as being desirable for themselves and perfectly innocuous to the elder architects. Professor Cockerell will of course support with alacrity any matured plan for securing better public appreciation of the art and its professors. Professor Donaldson has announced in this room, as a matter of self-gratulation to us, the establishment of certificates in two colleges. Sir Robert Smirke, Sir Charles Barry, and Mr. Hardwick, cannot be supposed indifferent to the wishes of their professional brethren. Mr. Sydney Smirke and Mr. Gilbert Scott equally are anxious for the improvement of our position. Mr. Tite you have already heard; and, in fact, the only opposition which the measure of establishing a diploma can encounter would arise from those who feel some hesitation as to the possibility of their deserving it.

The diploma cannot be the result of an imperative examination, without an Act of Parliament to that effect; and the Legislature will of course refuse such an Act until the profession has shown that the diploma is feasible and in operation. The Institute should never require the diploma of any candidate for election into its own body. The examination would be most honourable as a voluntary one.

The examining body should at first be composed of those who occupy a high station with the profession and with the public: hereafter those who take the highest honours would replace them as occasion shall demand.

The question of the body which should grant the diploma is a difficulty in the eyes of some. There have been three competing opinions as to the preference to be given to the universities, the examiners, or the Institute. The universities might follow our example if they found it well so to do: the examiners would be subordinate to ourselves; and therefore the Institute, especially if it should obtain an amended charter, seems to be the body which, as professional men, we should prefer.

It is hardly less desirable to fix any limit of age to candidates, than to close the examination-room against any candidate, whatever may be his position in society: if he be found fit to practise as an architect, that qualification should entitle him to the diploma.

The exemption of any candidate from examination would be a fatal error; nor should any candidate be allowed to pass upon a lower standard than that fixed for all comers.

To facilitate the adoption of the diploma, I imagine the adoption of a chairman, who should be, if possible, a president of this body. I imagine that the three professors would not refuse to accept the diploma at his hands; and then we have a board who could give to all qualified persons, who have practised legitimately during the last few years as architects, the diploma of Master in Architecture, and to those who have been so engaged for a short time only, the diploma of Bachelor. I suppose that some would be found to deserve the most honourable degree of Doctor in Architecture.

It must be evident that the severity of examination for these degrees must be relaxed for the first three years: there are men of established repute whose neglect of the diploma might be hurtful at first to its existence, and who might not choose to do more than present themselves personally to claim it; and this class must be consulted in order to facilitate the transition.

Then, when the examinations are fixed, the board would only have in the first year to verify the position held by the candidate, and his power of making before them a tinted sketch and an outline of detail, in order to hand to him their certificate of the ordinary degree of Master or Bachelor, as the case may be. While if the candidate apply for a higher degree than that which he would ordinarily claim, we should all rejoice at his being found worthy of it.

At the end of three years the examinations should be stricter, and at the end of five years they should have attained the ultimatum, for a time, of their severity: then the profession would be in such a position as it cannot at present hold; and might reasonably hope to procure the adoption by the Legislature of a Bill against quack-architects.

I shall conclude by observing that I sincerely hope the examinations will be public, i.e. will be held in the presence of any graduates who choose to attend them; and that the examiners will avoid the fault of the continental systems, and not ask questions upon formulæ and facts to test the memory of a candidate crammed for the occasion, and ready to forget all on the next day, but put such questions as a candidate may be expected to answer, by referring to works in the library of the Institute. It is not what a man can recollect, but his knowledge of how to use and where to find information, which is the great secret of the skill of the architect as a scientific man, and of his knowledge as an archæologist. His taste cannot even be a question for the examiners; but readiness with the chalk, the brush, and the pencil are, I venture to presume, indispensable to the man who lays claim to the authorised title, the honourable title, of architect.

ON ARTISTIC METAL-WORK.*

We have now to treat of another process of ornamentation, namely,—that of Niello. This art, almost in disuse for the three past centuries, was practised during many ages and in different countries. There is a singular passage in Pliny, to the effect that by an invention of the Gauls, argentiferous lead was fused into works of brass, and the effect so produced was called incoctilia; and he remarks,—"That which was marvellous to behold in the decoration of vases and articles of Roman luxury, by them was used in the decoration of their horses, the yokes of their oxen, and in their various kinds of vehicles." I have seen in Scotland remains of Scandinavian origin inlaid with the same material, proving its use by this race of people. Slightly varied in its composition it was called at its earliest period incoctile: later it assumed the name in Latin of nigellum; in Italian, niello. It was thus used. The subject intended to be delineated was first traced upon the surface of silver, and the groundwork cut with tools as in champ-levé enamel, leaving the figures raised in silver: this was frequently reversed, and the subject itself represented by the niello. In its composition, silver, lead, sulphur, &c. are combined; and it is one of the greatest difficulties of the process that in fusing, either the sulphur destroying the nature of the niello, or the silver reviving into a metallic state, covers the surface of the niello with small white spots. Another great evil frequently results from the heat necessary for its fusion, causing its combination with the silver in which it is worked, instead of forming the contrast intended. In a ruin at Rome, a silver casket of Roman workmanship was found, of about the date of the fourth or fifth century, covered with enrichments in niello, containing the requisites for the toilet of a Roman lady, and will prove the use of niello at this period. Chalices and other articles were continually

* See p. 551, *ante*.

enriched with it during the thirteenth, fourteenth, and fifteenth centuries.

Associated as it is with many ages, expressing as it does in the decorative art, the higher or lower degree of the perception of beauty attained by people so differing in habits and manners, it loses none of its interest from the fact, that it was both the forerunner and origin of the art of printing from engraving. We are informed by Vasari that Maso Finiguerra, the goldsmith, of Florence, in taking impressions in black ink from incised lines intended to hold the niello, gave to the world the first production of an art (engraving), which has developed in the present day so much talent and skill, throwing within the reach of the many those beautiful emanations of genius, otherwise confined to the collections of the rich alone. Another process, Damascening, consisted of incising fine lines of foliage, or other ornamentation into iron, copper, or any of the baser metals, and then, with gold or silver cut to the same form, filling up the cavities. It may be found in the antiquities of the Saxons, the Irish, the Romans, during the Middle Ages, and in the East.

Parcel gilding forms another mode of giving variety to the surface of any article, by fixing gold in some places, while in others the silver is allowed to remain in its natural colour. Shakspeare speaks of a chalice parcel gilt, and in ancient chalices the interior of the bowl, a slight margin down the outside of the lip, the boss, portions of the foot, and occasionally small parts of the stem, were gilt. By this means a greater beauty is attained than by whole gilding; it was in use from the twelfth to the seventeenth century.

Bronze and brass, unlike the precious metals, find their more natural expression in casting, producing a sharp line from the sand, and form a ready means of perpetuating the models made in wax by the artist. Examples are numerous of large doors of bronze, some nearly plain, as at Mayence Cathedral, while others have panels containing historical subjects and figures of saints, apostles, &c. as at Monreale, in Sicily, by Barisanses, containing twenty-eight panels, with figures in relief. They occur in numerous other places. At a later period Vasari describes the particulars of the celebrated gates, now so well known, executed by Ghiberti for the company of merchants at Florence, intended for the Baptistery of San Giovanni, which were to rival those of Andrea of Pisa. There were seven competitors, from whom Lorenzo Ghiberti carried the prize, and whose production was confessed to be the best even by those with whom he competed. Much of his success is attributed by Vasari to his early education as a goldsmith. In the various church restorations of the present day, I know no attempt to reproduce gates in bronze of artistic character. The bronze figure of Henry, by Wm. Torel is a well-known example in this material. Fonts of brass occur frequently on the Continent, and I would suggest the use of the material in combination with iron, and with subjects in enamel on the surface.

Of works in iron, if time permitted, the gradual changes might be traced of each succeeding era of architecture, assuming the conventional forms of the day, and subject to various modes of treatment.

In iron it will be evident the proper mode of working must differ as much from gold as it does from wood or stone, assuming a position about midway. Gold, from its great value and power of attenuation, is naturally used in sheet and filigree, not frequently rendered in solid masses, and many times serving as a covering to a less expensive material; while iron may be used in quantities not so massive as stone, but capable of such attenuation as to render it light and beautiful in its general conformations. Who has not been delighted abroad with the light grille dividing some portion of a cathedral, or the wondrous strength and delicacy combined in the hinges of doors, the lightness of chandeliers, and coronæ ornamented with hammered leaves?

How readily will come to mind the hinges of Merton, those of Lichfield, Notre Dame at Paris, the well at Antwerp of Quentin Matsys, and many other evidences of the application of true principles and taste to the manipulation of this material.

Suppose nothing more is done than at present, and the *artistic* use of metal makes no further progress, what, for instance, in this nineteenth century, is there on the *face* of London to vie with those works of art left, as it were, by the surges of centuries on the sands of time, indicating the tidal line which art had attained? Will the pump of Piccadilly rival the well of Quentin Matsys, each being for the same object? Will the handle on the door of the Home Office compare with that of the Seven Electors? Take the iron gas-lamp, placed probably by street commissioners near a large recent structure, in London, of fine architectural proportions, or the lamp from the large staircase of Christ Church, Oxford (what, by the way, would the founder, Wolsey, have thought of this accessory?), and compare them to the bracket, for the same purpose, of hammered iron from the Domkirk, at Innspruck.

Having now briefly glanced at metal-work and its enrichments, it becomes the question how far at present we have availed ourselves of the many advantages it offers.

I think we may, by calling to mind the various works, in brass and iron, which have been used in other ages as accessories to and portions of architectural design, and by trying to realize what has been swept away by the ravages of time, and the still greater ravages of man (even with the many energetic and laudable efforts which we have seen of late for its use), we may safely conclude, that we have not as yet reached its large application in bygone days. Where are our grilles, altars, lecterns, brasses, lamps, pulpits, crestings, vanes? where our recumbent effigies, our tombs, our fonts? where our gates of brass and bronze. Churches and domestic buildings were rich in these things, in days when metals were difficult of access: how far behind are we in this nineteenth century, essentialy the metallic age?

Compare, for instance, the few furnaces of the middle centuries blown by hand—heated by charcoal—with the thousands which now darken the air, and emit their flames in Staffordshire, in Scotland, and in Wales, aided by exhaustless supplies of coal and ore, and stupendous steam-power helping also its production. Then, however capable its inherent powers, its scarcity was an effectual bar to its extended application, now saving only its full development in Pointed architecture. It is difficult to know where to begin in citing its use. Do we look down on the map of England,—what vast and compli cated network threads its surface! unlike the great Roman roads of old, it is of iron, and not of stone.

Do we wish to span the thundering falls of Niagara? it is with iron, and not timber, the trial is made. Yet, on the other hand, do we wish to span the roof of a cathedral? wood is used,—though the forest which originally supplied the ancient ones have disappeared, and we traverse the broad Atlantic to make up the deficiency,—metallic materials in abundance lying around us. Or, again. Look at the vast covering to the terminus at Birmingham; the Crystal Palaces; the great girdle of iron and glass to encircle London, which has just been recommended to the consideration of Parliament; the roof of the British Museum; the Menai Bridge;—and let us ask ourselves if the world is not outstepping us in the appreciation of its wondrously constructive powers.

In many erections within our memory, there have been sums expended almost fabulous, in which erections artistic powers have not been united with scientific skill. Had this not been the case, and had art found its legitimate expression in the adornment of construction, we might rather have referred to the progress we had made, than have speculated upon the nearness of that period so much to be desired.

It is perhaps in our great works of national improvement, termini of railways, large central stations, and other improvements, where thousands are dealt with as units would be in private efforts, that we may expect to see some *first*—some manly struggle in a direction at present but too slightly attended to.

It may be replied to all this,—iron is not capable of beautiful expression. Have we tried its artistic powers with the same energy as other materials? What is a piece of burnt clay, a lump of stone, without architectural construction and artistic skill? Nothing more than a bar of iron. A wall of rubble has little of interest; yet a cathedral, with its clerestory and flying buttresses, is but a wall supported and enriched. All these raw materials are alike unpromising: it is genius which rears them into forms of utility, of grandeur, and of beauty.

When the Pointed arch first gained use, what new features of construction were brought into existence? what an era does it mark? The genius of the day seized it, and charmed succeeding ages with those exquisite proportions eliminated from it; but what is the arch? Not the natural or easy expression of stone: wooden framing has first to be constructed; and on this the pieces of stone are placed: without those crutches each individual piece would fall to the ground; but unlike stone, iron at once assumes the arch by only complying with its natural tendency: it needs no prop: what adhesive power in its own nature is it capable of! what ponderous weight and compression will it sustain! What is the limit of its span?

Now, let us for a moment suppose that the men who built our cathedrals, and carved out their own paths of originality and beauty, had possessed this material as we do: we should most probably have received some extraordinary relics for our antiquarian lore. In claiming for iron, then, and other metals their fair amount of importance, or urging their much more extended use, am I doing what one may be so apt to do, overrating the use of that which is more particularly one's study and province? So far from this, the Ecclesiological Society has long announced its intention of bringing out drawings for an iron church; and the late Mr. Carpenter had received instructions to prepare plans for the same. The Oxford Architectural Society has urged similar views, and the *Builder* has written forcibly upon the subject. I might quote many architects who, in their words and writings, express their convictions that sooner or later these materials must take their high rank in architectural design.

Now, by an iron church, I do not mean, nor do I suppose the Ecclesiological Society meant, having its walls made of, and no thicker than, a sheet of corrugated iron: it is essential, in construction, that its wall should be double, giving security against atmospheric changes, and at the same time imparting solidity. Again, there are various modes by which the interstices of the frameworks may be filled with ceramic art, with marbles, or stone carvings, or all three united, the arrangement of colours and combination of geometrical form giving ample opportunities to the skill of the architect. It is not as superseding the use of stone, but in conjunction, that some great effort might be made. It is in the union of the powers of the past and the present, and so availing ourselves of all the arts and materials of our day, that we may hope to accomplish great ends.

Is there any one in this his present lifetime, expects to be called upon to raise a cathedral, which might proudly rival Canterbury or York Minster—too long the process, too costly the material? But there is an extraordinary opportunity offered in the constructive facilities of the various materials, for some one to leave a house to the future, and an edifice which would more than compare with the mightiest efforts of the past—the delicacy and sharpness of its outlines standing unrivalled: its walls internally would give large scope for frescoes, glowing with rich hues of colour, and of gold—for enamels, for mosaics, and carvings of stone, affording to it solidity of character. With such constructional powers, externally its height of roof might be something marvellous, while its gilded spires, with their sharp outline, would soar brilliantly to contrast with the clear blue sky. In its nave, a span for vastness and height might be attained, compared with which many existing cathedrals would be but side aisles: its roof, internally fretted with interlacing lines of construction, would be almost lost in the gloomy grandeur and deep shadows of distance: these and its spandrils might be enriched with vigorous yet delicate manipulations in iron, crisp with foliage derived from nature: its

columns, groups of detached and illuminated shafts, would attain an altitude unprecedented. I hope and believe some vigorous intellect—some strong hand, will erect such a cathedral whose form of grandeur will loom on in the hazy mists of the great future, and succeeding generations of the human race will point to it as a noble effort of metallic and kindred arts of this *our* century. F. A. SKIDMORE.

THE ARCHITECTURE OF THE FUTURE.

LIVERPOOL ARCHITECTURAL SOCIETY.

THE fortnightly meeting of the above society was held at the Royal Institution, Liverpool, on Wednesday evening, the 14th ult. Mr. J. Hay, president, occupied the chair.

Mr. Verelst spoke highly in favour of the exhibition of architectural designs, &c. to be opened in London on the 17th inst. It had often been a source of regret to him to see how few of the Liverpool architects contributed to the public exhibitions. He alluded with much pleasure to the success of English architects in the Exhibition at Paris.

Mr. S. Huggins then read a paper on "The Architecture of the Future," of which the following is an abstract:—A notion prevailed that a new style was the thing we wanted. Our chance of a new style was dependent on the amount and importance of the new elements we had to contribute. We knew how styles had arisen aforetime: each had both a father and a mother, and owed its birth to the influence of some new principle, or the abandonment of some old one, upon the style of the day. One thing was certain, we could so use the present styles as to produce true and original works. To deny this was as absurd as to deny to the poet the power of producing a new poem without first inventing a new language. The historic association of the Gothic or Classic architecture with the spirit and character of the period of its production was an objection that should be confined to individual works. The styles might be productive of edifices that should bear the broad seal of any time, as much of the present as of a past day, and be unequivocal exponents of the mind and circumstances of the age. But individual truthfulness like this would inevitably tend to the desired expansion and ramification of the style. Something every now and then would appear that had not been seen before: if it were congenial to the style its spirit would reject it; but if otherwise, and the work in which it appeared was found to be in accordance with the unerring laws of art, and all its parts were in unison, the innovating feature would soon be absorbed into the system, and form a part of it. Thus was the system made, and thus was it to be carried on. This was the way the Classic architecture was formerly treated in one of the greatest art revolutions, viz. that which took place soon after the time of Constantine the Great in the development of Byzantine art, where originality was observable in every form in the capitals, in the mouldings, &c. They introduced new principles of decoration, such as sinking carved work of capitals beneath bounding lines of form, instead of projecting it beyond them. It was not at all important that we should leave a uniform architecture, *i. e.* an architecture all in one style, to the inspection of posterity. The object we had to set before us was to erect works such as would individually comply with the conditions of original and genuine works of art. Any mixture of style consequent upon our working in a plurality of styles was not to be feared so long as it was done by men who understood their work. No matter whence the origin of elements in the hands of the true artist; his work would be *one*, and rightly affect the mind. It did not follow that because the Greeks and other ancients had but one style for temple and theatre and other edifices, that a plurality must therefore be improper amongst us. Those who urged this forgot the difference between our civilization and that of ancient times. In Greece all was unity; everything was the emanation of a master feeling or passion, which was invariably a devotional one. It was of no use to say that this ought to be the case with us, because the architect had to do with society not as it ought to be, but as he found it. The present state of modern life might perhaps be best represented by a plurality of styles: what we had to do was to work truly in them. There would be unity and harmony in architecture if we did so; and though starting from so many different points, and traversing so many different roads, we might meet at last in one beautiful and pleasant one. A general unity in our architecture was to be secured not by our working from the same style, but by our working from the same principles, namely,—the great polar principles of art, which were founded on those of Nature herself. And whether we worked in one style or in twenty styles, there was no safety from confusion and discord but in constantly going back through all styles to their great fundamental principles, and appealing to the original elements in their constitution. It was looking to the ever-shifting clouds of fancy and fashion of the day, and in appropriating what was but temporary and local in the past, that had caused the divided action amongst architects so much complained of, and which no combination of the profession or interference of Government could remedy. Principle was not only unity of action; it was wisdom, strength, and beauty; and it would not only give unity to architecture, it would unite all the arts of decoration *to* architecture, if it were suffered to regulate them: it would unite the architect, the upholsterer, the weaver, the potter, as in all great art periods they were united, as shown by existing remains. There was not much need of quarrel, as to which style was best to be used for any given purpose or purposes. Some features and forms were thought peculiar to certain styles, and deemed admissible into no other; but there were perhaps few forms in any style that could not be translated into another. It was not style, but the intellectual and imaginative power that was to apply it, on which success depended. The dispute about styles seemed not much unlike a speculation upon the merits of different military uniforms or kinds of armour; and, indeed, to calculate upon the result of architectural doings from the character of the style or styles we adopted was as idle as to predict the issue of an encounter of warriors from the mere length of their swords or strength of their armour, without taking into account the personal force and prowess of the combatants. Notwithstanding what had been advanced, it was nevertheless true that one style was better fitted for general purposes than another, as there was much difference between them in point of scope, if not of power. He considered the Greco-Romano system was the soil most capable of yielding the multiplicity of forms which the exigencies of the future would demand from architecture. The Classic style—having been carried to perfection in but one very limited and simple class of structures, the Greek temple — afforded us more room for new and original combinations than its rival, the chief productions of which, the cathedral of the middle ages, the attempt to emulate would be hopeless. The general and dominant style of the future, he believed, would be mainly composed of the Roman arch springing immediately from the Greek or Roman column, *i. e.* the noble Byzantine and Lombardic styles, known under the general appellation of Romanesque, divested of everything like barbarism, and restored to classic purity. This did not involve the abandonment of the entablature, for with such purified ordinance could be well combined the classic colonnade or portico in its original integrity. The style so generated would be the true artistic blending of Greek architecture with Roman arcuation. It was when the column was placed under the arch as an arch pier that the marriage of the two styles was truly consummated, and artistic unity secured. By the system he had endeavoured to sketch out would be embraced every necessary feature required by our climate and state of social existence, such as sloping roof, window, portico, porch, and so forth, and this should be well observed. A true Anglo-classic building was one from the visible composition of which no needful feature was excluded, and in which the features we borrowed from classic antiquity, or derived from any foreign source, such as the portico, were fully adapted to our purpose, and cast into the new moulds that by the circumstances of time and place were prepared for it. A building, however artistic in its composition, or pure in its details, was defective in character if visually wanting the roof, which in England must play its part in the architectural drama, whatever the style; and the same might be said of the window, which for various reasons had taken such a hold on the mind and heart of the people of this country, that except in some peculiar instances we should never be allowed by public feeling and opinion to omit it. The portico was also an important feature in our future architecture; but it must assume a very different character to what it had generally assumed in England. It must be adapted to the climate, than which there is nothing more important to bear in mind. Nothing contributed so much to a national and distinctive character in our buildings and streets as a due recognition of the climate of the country. It was often suggested as a means of embellishment of public squares to erect fountains. The scheme has often been tried, but had succeeded nowhere in this country as in Italy and France; and the reason was obvious—there was no natural call for the play of fountains in a climate where the elements were so often and so bounteously playing themselves. He thought himself that a large chafing-dish, containing a good fire, would be a far more agreeable and appropriate ornament in the centre of an English place or square, for at least eight months in the year, than any fountain. He referred to St. George's Hall as an edifice well suited to the illustration of his remarks, and passed a high eulogy upon its exterior, which, whether classic or English, was in a high degree artistic and beautiful. Here eulogy, however, though qualified, must cease. The approaches to the building were a subject not merely for regret to architects, they must be an offence to every one possessed of the smallest share of taste. In conclusion, he contended that the style of the future, combining as it would greater elements than any former style, and based on everything great and glorious in the foregone, might pass beyond the range of the Greek or the Gothic, allow the fullest scope for man's intellectual energies, and be receptive of all possible elements of change for any period of time.

DEATH OF ALDERMAN LAWRENCE.

IT is with feelings of deep regret that we announce the decease of Mr. Alderman Lawrence, on Sunday, the 25th ult. at his residence, Westbourne-terrace, Hyde-park, in the 67th year of his age. He was a man of enlarged capacity, keen perception, ready eloquence, and of the highest integrity. As a public man, he opposed all jobbery, all waste of public money, and advocated the execution of public works in the most efficient way. He was the head of the well-known building firm which bears his name, and many of the erections in New Cannon-street reflect the energy and completeness which were the characteristics of his vigorous mind, being the fruits of his spirit of enterprise. In the public boards, of which he was a member, he took a leading part, and rendered great services, though his views were not always ours. He was elected alderman of Bread-street ward in 1848, served the office of sheriff in 1849, and was within one of the civic chair, being preceded only by Alderman Finnis. He has for two years suffered from deranged liver, under which he has at length sunk, in the full possession of all his faculties and energetic spirit.

FORTIFICATION OF THE ISLE OF WIGHT.

MR. JAMES FERGUSSON has brought charges of incompetency against the engineers who designed the fortifications recently erected opposite Hurst Castle, so serious as to command reply. He asserts, and he is too careful a man to do so on insufficient grounds, that the forts are constructed so as to be altogether useless, and that the affair shows "our incompetence in military matters to all Europe in a manner that makes one's blood tingle." A semi-official denial has appeared in the *Times*, where Mr. Fergusson's letter was published, but Mr. F. reiterates his charges. What *is* England coming to?

PLAN OF THE CITY OF LONDON CEMETERY, ILFORD, ESSEX.

THE CITY OF LONDON CEMETERY.

The City of London Cemetery is situated at Little Ilford, in the county of Essex, and is precisely seven miles from the General Post Office. The roads to it the whole way are level and good. The area enclosed within the boundary fencing is about ninety-one acres. On the southern side the cemetery is touched by the Eastern Counties Railway: on the northern side it is bounded by a portion of the Wellesley estate; on the western side by the Wanstead Flats; and on the eastern side by surplus land belonging to the Commission. The surrounding country is richly wooded.

The soil is principally of bright gravel, varying in depth from 10 feet to 18 feet. It has been drained to a depth of about 11 feet. The ground rising with a gentle slope from the River Roding to a height of 27 feet above the mean level of that river, affords an outfall for the drainage. The cemetery is enclosed by a strong oak close fencing, 7 feet in height on its north-east, and a small portion of its north-west sides; on the remaining portion of that side, and the southern side, by an open iron railing on a dwarf wall, the height varying from 8 feet 6 inches to 11 feet 6 inches.

The principal entrance is from the Wanstead flats (which flats, we may remark, so far from being low swamps, as is generally supposed, are about 40 feet above high-water mark, T. D. and the soil of which is a fine large gravel beneath the peat surface). It consists of an entrance archway, in the Pointed style, as are all the buildings throughout, with ornamental iron gates, and has on one side the superintendent's house, and on the other the porter's lodge. We shall give a view of this hereafter, and other illustrations.

Directly upon entering the principal gates, the Dissenting and Episcopal Chapels, although 700 feet apart from each other, are both in view, the roads to each being direct lines from the entrance. The plan of the ground was designed in reference to the surface configuration, and other conditions, and is composed partly of straight and partly of serpentine roads.

Through the middle of the ground, and running from east to west, there was a large pond. This has been used as a main valley line for drainage; and at the extreme eastern side this pond has been *deepened*, and catacombs placed in it. The catacomb valley, or basin, is about 500 feet long, and 230 feet wide, and is about 11 feet beneath the level of the adjoining ground, and enclosed by grass slopes, of 2 to 1. The tops of the slopes are planted with rows of arbor vitæ. The earth excavated from this valley, was well fitted, it appears, for disposing upon other portions of the ground for planting the shrubs in, and was so used. We give a plan of the cemetery, and a view of the Episcopal Chapel. The general surface of the ground was originally level: the whole of the undulations now upon it are artificial; that which slopes towards the pond line alone excepted.

The length of the Episcopal Chapel is 61 feet 6 inches within the walls: the Dissenting Chapel is an octagon of 34 feet in the clear, with an elongation on one face, which makes the length 45 feet 6 inches. All the buildings are faced with Kentish rag with Caen stone dressings.

The cost is estimated as follows:—

Land	£30,500
Chapels, entrance, houses, fencing, draining, earthwork, and planting.....	45,450
	£75,950

This sum, it is expected, will not be exceeded. The Commission have a surplus hundred acres, the value of which should be deducted from the 75,950*l*. They bought this large quantity because they obtained it proportionally cheaper thereby, and with the impression that it might be sold to other parishes for cemetery purposes; and as the buildings of the City of London Cemetery, the staff, and the machinery attaching to the railway, might be made to serve for the whole, the first cost to all concerned, and the charges for interment afterwards, would be made less than would otherwise be the case.

It is in contemplation to build waiting-rooms and a railway siding, and have railway accommodation for burials, if other of the eastern parishes who as yet have not provided themselves with cemeteries take the adjoining ground; but, unless the interments be numerous, it would not answer the purpose in a pecuniary point of view to do so.

The fencing, railings, some of the main drainage and earthwork, were done by Messrs. Crook and Son. The chapels, lodge, superintendent's house, and entrance archways, the drains, gullies, and the great mass of surface excavation, by Mr. William Hill, of Whitechapel. The roads and catacombs now in hand by Mr. R. T. Carlisle. The whole has been carried out from the designs and under the superintendence of Mr. William Haywood, the surveyor to the City of London Commission of Sewers.

IS TOWN DRAINAGE BENEFICIAL?

SUNDERLAND.

In answering the above question, I do so (as a Scotchman) by asking another question:—*Is it beneficial to have slops removed from bed-rooms every morning?* I have just hired a house, the bed-rooms of which are up three pairs of stairs, and my wife is about to hire a chamber-maid to empty the slops and cleanse the bed-rooms every morning, at an estimated cost of nearly 45*l*. a year. Before entering upon the responsibility of spending the large sum of 45*l*. a year, I have halted at the outset, and now ask the following questions:—1. Is cleanliness in bed-rooms beneficial? 2. If so, whether is a yearly superficial cleansing or a thorough daily cleansing the most so?

A difference of opinion appears to exist on the question, and I wish to obtain the opinion of other persons who have large families, whether it is better to allow the family refuse to accumulate in the house, and have it removed yearly, when the family is from home, for the benefit of their health, or is it more *beneficial* to have it removed every day? If so, which is the best way of removing it? There is plenty of fall from the top of the house to the street, and if the slops were thrown on the floor, they would soon find their way down the stairs to the street; or would it be better to throw them out at the window? It is so very expensive these dear times to keep a servant, merely to remove the refuse and keep the house clean. The discussion and settlement of this great question must necessarily take place previous to the discussion and settlement of the Sunderland town drainage question.

WANDERING WILLIE.

VIEW OF THE EPISCOPAL CHAPEL, CITY OF LONDON CEMETERY.—Mr. William Haywood, Architect.

AWARDS IN ARCHITECTURE AT THE PARIS EXHIBITION.

As only incomplete statements have yet appeared, and the awards have not given very general satisfaction, we have thought it right to translate from the *Moniteur* the complete list of those to whom awards have been made in Class XXX.

ARCHITECTURE.

GRAND MEDALS OF HONOUR.

Barry (Sir Chas.), United Kingdom:—New Parliament House; Villa at Cliefden.
Duban (Félix-Jacques), France:—Restoration of the Château of Blois; and of the Portico of Octavius, at Rome; Studies of the different Epochs of Architecture.

FIRST-CLASS MEDALS.

SECTION I.—*Designs for Works executed, or not executed.*

Questel (Charles-Auguste), France:—Church of St. Paul, at Nismes; Restoration of the Amphitheatre, at Arles; Restoration of the Pont du Gard.

SECTION II.—*Restorations, and Projects for the Restoration of Buildings.*

Division 1.—Antique Monuments.

Caristie (Augustin-Nicolas), France:—Design for the restoration of the Temple of Serapis, at Puzzuoli; Restoration of the Triumphal Arch, at Orange.
Duc (Joseph-Louis), France:—Design for the restoration of the Colosseum.
Labrouste (Pierre-François-Henri), France:—Design for the restoration of the Temple at Pæstum.
Normand (Alfred-Nicolas), France:—Design for the restoration of the ancient Forum.

Division 2.—Mediæval Works.

Bœswilvald (Emile), France:—Restoration of the Cathedral at Laon, and other historic monuments of France.
Viollet-Leduc (Eugène-Emmanuel), France:—Design for the restoration of the Fortifications of Carcassonne and other historic monuments of France.

Division 3.—Works of the Renaissance.

Vaudoyer (Leon), France:—Municipal Buildings of Orleans; Design for the restoration of the Temple of Venus, at Rome.

SECTION III.—*Studies, original, or after existing Monuments.*

Cockerell (Charles Robert), United Kingdom:—Monument raised to the memory of Wren.*
Jones (Owen), United Kingdom:—Studies from the Alhambra, at Grenada.
Donaldson (T. L.), United Kingdom:—Study of a Temple of Victory in the time of the Emperor Adrian.

SECOND-CLASS MEDALS.

SECTION I.—*Designs for Works executed or not executed.*

D'Arnim (——), Prussia:—Design for a palatial residence; Design for a farm.
Hardwick (Philip), United Kingdom:—Goldsmiths' Hall, London; View of Lincoln's Inn Hall.
Scott (G. G.), United Kingdom:—View of the Church of St. Nicolas, in course of erection at Hamburg; View of the Hôtel de Ville, at Hamburg.
Zanth (Louis de), Wurtemberg:—"La Wilhelma," a country-house.

SECTION II.—*Restorations, and Projects for the Restoration of Buildings.*

Division 1.—Antique Monuments.

Baltard (Victor), France:—Design for a restoration of the Theatre at Pompeii.
Clerget (Jacques-Jean), France:—Design for a restoration of the House of Augustus, on the Palatine.
Lefuel (Hector-Martin), France:—Design for a restoration of the Temple of Juno Matuta, of the Temple of Piety, and of the Temple of Hope.
Pacard (Alexis), France:—Design for a restoration of the Parthenon.
Tétaz (Jacques-Martin), France:—Design for a restoration of the Erectheum, at Athens.

Division 2.—Mediæval Works.

Daly (César), France:—Restoration of the Cathedral of Alby.
Lassus (Jean-Baptiste-Antoine), France:—Restoration of the Church of Saint Aignan; Design, the Châsse de Sainte Radegonde.
Millet (Eugène-Louis), France:—Restoration of the Church of Paray-le-Monial.
Ruprich-Robert (Victor-Marie-Charles), France:—Restoration of the Church of the Abbaye-aux-Dames.

* "Monument élevé à la mémoire de Wren."

SECTION III.—*Studies Original, or after Existing Monuments.*

Falkener (E.), United Kingdom:—Studies of Monuments in Italy and Asia Minor.
Hamilton (Thomas), United Kingdom:—View of different works ["monuments"], at Edinburgh.

SECTION IV.—*Architectural Ornaments, designed or reproduced.*

Denuelle (Alexandre-Dominique), France:—Drawings of ancient Paintings; Decoration of the Choir of the Church of St. Paul, at Nismes.
Petit (Savinien), France:—Chromatic Decoration of the Chapel of Liget (Indre et Loire).

SECTION V.—*Engraving and Lithography: Architectural Subjects.*

Beau (Emile), France:—Different chromo-lithographs; Drawings of glass paintings.
Gaucherel (Léon), France:—Statues at the Cathedral of Chartres; View of the Town-hall of Sienna.
Guillaumot (Louis), France:—Engravings on wood for the Architectural Dictionary by M. Viollet-le-Duc.
Guillaumot (Claude-Nicolas-Eugene), France:—Ditto.
Huguenet (Jacques), France:—Different architectural engravings.

HONOURABLE MENTION.

SECTION I.

Bilezikdji (Pascal-Artin), Ottoman Empire:—Design for a Monument to commemorate the Alliance of France, England, and Turkey.
Burton (Decimus), United Kingdom:—Designs for Buildings ["monuments"] in London.
Fowler (Charles), United Kingdom:—Designs for Buildings in London.
Garnaud (Antoine-Martin), France:—Design for Opera-house.
Hesse (Charles), Prussia:—Additions to the palace of Sans-Souci.
Wyatt (Thomas), United Kingdom:—Church of St. Nicholas and St. Mary, at Wilton.

SECTION II.

Abadie (Paul), France:—Restoration of Buildings ["monuments"].
Merindol (Jules-Amieth de), France:—Restoration of the Church of Saint Genac.
Desjardins (Tony), France:—Doorway of the Church of Charlieu.
Durand (Alphonse), France:—Restoration of the Church of Vétheuil.
Gandara (——), Spain:—Campanile of the Cathedral of Palermo.
Laisné (Jean-Charles), France:—Restoration of the Lazaretto of Ourscamps, and of the Church of Notre-Dame d'Etampes.
Lambert (Eugène), France:—Drawing of the "Jubé" of Faouet.
Lenoir (Albert-Alexandre), France:—Restoration of the Hôtel de Cluny.
Lenormand (Louis), France:—Restoration of the Chateau de Meillant (Cher).
Mallay (Jean-Baptiste-Emile), France:—Principal Street of Monferrand.
Mauguin (Pierre), France:—Drawing of the old Doorway of Die.
Revoil (Henri), France:—Drawing of the Chapel of Saint Gabriel.
Verdier (Aymar), France:—Drawings of the Maisons de Cluny.

SECTION III.

Allom (T.), United Kingdom:—Studies for London Improvements.
Wyatt (Digby), United Kingdom:—Drawing of the Arch of Titus, and of the Upper Church of San Benedetto at Subiaco.
Kendall (H. E.):—Architectural Designs.

SECTION IV.

Delton (Etienne-Albert), France:—Glass-paintings of the Choir of Ferrière-en-Gâtinais.
Frappaz (Jules-Marc), France.—Illustrations to the Imperial Bible.
Laval (Eugène), France:—Silk tapestries of Tarascon.
Shaw (H.), United Kingdom:—Drawing of the Funeral Pall of the Fishmongers' Company, at London.

SECTION V.

Clément (Mdme. Anne-Clara), France:—Architectural Engravings.
Guillaumot (Auguste-Alexandre), France:—Architectural Engravings.
Hibon (——), France:—Architectural Engravings.
Lemaître (Augustin-François), France.—Engraved View of the Arch of Orange.
Penel (Louis-Félix), France:—Architectural Engravings.
Ribault (Auguste-Louis-François), France:—Architectural Engravings.
Sauvageot (Claude), France:—Architectural Engravings.

THE AWARDS IN ARCHITECTURE AT THE PARIS EXHIBITION.

SIR,—The jury appointed to consider the architectural works exhibited at the French Exhibition consisted of nine members; six being architects, and two of the six being Englishmen. In the distribution of rewards it must be acknowledged that these gentlemen have not from any false motives of delicacy disregarded their own interest. They have awarded themselves six gold medals; two of them being "grandes médailles d'honneur." Here are their names, and what they have given themselves:—

Sir Charles Barry.—First great medal of honour.
Duban.—Second ditto.
No other great medals given.
Caristie.—First gold medal for restoration of ancient monuments not executed.
Three others given.
Leon Vaudoyer.—Only gold medal given for Renaissance restoration.
Cockerell.—First gold medal for studies of existing buildings.
Lefuel.—Gold medal for designs for restoration of the antique.
Four others given.

One of the points which most surprised and disappointed me in this architectural exhibition, was the almost entire absence of drawings of executed and modern works by our French and Continental *confrères*, and the comparatively few designs exhibited by them. My surprise has certainly not been diminished, when I find that out of the eleven gold medals of the first class, the French have taken eight; out of the eighteen gold medals of the second class, they have taken fourteen; and of the thirty-three "mentions honorables," they have appropriated twenty-three;—leaving for English architects, seven; for Spanish architects, one; for German architects, one; and for Turkish architects, one—total, thirty-three.

I find amongst my own professional friends, that the decisions in this class are as unsatisfactory as those connected with painting and sculpture.

AN ARCHITECT.*

THE DRAINAGE QUESTION,

INVOLVING HEALTH, HAPPINESS, AND ECONOMY.

As the new legislation places the different localities forming the metropolis in more important relations to drainage than heretofore, and imposes more duties upon those who are to carry that drainage into a proper working condition, not only for the benefit of each house, but also of each locality, it behoves our readers to acquire information on the subject.

After the 1st of January next, every new house, and every house rebuilt from or below the ground-floor, in the metropolis, must have a sufficient "closet," ash-pit, &c.; and every "closet" must have a suitable water supply and apparatus, and suitable trapped soil-pan, and other suitable works and arrangements, so far as may be necessary to ensure the efficient operation thereof. Any offender in respect thereof is liable to a penalty not exceeding 20*l*. The incorporated vestries and district Boards may also in certain cases apply the above powers to any house.

As it were preparatory to such a state of things, we have the Court of Sewers proceeding with great activity to construct the requisite drains, to remove the contents of such closets, &c. and provide also for the abolition of cesspools. It may be a consideration for district Boards, before the machinery of the Court of Sewers is dispersed, to determine whether they should at once undertake the powers of the Act as to drainage, or whether they could not make a fair bargain with the Central Board to do the drainage for them under the power they have to transfer it; for it seems unreasonable that the persons who have had all the experience hitherto, should not be able to do the works required of the districts, at as fair a charge as they could get it done on their own behalf. It appears to be a matter about which

* We have received several other letters to the effect of the above.

the owners, who have to pay, might very well instruct their representatives.

As the changes to be effected under the new Acts are more of managers than of measures, it may be well to note the course adopted by our factory friends in the north of England, under such circumstances. The value of a manager there is shown by his power of drawing the foremen after him, as they value a man whom they understand and respect, and would leave any work for the purpose of serving under him as usual. On the other hand, when a new manager comes amongst those to whom he is a stranger, he tries not to disturb any one under the existing arrangements until he has had some trial of his men and their modes of business. Such also is, no doubt, the rule in large establishments everywhere. So it would be wise in the Metropolitan and other Boards to hold to some provisional arrangements, satisfactory alike to the public, their masters, and to the officers who are to manage their affairs, and not hastily to do injustice to any man's position and prospects. They may thus expect the more able and willing service.

CHURCH-BUILDING NEWS.

Datchet.—The church at Datchet being inadequate to the requirements of the parish, and much out of repair, and the churchyard filled, it has been determined to erect, by subscription, a new church, and also a new vicarage-house. The subscription-list is progressing satisfactorily, and is headed by the name of her Majesty as a subscriber for 100*l.* The Duke of Buccleuch also contributes 150*l.*; and the sum altogether promised to the present time is about 1,500*l.* The sum required amounts to 3,500*l.* It is proposed to erect the new church on the site of the present vicarage-house, and to appropriate a large portion of the vicarage garden as the new burial-ground.

Sherborne.—The Sherborne Burial-board have agreed to purchase four acres of land, in Lenthay-lane, for the formation of a cemetery or burial-ground; and the site has been approved of by the Home Secretary. They have engaged Mr. Haggett as their architect, to prepare the necessary plans and drawings for building two chapels, in the Early English and simplest style of architecture, laying out the grounds, and other works; and the plans and drawings have been approved by the Bishop of Salisbury. Mr. Haggett's estimate for building two chapels, receiving-house, lodge, and office for books, &c.; entrance-gates, making the necessary fences, and laying out and planting the cemetery, draining the same to the depth of 8 feet with a proper outfall, and also for widening and improving the road to the cemetery, amounts in the whole to 2,450*l.* which, added to the 550*l.* sanctioned for the purchase of the land, makes a total of 3,000*l.* The vestry have sanctioned the borrowing of this sum.

Bradford.—The foundation-stone of a new church was laid at Low Moor, on Monday before last, but without the usual ceremony. The church is said to be an addition to those raised in the immediate district by the late Mr. John Hardy. The site is near the highway leading to Wyke. The church will afford accommodation for about 500. The style of architecture is Geometrical Decorated of the time of Edward II. from designs by Messrs. Mallinson and Healey, of Bradford. The edifice will be dedicated to St. Mark. This will be the fifth church that has been reared in the neighbourhood within the last seventeen years, namely, Buttershaw, Wyke, Bank Foot, Shelf, and now St. Mark's.

Otley.—On Saturday evening before last, Salem (Independent) Chapel, Otley, very narrowly escaped being destroyed by fire. Alterations are being made in the chapel. One of the workmen, in order to expedite the process of drying a portion of the newly-plastered walls, had, before leaving the building, made two large fires in the recesses above the organ gallery, and for that purpose had placed on the wood floor two large flags, above which were bricks put edgeways, each fire being also fenced round with loose bricks. The bricks put upon the flags became red-hot, and the flags were also heated, so as to ignite the boards of the floor, as well as a rafter beneath: two holes had been already burnt through the floor, and particles of the burning wood were dropping into the intended class-rooms below, then being used by the joiners, and filled with dry wood, benches, &c. whilst the ground was strewed with loose shavings. Water was hastily procured, and the fires extinguished. A few minutes later and the building would have been in flames, and no one would have been told how recklessly it had been destroyed.

Leeds.—Two workmen have been severely injured by the fall of a scaffolding in course of erection for fixing the roof of St. Mary's Roman Catholic Church here. One of those injured had been sent up to fix the guy-rope to the principal, so as to make all secure; instead of which, from some unexplained reason, he loosened the block, so that the legs veered over and struck down the scaffolding. Three men fell 80 feet, and others leaped on to the adjoining buttresses.

Salford.—Trinity Church, Salford, was re-opened on Sunday in week before last, after having undergone a renovation in its interior, in accordance with the plans and suggestions of Messrs. Isaac Holden and Son, of Manchester, architects. The galleries are supported by solid pillars encased in oak, and the roof by lighter Ionic shafts, which have been painted to represent polished marble, the six pillars on each side of the church being alternately marbled in *verd antique* and *rouge roi*. The whole of the pews and fittings are of dark oak, and have been cleaned and polished. An unsightly signboard in front of the organ-gallery has been removed, and a model of the Royal arms placed there. The chief alteration has been effected in the chancel, which formerly had a dingy appearance. The style of decoration is now in accordance with the Roman architecture of the church. The painting and gilding is the work of Messrs. William Kirkham and Son, of Manchester. Some rudely-painted figures have been removed from a sort of niche in the chancel, and other ornaments substituted. Between the two halves of the double window of the chancel the sacred monogram, I. H. S. has been wrought encircling a cross. What is wanted to complete the effect of these decorations, according to the *Manchester Courier*, it is intended to supply in the form of two stained-glass memorial windows, to be furnished by private subscription. The cost of filling the two windows with stained glass in the Italian style, containing medallions and appropriate scriptural subjects, is estimated at 100 guineas, towards which 60 guineas have been subscribed. The gas-fittings have been altered by Messrs. Harrison and Son, of Salford. The mode of warming the church is still open to improvement: the two unsightly stoves, with their long chimneys in the centre aisle, still remain. The pulpit and reading-desk have been lowered from their former towering height.

ARCHITECTURE AND PUBLIC IMPROVEMENTS.

THE COMPANION TO THE ALMANAC.

THE section of the "Companion to the British Almanac,"* devoted to architecture and public improvements, is this year more than usually interesting. It occupies thirty-four pages, and affords an able *résumé* of much that has been done during the year. The writer says,—

"The increasing difficulty which there is in noticing, adequately, the important works of the year—we might say the impossibility now, of presenting even a catalogue of names—is to ourselves really one of the best pieces of testimony that could be afforded, of the widely-extending growth of art and science in architecture and public improvements. It is true that there are causes for dissatisfaction about popular views on architectural *art*; there are *cliques* amongst professors and students; and researches and theories are sometimes directly productive of error, and only indirectly herald advancement. The real point of excellence, the art, the design, the work of mind, is too frequently not detected by the public. And undoubtedly, the *art* of our time has not kept pace with the progress of mechanical invention and general science. Even in the very application of *science* to sanitary economy, it must, we fear, be allowed that some of the chief questions have not been cleared up; and that, with long arrears to be made good, yet with disaster waiting upon delay, the actual circumstances of the moment are not unalarming."

As the essay is, as yet, scarcely before the public, we give a few extracts:—

Progress.—"We know of no feature which could be more hopeful in the works of the last few years, by educated architects—we might allude even to the last twelve months—than the steadily-growing conviction of the importance of this principle,—the real value and best use of the resources of the time; and the principle to which we have referred has only to be extended to articles of furniture and household use. Many of the evidences are to be observed in the more consistent treatment of decorative ironwork. In practical architecture, the material iron is effecting the most important changes. Areas are now spanned over, which would hardly have been encountered with all the resources of scientific carpentry; and facilities for the admission of light can often be obtained, which are of great importance in a crowded city. Doubts have been raised, sometimes, as to the durability of boiler-plate girders, but the latter can be used for lengths of bearing where the adoption of cast iron would have been the height of temerity. The value as regards internal convenience is obvious, if not also that to art, which should attend the possession of any new resource. But the greatest step which is being made is in the application of cement. It is becoming obvious that the proper artistic use of this material is not in the way of imitating masonry. The employment of brickwork for decorative effect, also is extending; and tiles and glazed bricks are being introduced on many exteriors of a superior character of design. In staircase lights the use of large plates of glass is a resource of great value in such situations; whilst in decoration the material glass is being multiplied into a great number of new forms and colours. The love of decoration in interiors is extending; and the more important works manifest a growing recognition of sound principles,—even if it must be allowed that the majority of others, and private houses especially, still show that much has to be learned there in the way of those principles which, structural in their origin, should be ever found in what seeks to realise beauty in architecture, and which are the very acquisition of value which we say is gleaned from excursions into the arts of the middle ages."

Competitions.—"Advertisements have been addressed weekly to architects, inviting plans to be sent in competition; though we must say that the terms offered—sometimes as little as 5*l.* for the set of elaborate drawings which may chance to be accepted—do not seem calculated to induce much expenditure of thought by members of a profession which requires very varied attainments and a long course of study. The whole question of architects' and sculptors' competitions is one too much mixed up with that of *competition* in general, for those who are most interested to have the chance of speedily settling it; and all that can be at present said is, that competitions now involve much that is unwise as regards all persons interests, and the interests of art, if not much that is degrading or questionable in morals. This, however, is not the place to attempt to show why the best use in every way is not made of the available talent of the country, in cases where there is the necessity for a sudden and general appeal to it. But the Government and the Legislature are not less blameable than municipal and parochial authorities. We may instance the late offer of a premium by the Barrack Accommodation Committee appointed by the Minister of War, where it is stipulated that all plans sent in, rewarded or not, are to remain the property of the War Department. So that, as 180 sets of drawings are understood to have been sent, the country paying, amongst half-a-dozen competitors, 600*l.* in premiums (not a pound more than the money-worth), is to get 124 sets of drawings—involving a cost of, at the most moderate computation, 1,500*l.* to 2,000*l.*—at the expense of the unlucky authors. We have not to urge that the system—here seen in but one of its phases, and that one a comparatively favourable one—is opposed to the high English spirit of honour; we have merely to say that it is one of those matters which require reformation—as an object which, like the popular information on *art*, and the natural apprehension of respective duties and claims between artists and the public, must be attended to, if ever the desired advancement is to be effected in art, and the best use made of such resources of education and skill as may happen to await demand."

Our Statues.—"The public statues erected during the last few years have been as numerous in England, perhaps, as on the Continent; and it has been out of our power to allude to each instance. The Manchester Wellington Monument, by Mr. Noble, is one of the last completed. The hero is represented in

* Knight and Co. 90, Fleet-street. 1855.

ordinary costume, on a tall pedestal, at the base of which are grouped accessory figures. At the same town, the bronze statue of Dalton, by W. Theed, has been completed and fixed. It is placed on an angle pedestal, in the parapet wall separating the public esplanade from the grounds of the Infirmary, and is a copy, on a somewhat larger scale, of a marble statue by Chantrey, in the Royal Institution, at the same town. This principle, in works of sculpture—here carried out on the instructions of the committee—is not a judicious one,—and not merely because the value of a new work is comparatively little, if it cannot be viewed as a work of mind (which surely every public monument should be), but because it is by no means clear that the rules of art as to properties of materials do not apply as much to sculpture as to architecture and decorative art. The antique sculpture in bronze is always very different in treatment to the sculpture in marble. Proportions and details can be fashioned in the one case, which would be beyond the limits of a friable material; and these opportunities, according to all sound principles of art, are to be accepted, not passed by. Moreover, a comparative lightness of character affords the justification that is really required, for the use of a material the colour of which has some heaviness, and we believe it is to mistakes of the kind referred to, as much as the ungainliness of modern costume, that the somewhat unfortunate result in recent works—such as the statue of Sir Robert Peel, lately placed at the west end of Cheapside—is due. We are therefore disposed to suggest to the authorities at Manchester, that they should hesitate before carrying out an intention, lately expressed, of making a statue of Watt (proposed to be placed in a corresponding position to that of the Dalton statue) a copy of the marble statue in Westminster Abbey.—The statue of Sir Robert Peel just mentioned fails in another important particular. It is no exception to the common error in our public statues, of caring little about the accessories and the pedestal. There should in all cases be a proper area of platform slightly raised above the general ground; and if the latter *ascend* to the statue, it is better. Then, with subordinate objects at the angles, and some degree of *design* and decoration in the pedestal itself, not only does the whole become a satisfactory public monument, but the work of the sculptor culminates to its due effect; whereas, a common system is to take no thought about the pedestal,—to set it down where the ground is perhaps lower than that around, and to finish with an ugly railing and four street-lamps."

A Slag Church.—"A church at Oakengates, in Shropshire, by Mr. J. P. Harrison, is important as an instance of the economic use of a local material, viz. the slag from furnaces. This refuse accumulates in the iron districts in vast heaps, spoils the face of the country, and hitherto has been treated as nearly useless. At Oakengates, it was gladly got rid of by the manufacturers as a gift. There would at present be some difficulty in insuring good construction with materials of such irregular form; but if it should be worth while to run the refuse into blocks, this material might become really valuable. But since the erection of the church, a company has been formed for the conversion of the slag into various shapes; and it is found that it can receive a high polish. Considering that, in the manufacture of iron, the refuse is in the proportion of from one to three tons for each ton of iron produced, whilst in the case of lead and copper the proportion is even greater, the matter is one of some public interest."

New Palace Yard, Westminster.—"An extensive scheme has been broached. This comprises, in addition to buildings on the line of Bridge-street, the removal of the Law Courts; the erection—somewhat in advance of the present line—of a range of buildings with bay windows, and an arcade, now much needed in wet weather; of a grand gateway at the angle of New Palace Yard, thus enclosed; of the raising the roof of Westminster Hall; the removal of St. Margaret's Church to a fresh site, and of several houses in Old Palace Yard; and some other works. Thus it is believed that the present disjointed and incongruous character of the whole would be remedied; that a proper entrance would be afforded, and that the general mass would group with the Abbey; that building, with the new portion of the Palace, forming two sides of a quadrangle. The new buildings would be chiefly used for Commissions, and similar purposes; for which, as we remarked in a former year, enormous expense is now incurred. The cost of the Palace, with the works in progress or sanctioned, would come to 1,944,226*l.* (inclusive of what has been paid for houses and land), and if Sir Charles Barry's last proposals were accepted, it is believed that the total cost would be made up to 2,595,511*l.* A number of works of painting and sculpture have already been added to the building. The frescoes in the upper waiting-hall, descriptive of passages in the poets, have been some time complete: Mr. Maclise is painting the subject of his picture, 'The Marriage of Strongbow and Eva,' in fresco, in the Painted Chamber, or conference hall; and amongst the recent works of sculpture are bronze relievos in the Prince's Chamber, by Theed, and statues of Selden, by Foley, and Walpole, by Bell, in St. Stephen's Hall."

British Museum.—"The new reading-room now in progress in the inner quadrangle, will meet a want which has been long pressing. By the adoption of the circular form in combination with the other features in the new arrangement, the light in the old part is not interfered with; an effective interior will be secured; apparently ample elbow-room will be afforded to readers; and there will be a great increase of book space. Lavatories and a refreshment-room are still wanted. The entrance for readers will be through the main entrance-hall, in place of the roundabout back-way. The reading-room, or hall, will be in diameter 140 feet; and the height to the top of the central skylight will be 108 feet, taking the measurements in the clear, and before the fixing of book-cases. The dimensions nearly equal those of the Pantheon at Rome; a building between which and that we are noticing, there are points of resemblance—whilst we believe the modern work goes far beyond the ancient example, if not beyond all examples of domed structures, in the amount of skill and contrivance brought to its execution. We refer here to the manner of forming the vault itself—providing the requisite channels for ventilation, and guarding against the spread of fire from external buildings to the interior of the hall, and *vice versâ*; to the securing abundant light; taking up the minimum of space for supports, so as to give the utmost space for books; and providing the requisite counteraction to the thrust of the dome without cross-ties, or counterforts—which here would be in the way. The ingenious and elaborate structural contrivances by which all these objects are worked out, will be concealed when the work is complete; and as they really form what is of chief interest, we regret we cannot explain their nature by the required large illustrations. We may say, however, that the supports consist of uprights of cast iron (massive enough, though barely discernible on our plan) carrying a ring of girders locked together; the latter bearing the dome,—which is to be formed with iron ribs and ties, and brick and tile work, and is to be covered with copper. The hall is lighted partly on the principle of the Pantheon dome; that is, by a light at the top—here 40 feet in diameter—and partly by twenty large windows round the base. Beneath the whole floor will be a chamber for the accumulation of fresh air, moderately heated by hot-water pipes,—the air being passed into the room by numerous apertures. Arrangements for the summer ventilation are also provided. The supply of air is drawn from a vertical shaft. The reading-room is estimated to provide for 100,000 volumes of reference, and about 400 readers at tables radiating from the centre, where the superintendent's raised platform, and the catalogues in concentric cases, will be placed. The new portions (external to the circle) which have ridge and furrow top lights, are chiefly to provide additional stowage for books. The books are to stand on light racks, or cases of wrought iron. The increase of space is very great. The panels of the finished vault will be formed of *papier maché*, and may be decorated with paintings. Mr. Sydney Smirke is the architect of these works; and whether the suggestion of a conversion of the quadrangle be due to him, or to Mr. Hosking, or others, the actual design and construction do him the highest possible credit."

MAINTENANCE OF NEW ROADS.

As no one else has replied to your correspondent of a recent number, "The oldest Inhabitant," relative to the state of the road in his immediate neighbourhood,—and which having seen in the summer time, I can readily conceive to be in quite as bad a state, after some weeks' almost continuous rain, as he represents it,—I will without one word more as to the disease proceed at once to the remedy.

By a recent Highway Act, it has been, as I think, very wisely provided, that every new road opened in any parish or place shall be of good and sufficient width, and be properly formed, made, and drained; and, after due notice being given, be formally handed over, and if found to be in accordance with the Act, be accepted by the surveyors of the said parish, before two or more justices of the peace, and become from henceforth to all intents and purposes a parish road. This is the purport of the Act alluded to; but as I have not a copy at hand, I quote from memory.

Where there are several proprietors engaged on the sides of a new road, and there are many such in the neighbourhood of London, it is one of the most difficult things in the world to convince them collectively of the necessity of making the road before a brick is laid in the intended new houses; and unless all agree, the outlay of those who are wise enough to see the necessity of it, would be quite thrown away if so applied. Now the building societies which have of late sprung up in such numbers, have very wisely met this outlay in a proper manner; and the first thing they have done on their plots has been the laying out and forming the roads. True, they have the means in their own hands, because they can spread the cost equally or proportionally over the whole of the plots. In all private speculations the nuisance, notwithstanding the drawback which in some instances must be severely felt by not only proprietors but also those who have perhaps unwittingly become tenants of houses thus situated, is not likely to be remedied until the clauses of some future Act shall make it imperative on all owners in such cases to cause proper roads to be made, and as relates to the London district, for aught I know, this may have been already done.

It is very natural that people who are made to pay highway rates and the like, should grumble at not having the same accommodation as the earlier settlers in the parish; but a very little reflection will convince such parties of the injustice of such a notion. In going to and from these newly-opened roads, parties have to traverse a very large portion of the old roads of the parish; whereas the occupants of the old roads, with very few exceptions indeed, never have occasion to go on to the new road; but the Act makes them say,—Put yourselves in as good condition as ourselves, and we will take you into fellowship with us. W. Wilds.

CEMENT FOR WOOD AND METAL.

The following cement will unite porcelain, glass, and, as I have lately found, iron and other metals, to wood, most effectually. I should think it would be admirably adapted for your correspondent's purpose:

Two parts by weight of Portland cement, and the same amount of clean "silver sand," both sifted very finely, must be intimately mixed with one part of glass dust. This compound may be made in quantity, and preserved for any length of time in air-tight vessels. When required for use, it should be worked up with a little of the clear serum of blood (or white of egg, diluted with two-thirds of its bulk of water), with every fluid ounce of which have been previously incorporated twelve to fourteen drops of white vinegar.

It is better first to moisten the surfaces it is intended to unite, with this albuminous menstruum, and then apply the cement, kneaded into a *thick paste* with the same, than *at once* to employ the latter, made of a much *thinner consistency*.

Whenever possible, the points of contact should be made to dovetail into each other in some way, to ensure a perfect junction; and where the surfaces *must* be plain, they might be roughened with considerable advantage. A good deal of cement should be used, and every crack filled up, the superfluity being squeezed out by strong pressure, continued for forty-eight hours. In about four or five days the junction will bear hot or cold water and vibration with impunity. Wentworth L. Scott.

P.S. In reference to my article on "Salt in Walls," &c. I am happy to say that the Crystal Palace Company have set a good example to other subscribers to the *Builder*, by sending me several excellent specimens of "salt." The cost of adding sulphuric acid to a fifty-gallon cistern was misprinted "eightpence:" it should have been "twopence."

A DIPLOMA SOCIETY.

Whilst reading your recent leading article as to "The Architectural Association," the idea occurred to me of instituting "a general society" of the kind throughout the country, the members agreeing to submit themselves to an examination at the Royal Institute of British Architects. This, with the aid of "the Institute," and backed of course by the *Builder*, would at once put down all opposition to architectural diplomas. I am a young man myself, and feel how great a benefit such a protection would be to those who had honestly earned it; against, as it were, architectural quacks, who not only deprive the competent practitioner of business, but injure the profession generally, by the wretched buildings which are erected under their directions. Of course it would require some hard study to pass such an examination, but that would fill the mind with many good and noble ideas, and which would at some future period be the means also of filling the pockets. Such an examination would, doubtless, exclude many from passing as architects, but who would, most likely, be able to pass for surveyors, which I think every one should do. As every surgeon must pass for an apothecary, so should every architect for a surveyor. As the profession now stands any one may act as an architect; and with a fluent speech, and a large brass plate on his door, cut a very respectable figure in society; but

then, look at the structures they have designed, and carried out, of which your sketch of a "Corner Shop" is a very fair specimen, which looks as though it wanted to bow itself down to the ground in honour of its distinguished originator. A Student.

INVENTIONS AND MANUFACTURES AT THE ARCHITECTURAL EXHIBITION.

The intimation that the Council of the Royal Institute of Architects have agreed to the request that they should appoint a jury, who will award certificates of merit to such exhibitors of materials, inventions, and manufactures, connected with architecture, as they may think entitled to them, will lead, we should think, to the exhibition of a very large number of interesting objects, and render the Exhibition practically valuable to all concerned or interested in works of construction. A certificate of merit from such a committee as they will, doubtless, appoint, must prove of no small value to the recipient.

Our readers have probably observed that a *conversazione* will be held on every Tuesday evening, when papers on art will be read. These meetings will have the effect of bringing large numbers of the public to inspect the works exhibited.

Notices of Books.

A Treatise on the Stability of Retaining Walls. By John Murray, C.E. First Part. Weale, Holborn. 1855.

Some years ago an eminent foreign architect, who had examined various lines of railways then in course of construction, asserted to us that he had scarcely met during his journey with one person engaged upon the works who could explain to him mathematically the resisting power of the "retaining walls," or the thickness required in one to resist a certain pressure. Whether or not he was exaggerating we will not discuss, but certain it is that this description of knowledge is not so general as it should be. Even if we go to existing theories on the stability of retaining walls, "it will be seen," as the writer of the book before us observes, "how much the one is at variance with the other. If some of these theories be adopted, what a waste of material would be improperly applied: if practice only be followed, how much money would be spent, on the notion of obtaining strength to the structure, by placing the material where it could not be of the slightest use. In this, as in most instances connected with physics, the one must be combined with the other."

In Chapter V. Mr. Murray gives these various formulæ, which have been propounded by mathematicians; and, combining the results (!), deduces that "the thickness of the wall is one-fourth of the height. This thickness, however, is only in equilibrium with the pressure of the earth; and therefore the smallest possible." He concludes:—

"The inference on the whole is, that if we make the thickness of the wall one-third of the height, it will be ample for the average kind of earth pressing against it; but if care be not taken to place the same properly, and there be likelihood of its being saturated with water, acting with the full force of a semi-fluid, we must of course increase its thickness. Whether this should be made nearly one-half the height, as recommended by Mayniel, is however questionable. There is no doubt that it may be very much avoided by having the backing executed, for a sufficient breadth, with proper care. By so doing, a large reduction in the cost of the masonry may be advantageously applied in depositing the backing earth in layers, properly levelled, beaten, and carried up with the building of the wall. In practice this is sometimes done in a slovenly manner, without due superintendence, and is often the cause of failure in the structure."

There is a want of precise teaching in this treatise; readers are left in doubt which really is the correct formula after all: nevertheless we strongly recommend Mr. Murray's work to the consideration of our readers, and even more strongly the special branch of knowledge which the consideration of it involves.

Fall of a Railway Bridge.—On Thursday before last, a bridge over the Stockton and Darlington Railway, near Crook, fell in as six or eight horses, and three or four persons, were passing over. The bridge (made of wood) connected the lands of one farm, and had been in a rotten state for some time.

Miscellanea.

Reflector for Lights.—At the meeting of the Institution of Civil Engineers, on the 20th November, attention was directed to a new kind of reflector for lights: it was composed of silvered porcelain, and appeared to possess a very brilliant polish, which was stated to be indestructible. Hitherto reflectors of small sizes only had been produced; but by means now adopted, it was expected they could be made as large as 21 inches diameter over the mouth. If this manufacture was brought to the perfection it was anticipated, a great economy would result, as the silvered copper reflectors, at present used, were expensive originally, were liable to oxydation, and were frequently injured by the care of the attendants, in rubbing them to keep the reflecting surfaces bright.

Expanding Bridge.—At the same meeting Mr. Lavanchy exhibited a model of an expanding portable bridge, of his invention. The system had been tried at Paris, where a bridge on this principle, fixed upon a boat in the canal, had been used for permitting the passage of troops: the boat yielded considerably to the weight of the men brought upon it, but the bridge remained stiff, and the commanding officer had reported well of its properties. The principle was that of a number of strips of iron or wood, pinned together transversely at such points, as that they should form a series of equilateral parallelograms, the extension being obtained by the motion upon the connecting pins, somewhat on the principle of what was commonly called "lazy-tongs." Its construction was stated not to be at all expensive.

The Traffic of the Metropolis.—In the report of the Parliamentary Committee on metropolitan communications, it is stated that about 200,000 persons enter the city each day on foot by different avenues, and about 15,000 by the river steamers; and besides the cab, cart, carriage, and waggon traffic of the streets, the omnibuses alone perform an aggregate of 7,400 daily journeys through the city. The number of passengers arriving at and departing from the London-bridge group of railway termini, which in 1850 amounted to 5,558,000, had in 1854 risen to 10,845,000. At the South-Western Railway, during the same period, the numbers have increased from 1,238,000 to 3,308,000. The number arriving at and departing from the Shoreditch Station last year, is stated at 2,143,000; Euston-square Station, 970,000; Paddington Station, 1,400,000; King's-cross Station, 711,000; the Blackwall Station, in Fenchurch-street, 8,144,000. The committee call attention to the urgent need of plans being adopted to relieve the present over-crowded thoroughfares. They recommend the establishment of new and more direct lines of communications between the principal points of the metropolis; the connection of the various railway termini with each other, with the docks, the river, and the post-office; and the abolition of tolls on the roads and bridges within the metropolitan district.

Surveyorship.—It is stated that the office of surveyor in the Sun Fire Office is vacant. The salary is, of course, considerable.

Nottingham School of Art.—On Tuesday in last week the twelfth annual general meeting of the donors, subscribers, and friends of this school, was held in the Exchange Hall, Nottingham, for receiving the report of the committee, electing a new committee, and distributing the medals awarded to the students for works sent to the annual exhibition, Gore House, London. The drawings of the students, from Gore House, and of the pupils generally, were exhibited on the walls. The mayor was called to the chair, and the secretary read the report, in which the committee regretted that they were not able to report so favourably as they could have wished to have done upon the present position of the school. During the past year the numbers of students in attendance had been about eighty each month, which was a falling off as compared with previous years of at least thirty students. The committee were of opinion that this decrease was mainly owing to the frequent changes made in the management of schools of art by the authorities at Marlborough House, and to the want of a second master to the school. In the midst of a good deal of remark from various speakers, unfavourable to the management of the Department of Art, the chairman said he hoped that steps would be taken to represent to Government the steps which the gentlemen of Marlborough House were attempting to impose upon them, and which would soon shut up all the provincial schools of art. It was all very well to say that those interested in manufactures should support these themselves: manufacturers, both here and in other places, had always contributed *their share* and more. But the school was calculated to be of benefit not only to the manufacturers but to the town at large; and it was their duty to aid in the development of what he believed advanced the trade of the town and the commercial interests of the country generally.

Gas.—The Portsmouth Gas Company's men are busily employed, according to the local *Times*, in laying down throughout the town, new mains of a much larger diameter than those at present in use. An insufficient supply, much complained of, has been caused by leakages in the old mains.——A "perdifume" or condenser, has been patented by Mr. Edward Simons, of Dale End, Birmingham. In size and external form it resembles the ordinary shades, and it is suspended in the same manner over the flame. It has a raised and partially closed bottom, containing soda, lime, or potash, which absorbs the carbonic vapours, and thus, it is said, preserves the surrounding air in a state fit for respiration, also condensing the smoke, and retaining the unconsumed carbon, which would otherwise be deposited in more objectionable places. Where it is made of porcelain, or of opaque glass, it is said to increase the illuminating power of the gas, by acting as a reflector. The cost, it is said, is a mere trifle.——With the view of economising the consumption of gas, as well as effectually lighting the streets, an experiment is being tried at Dunbar. The same system was introduced into Haddington some time ago by Mr. D. Roughead, and abandoned before it had a fair trial. It consists of highly reflective lamps placed in elevated situations in different parts of the town, whereby a small jet of gas throws out a great flood of light. There is only one lamp at Dunbar as yet. It has been placed in a window of the top floor of Dunbar House. The lamps on both sides of the streets were put out as far as the West Port, and the street is, nevertheless, it is said, nearly as well lighted as with the present lamps altogether.

Saturday Half-holidays.—Mr. J. R. Taylor, of Chancery-lane, has compiled, under the title of "Saturday Half-holidays and the Earlier Payment of Wages," and published in the form of a pamphlet, some correspondence from the public journals on this important subject, together with the resolutions unanimously passed at the public meeting in Guildhall, London, on 15th August last,—the whole addressed to the Lord Chancellor (Cranworth), the Lords of the Treasury, the Lord Mayor of London, the legal profession, and the public in general. The object is to enable those addressed to form a just estimate of the importance of the movement in various aspects, and to point out the best means of carrying out the design.

Wooden Houses.—In a book written by me called "A Sketcher's Tour round the World" (Hurst and Blackett, 1854), at page 159, in speaking of the earthquakes in Chili and Peru, I have remarked on the danger of brick and stone houses, and that if houses were built of timber, exactly as they are in Norway and Sweden, they would be quite safe. The logs are notched into each other at the corners of the house, and the partition of the rooms fitted in the same way, through the side of the house, and each log when put up is placed on pegs previously inserted in the lower one. I think that houses built in this way would be quite safe in earthquakes that would overthrow any brick or stone ones.—R. Elwes.

Hoop-Iron Bond.—As the patentee of the bond upon which you were good enough to express a favourable opinion, I cannot permit the observations of your correspondent, "R." (who has brought forward a very old suggestion, as being a better and more easy method of preventing "longitudinal escape," than by the use of my "Patent Bond"), to pass quite unnoticed, lest those of your readers who have not yet seen the "new bond," may be prejudiced against it, and say it must, indeed, be useless, if "R.'s" suggestion be better. It will not, I think, be necessary to go fully into the defects of "R.'s" notion, as nineteen-twentieths of your readers will have at once seen its objectionable character. It is clearly not so good a method as using the hoop-iron in the ordinary manner, as it divides the building into a series of short ties, offering a kind of premium for a split, on the least settlement taking place, weakens the bond at four places, for every "raising and depressing" of the iron, causes great additional labour, as the iron must be closely dressed at each turn, and entirely destroys the end-to-end tie, so essentially necessary for proper construction. That "longitudinal escape" does now occur, there cannot, I think, be any doubt, although "R." thinks differently; the cracks to be seen in every street offer, according to my ideas, convincing proof. The methods adopted by many architects to give to the hoop-iron an additional key, and the various experiments tried by many professional men (among them I would mention one of the most celebrated late engineers), clearly prove that "R.'s" opinion is not a general one; and that hoop-iron, as at present used, is not considered perfect, and does not obtain, to the full extent, that object, for which it is especially used. It is to prevent the possibility of "longitudinal escape," that my "Patent Bond" has been designed.

F. Tyerman.

The proposed Anglo-Gallic Submarine Railway Tunnel.—Another new form of this project has been sketched out by Mr. James Wylson, C.E. in the *Illustrated News*. Mr. Wylson preludes his own modification of the tunnel, by a brief historical record of the various forms under which it has been suggested, and points out the *Builder's* early connection with the project. The names associated successively with it in this sketch are, Mr. Rettie, of Glasgow, C.E. in 1838; Mr. De la Haye, of Liverpool, in 1845; Mr. E. Pearse, of Tavistock, in 1846; M. Ferdinand, in 1848; M. Horeau, in 1851; and Dr. Payerne and M. Favre, in 1855. Mr. Wylson's peculiar modification of the idea consists mainly in the submersion, midway or more towards the bottom of the channel, of a tunnel built on pontoons at the surface, and constructed in a way analagous to that pursued in the cooper's craft, the tube being cylindrical, and consisting of a system of staves and hoops of wrought iron, with some flexible and saturated sheeting between the two, and lined interiorly with dowelled brick, to moderate the buoyancy of the whole, and steady it *in situ* below the field of storm-wave commotion altogether, where it would be moored by weights of sufficient ponderosity after being sunk to its position. The ends of the tunnel would be closed each with a hemisphere of iron, and access be had from above the surface of the water by shafting and platforms, so that the whole would float freely without any rigid attachment to the shores. There might also be shafts for ventilation here and there along the line, with bells and lights to indicate the whereabouts of the tunnel to vessels passing it, and the tunnel might be lighted by electricity, the tops and sides of the carriages being of glass. Mr. Wylson provides for various other contingencies into which we cannot enter. He estimates the total cost of his project, so far as regards the tube itself, at 15,000,000*l.* or 750,000*l.* a mile, the tube being suitable to a single line only, to be worked alternately to and fro. This estimate, as he remarks, is about two and a half times the cost of the London and Blackwall Railway. Mr. Wylson's object is merely to indicate the practicability of the project, and advance it a stage or so towards its possible future realization.

Improvement in Carlow.—A correspondent of the *Carlow Sentinel* speaks of Mr. J. D. Duckett, of Duckett's-grove, Carlow, as one who has fostered architectural taste, and to some extent been instrumental in promoting the fine arts in Ireland, especially by his collection of works of art and science. The writer then proceeds to describe the new buildings at Duckett's-grove. The mansion is said to belong to a transition period between the thirteenth and fourteenth centuries. The style is castellated domestic. It consists of a centre and wings,—the centre, composed of the principal gateway, with lodges on either side, in flanking towers to the gateway. These towers are of unequal height—the one being 50, and the other 43 feet—the taller tower having a characteristic spiral stair leading to apartments above, which are fireproof. By this staircase, which is continuous, there is an ascent to a level flat or terrace of solid masonry, composed of Carlow flags with drips, after the manner of Roslyn Castle. The pile of building is of irregular outline in plan, covering an extent of about 240 feet. The design is by Mr. J. M. Derrick, and the contractors are Messrs. Kelly and Kinsella, who have been occupied about two years in the work.

The St. Andrews School of Art.—This undertaking was formally inaugurated by Sheriff Gordon on the evening of Friday before last, as reported in the *Fife Herald*. The Sheriff delivered an address on the occasion, advocating the wide diffusion of education among all classes of the community, as the most effectual means of lessening crime, and fostering refined tastes in the country. The large hall of the Madras College (where the address was delivered) was filled with the *élite* of the city, who testified their approval of the liberal sentiments submitted to them by frequent applause. Dr. Lees gave an encouraging statement of the progress already made by the committee of management, as to lecturers and enrolments in the several classes which were to commence this week. At the close of the address, a public supper was served up in the Town Hall, and about sixty gentlemen were present.

Birmingham.—The first lecture to the members of the St. George's Instruction Society, was delivered on Tuesday evening in last week, by Mr. George Wallis, head master of the Government School of Art, in continuation of a lecture delivered last winter, "On Elementary Drawing." The special subjects selected on this occasion were light, shade, and colour; and the various points brought out in the course of the address were illustrated by diagrams of colour and paintings, together with sketches in charcoal and white chalk, executed on tinted paper in the presence of the audience.

Leamington National Schools Competition.—We understand that the Lords of the Committee of Council on Education have expressed their approval of the plans prepared by Messrs. Clarke and Worthington. The committee, we are informed, stated that they did not think the estimate (2,022*l.* 10s.) too high for such a school as that in contemplation. Their grant towards the new building will be about 6s. per foot superficial over school and class-rooms, residence for master and mistress, &c. The amount is thus divided: master and mistress's residences, with yards and offices complete, 700*l.*; school-rooms and class-rooms, 740*l.*; sheds, &c. including division-wall, 175*l.*; water-closet building to schools, and fittings, 80*l.*; boundary-wall and iron railing to front, including four gates, 170*l.*; bell and hanging, 7*l.*; grates, desks, benches, cupboards, &c. 125*l.*; add extra for tile roofs, 25*l.* 10s.: total, 2,022*l.* 10s. Mr. John Murray has published an advertisement, a column and a half long, in the *Spa Courier*, impugning the decision.

Somersetshire Archæological and Natural History Society.—The first *conversazione* of this society for the season 1855-6 took place in the Museum of the institution, at Taunton, on Monday evening before last, under the presidency of Mr. W. E. Surtees, when the large room was thronged by the *élite* of the town and neighbourhood. Nearly 200 members and their friends were present. The walls of the museum displayed various additions to the collection deposited in the curator's custody. The Rev. Mr. Warre lectured on the subject of the cathedral at Wells. Mr. Warre's remarks related to the appropriate and judicious use of sculpture and painting, as aids to architecture, but more particularly to the merits of the collection of casts from Wells Cathedral, of which the society had obtained possession since their last meeting. After some little discussion, Mr. R. Walter read a paper "On the Architectural Features of Stoke-sub-Hamdon Church;" after which the company adjourned to the refreshment-room; and when the subject was resumed, some conversation ensued on the topic of Mr. Walter's paper. Mr. Jones then addressed the meeting on "The Microscope, with some of its Uses and Revelations."

Extension of Speaking Tubes.—A fact in acoustics has just been tested at a printing establishment in Liverpool, according to the local *Journal*. Mr. Greenwood's private office is in Canning-place, his printing-office in Trafford-chambers, South John-street. The distance is about 400 feet, and a gutta-percha tube, of an inch diameter, has been carried through yards, houses, cellars, &c. and then passed up to the upper story of Trafford-chambers. A person speaking at one extremity in Canning-place is heard, it is said, as distinctly in South John-street as if he had been within a yard of the speaker. Some scientific gentlemen recommended a tube of large diameter, and one of an inch-and-a-half was tried without success: the inference is, that the smaller the tube the more distinct the words conveyed. Does this, remarks the *Journal*, suggest the possibility of a speaking-tube for miles along a railway? Is it not, we may add, corroborative of the idea that music, and even lecturing, preaching, &c. may be "laid on" in a town, like gas or water, or distributed from some central source and through different routes at one and the same time, by means of very small tubes connected with one or more "auricles," or conceutraters, of the particular sounds to be so conducted? The experiment at the Polytechnic Institution, in Regent-street, whereby music is conducted in a way somewhat analogous from one part to another of the premises is an interesting one, and might be followed up by the enterprising manager, Mr. Pepper, with another, of the kind indicated, for the transmission of some suitable lecture, or other oratorical composition, or soliloquy, from an auricle, and through several small tubes simultaneously into different apartments, or closets, prepared so as to receive the acoustic vibrations to the best advantage. The effect might at least be made exceedingly amusing in various ways, though not perhaps of much practical use.

Milton Club Competition.—We understand that the design by Messrs. Banks and Barry has been selected.

The Stained Glass for St. George's-hall, Liverpool.—The *Liverpool Albion* of Monday last mentions that a transparency prepared by Mr. F. Howard, "as a specimen design for a decorated window for St. George's-hall, will be exhibited to-day, in order to give the committee an opportunity of appreciating its effect before giving the order for its execution in stained glass." The subject represents Lord Stanley putting the crown on the head of Richmond, after the battle of Bosworth-field. It occupies the centre window of the five at the side, the size being 18 feet 7 inches by 8 feet 6 inches. It is proposed to fill the window with the single representation of the subject, and to make the outline of the group support the whole of the glass without any arbitrary lines, such as sash-framing and saddle-bars.

Associated Registrars' Committee.—The superintendent registrars and registrars of births, deaths, and marriages, considering it desirable that, as a body, they should have an organised representation, held a meeting a short time ago at the Freemasons' Tavern, at which it was resolved that a committee should be appointed, under the above title, to watch over the interests of the registrars generally, and especially in respect to any legislative enactments affecting them in their official capacity. The committee, in their prospectus which they have addressed to the registrars, inviting their co-operation, desire it to be clearly understood that they have no reason, nor any wish, to complain of the duties imposed upon them by the registrar-general under the Registration Act, but they consider that the experience acquired by the registrars since the passing of the Compulsory Vaccination Act, fully warrants that some endeavour should be made to guard them from the effects of Acts of Parliament containing clauses most difficult to be carried out, and at the same time affording very inadequate remuneration for the duties imposed. This, they are of opinion, cannot be done efficiently without the cordial co-operation of the general body of registrars. The offices of the committee are at 9, Gower-street, Bedford-square.

Architectural Society, Oxford.—At a meeting held on Wednesday evening, the 21st ult. the president, the rector of Exeter, in the chair, the secretary read the report of the committee, expressing a hope that, before any steps were taken towards the much desired restoration of St. Mary's Church, the state of the tower should be carefully considered, since great fears were entertained, from the reappearance and extension of cracks in the masonry. Afterwards the Hon. H. C. Forbes, of Oriel College, read a paper "On the best Style for Churches in the Present Day."

The Royal Institute of Architects in Ireland held its second re-union for the session on Saturday, the 24th of November, and we are informed that the members mustered pretty strongly. Mr. Jacob Owen, V.P. M.R.I.A. occupied the chair; Messrs. M'Carthy, S. Symes, Neville, M'Curdy, J. J. Lyons, James Owen, Astley, Montgomery (members); J. Kirk, Tate, Telford (associates), &c. were present. The business of the evening was chiefly of a financial character, with exception of the announcement of a donation of reports of proceedings from the Liverpool Architectural and Archæological Institute,—an evidence of that proper feeling of cordiality which should always exist between kindred institutions.

Coppin's Iron Theatre, at Melbourne.—The Sydney *Bell's Life* mentions the opening of this theatre, which was made by Messrs. Edward T. Bellhouse and Co. of Eagle Foundry, Manchester. Although erected in the short period of six weeks, it is stated to have a thoroughly substantial look. The *parterre*, having sitting capacity for 700 persons, is divided into pit and pit stalls; and the boxes will hold 450 seated. The decorations are rich and elegant, the prevailing colours being green, pink, and French white. The front of the boxes is ornamented by medallions, illustrating selected situations from the "Merchant of Venice," "Hamlet," "Othello," "Richelieu," "Richard the Third," and "A New Way to Pay Old Debts," which (as well as the general decorations) have been executed by Mr. W. Pitt, formerly connected with the Lyceum Theatre.

Board of Works.—T. Walsham Philipps, esq. who, on his retirement, has been succeeded in the situation of Secretary to the Board of Public Works by Mr. Austin, from the Poor Law Board, served upwards of forty years with ability and zeal in the public service. On the division of the establishment of Woods, Forests, Land Revenues, Works, and Buildings, on October 10, 1851, Mr. Philipps was appointed Secretary to the Commissioners of Works and Public Buildings. Previously he was official secretary to the Chief Commissioner, and clerk to the Board of Woods and Forests; also secretary to the Commissioners of Metropolis Improvements.—*Civil Service Gazette*.

Smithfield Club Prize Cattle Show, 1855.—We are asked to remove the impression which has arisen that this show has been removed from the Baker-street Bazaar, where it has been so long held, and are authorised to say that it will take place as usual on the 11th, 12th, 13th, and 14th of December, at the Bazaar. In taking the Bazaar for a term of years, the committee of the club had in view the fact that the principal supporters of the show are, on the one hand, the general public, who will not follow an exhibition, however popular, to an inconvenient locality; and, on the other, noblemen and gentlemen interested in agriculture—the principal exhibitors—who now resort to the show from day to day, from its contiguity to their London residences, as well as the farmers and graziers, who, when they come to town, like a central situation.

TENDERS

For the erection of an iron and timber stage, for stacking and seasoning mahogany, at Messrs. William Oliver and Sons' yard, Bunhill-row. Mr. Joseph Springbett, architect:—

Verry and Turner	£1,102 0 0

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK, LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N B OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has (on very CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed street, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, and Seel street, Liverpool

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME to any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto, ditto, 2d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SLOUNDS, PAVIORS', STOCKS, and other BRICKS.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period, and is shown on hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

BATH, PORTLAND, and ROMAN CEMENTS, GROUND and LUMP HYDRAULIC BLUE LIAS LIME.—The London and West of England Cement Company can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The company particularly request that of their EXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to a l parts. Agents required in all towns where not already established. Orders received by RICHARD WINTER (Manager to the Company), Cement Works, Dunball, Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying competitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvidere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N B These Cements supplied or shipment, on advantageous terms

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates and Slate Slabs, Fire-bricks, Grindstones, Cement chimney-pots, ditto Vases, Hideing, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

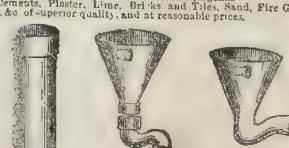
Delivered for Cash to any of the Metropolitan Railway Stations or within the Metropolis

11 George-yard, Lombard street City

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality manufactured at the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stucco will take paint or can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their continuity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each truck.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.



Agents in London.—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road Paddington

TO BUILDERS CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfect by NON ABSORBENT the quality of rain having any effect upon it), and will not VEGETATE or BENGOUGH. Stucco Cement and Stucco Paint. CLARK and Works, Grand Surrey Canal Bridge, Old Kent-road.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 30s. per 1,000, floor bricks and 9 inch pavings, at 37s. 6d. per 1,000, 8 inch pavings at 27s 6d. per 1,000; 9 inch pavings, at 25s. 6d per 1,000 Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC" is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Pilleries," Tunstall, Staffordshire, as the first of the kind in the world.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 5, King William-street, City, London Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and economical, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PRIZE BRICK-MAKING MACHINE.—CHAMBERLAINS' PATENT. This portable machine will make 20,000 solid bricks per day, with 5-horse power. One man to feed the machine with clay, and boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helen's, September 6th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 8th, 1855.—Apply for particulars to Mr. HUDDY CHAMBERLAIN, Kempsey, Worcester.

THE PATENT BRICK-MACHINE COMPANY have ORDERS for their improved machines, the only one that manufactures solid bricks equal to hand-made. A machine, and bricks made by it, may be seen in a field near London. H. C. MOUNT, Secretary.

37, King William-street, City.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea bridge, at the following prices, viz.—Grey stocks, 33s per thousand; Grizzles, 29s. per thousand; Rough Stocks, 20s; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G SMEED, Sittingbourne, Kent.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite office, 4, Millbank-row, Westminster.

GRANITE.—The Checsewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potterscream, Hare-hill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curbs and Pitching, all at the very lowest prices.

N.B. Good 2 inch Tooled Paving, at 40s. per 100 feet, cash.

AUSTIN'S ARTIFICIAL STONE.—This material frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Features has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000 and 5,000. In contradistinction from Terra-cotta, and all other kind of Pottery, there is no distortion of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof. AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.

*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED,

Manufactured by MACHINERY, which produces the greatest degree of fineness.

WILCOX & CO.
Flint Mills, Mill wall, near Scott Russell's.
CARRIAGE FREE.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, Kingscross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

ENAMELLED SLATE.—REDUCTION in PRICE. Mr MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the size of a large and increased discount to the TRADE. His best sides are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works Model Prison, Pentonville, and other Penitentiaries, Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag-Stone Company and the Llangollen Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney pieces, Baths, Filters, Larders, Mangers, Rilgeing, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malting-houses breweries, conservatories, warehouses, &c. A cheap variety of reft aced flags for street paving, &c can be supplied at very moderate prices.—Price and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr. GEORGE F. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

MEDWIN and HALL, Engineers, Surrey Iron Works, 93, Blackfriars Road, where, &c., may be seen

VAST IMPROVEMENT and ECONOMY in PUMPS and PUMPING-ENGINES.—Parsey's Revolving Pump, worked by a revolving steam-engine, may be seen at his factory, Great Dedmead yard, 6 in twelve to one, and from two till dusk, every day except Saturdays.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the perniciousness of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it more weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; the Manufacturing and Painting Agent, Mr FREDK BRADY, Putney Works, New-road. In Manchester and Liverpool by R. CLAY, 8, Mercer-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber Merchants; and in Southampton, by Mr. H J. BUCHAN. Dry OXIDES and PAINTS in kegs of 14, 21 and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.
For further particulars, apply to the Company's General Agency in London, 12, Manchester buildings, Westminster

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the erection of our noblest buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice

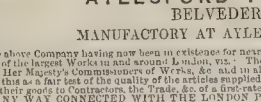
BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Cornices, Tracery, Fire Parapets, Balusters, String Courses, Friezes, Bas-reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Pratt street, Paddington.

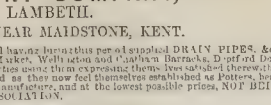
HAWKINS'S PATENT BRUSH COMPANY.—Manufactory, 17, College hill, Cannon-street West, London.—Merchants, Artists, and Others, would do well to buy Hawkins's Patent and other Brushes; their superiority in every respect being now established by use. Prices and full particulars can be had, and samples seen, at any Ironmonger's under, or at the Manufactory as above.—Mr. FRANCIS FORD, 8, Lawrence Pountney-hill, Cannon-street, London, Sole Agent for London and its Vicinity

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GREGG'S WHOLESALE WAREHOUSE, 24, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGING WAREHOUSE, 3 OXFORD-STREET.—To be DISPOSED OF, at a considerable reduction, all the remaining Summer STOCK of PAPER-HANGINGS, including Gold Flocks, Satins, and Machine-work, which must be cleared out before the new year.

AYLESFORD POTTERY COMPANY,
BELVEDERE-ROAD, LAMBETH.





MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years and having during this period supplied DRAIN PIPES, &c to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

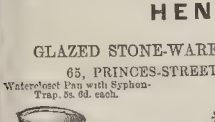
Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.



I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

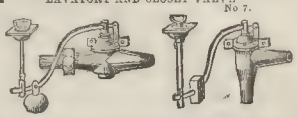
"Terra-cotta" Chimney-pots of various patterns and sizes, also Red Earthenware Drain-pipes, at greatly reduced prices. (1179)

SUPERIOR GLAZED STONEWARE
DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.



W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Northen's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in its manufacture, which is equal to glass, and rendering it proof in the highest possible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Marton and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea: and at the Pottery.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE
No 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many families are in use under existing pressure of 10 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Woodstock-sheds by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 14s. 6d. each.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES

FREEMAN ROE'S PATENT SLUICE-VALVES,

SURVEYOR WANTED.—The Local Board

of Health and the Council of the Borough of Great Yarmouth are desirous of engaging a qualified person to perform the duties of SURVEYOR and INSPECTOR of NUISANCES to the Board of Health, and Surveyor to the Town Council; to be restricted from any other occupation or emoluments. Total salary, £200. Applications, stating age, with testimonials, are to be addressed to the Town Clerk, not later than the 24th DECEMBER next.—Great Yarmouth, 27th November, 1855.

ROTHERHAM and KIMBERWORTH

LOCAL BOARD of HEALTH.—WANTED, by the above Board, a GENTLEMAN of experience as SURVEYOR. The candidate must have a knowledge of engineering, especially in connection with works of water-supply, drainage, sewerage, and surface cleansing; competent to conduct surveys, take levels and sections, prepare plans, drawings, and estimates for works of every description, and able to superintend the execution thereof, test the materials, and see to the fulfilment of the conditions of the contract for executing such works. He also will be required to report upon all new buildings within the district, as to their drainage, levels, and other conveniences, and also upon cases of nuisance, and generally possess a thorough knowledge of the repair of highways, and of all the duties required by the Public Health Act, 1848. The whole time of the surveyor is to be devoted to the duties assigned to him, and he is to be restricted from undertaking any other employment. Candidates are to state the exact previous occupation, and the salary they would expect to receive; but are not required to attend personally until summoned; and no canvassing will be sanctioned.—Applications, with testimonials of qualification and competency, addressed to "The Chairman," must be forwarded to me on or before the 14th day of DECEMBER next, at TEN o'clock a.m.—By order,

JNO. BARRAS, Clerk.

Public Offices, Rotherham, November 22, 1855.

BOROUGH of HALIFAX.—To

ENGINEERS and SURVEYORS.—WANTED, a SURVEYOR, fully competent to take charge of the borough water works, sewerage, and other public works of the borough, besides the usual business of the Corporation, including that of the Local Board of Health. He must be familiar with the practice of engineering in connection with the above mentioned works, able to conduct surveys, prepare plans, drawings, and estimates of works of every description, and will be required to devote the whole of his time to the duties of his office. Salary £300 per annum. Applications, with testimonials of qualification and competency, to be addressed to the General Purposes Committee, endorsed "Application for Office of Surveyor," and to be forwarded, under cover, to the undersigned, on or before the 1st day of JANUARY, 1856. By order,

EDMUND MINSON WAVELL, Town Clerk, and
Clerk to the Halifax Local Board of Health.

Town Clerk's Office, Halifax, November 15th, 1855.

WARE LOCAL BOARD of HEALTH.—

Notice is hereby given, that the Ware Local Board of Health will, on TUESDAY, the 18th day of DECEMBER next, proceed to ELECT a person to execute the duties of SURVEYOR and INSPECTOR of NUISANCES, at a salary of £1 a year. Candidates are requested to send their testimonials, addressed "The Chairman of the Local Board of Health, Ware," on or before the 14th day of DECEMBER next, and to state their age. The person obtaining the appointment must reside in Ware, and devote his whole time to the duties of his office. He must be fully competent to prepare plans and to superintend the drainage of the probable cost of any works which they may require to be done, and he will be sworn in as a constable.—Further information may be obtained on application to the clerk.

By order,

NATH. COBHAM, Clerk to the Board.

Ware, 21st November, 1855.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.

TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relations to the requirements of trade and manufacture and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of the general education entrusted to them.

The Instruction comprehends the following subjects:—Freehand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, Objects of Still Life, Figure from the Antique and the Life, and the Study of Anatomy as applied to Art. Also, Classes for instruction in the technical processes of Chromatic Enamel Painting, Etching and Engraving on Steel, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees if per session, or part of the session. For Evening Classes only, if per session.

The Fees for Practical Geometry and Perspective, or that for Modelling and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students in the Training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 1s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

DARLINGTON BURIAL BOARD.—The

BURIAL BOARD for the Township of DARLINGTON, are prepared to receive DESIGNS, SPECIFICATIONS, and ESTIMATES, for ERECTING TWO CHAPELS, ENTRANCE LODGE, GATES, FENCING, and LAYING OUT the proposed NEW BURIAL GROUND twelve acres in extent, the total amount not to exceed £2500. Premiums will be given for the two designs most approved, viz.: £25 for the first, and £15 for the second, the plans, &c. for which they are given to be the property of the Board. Competitors must state the amount of Architect's charges required over and above the premium, for furnishing all working drawings necessary, and superintending the work, if the Board should require their services. The designs, estimates, &c. must be sent to me, at No. 8, Arden-street, Darlington (where a plan of the site may be seen), on or before the 24th DECEMBER.

By order,
H. LUNN, Clerk to the Board.

Darlington, November 29, 1855.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that sealed Tenders, addressed to the Director General of Contracts, will be received at the War Department, Pall-mall, on or before the 17th DECEMBER, 1855, for the ERECTION of a New BLOCK of SOLDIERS' BARRACKS, at the Wellington Barracks, St. James's-park. The specification and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineer's Office, 31, Jamesstreet, Pimlico, between the hours of TEN and THREE o'clock, from the 3rd to the 17th of DECEMBER. The War Department reserves to itself the right of rejecting any or all of the Tenders.

Royal Engineer's Office London District, 1st December, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer, Portsmouth, hereby gives notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on or before FRIDAY, the 14th day of DECEMBER, 1855, from persons desirous of contracting for IMPROVING the APPROACHES to, and for WIDENING and RENEWING the POINT BRIDGE, Portsmouth, county of Hants, the plans and specification for which may be seen, and all necessary information obtained, together with printed forms of Tender, at the Office, between the hours of TEN and FOUR each day (Sunday excepted) from the 6th to the 13th instant. The person whose Tender may be accepted, will be required to provide two eligible securities, to be bound with him jointly and separately in a bond of 400l. for the due performance of the contract by the 15th day of MARCH, 1856. The War Department reserves the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form.

Royal Engineer Office, Portsmouth, 1st December, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall Mall, on or before the 20th DECEMBER, 1855, for the ERECTION of SOLDIERS' BARRACKS and CANTEEN, at the Wellington Barracks, St. James's-park. The specification and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineer's Office, 31, James-street, Pimlico, between the hours of TEN and THREE o'clock, from the 12th to the 22nd DECEMBER. The plans, &c. for the Erection of a block of Soldiers' Barracks known as No. 5 on the Royal Barrack Ground, and 22nd DECEMBER, instead of the 17th DECEMBER as previously advertised. The War Department reserves to itself the right of rejecting any or all of the Tenders.

Royal Engineer's Office, London District, Dec. 6, 1855.

CONTRACT for GRAVEL.—The Committee of the REGENT'S CANAL COMPANY are desirous of receiving TENDERS, on or before the 20th DECEMBER next, from parties willing to CONTRACT for MEASURING the TOWING PATH of the CANAL, with GRAVEL. The specification may be seen at the Company's Office. Tenders to be closed in a cover, sealed and marked, "Tender for Gravel." By order of the Committee,

EDM. L. SNEE, Secretary.

Regent's Canal Office, No. 29, City-road Basin,
Nov. 24, 1855.

CONTRACT for DREDGING.—The Committee of the REGENT'S CANAL COMPANY are desirous of receiving TENDERS, on or before the 20th DECEMBER next, from parties willing to CONTRACT for CLEANSING the CANAL, &c. for a Term of Three Years. The specification may be seen at the Company's Office. Tenders to be closed in a cover, sealed and marked, "Tender for Dredging"—By order of the Committee,

EDM. L. SNEE, Secretary.

Regent's Canal Office, No. 29, City-road Basin,
Nov. 28, 1855.

TEMPORARY CHURCH REQUIRED.—TENDERS, with designs, are required for an Iron or Timber-built CHURCH, to be erected in Camberwell, London, capable of accommodating 1000 persons. Further particulars may be had on application to Mr ABRAHAM LOCKEN, 1 Castle-st Buildings, Cheltenham, on or before the 14th day of December, 1855, stating a price for purchase, and also for rental for two years certain.

GLASGOW CORPORATION WATER-WORKS.—LOCK KATRINE AQUEDUCT.—CONTRACTORS WANTED FOR THE ARRHUILDARAN CONTRACT, including a tunnel, 2 1/2 miles in length, and other works. The plans, sections, and specification of the said contract for the execution of these works, will be ready for inspection on and after 5th DECEMBER next, in the Town Hall, at the Cross of Glasgow, entry by No. 12, Trongate street; and also at the Inn, at Aberfoyle, near the site of the Contract. At these different places, as well as from the subscriber in Glasgow, any necessary information will be obtained. The works to form the first of the contract will extend from Loch Katrine to the valley of the Duchray Water, being a length of about eight miles and will include all tunnelling, masonry, and arched culverts requisite, and every other work connected with the same. The whole, together with the formation of about 2 miles of road from the head of Loch Katrine to the road leading from Inversnaid on Loch Lomond to Stronachalchar, on Loch Katrine. Further information may be obtained from Mr. J. F. BATEMAN, at Manchester, his Offices, in John Dalton-street, Manchester; and from Mr G. H. HILL, the Assistant Engineer, at Inversnaid on Loch Ard, near Aberfoyle, who will accompany intending Contractors over the ground. The CORPORATION of the WORKS, sealed and marked "Tender for Ruaich Head Contract," will have to be delivered to the subscriber, Mr. BURNET, at his office, Council-chambers, Glasgow, on or before 3rd JANUARY next.—By order of the Committee,

JOHN BURNET, Secretary.

Glasgow, Nov. 22 1855.

[For remainder of Contracts see next page.

CONTRACTS.

TYNEMOUTH CEMETERY.—The Burial Board for the Parish of Tynemouth hereby give notice, that they are prepared to receive TENDERS from parties willing to contract for the execution of the following works:—

CONTRACT No 2.—For providing Materials, and Building about 1,274 Lineal Yards of Rubble Stone Wall eight feet in height, round the proposed Cemetery, also a Dwarf Wall, 2 0 yards in length, to receive Palisading.

CONTRACT No 3.—For providing and fixing 900 Lineal Yards of Cast-iron Palisading, five feet six inches in height.

CONTRACT No 4. For Cutting and Levelling the Surface, providing Material and Forming about 12,850 Square Yards of Gravel or Ash Paths within the Cemetery. Also for Excavating and Laying about 4,600 Lineal Yards of Drain Pipes.

The plans may be examined and duplicate copies of specification and form of Tender may be had, on payment of 1s 6d for each Contract; and any further information obtained, on application at the Office of Mr. THOMAS PENWICK, Borough Surveyor, Northumberland-street, North Shields. Sealed Tenders to be delivered at the Town Clerk's Office, North Shields, before TWELVE o'clock on FRIDAY, the 21st day of DECEMBER, 1855, endorsed "Tender for Contract, No. 2, 3 or 4," as the case may be. The Board are not bound to accept the lowest or any Tender.

THOMAS C. LEITCH, Town Clerk.

North Shields, Nov. 28, 1855.

NORTH-EASTERN RAILWAY.—The Directors of the North-Eastern Railway Company are prepared to receive TENDERS for the undermentioned ARTICLES, in such quantities as they may require from the 1st of JANUARY to the 30th JUNE, 1856, delivered at the Company's Storehouses at Newcastle, Gateshead, York, Leeds, or Hull. Payment for each month's delivery at the end of three months, or cash deducting 5 per cent. discount.

1. Timber, Deals, &c
2. Best English Oak Waggon Wood.
3. Sleepers, Keys, Fence Railing, and Posts.
4. Wrought and Cast Iron, Chairs, and Switches.
5. Nails
6. Chains and heavy Iron-mongery.
7. Steel, Files, and Springs.
8. Tire Hoops.
9. Tallow and Oils.
10. Varnishes and Paints.
11. Brushes.
12. Wire Ropes and general Hemp Cordage.
13. Leather
14. Coke Baskets.
15. Glass.

Forms of Tenders may be had on application to Mr. BARNES, Stores, Gateshead, on and after MONDAY, the 10th of DECEMBER; and Tenders must be sent in addressed to the Secretary, at York, sealed, and marked "Tender for Stores," on or before MONDAY, the 24th DECEMBER. The Directors do not bind themselves to accept the Lowest Tender or any other.

York, November 24, 1855. W. O'BRIEN, Secretary.

TO BUILDERS AND OTHERS

THE BURIAL BOARD for the Parish of WEST HAM, in the county of Essex, require TENDERS from parties willing to CONTRACT to REPAIR the WALLS of West Ham Churchyard, and to pull down and rebuild such parts of the said Walls as may be required, and to build a new wall, of about 300 feet in length, for placing thereon a 5-feet iron railing, and to provide the said railing, as well as to supply new iron gates and such additional iron railing as may be deemed necessary to be placed upon the coping-stone of the outer walls of the churchyard, and to provide the stone for new steps, and for such other purposes that may be wanted, and to do and perform all the iron and stone work; and also to level such of the paths and other parts of the said churchyard as may be required, and to supply all the materials, and to perform all the work, according to the specification to be seen at the Office of Mr. T. E. KNIGHTLEY, Architect, No. 25, Cannon-street, City, until the 15th of DECEMBER, between the hours of TEN a.m. and FOUR p.m. The iron work may be Tendered for separately. The Board do not bind themselves to accept the lowest or any other Tender; and the party whose Tender shall be accepted will receive notice thereof, and have to execute a contract or agreement for the due performance of all matters therein stipulated. Personal attendance will not be required. Every Tender is to be sealed and marked "Tender for Repairs, &c. to West Ham Churchyard," and to be addressed to Mr. JOHN SUTTON, Clerk to the Burial Board, Rokeby House, Stratford, Essex; and to be delivered by TWELVE o'clock on MONDAY, the 17th of DECEMBER now next; after which hour no Tender will be received.

Dated Nov. 26, 1855

TO IRONFOUNDERS AND OTHERS

THE NEWTON-IN-MACKERFIELD IMPROVEMENT COMMISSIONERS are prepared to receive TENDERS for the SUPPLY of 1,500 YARDS of GAS MAINS, with socket-joints, and with bearings bored and turned, also, seventeen Gas Pillars, and twelve Wall Brackets for Lamps. Specifications and further particulars may be obtained on application to the Surveyor to the Commissioners, Millstone, Newton, near Warrington, Lancashire, or to us, the undersigned. Tenders to be addressed to us, under cover, endorsed "Tenders for Gas Mains," and delivered at our Office on or before the 15th inst. The Commissioners do not bind themselves to accept the lowest or any Tender. KING and BROOMHEAD WARD,

Clerks to the Commissioners.

St. James's Chambers, South Rin.-street, Manchester.

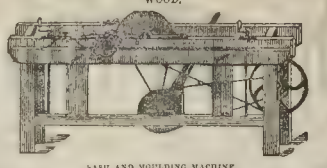
TO BUILDERS AND OTHERS

NATIONAL SCHOOLS, Horsington, near Wincanton, Somerset. The Committee are prepared to receive TENDERS for the ERECTION of NEW SCHOOLS and TEACHER'S RESIDENCE, and persons desirous of Contracting for the same, in whole or in part, may inspect the drawings, specification, and conditions, at the Office of Messrs. MESSITER, Wincanton, on and after MONDAY, the 10th day of DECEMBER, or at the Office of the Architect, Mr. HENRY HALL of, Thornhill-square, Islington, of whom further particulars may be obtained. The Tenders are to be forwarded to the Rev. E. L. MATHER, Horsington, on or before the 8th day of JANUARY, 1856. The Committee do not bind themselves to accept the lowest or any Tender.

THE NORTHAMPTON GAS-LIGHT COMPANY.—Persons desirous of CONTRACTING with the above Company for the PURCHASE of their COKE for the Year commencing on the 1st day of JANUARY, 1856, are hereby informed that sealed Tenders, at per Ton for the same, may be delivered at the Company's Works, Northampton, up to the 19th day of DECEMBER next, addressed to Mr. JNO. EUNSON, Gas Manager. The terms of payment, and other stipulations, will be the same "mutatis mutandis" as those for the current year, and will be produced on application to Mr. EUNSON. The Committee of Management do not pledge themselves to accept the highest Tender. WILLIAM DENNIS, Clerk.

TO BUILDERS

RUCKLAND RECTORY, LINCOLNSHIRE. The design, specification of works, and conditions of CONTRACT for BUILDING an entirely NEW RECTORY HOUSE and OFFICES at RUCKLAND, in the county and diocese of Lincoln, may be seen at our rooms in Louth, by builders desirous of submitting Tenders for the execution of the Works, from WEDNESDAY, the 12th, to THURSDAY, the 20th days of DECEMBER instant. Tenders to be delivered to us on or before FRIDAY, the 21st day of DECEMBER.



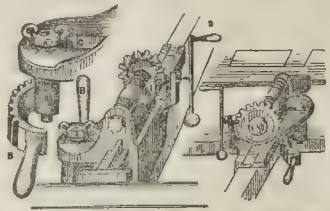
MAUGHAN and FOWLER, Architects.

Louth, Dec 4, 1855.

The contractor will have the privilege of making his own bricks for the works, on land immediately contiguous to the site.

BUILDING CONTRACT for FIVE HOUSES Millwall, for F. WALTERS, Esq.—Drawings and specifications at the Office of FRANCIS H. FOWLER, Esq., Architect, 4, Garden-court, Temple, from the 11th to the 15th inst. on which day TENDERS are to be delivered by TWELVE o'clock. Lowest Tender not necessarily accepted.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.



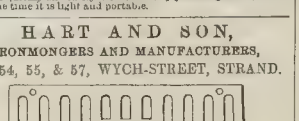
SASH AND MOULDING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, cutmakers, coach and cabinet makers, railway carriage and waggon builders, machinists, agricultural implement makers, shipbuilders: and also by the British and French Governments for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 36, Lawton-street, Liverpool, from whom full particulars may be obtained.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES

W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.



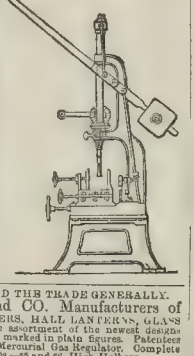
B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually get fixed and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a BENCH cramp of the best kind, and as well-suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND.



SLIDING VENTILATORS, IN IRON, BRASS, AND ZINC.

JOHN PARKIN and CO. late BLAKE and PARKIN NEW MEADOWSTEEL WORKS, SHEFFIELD, MANUFACTURERS of CIRCULAR and MILLING SAWS, IMPROVED CAST-STEEL FILES, for the use of engineers and machinists. PATENT LIMBERED MACHINE KNIVES and CUTTERS, manufactured for planing and grooving wood, for cutting paper, iron, stone, leather, &c. to any pattern or dimensions with the utmost exactness. Warranted to work with a harder and finer edge than any other made of temper.

INVENTIONS of CORE-ANNEALED CAST-STEEL for tape, piston-rods &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST-STEEL, &c.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', DOWIE, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongers' Establishment, 295, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is finally one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required

Patent Galvanized Iron supplied in every form.

Sheets plain and corrugated—Roofs fixed complete.

J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.

An Allowance to the Trade.

PATENT GALVANIZING and CORRUGATING IRONWORKS (Improved Process).

WORKS—GLASS-HOUSE YARD, opposite the Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.

A Discount allowed to the Trade.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC.

GREAT REDUCTION IN PRICE.

PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about 18 oz. per foot super.			
12	"	20	"
14	"	24	"
16	"	36	"

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The Original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is no seless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Pre-serving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEBRETT'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented; whilst it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEBRETT'S Office, 145 Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS of Messrs. Weeks' establishment, an apparatus with one foot of fire seen day and night in full operation, heating two buildings covering 1 rod feet in depth, at the small expense per day in fuel and labour of 1s 6d. This achievement in heating by hot water is unprecedented.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE, the choice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. On view daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained ranges with pipes, or forwarded free by post.—DEANE, DRAY, and CO., opposite to the Monument, London-bridge. Established A.D. 1700.

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Patent Stove which gained a Prize Medal (Class 4th), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Entrance-halls, Libraries, and Warerooms. CUTLER and SONS, Sole Licensees and Manufacturers, 9 Great Queen-street, Long-acre, London.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by T. EDWARDS, SON, and CO. 42 Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK, also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soil pans for the same, hot water pipes, elbows, tees, syphons, throttle valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron Bridge Wharf, No. 6, Bankside, London, near the Southwark-iron-bridge.

CHUBB'S LOCKS, with all the recent improvements. STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.

CHUBB and SON, 57, St. Paul's-church-yard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete or cement, so constructed that each floor becomes in effect a beam of considerable strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary boarding or tiles, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended by the most eminent architects and engineers in building, both as superseding the necessity for fire-proof girders and brick arches, and as being the cheapest system of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, Turk-street, Adelphi.

BRAMAH LOCKS, FIREPROOF IRON SAFES, WATER-CLOSETS, and PUMPS. BRAMAH and CO. have the pleasure to state that a first-class Silver Medal has been awarded to them by the Jurors of the Paris Universal Exhibition. Manufactory and Warerooms, 124, Piccadilly, London.—Every article made by BRAMAH and CO. bears their address—124, Piccadilly.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. DOBBIE BEARDER, at the Great Exhibition of 1851, who invites the attention of builders, &c. to his Stock of Ironmongery, Brass Founding, Nails, Wrought and Cast, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c.

J. H. DOBBIE (late STURCH and DOBBIE), established nearly 30 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

ESTABLISHED 1817

WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 19, Horseferry-road, and 1 & 2, Peter-street, Westminster.—Contractors, Builders, &c. supplied with General Ironmongery at the lowest wholesale prices.

Cottage Ranges, with oven, 1 boiler, complete, 52s. each.

Self-acting Oven and Boiler Ranges, with wrought bottoms, &c. complete, from 4l. 4s. each.

Register Stoves, from 6d. per inch.

Elliptic ditto, with double backs, from 8d. per inch.

	2	3	4	5
Cast-iron Rain pipe	7d.	10d.	1s. 3d.	1s. 6d. per yard.

4-inch Eaves Gutters, 1l. per yard.

1-inch Best Cut Lath, 18s. per cwt.

Sheet Floor Brads, 14s. per cwt.

Hoop Floor Brads, 20s. per cwt.

Sash Weights, 7s. 6d. per cwt.; 9-inch Air Bricks, 3s. 6d. per doz.; 6-inch Sink Traps, 6s. per doz.; strong 6-inch Chairs, with hooks, 20s. per doz. Sheet Zinc, Perforated Zinc, and Tinning. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"18, Hyde-park Gate, Kensington, February 24, 1854.

"My dear Sir.—The Air Warmer continues to work very satisfactorily indeed, with regard to the main body of the house, and during this weather is charming, even in the painting-room. Mrs. Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"RICHARD REDGRAVE.

"Mr. J. Jobson Smith."

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield.

"Stanhope-lodge, St. John's-wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England, and this has increased with increasing years and decreasing strength; I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the hall and passages of my house; but I have never succeeded till now in producing an equal temperature over every part, and having that temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and have the climate of May within doors in the months of December and January. The servants learnt its proper management in a few days without difficulty, and its economy in fuel is as remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall lose no opportunity of heartily advising its adoption to all who desire to protect themselves against the changes of temperature in their dwellings.—I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Roscoe-place, Sheffield."

M. E. HADFIELD, Esq. Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855.

"My dear Sir.—We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable oppressive odour produced usually by Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective. I am, my dear Sir, yours faithfully,

"M. E. HADFIELD.

"Mr. J. Jobson Smith, Roscoe-place."

WILLIAM RUTSON, Esq.

"Newby Wiske, Thirsk, 15th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the disadvantages incident to an unfinished and unfurnished house, with all the doors open into the adjacent rooms, it is keeping up a very genial influence over the temperature, even during this severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 16s. 8d. per ton, the rate at which it has been fired for the last two or three months, is 1d. per hour.

"I am, Sirs, yours truly,

"WILLIAM RUTSON.

"Messrs. Stuart and Smith.

"P.S.—Mr. Rutson, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3l. 6d. for coke—say about 5d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop-road, February 27th, 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the comfort has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase, and passages, being a reservoir of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have had the general run of the house without the fear of a relapse. To many invalids the invention will prove invaluable, giving them the freedom of their habitation instead of confining them prisoners to one apartment.—Believe, me, my dear Sir, very truly yours,

"EDWARD MARTIN.

"Mr. Jobson Smith."

E. F. SANDERSON, Esq.

"West-street, Sheffield, 27th March, 1855.

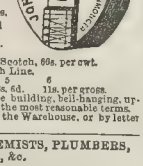
"Gentlemen.—The Gill Air Warmer you put up for me last year at Endcliffe, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country, but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling-houses most equably comfortable in point of temperature.—I am, yours very truly,

"E. F. ANDERSON.

"Messrs. Stuart and Smith, Roscoe-place."

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 139, Shoreditch.
A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler.
20 22 24 26-inch.
28s. 30s. 32s. 34s.
Best Self-acting Ranges, with Oven and Back Boiler, Bright Wrought Bars—
34 36 38 42-inch
54s. 56s. 58s. 60s.
Strong Elliptic Stoves, with Extra Back and Solid Bars, per in. 9d.
Register Stoves, with Solid Bars, per inch, 5d.
Improved New Pattern Circular Cheek Register, with strong Bars and Trivits, 5d. per inch.
Best Solar ditto, with Fire Brick Back, per inch, 10d.
Bright Stoves, with Two Fires, 40s. to 100s. each.
Cast Rain-water Pipe { 2 2½ 3 inch. 1½d. 1s. 2d. 1s. 4d. per yard.
Cast Gutters—4 inch, 9d. per yard.
O G Gutters ..... { 4 5 inch. 1s. 1d. 1s. 3d. per yard.
Patent Line { 2 3 4 5 6 6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. 4d. 6d. 7d. 9d. 1s. per knot.
Light Elliptic and Register Metal, 14s. per cwt.
Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.
Brick Moulds kept in stock. Any size made to order.



JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior manner in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 3½d. 4½d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 5s.; 4 ft., 3l. 19s.
3-feet Cottage Ranges, with ovens and back boilers, 38s. each.
3-feet self-acting ditto, ditto, 38s. each.
Air Bricks, 4s. per doz.
Best Town Glue, 56s. Ditto, Scotch, 60s. per cwt.
Best Patent Sash Line.
1 2 3 4 5 6
4d. 6d. 5s. 6d. 7s. 6d. 8s. 6d. 11s. per gross.
And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delhruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse removed from 81 to 68, Upper Thames-street.

IRONMONGERY.
PFEIL AND STEDALL.
THE LARGEST STOCK AT
THE LOWEST PRICE,
5 AND 6, BROAD-STREET, BLOOMSBURY.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Rise-lane, London.

PHŒNIX FOUNDRY, Derby, Sept. 1st, 1852.

JAMES HAYWOOD, Jun. begs to inform his friends and the public generally, that he has PURCHASED the whole of the STOCK of GOODS, as well as the large and valuable collection of WOOD and IRON PATTERNS belonging to the above Foundry, and has made arrangements to carry on the business on his own account from the 1st of September last. He will continue to conduct the same in all its branches as heretofore. The large and important contracts which have been executed at this foundry render it almost unnecessary for him to state that he possesses every facility for executing orders either for castings or wrought-iron work of any description whatever, upon the best terms and in the shortest possible time. He respectfully solicits a continuance of that patronage which has hitherto been so liberally bestowed upon the Phœnix Foundry.

JAMES HAYWOOD, Jun. PHŒNIX FOUNDRY and ENGINEERING WORKS, Derby, Manufacturer of every description of CASTINGS, from the smallest Ornamental Work to Castings weighing twenty tons each, railway bridges, iron roofs for railway stations and other purposes, railway chairs, machinery and sugar-mill castings, conservatories, wineries, windows and stoves in great variety, cast-iron ornamental garden vases and chairs, pipes for steam and water, and every description of work required by engineers, architects, builders, ironmongers, &c. Heating by hot water or steam.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.
W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements under their Quadruple patents of 1840-51-54 and 1855, including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.
MILNER'S PHŒNIX (212°) SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord street, Liverpool. London Depôt, 47A, Moorgate street, City.—Circulars free by post.

THOMAS EDINGTON, PURCHASER and INSPECTOR OF CASTINGS on COMMISSION,
17, GORDON-STREET, Glasgow.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Gorge-poles, Rings and Lacquered Case Tube for Picture Rods. Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO ENGINEERS AND BOILER-MAKERS, STOVE AND RANGE MANUFACTURERS.

THERE is an IMPROVEMENT to introduce to the public in BOILERS for Steam or circulating for Bath Work, &c. Any gentleman wishing to work the same, may apply for further particulars to W. S. 30, St. James-terrace, Clarendon-road North, Notting-hill.

TO STONEMASONS, BUILDERS, RAILROAD CONTRACTORS, AND OTHERS.

RICH. RICHARDS and SON, 95, New Park-street, Southwark, London, Manufacturers of TRAVELLING CRANES and JENNIES, to span from 5 to 70 feet, on the latest and best principle, warranted to lift from 3 to 30 tons, or upwards. Crab A Cranes, double and single purchase; stone saws, hammered and of the best quality, suitable for Portland stone or marble; made to any length; also saws for Oasen and Bath stone. Blocks of all sizes, in sets of one, two, and three sheaves, or single. Chain, suitable for the blocks, for hoisting any weight, made of the best iron, and tested by patent machinery. Lifting or screw-jacks of all kinds, double and single purchase traversing cranes for railways, and cranes and hoisting-tackle of every description to order or by estimate.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

FENDERS, STOVES, and FIRE-IRONS.

Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto, with ormolu ornaments and two sets of bars, 5l. 10s. to 12l. 12s.; bronzed fenders, complete, with standards, from 7s. to 2l.; steel fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 2l. 15s. to 7l. 7s.; fire-irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth-plates. All which he is enabled to sell at these very reduced charges.
Firstly—From the frequency and extent of his purchases; and secondly—From those purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS.

The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufactories, in Metal and Glass, all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are NOW SHOWN over his SIX TEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two-light) to 16l. 16s.

THE BEST SHOW of IRON BEDSTEADS in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads as: Children's Cots, with appropriate Bedding and Mattresses, Common Iron Bedsteads, from 10s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d.; and Cots, from 30s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.
The alterations and additions to these very extensive premises (already by far the largest in Europe), which have occupied the whole year, are now nearly completed; they are of such a character that the entire of EIGHT HOUSES is now devoted to the display of the most magnificent Stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated and Japanned Wares, Iron and Brass Bedsteads and Bedding), arranged in Sixteen Large Show-rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.
Catalogues, with engravings, sent (per post) free.
39, OXFORD-STREET; 1, 1A, 3, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established A.D. 1820.

TO MACHINISTS.

WANTED, a thoroughly good-conditioned, second-hand VERTICAL DEAD SAW-FRAME, to cut 18-inch deals, with saws, &c. complete.—Address, E. JENNINGS, Surveyor, Windsor, with lowest cash price, name of maker, and other particulars.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

CHAS. MACINTOSH and CO. Patentees

of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO. — Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

DURABILITY of GUTTA PERCHA

TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—" March 10th, 1852. In reply to your letter, dated this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO SCULPTORS, BUILDERS, MASONS, &c.
B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, vein Sicilian, black and grey, dove, Bardilla, Siena, and Breccia, in blocks and particularly calls their attention to a large quantity of his best statuary, sixty blocks, small sizes, just landed
Monuments, vases, and statues, finely executed in Italy
Carrara Wharf, Thames-bank, Pimlico.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 38 Wharf, Macclesfield-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.
July 25, 1855. C. ADENEY, Secretary.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 90, Surrey-street, Strand.
HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

GRANITE.—King William and Nelson Monuments Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's court, Old Broad-street. Manager—JAS. J. PRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SOULES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire bricks, gravel and sheils for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Hare-hill, Bath, York, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curbs and Pitching, all at the very lowest prices.
N.B. Good 3-inch Tooled Paving, at 40s. per 100 feet, cash.

AUSTIN'S ARTIFICIAL STONE.—This material (frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Figures, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000l. and 5,000l. In contradistinction from Terra-cotta, and all other kind of Pottery, there is no distortion of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof. AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.
*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED.
WILCOX & CO.
FLINT MILLS, MILLWALL, POPLAR.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 30 and 40, Upper Belgrave place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

GREEN SLATE.—For SALE, about 200 tons of WELSH GREEN SLATE, the produce of a late discovery. This Slate is well adapted to church and public buildings. For colour, grain, and capability of splitting, it is superior to any hitherto obtained. Terms, at the quarry, 80s. per ton.—Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street; or to Mr. W. G. JENNINGS, Pen-y-Groes, near Carnarvon.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag-Stone Company and the Llantysilio Slate Company, are now prepared to supply architects, contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney-pieces, Baths, Filters, Larders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices.—Price and further particulars can be had upon application to Messrs. JOHN TAYLOR and SON, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, South Wharf-road, Paddington; or to Mr. GEORGE P. DYER, at the Works of the Company, Pentrefelin Wharf, Llangollen.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 3, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf
Contractors supplied to any extent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT
For Damp Walls, and Lining Iron Houses,
2, DOWGATE-HILL, LONDON.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 30 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Rendham, Lancaster.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

The Builder.

Vol. XIII.—No. 670.

TWO qualities are imperatively demanded of all architects who would improve the aspect of our streets, and remove from English shoulders a portion of that burden of invidious comparison between London and Paris which each day augments: the one is the power to create good new buildings, and the other is to make the very best of what we have. It would be easy at this moment to point to many really satisfactory evidences of our architects' possession of a fair share of the former, but the present condition of our leading thoroughfares stands in even more immediate need of the latter. The reason why the quality of successful origination has been better developed than the faculty of amelioration is, doubtless, that when new buildings of importance are required, the assistance of the architect cannot be dispensed with; whereas the popular prejudice runs strongly in favour of entrusting repairs of houses, new shop-fronts, and street-painting generally, to tradesmen uncontrolled by the supervision of any educated artist. Need we go further than Regent-street to lay bare this sore place, and to view the results to which the practice leads. Unfortunately the malady may be said to principally affect the skin, and the various forms of eruption which from time to time break out, are of the most irritating description. Nash, poor man, confiding on a greater amount of Communist tendency than is ever likely to animate the breasts of any four or five neighbours, grouped many a set of four or five houses, so as to make believe that they were each of them denizens of so many Egyptian, Greek, Roman, or Italian palaces. It is no use now, so far as Regent-street is concerned, discussing whether such make-believe combinations were wise or not: they exist, and must for the present be accepted as "*faits accomplis*." Let us suppose Brown, Jones, and Robinson, to whom we may add Smith and Green, to be in occupation each one of a fifth of one of these Palazzi or Propylons, as the case may be, and then let us trace what becomes of what no doubt Nash described to George IV. as a capital idea for obtaining a "grand unity of effect." Brown, No. 1, is a model tradesman, who puts scarcely anything in the windows, who accepts his tenement *in toto*, and whose pride it is to maintain it in exactly the same stone-coloured condition in which he received it from the "party" of whom he took the business some twenty years ago. Jones, No. 2, is of quite a different stamp: he only took his present house in the fancy trade some two years since. The little windows of the propylon would not do for his goods, not they; so the first step is to put in a new front, chosen regardless of expense, with plenty of gilding, plate, and looking-glass, and abundance of Louis Quinze scroll-work, with a blazing inscription, recording the name of Jones and the articles he deals in, such as may be read nearly from one end of the street to the other.

Robinson, No. 3, is known in the street as a business man: he despises what he calls Jones's flash: his new front is all substantial and serious,—no putty and gilding, but all solid brass and mahogany, with the heaviest Roman mouldings. Poor Smith held No. 4 for a few months only. After the first few weeks he commenced those "alarming sacrifices" which filled his shop with customers for a month or two, and after a month or two with creditors. His affairs go into the lawyers' hands; his shutters are shut; and his landlord's affairs having become deranged, owing to his having advanced Smith money, so they have remained for the last two or three years,—dirt, dinginess, and "melancholy having marked" No. 4 "for their own." No. 5 is Green's "well-known Emporium of Commerce." As a corner house, it stands conspicuous in the street, and bristles with activity. Green's own establishment is a little bit of the Boulevards suddenly dropped amongst us. Has not the clever Celestine Dentelle made the most of the first floor, with her "modes" and "bric-a-brac," her neat little muslin blinds, and conspicuous bonnets? Are not the rooms above, the celebrated "billards," to which London and foreign flats and sharps resort to waste their money in mysterious communications on the subjects of "le sport" et "les sweepstakes?" Thus, while our friends Brown, Jones, Robinson, Smith, and Green struggle with the world, what becomes of poor Mr. Nash's palace or propylon? and by multiplication of ditto dittoes, what becomes of the aspect of Regent-street and our unfortunate street architecture altogether?

To palliate, if not to remedy so anomalous a condition of things, two measures only are necessary on the part of the London householders—to be a little less egotistical, and to act jointly with their neighbours under the advice of any accomplished artist. Should any half-dozen occupants of adjoining houses, for instance, agree to lay out a couple of hundred pounds apiece upon their houses, under the auspices of a man who has made the laws of harmonious decoration a special study, can any one doubt that a wonderful improvement upon the Brown, Jones, and Robinson system to which we have alluded, would be effected? We have been led to these conclusions by observing how much Mr. Owen Jones has done recently and notably in the case of Mr. Jay's new shop in Regent-street. His problem in that instance was a difficult one. Forced to retain structural forms and fittings of the most antagonistic description, his vocation has been to harmonize as far as possible the warring elements, by connecting them in a general system of coloured decoration, external and internal. The manner in which he has subdued all that could interfere with the effect of the goods, and made gay and attractive all the surfaces against which they were not to be relieved, is exceedingly judicious, and our London tradesmen will do well to take a hint from this exterior, not only in this respect, but in the taste with which the ornamental lettering of all the titles is carried out. Every inscription is clear and well spaced out, without any vulgarity or undue prominence. Unfortunately, a solitary house, however successfully treated, does not sufficiently forcibly exemplify what happy results a judicious use of colour may be made to produce in our London streets, and therefore it is that we should much like to see Mr. Jones's or any other properly educated artist's skill tried upon a larger scale; as, for instance, upon the whole of either of the fine circuses, could they but be handed over to a good colourist, to try how much could be done to restore that breadth of effect at which Nash so boldly aimed, and which supineness and accident have hitherto so sadly marred.

Proposed Statue of the late Mr. E. Baines at Leeds.—There have been on view three models of the proposed statue to the late Mr. Edward Baines, by Mr. Behnes, Mr. Noble, and Mr. Milnes. The committee have decided against the model by Mr. Milnes, as being the least successful, but they were unable to decide as to the other two. Ultimately the committee resolved to present Mr. Milnes with a sum of 20*l.* and to request Messrs. Behnes and Noble to make such alterations as they may please in their models, or produce entirely new ones, this to be done prior to 6th February, 1856, when the committee, according to the *Leeds Intelligencer*, will give their final decision.

NASH AND SCHINKEL: EDUCATION OF ARCHITECTS.

THE RECENT HISTORY OF ARCHITECTURE.*

Any merit to be credited to *revivalism* in Germany, would have to be looked for in the works of the class of artists—painters—with whom it originated; and the discovery of these merits, though they may be unquestionable, is not free from difficulties. We need but allude to paintings without back-grounds, or with gold back-grounds, and to the preference for outline in book-illustration, as amongst the peculiarities which are at variance with English ideas; although some of these, it should be said, have been widely imitated by artists in England; and others have been loudly held up to notice.

In architecture then, the popular taste tended towards the revival of old forms. It is *generally* not within the scope of an individual, at once to substitute expression of private opinions for the popular taste,—partly by reason of the inevitable position, that each individual member is not free from influences which colour the opinions of the public, and partly because isolated opportunities may be limited in their effects, as well as slow in producing the impression. This appears to us to hold good in modern Germany. Still we find as we have found before, that there is really much within the *power* of individuals. Indeed, the great changes in the expression of art at various periods, are, in a singular manner, traceable to some individual. Now, the meritorious elements in German architecture, seem clearly due to such distinct source; and as there is a parallel case in the architecture of England of about the same period, with very different results, it may be well to give a little attention beyond what we have already done, to the lives of the respective architects—the schools in which they were nurtured, and the opinions which they may have had the opportunity to form. The greatest contrast is that which is presented whilst London was under the *régime* of John Nash. Of the biography of this noted architect, as in the case of James Wyatt, few particulars have been given. That he was born in 1752, of Welsh parents, and that for some time he practised as a miniature painter; that he died at East Cowes, in the Isle of Wight, in 1835, at the age of eighty-three,—thus adding another to the number of octogenarian architects,—and that after all his gains by his profession, and speculations in connection with it, he left little property, forms about the whole of the information that is supplied to us in print. Some persons have viewed him as a speculative builder rather than an architect; whilst others do not hesitate to attribute to what they call his *sycophancy* of character all the opportunities which he had. But those who were his pupils at his house in Regent-street, speak feelingly of him for his constant gentlemanly and considerate demeanour, in a kind of relation which most of all brings out the dispositions of men.

What remains of his gallery, and of other pieces of internal distribution—which was that in which he succeeded better than in his exteriors—together with some of the characteristics of his work in other respects, go to justify what is said by Mr. Gwilt,—that the "late Mr. Nash was beyond doubt a person of great taste." The fitting up of his office, where each assistant or pupil had his private desk and compartment, we have heard praised for commodiousness and comfort, by those who had experience of it. Still, that Nash failed in some of the essentials of good architecture, is unquestionable,—indeed obvious. Now, here it is that we think the biography of architects might be made to come in, to speak to us in lessons for the guidance of the future. Whatever faltering pen *we* bring to a new task, certain we are that all pages of architectural history and biography must be previously conned over, and the right deduction grasped, if ever we are to hail the institution of a systematic and recognised system of architectural education. It is not that there is no learning—no assiduity amongst the members of the profession: those exist in abundance; but system and direction are wanted. For the lack

* See p. 517, *ante*.

of these, a man may be very arduous all his life, and yet leave no sign—no work of mind or hand. There is far more in any profession than a lifetime can accomplish: and long before any knowledge can be completed, there is work calling to be done. To approach the task at the right entrance, and after the bird's-eye range of elementary knowledge, is half the battle. Whenever our professional brethren do bring their minds to this great question,—so momentous both to the interests of the profession, and to those of art,—certain we are again, that the true principle of an institution will be found in wide comprehensiveness as to subjects of study, and in the recognition of the importance in each case, of a commencement. That "a little learning" is *dangerous*, is perfectly true; but not so the erroneous deduction which follows in the line of a poet,—elsewhere more deserving of the architect's study. Surely the reasoning is unsound which would view even superficial knowledge as "dangerous" in contrast to *ignorance*. The danger is that of ever allowing the idea of limit to investigation. With a proper start, self-sufficiency lessens every day as the expanding field opens into view. The universal fault of all education, professional or otherwise, in England, is that it developes in one channel and totally *neglects* others. This is the cause of existing prejudice. Were it not so, should we meet with leaders of the bar ignorant of the simple truths of science and contumelious of its votaries, and members of the government and legislature possessed with a sort of *imbecility* in all art-questions? Would—not mere antiquarian lore, but—professional teaching in architectural ART, be absent from our universities; and would it take the bulk of the lifetime of one of us, to bring home to men's convictions the facts in sanitary science, which observed or neglected, go to lengthen or to shorten lives? The most valuable part of a man's education is doubtless that which he makes for himself; but there is a wonderful value in seeing what it is you have to do. There are professions which have sought to lay out a scheme of education, and there are others which with an ill grace only half perform that duty. The latter class are accordingly tending downwards in position and influence. It rests with *our* profession to say to which class it will have itself assimilated. As we are at present, a large proportion of the acquired experience of individuals is lost with them, and might as well pass to some "rubbish-heap,"—not of the Renaissance. With the proper comprehensive elementary knowledge, and the further course sketched out, a man *may* continually be educating himself, — as all who would maintain any position are necessarily required to do. But, without the index to open the book of learning, a lifetime will pass ere it will be discovered; and the particular demand upon ability which rendered necessary, further study, will be supplied by no possible labour, but will be merely the occasion of falling back on what we call empiricism. Yet, if all be true that it is the habit of writers to say,—writers of a certain class,—those to whom we referred some months since in speaking of Perrault and others—*we* are wholly in the wrong; neither youthful study nor matured experience is of any use; and John Nash stippling on ivory will make as good an architect as any of us, or James Wyatt preparing his drawings in his carriage going to the works, or Sir Joseph Paxton on a sheet of blotting-paper, to be framed and glazed for the contemplation of artists yet unborn, will be taking all-sufficient means to produce a good result. Many such a prodigy as Nash, or Wyatt, has been saved in reputation by his workmen, or his assistants, or by the absolute incapacity of his judges. We have to think for ourselves, and not take too much note of contemporary fame. What, then, were the relative positions of the architects whom we select as of marked reputation in the period commencing about the year 1815. The *details* in the works of Nash are sufficient to show that he had received no adequate professional training, though he had the eye of an artist. Some of his fellows in their early career were absorbed in the practice of building. What is the history of the life of a *German* architect? One of the number, Weinbrenner, of Carlsruhe, who died in 1825, left his autobiography. This, however, we pass over for the sake of observing the development of a genius better known to fame.

Karl Friedrich Schinkel was born at Neu Ruppin, in Brandenburgh, in 1781, and died in 1841, in his sixty-first year. At fourteen, at Berlin, he was the pupil of David Gilly, who was not only a practical architect, but the author of several literary works relating to architecture. Here the direction of Schinkel's life was greatly influenced by the enthusiasm of Friedrich Gilly, who returned from his travels filled with the purpose of doing something to elevate his art from the comparatively low position which in Germany it then retained. The German architects, then, like those of a later date in England, were progressing, so far as regards better knowledge of the Greek orders; but the mere attainment of the character of these was not all that was required. Friedrich Gilly, however, died before he was thirty years of age, or in 1800. Soon after this, Schinkel's connection with David Gilly appears to have terminated. Thereupon, although, from the practical experience which he had acquired during the execution of works, with the superintendence of which he was entrusted by Gilly, he is thought to have been by no means unfitted for practice, he wisely attached himself for a time to other pursuits. It was then that he devoted himself to ornamental design, in which his name has some celebrity. His collection of designs for furniture in the classical taste is well known. We know not whether there is any instance in this country of an architect's following the same branch of art with similar energy and success: but it would be most fortunate for art just now, could it be so. In the mediæval school, the name of Pugin may, however, occur to every one.

By 1803, Schinkel had earned enough to enable him to set out for Italy. He went by way of Dresden, Prague, and Vienna. In the early part of 1805 he returned to Berlin. 1806 was the year which we have named as a disastrous one for Prussia. Public works were necessarily suspended. Schinkel turned his attention to landscape painting, in which he attained great skill. He also prepared a large panorama of Palermo from his sketches,—a work which excited considerable attention; and like Inigo Jones, Servandoni, and some other architects, he made designs for scene-painters. His scenes for the operas of "The Bride of Messina" and "The Zauberflote" were published, though, we confess, they do not seem quite worthy of his later reputation.

All this, however, was valuable as the training for the course which he afterwards took up, and which procured for him the designation of the Luther of Architecture. We hardly know whether the expression of such a view will meet with universal approval in England. Professor Cockerell, to whom we have often referred—always with pleasure as well as advantage—has every year spoken in deprecation of such "pretty drawings" as are found on the walls of the Academy; and it is not to be denied that such "polychromatic decoration" of foregrounds, as we find indulged in by some who are engaged to colour architects' drawings, may blind those who can be deceived by these substitutes, to the poverty which there may be in the real subject. On the other hand, we have hardly ever known an architect himself clever with the brush, who was not also gifted in design; and so apparent to our mind is this connection of the two sorts of talent, that we should feel disposed to *recommend* the practice of landscape painting in water-colours (objects of architectural art being of course made the chief accessory) for far more important reasons, than those of mere convenience, or economy, as to preparation of drawings,—the reasons generally urged in favour of what we refer to. It is impossible to attain skill in landscape painting, without deep study of atmospheric effect, and of that grouping of objects, and massing of shade, which most of all go to produce what constitutes "breadth." This quality in a work of art, so plain to the understanding of one who has once perceived it, yet so difficult to explain in words, is that very quality in which a poor style of architecture, and we much fear, our modern English no less, is usually deficient. Any architect who has books at his elbow, can cover the surface of elevations with mouldings or ornament; and many may have the wit to do so with some consistency of style and character. But, it requires the same eye that groups the lights and shadows of a picture,—realizing *chiar-oscuro*, or "effect,"—it requires the eye of an *artist* to accomplish that which is the chief source of expression of *art* in architecture. Artists are not wanting in England, who have considerable excellence in the treatment of light and shade in landscape drawings: just as we have *architects* far more learned than John Nash in the grammar of architecture. But it would be well if the two qualifications were more frequently combined. Now, whilst Schinkel had the advantage of training as an artist, combined with acquired knowledge of what had been practised in architectural details, Nash seems to have been almost destitute of the latter reserve of knowledge. Consequently, with an eye for effect, and that regard for novelty as a necessary object, for which we have already contended, his efforts often resulted in the display of uncouth forms, of disproportionate mouldings, and violations of essential laws of architectural art. Thus, having apprehended that projection of mass was necessary, in a particular case, no other mode of effecting this presented itself than by the familiar Palladian portico,—which he would place on the level of the upper stories, without any reference to the question whether the lines of windows at the back might be inconsistent with it, or it with them, or whether there was a way into it, or, in short, whether it possessed, in any respect, that structural union with the art-element, which we repeat makes up the art of *architecture*.—Perhaps, however, we should state that whilst it is not an uncommon notion that Nash was the architect of everything in Regent-street, if not the Regent's-park, he was in some cases only in the position of a surveyor to an estate,—a functionary who often gets the credit of what he has no means of preventing. Still, the bulk of what was done under the influence of Nash is singularly even, in what we may call its demeritorious characteristics. So far from carrying out his attention to breadth and grouping—as an artist-*architect* would have done, by differences in the widths of fronts,—some of Nash's grandest designs are mere rows of ordinary houses, of equal frontage, with porticoes added on. In his Hanover-terrace, Regent's-park, which may be an exception, and still more in Mr. Decimus Burton's Cornwall-terrace, the advantage of introducing a few houses on a plan varied from that of the general number, is apparent. It is difficult to realize all that may be required in street architecture of uniform narrow fronts; but Nash was not always so restricted.

He also did much to induce a continuance of erroneous principle in cementitious architecture, almost everything done during his time presenting the imitation of forms originally designed for, and expressed in stone. Here, however, he had been preceded by Palladio. The truth is, that the application of materials in forms characteristic of—or, more correctly, consistent with, their physical properties—has been a thing of modern elucidation in principles of art, deduced from the study of Gothic architecture,—although in that style even, the principle referred to is modified in some exceptional cases,—as in the use in woodwork of forms rather characteristic of stone construction. Much of the lath-and-plastered work on the exterior of the house at Strawberry-hill, is just now showing the manner of construction, and exemplifies the change that has taken place. Principles as to consistent application of cement are, however, still open to discussion, although recent works of rather superior character show that it is being felt that the material should not be treated in imitation of stone. We may also remark, that the exact reason of the inferiority of the effect which it will be admitted there is, even where a good cement has been used, has not been precisely explained. Much of the defect in point of art is due doubtless to inferiority *proclaimed* wherever the design recalls the forms of stone architecture,—the very aspect of *inferiority* being repulsive to the sense of excellence in art: part of the impression may be due to a leaden, or otherwise objec-

tionable colour: whilst to many minds an imitation of one material by means of another is positive mendacity,—no less than spoken falsehood. Still there is something which we cannot wholly reconcile with these impressions.

If, in point of art, the use of cement, as applied by Nash, involved grave errors, a coating of this sort is often a protection to brickwork—especially in damp situations—for which there would be no sufficient substitute. It is therefore important not to cast aside the material, but to discover the proper æsthetic use of it, with recognition of its especial physical properties; and this is a matter still open to demonstration. The best kinds of cement for general use, would be those which do not usually require colouring, or painting, such as the blue lias lime, and the recently introduced Portland cement. Roman cement and mastic, however, seem to be what were chiefly used by Nash, and the results are objectionable on many grounds.

The greasy look of a painted surface; the gradual obscuration of the sharpness of ornaments and mouldings, by the successive coatings; and the entire contradiction of an evenly-coloured front, to the natural weather-stained stone, and to the varying nature tints, and lights and shades, are common to all the cemented fronts of Nash's school of taste,—which, moreover, did much to induce carelessness in bricklayers' work, such as the use of cement is, it must be allowed, at all times liable to lead to. And it is really a very serious defect as regards the result, that the painting or colouring can never be done simultaneously. In Regent-street, as we have already said, *motley* is always "your only wear," and were the architectural details ever so good, the eye could not fail to be offended, and prevented from detecting any merit that there might be, by contrasts of white and drab—of paint and dirt—which are constantly warring against the architecture. We suppose no one would be able to realise the due effect of the proportions of a column, having one half white and the other half black, divided from each other down the middle; and this is what may be seen any day during the painting season in Regent-street; and we should require strong evidence of the æsthetic value of cement, to be reconciled to what seems to militate so decidedly against such value. The facility of using ornaments which may be ready cast, also, is of very questionable advantage: the temptation to save the trouble of thought is often not to be resisted, whereas the regular process of design is *favourable* to the discovery of a good and proportionate form. Since the date of the architecture af Regent-street, the suburbs of London, and the watering places of the south coast, have been studded with houses, rich in all the variations of plasterers' architecture. Corinthian capitals are placed indifferently on shafts of six, or of sixteen diameters in height; and every other beautiful form is applied in such positions, that we acquire involuntarily a distaste for those very ornaments, which, as once designed, seemed likely to excite admiration, as all forms of real beauty should do, throughout ages; and to this cause of dissatisfaction amongst others, we owe that constant tickling of the palate of taste with strong drink and fresh sensations, by which we strive to supply the omission of beauty and true art. However necessary for a result in art, have we considered the pursuit of novelty, that country is in a low stage where novelty becomes the sole, or main end in view. Some have urged that if we cannot get what is best (as in this case—stone), art is advanced by our using what there may be. But, clearly whilst we refuse no material, and no contrivance, we shall realise better art by making each thing the exponent of its distinctive capabilities, than by allowing the same thing to proclaim a failure. We would prefer even *not* to educate the public eye in the matter of taste, than to educate it downwards. Of these downward steps, public taste has of late made many; and it requires strong faith in our progress to believe that the good realised during the time outbalances the evil. The neither good nor evil of Baker-street architecture, may be more desirable than the active vitiation, ocular and intellectual, by a mile of Brighton terraces.

BIRMINGHAM AND ITS PROGRESS.

INTERIOR OF GREAT CENTRAL STATION.

The condition of the streets of Birmingham, when Prince Albert went there to lay the first stone of the Midland Institute, afforded proof that the corporation have not given notice of their intention to apply to Parliament for increased power as to forming, flagging, paving, sewering, and maintaining roads and footways, before it was needed. Every place on that occasion was positively *flooded* with liquid slimy mud: the air itself was foul, and the thousands who thronged the streets must have been literally steeped in dirt. Leland, in the account he gives of Birmingham in the reign of Henry VIII. says;—"I came through a pretty street as ever I entered, into Birmingham town. This street, as I remember, is called 'Dirtey.'" He would certainly have extended the appellation if he had revisited it on the day we are speaking of.

The application on the part of the corporation seeks also for power to make a new street, to straighten and widen old ones, and to enforce sanitary regulations. They have our best wishes in all such good works. As we have before said,—

To drain and pave
Is to raise and save.

The Birmingham Society of Artists quote on the title-page of their catalogue this year a well-known suggestion by Goëthe,—"We should do our utmost to encourage the beautiful, for the useful encourages itself;" and if we might say so without being considered impertinent, we would urge the town-council to keep this teaching prominently before them.

Very remarkable has been the progress of Birmingham. William Hutton wrote truly of the town a hundred years ago;—"Comparatively small in her size, homely in her person, and coarse in her dress. Her ornaments wholly of iron, from her own forge. But now her growth will be amazing, her expansion rapid,—perhaps not to be paralleled in history. . . . . She will add to her iron ornaments the lustre of every metal that the whole earth can produce, with all their illustrious race of compounds, heightened by fancy and garnished with jewels."* Iron, however, is still her staple, and no more extraordinary instance will the visitor find than that which meets his view on arriving at the Great Central Station, New-street, the roof of which has a span at the widest part of 212 feet, and is 840 feet long. A detailed description of this extraordinary piece of construction has been given in our pages, and here is a small view of it, showing the bridge which passes over the lines for the use of the Queen's Hotel. This roof contains 1,050 tons of iron, and cost 32,274*l.* at a time when prices were lower than they now are.

THE TOWN HALL.

The Town-hall, wherein the banquet was given to the Prince, is another great feature of the town. You know it, doubtless: if not, the engraving will suggest it to you. The interior, our readers will remember, has been recently decorated and lighted at a cost of 2,500*l.* (we described the works not long ago, p. 402), and we may now add that the effect of the ceiling is certainly very satisfactory and agreeable. The walls, perhaps, are somewhat too light for it. The organ-pipes are blue, with a gold diaper.

Another work, which has been going on for some time, namely, the restoration of the tower

* Quoted in "The Land we Live in."

of St. Martin's, the mother church, and concerning which much has been said, is now so far completed that on the morning of Prince Albert's visit the churchwarden bravely mounted aloft, and placed the crowning stone of the spire in its proper place. The decorative portions of the spire will have to be completed as the workmen come down. The scaffolding, of square timber nearly up to the top, is of peculiar strength and massiveness, enforced probably by circumstances not now obvious. What is to be done with the ugly, misshapen building to which the tower is attached? Having built a steeple to the church, the parish must now certainly build a church to the steeple. The regard which the parishioners appear to entertain for their vicar, the Rev. J. C. Miller, M.A. one who has fought his way from the forms of the Brompton Grammar School to his present gratifying position, will probably lead them to further exertions.

Some additions are being made to Queen's College, under the direction of Mr. Bateman, and a new lecture theatre hard by is spoken of. The principal new building now in progress is the Birmingham Music Hall, a lofty building in the Pointed style, with open timber roof, and calculated to accommodate 2,000 persons. This hall is 112 feet long and 71 feet 6 inches wide, and has two tiers of galleries round three sides of it: the orchestra of course occupies the fourth. The architect, Mr. Cranston, contemplates more than an ordinary amount of decoration with colour, and hopes to do this before the building is opened to the public. Including the organ, which is to cost 1,230*l.* more than 7,000*l.* will be spent here. Externally no show is attempted, as, with the exception of the entrances, which will probably be made more striking than they are at present, the whole will be masked by buildings next the street.

Some vacant ground adjoining has been spoken of as a site for a building for the permanent exhibition of Birmingham manufactures.

Looking in at the Exhibition of Fine Arts, now open, we found 472 works of more than average goodness, including, of course, pictures already known to Londoners, such as Maclise's "Sleeping Beauty," Mulready's "Barber's Shop," and Rankley's touching chapter, written with the brush, called, "Old School-fellows." Artists may usefully reflect on the lines which Mr. Cave Thomas attaches to an earnest picture exhibited here by him:—

> "Matter is stamped deformed or beautiful
> According as the die from which 't is struck:
> Trifle not, therefore, but think well on this.
> The highest art is that which fashions mind,
> Graves and entempers it with utmost skill,
> That all its issues may be coined just,
> And bear the impress of the sovereign good."

The picture to which the Eastlake prize of fifty guineas has been awarded is by W. T. Roden, "Christ Healing the Man sick of the Palsy." The figures have a stumpy aspect, but for sentiment and expression the picture is very praiseworthy. The prize of sixty guineas offered by the Committee of the Prize Fund Association, has been adjudged to Mr. W. H. Knight, for his clever work of the Webster school, "The Broken Window — who threw the Stone?"

Birmingham has a deep interest in the progress of the fine arts amongst her population—no town deeper, and should seek to imbue with love of them the thousands who throng her manufactories. And what factories these are! Some of them small towns; Messrs. Winfield's, for example, who have established schools, and reading-room, and sick-club; or Messrs. Elkington and Mason's Electro Plate Works, where about 700 people are employed. Look, too, at Mr. Gillott's manufactory, where steel pens are made in millions. The growth of this trade in thirty years is one of the marvels of Birmingham.

GILLOTT'S STEEL-PEN MANUFACTORY.*

Works for the prosecution of an entirely new branch of industry have been opened by Mr. Chance, about five miles from the town,—the manufacture of architectural decorations and adjuncts in *Basalt*. The rag-stone of the neighbourhood is melted, and cast in hot moulds, and cornices, doorheads, and other architectural enrichments are produced, of very lasting quality. When cast in cold moulds a glassy lava, known as *obsidian*, is produced, an interesting fact in a geological point of view. "In all our operations," said Prince Albert, in his most admirable address, "it is not we who operate, but the Laws of Nature, which we have set in operation. It is, then, of the highest importance that we should know these laws, in order to know what we are about, and the reason why certain things are, which occur daily under our hands, and what course we are to pursue with regard to them." And again, —"No human pursuits make any material progress until science be brought to bear upon them. We have seen, accordingly, many of them slumber for centuries; but from the moment that Science has touched them with her magic wand, they have sprung forward, and taken strides which amaze, and almost awe, the beholder. Look at the transformation which has gone on around us since the laws of gravitation, electricity, magnetism, and the expansive power of heat, have become known to us! It has altered our whole state of existence—one might say, the whole face of the globe! We owe this to Science, and Science alone; and she has other treasures in store for us, if we will but call her to our assistance."

Lord Ashburton's speech, although it took too low a view of English industry and skill, is full of admirable teaching. He sketched the uneducated workman (restricted, in consequence, to a limited mechanical task), rebelling against the drudgery which leaves undeveloped faculties of which he is conscious, and expending his energy and power in a pursuit altogether alien to his business. And then he contrasted with him one enabled by such an institution as they were engaged in founding, to reconcile the aspirations of an intellectual being with the worldly duties of a husband and a parent. "Where before he moved hoodwinked and indifferently, he has now presented to his sharpened and inquiring senses wonders such as the book-worm in his closet, nay, such as even the chemist in his laboratory has never conceived. Instead of endeavouring, by fruitless efforts, to raise himself above the mechanical calling which drags him down, he now has the satisfaction of raising his calling into an art, an art worthy of all the interest that an intellectual being has to bestow; and if he attain excellence, there is a higher career opened to him in which he may distinguish himself, serve his family, and benefit his country." And then the speaker warned England, in weighty words, that she had not maintained her position in the arts of peace since 1851, because the people are inferior in that scientific knowledge which cheapens and facilitates the application of labour.*

If the country be thoroughly awakened to the necessity for effort, and will put forth its strength, all danger will vanish: if we pause in the race we shall be trampled under foot.

THE DIPLOMA QUESTION.

This subject was discussed at the Institute of Architects, on Monday evening last, as announced, and was ultimately adjourned for further consideration. We must leave for a future occasion reference to the opinions expressed. The elder members of the profession, we suppose, do not consider the question of much importance, few of them being present. A memorial, addressed to the council by the Architectural Association, was read, urging that the Institute should undertake the examination of such as would voluntarily come before them, and grant diplomas of fitness to those who passed it satisfactorily. The propriety of acceding to this should receive the fullest consideration: much may be said, and has been said, in favour of it. The proposal to make the acquirement of a diploma by all who would practise compulsory, is a different matter. Mr. Papworth is not correct when he says, "the only opposition which the measure of establishing a diploma can encounter would arise from those who feel some hesitation as to the possibility of their deserving it." It is unnecessary to tell the readers of the early volumes of the *Builder* that this is not by any means a new question. If its advantages and desirability had been unquestionable, we may suppose steps would have been taken before now to carry it into practice. We have long thought over the matter, and must confess we should not look for any great advantage to the art from the requirement of a diploma, whatever aid it might prove to the artist. Academic rules and diplomas follow upon the doings of genius—they do not produce it. In Prussia the system must be considered a failure: it has made red-tapists instead of architects. Men are crammed with useless and eccentric knowledge, to meet the demands, prejudices, and caprices of a board of examiners, and so neglect essentials: all minds must be pressed into the same mould, all wheels must run in the same groove. Be it noted, too, the demand for a diploma is not from without; it is the architects themselves who ask to be protected. "Protection" in the nineteenth century!

---

* We derive our cuts from the "Guide to the London and North Western Railway," by Mr. George Measom, just now published by Collins, of Paternoster-row, and Smith and Son, of the Strand: it is richly illustrated, and will be found a very useful hand-book. We may use the opportunity to mention a fresh issue of Mr. Measom's "Illustrated Guide to the Brighton and South Coast Railway, and its Branches" (by Waterlow and Sons, London-wall), with new matter.

* The words of an ode written for the occasion by Mr. W. Bartholomew, and which was sung at the end of the Prince's address, will bear repetition,—

> *Women.* "Is glory only won
> By deeds of valour done?
> *Men.* Though glory's brightest rays
> Adorn the victor's bays,
> Its purest beams alight
> On all who take delight
> In wisdom's ways.
> *Women.* Is glory, then, the meed
> Of every noble deed?
> *Men.* It is: and they who strive
> To see their country thrive
> In arts, that civilise
> And make the untaught wise,
> In glory live."

At all events, they deserve to do so.

Surely it will require that a strong case should be made out first; and this must be done with great care to give it the least chance of success. As the matter was put by one of the speakers on Monday night, probably unintentionally, it sounded very much like a summons from the younger members of the profession to the elders to come up before them and learn how incompetent they, the said elders, were. We have great hopes of the rising architects, but we must not forget that there is at all events one very important quality in which the elders are superior, and that is *experience:* experience which teaches, amongst other things, that what seems at first most desirable is not always so; and which, by making evident one's own limited capabilities, induces due consideration for the opinions of others. What we have most to desire and strive for is the education of the public.

GIOTTO AND EARLY ART.

THE collection which has been brought together in the Arundel Court of the Crystal Palace consists of monuments of painting and of sculpture.

The earliest as well as most important of these were executed by an artist of the name of Giotto da Bondone, who was born about the year 1276, according to Vasari, or about 1270 according to some of his commentators—a comparatively archaic period for art in Italy—nearly corresponding in English history with the advent to the throne of Edward I. and with the time at which the Chapter House of Salisbury Cathedral was built. He was the friend of Dante and of Petrarch, and was known and admired by Boccacio, Sacchetti, Villani, and all the great Italian poets and writers of that period. Rarely, indeed, has there been an artist who so completely identified himself with the psychological and literary characteristics of his age. Of him, Dante says, in a well-known passage,—

> "Credette Cimabue nella pintura
> Tener lo campo ed ogri
> Ha Giotto tutto il grido
> Siche la fama di colui oscura." *

In these words, Oderigi d'Agobbio, the celebrated illuminist, addresses the Florentine and Mantuan poets, drawing a parallel between his own position and that of Franco Bolognese, by whom he had been surpassed, and those of Cimabue and Giotto:—"You believed," says he, "Cimabue to hold the field against all comers in painting, and to-day Giotto has all the public voice, so that his fame o'ershadows."

Petrarch boasts, in the fifth book of his "Familiar Letters," that he had the honour of knowing two painters—"egregios nec formosos,"—one being Giotto, and the other Simone Memmi, of Sienna; and so much did he value Giotto's works, that in his will he bequeathed to Francisco da Carrara, the podesta and chief magistrate of Padua, a painting by that artist of the Madonna, which, he says, "the ignorant will not appreciate, but to those learned in art it will be a matter of admiration."† Again, Giovanni Villani, the historian, speaks of him as a man who was the first painter of all time. Lorenzo Ghiberti says that "he changed art from top to bottom, making that Latin which had been Greek." Boccacio declares that there was nothing human that he could not imitate; and Cennini confirms the testimony of Ghiberti in the same enthusiastic terms, and with especial reference to technical manipulation. His very tomb is graced by an elegant and eulogistic inscription from the pen of the learned Politian.

Now there must be something in these works of Giotto—representations of which are in the Court referred to—or else all these great men must have made some fatal error of judgment.

The first step by which we may hope to test the accuracy of a verdict, against the justice of which no single voice has yet been raised, and to appreciate fairly what is in these works, must obviously be by realising to ourselves the position in which Giotto stood at the time in which they were executed. I cannot better paraphrase my impression of his relation to his age, than by thinking of this present gloomy day, and of the influence which a ray of sunlight would exercise, should such beam amongst us at this moment. Just such an influence was exerted by Giotto over the clouded state of art, at the time his great light dawned upon its horizon.

In order that you may appreciate what he introduced into the theory and practice of art, and the completeness of the changes he effected, I will now run briefly over its leading characteristics previous to his time.

You will probably remember that the ordinary painting of the catacombs was assimilated to that of the ancient Romans, with the difference that the subjects were almost exclusively Christian instead of Pagan, and that they were represented in a symbolical rather than a dramatic form. This was necessary, because, being obviously contrary to the faith of the ruling powers, it was not safe, in those days of persecution, to express openly the facts to which they bore testimony.

This symbolical mode of representation lasted from necessity for the first three centuries in Italy, and subsisted from choice for several more. On the translation of the empire, with all its pomp, and the majority of its leading workmen, to Greece, these transplanted artists and artificers preserved at Constantinople the practice and traditions of classic ages. Thus it was, that until the time of Justinian, about the year 500, the workmanship, both in the technical processes (principally of mosaic and the other modes of executing pictorial works) as well as in design, were almost identical in the old and new countries. It was not till a period shortly preceding the time of the iconoclastic troubles, about A.D. 726, when it was considered that the Greeks were becoming too idolatrous in their representations, that any difference between the Latin or Western and the Greek or Eastern styles became manifest. I shall show how the divergence took place; but at all events, it was not till towards the end of the ninth century, when a reaction took place against the movement of destruction, that Greece created an independent system of types for the portrayal of Scripture history at all. It was then that in the celebrated Monologion of the Emperor Basil, one of the capital MSS. of the Vatican Library, that a complete series of illustrations was given to the world, both of Sacred History and of the Acts of the Martyrs. In them it is to be observed, that the sufferings of the saints are depicted directly in the actual circumstances belonging to martyrdom; whereas, in the works of Latin origin, they are either represented in some symbolical manner, or altogether set aside, leaving only the aspirations, the triumphs, and glories of the Church upon record.

This art of Byzantium assumed, then, an entirely independent and individual character about the year 900; and as it became more completely developed towards the era of our Norman Conquest, it far outstripped all competitors, feeding the West with its inspirations and technicalities.

It is curious that a movement of independent organization appears to have taken place in the north; and, dating from the middle of the sixth century, about the time when the early Irish saints,—St. Colombanus, St. Columbkill, St. Kilian, St. Gall, St. Fridolin, and St. Fiacre,—went forth as missionaries to the other countries of Europe, and propagated the faith from Ireland, a corresponding change certainly did take place abroad. It is most probably to the impetus thus given that we may trace the origination of what was generally called by ancient writers on art the "German," as opposed to the Roman manner. It was begun by Irish and Anglo-Saxon missionaries to Germany, where, especially upon the banks of the Rhine, considerable remnants of the old Roman occupation existed. This mixture of Northern and Celtic with Latin art made that independent creation which eventually led to the Pointed style.

Greek painters and architects were, for a long while, almost exclusively employed in Italy; but as the year 1200 approached, there descend, a certain artists from the north. - no effect - a considerable modification p-- what w- practised previously to their -me in th- country. Thus, almost all the -ildings in -taly, up to the year 1200, w- construc-d with round arches, and in that Byzantine or Romanesque style which has been illustrated in the Byzantine Court of the Crystal Palace. Soon after the year 1220, however, we find in the Church of Sant' Andrea, at Vercelli, built by a Frenchman, that a regular Gothic treatment is introduced; and at a later period the Pointed style was carried to a still more perfect development in the Church of San Francisco, at Assisi, built by Magister Jacobus, who is supposed to have been in the service of the Emperor Frederic II. of Germany.

Now, this Church of St. Francis draws our attention also to several vital principles, which stimulated art into a more energetic existence at this time. It was built to commemorate the canonisation of St. Francis. You will remember that the Church obtained a powerful influence over the minds of men previous to the year 1000, by sharing secretly, if not openly encouraging, the popular belief that in that year the end of all things was at hand. The greatest sinners of those days (and they were many and rich) gave their possessions to the Church, in order that they might propitiate the inflictor of the calamity, and, if possible, avert it. Abundantly provided as the Church was, through this means, with funds to carry out great works, the heart of the people was not livelily stirred up to acts of devotion; and, it appears, that for at least 150 years there was a general laxity of faith, both among laity and clergy,—the obvious reaction from their previous state of terrorism of those who felt themselves relieved from the pressure of immediate peril. Theology at that time being almost entirely confined to the schoolmen, had but little affinity with, and could speak but indirectly to, the minds of the great mass of the population.

This creeping mortification, in some degree fostered by the Ghibelline party, was beginning to sensibly affect the heart of Rome, when, fortunately for the existing Church, there arose two extraordinarily gifted men,—St. Dominic and St. Francis, who, themselves and their followers, became the media of translating the leading doctrines of the scholastic theology, which had been systematised by Albertus Magnus and St. Thomas Aquinas, to the minds of the people—spiritualising their intelligence of doctrine, and, at the same time, bringing down that doctrine to the level of the popular comprehension. From this time forward two distinct modes of representing subjects of faith became prevalent,—that which had been imported from Byzantium by the Greeks, representing the legends of the old Eastern rather than the then existing Western Church—and that which was summoned into being to assist the advocates of the formulæ of monastic theology, in procuring a more lively adhesion to the spiritual faith they taught. That is why, when the first Italian artists who possessed originality were urged by the Dominican or Franciscan monks to depict subjects either in writing, or painting, or sculpture, a difference made itself at once perceptible between their productions and those which would have been given to the world had either the Byzantines done it, or the Italian artists themselves worked upon Latin traditions, independently of the influence of the propagators of the new views.

Great revolutions in faith rarely fail to evoke great poets, and the intellectual movement we have been attempting to describe found its first and noblest bard in Dante. In the "Divina Commedia" he realised those forms of suffering and beatitude which entranced the fervour of such saints as Francis of Assisi and Catherine of Sienna; while, at the same time, he effected an entire revolution in the Italian language, which he raised from a common dialect into a beautiful system of phraseology, calculated to give expression to the loftiest and most tender thoughts. A parallel revolution his friend, Giotto, effected in painting, altogether departing from the mannerism then in vogue; enriching it with new types, and creating forms more spiritual, and yet far more human, than any which had previously existed. At the same time we can scarcely assert with truth, that Giotto was the father of painting in Italy, since we know that many preceded him, and that paintings of a much earlier period than his exist

* Purgatorio. Canto xi.

† "In cujus pulchritudinem ignorantes non intelligunt, magistri autem artis stupent."

in the Gallery of Sienna. One amongst them bears the inscription,—

"Me Guido de Senis diebus depinxit amenis,
Quem Christus lenis nullis velit agere penis,
Anno D.MCCXXI."

That is, "Guido of Sienna, on whom may God have mercy, painted me in the pleasant days of 1221." Now Guido da Sienna, Margharitone d'Arezzo, and Giunta da Pisa—respectively of Sienna, Arezzo, and Pisa—were the founders of the Greco-Italian school. These painters worked altogether after the manner of those Greek masters whom we know to have been residing at Venice, Florence, Rome, and Pisa, and engaged in the execution of the mosaics of the churches in those places. There were also numerous Byzantine artists, who wandered about Italy, like Solsernus, who put up the great mosaic on the façade of the Cathedral at Spoleto, about 1230; Couxolus, who painted in fresco at Subiaco; and Apollonius, the master of Andrea Tafi, who also worked in mosaic at Florence at the same period. These artists all wrought according to the rigid Greek system.

The researches of the industrious Von Rumohr have only brought to light the name of one artist who was employed by the municipality of Florence previous to the time of Cimabue, and he may therefore be properly regarded as the founder of the new school in that city. He was born about 1230, and was the first of the Florentines who began to diverge from the manner of the Greek artists: he learnt from them, but differed from them. It is, however, as the master of Giotto that he becomes most interesting in our inquiry into the merits of the latter artist. When Cimabue was yet a young man, he executed for the Florentines a picture now in the gallery of the Uffizii at Florence; and in that may be seen how closely he imitated the Greeks in his youth: they, as you are doubtless aware, worked principally in mosaic. Now, in order to adapt a pictorial subject for successful execution through this medium, it was necessary to break up all broad surfaces into little parts, so that the mortar lines should not become too conspicuous, and disturb that aspect of perfect technical manipulation to which the Greeks mainly aspired. The pages of their sketch-books, their studies, their manuscripts, were all drawn over with the lines fit for a mosaic rendering duly inserted. When artists began to paint in other media—in tempera and fresco—they still retained the mosaic outlines and cartoons which formed their stock in trade. Thus the system of breaking the draperies into little folds was preserved, and in the first paintings of Cimabue you see the whole of the garments of our Saviour and the Virgin are treated in that style. At a later period in life he painted a second picture—that celebrated one which was carried in grand procession from the house he lived in at Florence, in the "borgo" he had rendered so "allegro," to the church of Sta. Maria Novello, in which it is now preserved.*

M. Digby Wyatt.

A WORD IN SEASON.

Those who have wandered through the desert human waste of London, and witnessed the helpless and almost hopeless condition of a vast multitude, will hail as the traveller would water in the desert, the institutions (some of them very humble) which by the exertions of earnest and well-intentioned individuals, are beginning to be planted here and there, and all of which confirm the opinion we have long since formed of a class of our population, whose condition has to a considerable extent been produced by the unfitness of their dwellings and other neglect.

We have stated, and experience confirms the opinion, that amongst the worst parts of the population of our large towns a great good is to be effected by properly directed exertions, and the necessity for work has been shown by the formidable company of *roughs*, as have been called, who assembled for several days in Hyde-park. We have spoken to many this lawless and dangerous class, and have also inquired of those whose opportunities enable them to form a just opinion on the subject, and find that a large per-centage have been driven to their lost condition by the want of opportunity.

An institution has been open for four or five years in Great Smith-street, Westminster, through which some hundreds of the worst thieves in London have passed a probation of twelve months: in many instances, when the chance opened to them, they have become useful members of society. The history of this institution, and of the remarkable exertions of Mr. Nash, its founder, is both curious and encouraging.* The number of very poor children who attend the ragged schools shows the wish for education amongst this part of the population. A gentleman well acquainted with a distressed district says,—"Afford the poor an opportunity of attending divine worship, where they will not be exposed to the contrast of 'Dives and Lazarus,' and you will get large and thankful congregations: in fact, we want many *ragged churches*."

Dr. Stebbing had been called frequently into a shocking neighbourhood, which has been described in this journal. Something, he said, led him, on a dark dismal evening, when he saw sad groups of idlers sauntering about, to take a back room that happened to be to let, and to cause it to be made known that he would on certain nights call and read useful lessons, and see what could be done in teaching some of the most ignorant to read. Next morning, the Doctor said he thought of his undertaking with no little apprehension, but having embarked, determined to go forward. In this bad neighbourhood classes were formed, teachers volunteered, and in a short time it was necessary to move from the back room to one of larger dimensions; and now, from this small beginning, a large well-ventilated school, capable of accommodating some hundreds of boys and girls, with space for a school of industry, has been formed, which produces a large amount of good. We are led to direct attention to these particulars in consequence of the pressure which the times cause just now on many of these most important institutions, and which calls for liberal exertions on the part of those who have the power. We would ask those interested to visit places of this description in their respective neighbourhoods, judge of their usefulness, and see what can be done. By an accident we looked in a few days since at the North London Industrial Home, No. 16, Brian-street, Islington, and there found a number of inmates picked off the streets. Here, on a small scale, we found the same gratifying results as at the Reformatory, in Great Smith-street, Westminster. Some of the boys here sheltered must but for this have become Roughs. Now a few of them go out to the neighbouring tradesmen, and bring their wages weekly to the Home.

One boy has been for some time in the employment of an optician in Pentonville, and is paid 6s. per week; and it is satisfactory to know that his master is so well satisfied with him that he is about to teach him his business. Those not fit for out-door employment are kept at work in different ways at home,—learning shoemaking, tailoring, wood-chopping, &c. The evenings are occupied by schooling and other good exercises. This place has been established two years, and the managers could, in the large and well-ventilated dormitory, accommodate forty youths. Want of sufficient funds, however, limits them to half that number, and the means are unfortunately falling off even for these.

There is a Ragged School attached to this Home, where upwards of 140 boys are daily taught. This room is also open in the evenings, and many who are employed in the daytime avail themselves of these means in order to get the better of the evils of a neglected education. A Sunday School has not been forgotten. Such establishments as this, and proper attention to the homes of the poor, will do more for the reformation of the tottering than jails or the staves of policemen.

It is our own fault if we have any "*roughs*."

* These observations, hitherto unpublished, formed part of Mr. Wyatt's address, delivered in the Crystal Palace on the occasion of opening the exhibition of drawings and ivories issued by the Arundel Society. The whole address is about to be published.

* The colony established at Mettray, in France, for the reformation of young criminals, confirms the experience of Mr. Nash's of Jamaica. The accounts in the reports, made up to the 1st January, 1854, show that 533 colonists have gone out into the world. Of these, 774 had conducted themselves well, 18 were lost sight of, and 103 had relapsed into bad ways, while 533 maintained excellent characters, 53 were models.

EPIDEMICS AND OVERCROWDING.

Dr. Southwood Smith has been lecturing at the Philosophical Institution, Edinburgh, on Epidemics, and their relation to Civilization. He said the causes of epidemics were of two classes—the predisposing and primary causes. Of a hundred persons subjected to the primary causes, perhaps not more than ten would be seized. Of the chief predisposing causes, want of time would prevent him, on this occasion, from alluding to more than one—*overcrowding*. Dr. Smith then alluded to the overcrowding which had been discovered in the dwellings of the poor, and in some of the workhouses in England. In a parish in London there had been discovered a house in which five families all ate, drank, and slept within the four corners of one room. On this state of matters being discovered, one of the gentlemen on the Statistical Committee asked an old woman in the house:—"How can you exist in such a place?" "Och, your honour," she replied, "we all did well enough till the gentleman in the middle took in a lodger." The doctor proceeded to show that the atmospheric changes which prepared the way for the epidemic constitution of atmosphere—came within the range of science. There was an augmentation of pressure in the air, an unusual alternation of heat and cold, an unusual prevalence of haze, mist, and fog, of stillness in the air, and a deficiency of electricity. This heavy, warm, moist, and stagnant atmosphere promoted the decomposition of all organic matter. Where these conditions exist, we know that epidemics exist; where they do not exist, epidemics do not exist; and where they have existed, but have been removed, epidemics have been removed. It was necessary, however, that all the predisposing causes be removed. The doctor next referred to the various theories which had been entertained regarding the primary causes of epidemics—stating that the opinion now generally received was, that the primary cause was of the nature of a fermentation. The practical matter, however, was that the predisposing causes were within our own power and control, and could be removed. We have it in our power to remove the overcrowding, to remove the filth. We can supply the people with light, and air, and water in their dwellings. We can supply them with cleanliness. To the full extent that all this is in our power, to that extent it is in our power to prevent epidemics. We have now lived in the world together for some six thousand years, and we have not yet learned to make our habitations healthy. At last we are beginning to learn, and when we shall have learned this, we shall have learned to conquer epidemics.

EARLY IRONWORK.

DOOR OF THE ABBEY CHURCH OF ST. JEAN-DES-CHOUX.

Near the town of Saverne, in France (about twenty miles from Strasbourg), there is an old abbey dedicated to St. John. M. Daly, in the "*Revue de l' Architecture*," where the door was first illustrated, says the abbey was founded in 1126, and the church dedicated in 1127. The door shown in our engraving is probably of this same date, and affords a very admirable and curious specimen of the ironwork of that period. The door is 3·700 *mètres* high, and 2·350 *mètres* wide. We give a portion of the ironwork drawn to a larger scale, and some of the details half the full size.

Opening of the Victoria Docks.—These new docks, illustrated in our pages some time ago, which have been excavated and formed on the western division of Plaistow-marshes, near Blackwall, have been opened for the reception of shipping. The entrance locks are of enormous proportions: they are upwards of 325 feet long, and 80 in width, with wrought-iron gates worked by hydraulic power, the depth of water at the entrance being 28 feet high at high water. The water area of the first dock is very nearly 100 acres, while on the south side there is nearly a mile of water frontage. There is a tidal basin, accessible by night as well as by day, for mail steamers and other vessels requiring despatch. The basin occupies sixteen acres, and varies in depth from 27 feet 6 inches to 24 feet: that of the main basin is 28 feet.

EARLY IRONWORK: DOOR OF THE ABBEY CHURCH OF ST. JEAN-DES-CHOUX.

THE TEMPLE-GARDEN.

Passing not many weeks ago through the beautiful and truly English woodland and meadows of Bushy-park, it struck us while looking at the silver-edged clouds relieved by deep and clear blue sky,—the golden and deeper orange colours of the various autumn leaves,—the clear window-glass, the snow-white curtains, and groups of healthy-looking noisy school children,—how great the advantages of London life should be to atone for the absence of so many charms, and the ingredients of robust health.

The cottages, many of date older than the time of Queen Elizabeth, are small, it is true, in proportion, particularly in height, and not very convenient for persons of somewhat long proportions. Still, here, notwithstanding the limited means of many, we find none of the grim and dingy courts of the metropolis, and the temptations which offer on all sides. On the hedges close to the cottages of the humblest in the country, in the spring, the hawthorn blossoms, and in the winter it is brilliant with scarlet berries. Here are the roses in their season—showing that, notwithstanding the defects in sanitary measures, which lead to bad results in even the most salubrious neighbourhoods,—here, but for such neglect, are the materials, so far as the atmosphere is concerned, for both animal and vegetable health.

Walking in these country lanes, one cannot help comparing the colours of the fields and vegetation with those produced under difficult circumstances in our large cities, and recollection is recalled to certain plants of the same kind in London and places immediately adjoining. There are hawthorns of different ages in the neighbourhood of Manchester-square, and some other parts of the metropolis. A few years ago they showed blossoms in the season, and even towards winter there seemed some show at times of the fruit.

During the last few years the effort to throw off even a blossom has not been attended with much success.

Time was, however, when the strawberries of Ely-gardens were famous, and when both red and white roses flowered in the Temple-gardens.

Of the various classes who compose this great multitude, those who have been bred in London have as warm a love for the green fields and pleasant places as any other, and it is a pleasant sight to see the attempt made here and there at vegetation under difficulties that would puzzle the Horticultural Society. Much has been said respecting the gardening of our squares, many complaining of want of skill on the part of those engaged. Doubtless much more might be done, although the circumstances are difficult. We should like to see a society formed for the encouragement of floriculture in the London squares and other places of greenery within a certain radius of Bow bells.

In the Temple-gardens—a favourite spot with many Londoners—there was at the time of writing these notes a show of chrysanthemums in fine flower. This collection is creditable alike to the gentlemen of the Temple and Mr. Broome, the gardener, who has filled his difficult post here for upwards of twenty-three years. Many of these flowers this season are remarkable for their excellent form, size, and strength of foliage; and it is well worthy of remark that Mr. Broome considers that at no time in his experience has the vegetation of these venerable gardens been so healthy as during the present year. Some old hawthorns have flowered rather vigorously—a circumstance he has not before noted; and he has been able to rear two or three white roses,—no red ones. He thinks it is owing, in some measure, to the steam-packets and manufactories near the river *not sending us so much of their smoke now as formerly*. Perhaps when we get more completely rid of the metropolitan smoke the red and white roses may once more bloom in the Temple.

There is a venerable-looking sycamore-tree, carefully railed round, a little to the east of the sun-dial in the Temple-gardens. "It was not far from this tree, sir," said an old gentleman, "that the famous historical circumstance of the plucking of the red and white roses took place." Did it occur there at all? Never mind: Shakspeare says so. And although this tree might not have flourished at the time of the supposed incident, no doubt this picturesque object was there in Shakspeare's days. A print of the gardens, re-engraved in 1770, from an older one of the date of 1671, shows three trees on the site of the present one; and the gardener says, that in digging he has come to the roots of two more similarly placed to the full-grown ones in the old print. In this print is shown a brick terrace, faced with stones, with flights of steps running along the north side, where the chrysanthemums now are. This terrace is probably still remaining, filled in with earth, which slopes to the river. In the centre of the grass-plat is a sun-dial on a pedestal of good design: this was made, as the inscription states, by "Henricus Wynne, Londini, A.D. 1770." A little distance towards the river, from the dial, a part of this grass, not so well grown as the rest, marks the old river wall, which has, since the year 1670, been encroached on in parts fifty or sixty yards. Part of this was exposed at the time of the rebuilding of Paper-buildings, a few years ago, and was of great strength.

PROVINCIAL NEWS.

Lynn.—There is a prospect of the proposed quay along the Boal being now commenced, as the committee have expressed their readiness to accede to the contract proposed by Messrs. Grissell for the execution of the works, at the sum of 4,076*l.* The quaying of what is called the "Marine Parade," according to the *Norfolk Chronicle*, will, in all probability, be executed simultaneously. The whole of the east side of the harbour will then present a respectable front, and, in conjunction with the railway, afford greater facilities for the landing and embarking of goods.

Newark.—The Assembly-room in the Town-hall here has recently been redecorated under the superintendence of Mr. Crossley, of Newark. The room is of the composite order, its shape longitudinal, having circular ends intersected by four fluted columns. The ceiling, which is oval, is composed of circles and panels, and surrounded by fluted mouldings. The general tone of the colouring is a warm yellow, inclining to fawn. The panels in the ceiling are of an aërial tinted blue, the styles yellow, the mouldings white, and the under parts of the fretwork are coloured with the two primaries red and blue: the ground of the frieze is blue, the ornaments white and yellow, and the under parts of the enrichments red: the capitals are white, the shafts of the pilasters have a Roman ornament upon a green drab ground, and the flutes between are of a very pale blue, the bases ornamented with Roman fretwork upon a maroon ground.

East Dereham.—On Friday in the week before last, a meeting of owners and occupiers was held at East Dereham, to promote the establishment of a Corn-hall in that town.

Isle of Grain.—The Martello Tower, off the Spit Isle of Grain, erected by Messrs. Kirk and Parry, of Sleaford, is completed, and given up to the Ordnance. The construction of this tower gives it the capability of firing guns of largest calibre, on traversing centre pivots, so as to do execution in the fair-way of the rivers Thames and Medway. With the latter river this tower forms a crossfire with the Sheerness battery guns, sufficient, it is said, to sink any ships attempting to pass. The tower is struck from seven different centres, in order to give stability to the assailable parts. The average thickness of the solid masonry is 12 feet. The outer dimensions are 63 feet by 71 feet. Underneath is a barrack-room capable of accommodating thirty gunners, and an officers' private room. The basement story contains ordnance store, provision store, barrack store, regimental store, and magazine, the latter being encased with a coat of asphalte. The whole of this basement is lined with 9-inch brickwork, all being within a 12-feet wall of masonry. The estimated cost of the tower is about 14,000*l.* exclusive of its foundation of piles, which support solid balks of timber, with York landings, being filled in to a depth of 6 feet with cement. The extreme height of the tower is 41 feet 6 inches.

Worcester.—Mr. Hawksley's plans and sections of the proposed mode of carrying out the drainage and water supply in this city were to lie for inspection at the Guildhall till the 4th inst. It appears that the tank or reservoir, to be placed at the top of Rainbow-hill, will be entirely covered in, and will consist of a series of arched galleries, 123½ feet long by 100 feet broad, and capable of holding 750,000 gallons of water. The earth excavated will be disposed in terraces, and the ground made a promenade. The engine-house will contain a steam-engine of thirty-horse power.

Harlech Castle.—The ancient castle at Harlech, on the coast of Merioneth, in North Wales, is undergoing repairs by the Government. This is one of the numerous castles built by Edward I. to overawe the Welsh, and is in the keeping of the Commissioners of Woods and Forests. This is the third of the old castellated ruins of Wales which the Government has repaired within the last few years.

Droitwich.—Mr. J. H. Galton, of Hadzor, has recently erected schools and school-house on his estate at Oddingley, from the designs of Mr. J. Smith, architect, of this town. The schools, which are now open, will accommodate fifty children, and are of an ornamental character. The carriage of the materials was provided by the tenantry.

Chester.—The Music Hall, reared on the area of the Old Theatre in Northgate-street, was inaugurated on Monday in last week. "Just previous to the opening," says the *Chester Chronicle*, "a mischievous report got abroad that the north and south galleries were insecure, as it was asserted they were not properly supported." The design of Mr. James Harrison, the architect, was that they should rest on brackets, clamped with iron, as pillars would be an obstruction to sight, and when the area is used for a *salle de danse* might be inconvenient to the dancers, if not dangerous. "Before these galleries could move," it is added, "the external fabric must be dragged down with them, and no sane person entertained any alarm." The wood-work in front of the galleries, and of the orchestra, is painted with floral and fancy designs, by Mr. Morris. The chandelier was made by Mr. S. Box, from the designs of Mr. Harrison, and is of itself sufficient to light the hall, but besides this there is a sun-light over the orchestra, another in the upper gallery, and brackets from the walls underneath the galleries. Mr. J. D. Williams was the contractor. In the building and decoration none but Chester workmen have been employed.

Blackburn.—A plan of the proposed public park has been prepared by Mr. Henderson, of Birkenhead, landscape gardener. Fifty acres between Preston new-road and Revidge have been arranged ornamentally, including cricket, recreation, bowling, and other grounds. The plan, if approved of, will be carried into execution immediately afterwards. Public baths, to be erected in or near the proposed park, are under consideration.——The foundation stone of the Bank-top schools was laid on Monday before last, by a son of the architect, Mr. T. Walsh, jun. of Blackburn. The building will include a boys' school and girls' school.

Barnsley.—A pile of new buildings is in course of erection here, at the bottom of Market-hill. The architects are Messrs. Lockwood and Mawson, of Bradford, under whose superintendence it is being erected. The design comprises the re-erection of two hotels, and the construction of six shops, giving a total frontage when completed of 200 feet, in one of the most public situations in the town. The style of architecture is Italian of the Roman school, and the building consists of a rusticated basement, surmounted by a story with arched windows, with archivolts and pilasters within an architrave, and having carved spandrils and cornices. The upper windows are moulded and terminated with trusses, the whole being crowned by a block cornice. The whole work is executed in stone from neighbouring quarries. The contractor for the mason work is Mr. Robinson, and for the joiner and carpenter's work, Mr. Smith. It is proposed to extend at some future period the line of buildings to the bottom of Graham's orchard, which will form one of the best approaches into the town.

Newcastle-upon-Tyne.—Mr. R. Stephenson, C.E. has undertaken to discharge one-half the debts of the Literary and Philosophical Society of Newcastle, which amount to 6,200*l.* if his fellow-members will subscribe the other portion.

Shipley.—The opening of a new lecture-hall and news-room here took place on Saturday in week before last. The building is conveniently situated in the centre of the village, and will seat 700 persons. It will also accommodate public meetings, and be used for concerts, &c. The room is lighted from the ceiling.

CHURCH-BUILDING NEWS.

Pinchbeck.—The parish church here was re-opened on Thursday in last week. The expense incurred in the present alteration amounts, we understand, to about 2,000*l.* Other alterations, estimated at 150*l.* are required before the whole is completed. The most important restorations effected are the chancel, which has been rebuilt, under the superintendence of Mr. Butterfield, and a stained glass window, by Mr. O'Connor, behind the altar: the latter represents, in the centre, our Lord surrounded by St. Peter, St. Paul, St. John the Baptist, and St. Stephen: these form the leading figures, but there are various small designs.

Northampton.—The reopening of St. Giles's Church took place on Thursday in week before last, with some ceremony. The church has been greatly enlarged, by the extension of the entire edifice two bays to the west, and the addition of a north aisle. The connection between the nave and chancel, which had been almost entirely cut off, has been in a great measure restored by the opening of the east and west Norman arches that support the tower. The old galleries have been cleared away. The whole church has been re-seated in oak. The body of the church has been new roofed, and the windows are new. There are 281 additional sittings, 171 free, besides 100 children's seats; in all 901. The church before accommodated but 420 persons and 100 children, the arrangements being besides very incommodious. The alterations cost nearly 5,000*l.* The architect was Mr. E. F. Law. By the opening of the tower arches, the proportions of the building are displayed to much greater advantage. A glance, however, from nave to chancel shows that the work of the parish is not yet complete. The large chancel window is not parallel with the tower arches and the nave, and on this becoming apparent to the observer, the mind is disagreeably impressed with the incongruity. In the oak re-seating, a simple chemical agency, it is said, has been employed, to bring out the natural graining of the wood. The gas-fittings are new.

Kingston-upon-Thames.—The foundation-stone of a new congregational church and schools was laid last week at Kingston-upon-Thames, by Sir Culling Eardley, bart.

Chipstead.—On 22nd November, the Bishop of Chichester preached at the parish church of Chipstead, Surrey, on the re-opening of the nave, which has recently been restored. Before the repairs now in question were undertaken, the rector had restored the choir and rebuilt the south transept, and the north transept had also been entirely restored by Mr. J. Cattley, of Shabden-park, in the parish.

Newport (Isle of Wight).—The whole of the workmen and labourers employed in erecting the new Church of St. Thomas (says the *Hampshire Independent*) were treated to a substantial supper at the Newport Arms, on Tuesday evening, provided by the builders, Messrs. Dashwood, and the friends of the undertaking, to celebrate the rearing of the north and south roofs of the chancel, the centre portion of which will soon be ready for its covering.

Tolpuddle.—On Tuesday before last, Tolpuddle Church, which has undergone repair, was re-opened. The restorations, according to the *Dorset Chronicle*, have been executed by Mr. J. Wellspring, of Dorchester, builder, under the superintendence of Mr. T. H. Wyatt, the diocesan architect. The floor of the chancel has been laid with Minton's encaustic tiles. The roofing is open carved work of stained deal. The foot space for the altar is raised with Purbeck marble, filled in with encaustic tiles. The font is of Caen stone. The whole of the church has been re-pewed with open sittings, for the accommodation of upwards of 200 persons. The benches in the chancel are of open tracery, with carved finials.

Chichester.—A tablet is about to be put up in Chichester Cathedral to the memory of a Crimean hero, Captain Drummond, of the Scots Fusilier Guards (a son of Mr. Drummond, the banker). A short time before he fell, his father received a note from him in pencil, stating that, in case of his death, he should like a plain tablet put up in this cathedral, with his name, age, rank, and where and how he fell; "for," added the writer, alluding to Chichester, "in no place was I ever more jolly."

Shrewsbury.—In the churchyard of St. Alkmond, while excavating a grave on the north side of the church, a discovery was made of a portion of the walls of the ancient structure, which was indebted for its origin to Elfleda, daughter of Offa, king of Mercia, and queen of Kenwolf, who governed this portion of the island at the beginning of the ninth century. In 1788, in consequence of the fall of St. Chad's church, says the *Shrewsbury Chronicle*, in reference to this discovery, the inhabitants of St. Alkmond became alarmed for the safety of their own structure, and it was determined to build a new church, which was opened in 1795. The old church appears to have stood further north than the present edifice.

Preston.—The parish church of Preston has been reopened. We have occasionally noticed the several improvements made as they proceeded, but we may here state that a new window of stained glass has been placed in the chancel, representing our Saviour crucified between the two thieves, with, underneath, Mary, Martha, and some of the disciples,—that the windows on the south side are also of stained glass,—that the church is heated by a hot-water apparatus, and that the pews are all new—of deal, stained in imitation of wainscot, the chancel paved with tile composed of various colours and diamond shaped. The belfry has been repaired, and the old bells put in order, the aisles paved with Purbeck stone, the entrance improved, and the walks in the grounds, &c. newly laid out.

Bolton.—One of the town-council has sent a memorial to the Home Secretary, requesting him to withhold his sanction to the site recommended by the council for the new cemetery, on the ground that the situation is too low, the strata unsatisfactory, the price enormous, and that one far preferable could be procured at 200*l.* per acre. The burial board have given the memorialist an opportunity of proving the truth of his statements by authorizing him to find a more eligible site at 80*l.* less per acre. He has accordingly advertised for land within one to two miles from the borough suitable for a cemetery, at a price not exceeding 200*l.* per acre.

WORCESTER GOVERNMENT SCHOOL OF ART.

THE spacious Music-hall, at Worcester, according to the local *Chronicle*, was, on Friday night in last week, crowded in every part by gentlemen, ladies, and every class of citizens who feel an interest in their flourishing School of Design; so that many persons remained standing during the whole of the proceedings. Lord Ward took the chair. The report stated that the school continued to extend its operations and to give promise of most satisfactory results. 287 students had attended the central school during the past year, and 406 children of four public schools had received regular instructions in elementary drawing, being an increase of 229 over the previous year.

The Rev. John Pearson, in moving the adoption of the report, remarked that it was absolutely necessary, in a commercial and manufacturing point of view, that schools of design should be generally established in this kingdom. The report, generally speaking, was most satisfactory. But there was generally some bitter drop in every cup, and this report was no exception, for it told them that though the school was prospering in every point of view but one, and was doing the work for which it was established admirably, yet it was in debt upon the year, 15*l.* and he could not but feel that the prosperity of the school, in a financial point of view, very much depended on the support and liberality of one noble individual (Lord Ward). But this ought not to be. There were a great number of tradesmen and gentlemen living in this city and neighbourhood, who ought to be deeply interested in the welfare of this school, and, if they would look into its operations, they would find that Worcester was more interested in its being sustained than they seemed to think.

The meeting was addressed by Sir C. Hastings, Sir E. H. Lechmere, the Mayor, Canon Wood, and other gentlemen; and

Lord Ward, in replying to a vote of thanks, said he did not ask for a surplus, but he should be satisfied if the receipts and expenditure just balanced every year. It was, perhaps, scarcely fair to take the first year as a matter of comparison, because then there were extraordinary efforts made to start the school, yet he might mention that they did then receive 433*l.* 13s. 6d. in donations and subscriptions, while in the present year these only amounted to 181*l.* 15s. 6d. They had expressed their thanks to Government for their grant, but he should be sorry that that grant should be diminished or withdrawn: they must not look for any increase of it; but they must keep the income up to the expenditure, that so they might with clean hands require Government to continue their present aid. The manufactures of a city like Worcester must, of course, be made subservient to practical purposes, and must be made to pay, and he might justly direct them to the Potteries of Staffordshire, where he first got his idea that Worcester should have its own school of design. These were represented in the Paris Exhibition by such an admirable display of articles bearing the stamp of the maker's own peculiar mind, that they were all eagerly bought up, and Mr. Minton came home with orders which would take him eighteen months to execute. He had been told, indeed, that he had work cut out for him that would more likely occupy him eighteen years than eighteen months. And if Mr. Minton could make it answer so well to go to so liberal an outlay, ought not the manufacturers of this town long ago to have taken steps to provide themselves with really artistic and original workmen?

SUBJECTS FOR ESSAYS.

AMONGST the subjects for essays for which the Institution of Civil Engineers offer premiums, are the following —

On the chemical constitution, the method of preparation, and the use of artificial cements, to be employed either as "Béton," for forming foundations under water, or on dry land, and for stuccoing the exterior of houses.

The history and practical results of timber and iron piling, for foundations, or other purposes, and for wharf and dock walls; with notices of mechanical modes of driving, and of other modes of inserting the piles.

Accounts of the failure of large structures consisting of one or more arches, with the presumed or ascertained causes.

On brick and tile making, and the capability of introducing new hollow or solid forms, for engineering and architectural purposes; with the processes most useful to emigrants and settlers.

The laws of the strength of cast and wrought iron, under the various conditions of tensile, compressive, transverse, tortional, impulsive, and other strains; with examples illustrative of the co-efficients employed by eminent practical authorities in the construction of works.

The construction of girder-bridges, whether of trussed timber or wooden lattice; of cast-iron, trussed, or plain, or combined with wrought-iron, in simple, or compound triangulation; of wrought-iron lattice-work; or of plate-iron riveted sides, with or without cellular top and bottom; with the comparative results, and cost of the various systems.

The construction of suspension-bridges with rigid platforms; their adaptation to railways, and the modes of anchoring the stay-chains.

The arrangement and distribution of the workshops at the principal repairing station of a railway, for the repairs and maintenance of the locomotives, passenger and other carriages, &c. derived from existing examples.

The drainage and sewerage of large towns; exemplified by accounts of the systems at present pursued, with regard to the level and position of the outfall, the form, dimensions, and material of the sewers, the prevention of emanations from them, the disposal of the sewage, whether in a liquid or solid form, and of the arrangements for connecting the house drains with the public sewers.

On agricultural land drainage.

On the application of machinery, combined with mechanical power, and the means of transporting manure and produce, on large farms and agricultural establishments; and on improvements in the plan of

the works and buildings, and the "plant" employed.

Description of cast or wrought iron cranes, scaffolding, and machinery employed in large works, in stone quarries, hoists, or lifts on quays, in warehouses, &c. especially where either steam or water is used as a motive power.

Improved processes of sawing timber or stone.

On the improvements which may be effected in the buildings, machinery, and apparatus for producing sugar from the cane, in the plantations and sugar-works of the British colonies, and the comparison with beet-root, with regard to quantity, quality, and economy of manufacture.

THE DECORATION OF GUILDHALL.

Under the direction of Mr. Bunning, the Guildhall of London was effectively fitted up, and with extraordinary rapidity, for the reception of the King of Sardinia, on Tuesday, the 4th inst. A very handsome throne, with a canopy, supported in part by gilt caryatides, was placed against the south side of the hall, and on either side of this, galleries, reaching high up, were erected to receive more than 2,000 guests. At the west end of the hall, above the gallery, were suspended portraits of the allied Sovereigns: above these the soldiers of each nation, with implements of war and flags; and, surmounting the whole, an allegorical representation of a burning altar, over which the Angel of Peace hovers, while at the sides stand figures representing England, France, Sardinia, and Turkey, above a Latin motto, which said,—

No power can overcome those who are united, nor can any break the covenant of true friendship.

At the other end was a painting of the Piazza de San Carlo, where stands Marochetti's equestrian statue of Emanuele Filiberto, the founder of the House of Savoy,—the perspective of which was somewhat awkward.

Extempore portraits of members of the Royal House of Sardinia, were scattered over the side walls; flags and banners were tastefully disposed; and a brilliant gas illumination lent its aid.

We must not omit to mention that the walls of the crypt, wherein part of the visitors took luncheon, were hung with a representation of the well-known Bayeux tapestry,—a good idea.

Messrs. Fenton, Absolom, and Coke Smythe, as we understand, were the artists employed.

When will the City of London provide a proper reception-hall, adorned in a style of art worthy of its position and the age?

ROMNEY MARSH.

The tract of land generally known under this name consists of four several divisions under separate jurisdictions, and contains altogether about 52,000 acres, varying in value from 2*l.* to 4*l.* per acre, the latter being obtained for portions under peculiar circumstances: the former is only applicable to certain wet lands hitherto insufficiently drained, and some thinner breeding-lands with heavier rates, as forming portions of the hill parishes, which are generally more heavily burdened.

Romney Marsh (proper) is the eastern portion of this tract, comprising about 24,000 acres, and is protected from inundations of the sea by an embankment known as Dymchurch Wall, nearly two miles long and 20 feet in height, crossing the ancient estuary or mouth of the Lemen, either the Rother itself or its principal arm. On the safety of this wall depends the security of a large portion of this tract of land, and large sums have formerly been annually expended in its maintenance. An engineer is always resident on the spot, who has only recently been able to undertake the general superintendence of the drainage of this district. Under the management of Mr. James Elliott, the wall has been covered with a pavement of Kentish rag, rising in a parabolic curve, so that the sea, in tempestuous weather, is thrown back into its own bosom. This piece of work has only recently been completed, and we understand it has well withstood the tempests of the last fortnight, only a few yards having been displaced, which have been as promptly restored.

The part of this marsh adjoining the uplands, and known as Appledore Dowells, is nearly 10 feet below the level of the rest of this marsh: it has evidently been part of the channel separating the marsh from the main land: it discharges its waters most inefficiently through the adjoining marsh at Jury's Gut.

Walland-marsh, adjoining Romney-marsh, contains about 12,800 acres, and is separated therefrom by the Rhee wall, formerly a channel supposed to have been cut by the Romans, which discharged the waters of the Rother into Romney-haven. This is now filled up, and forms the high road to New Romney. Recently the commissioners who manage this level, in their efforts to economise their expenditure, have taken the construction of a new sluice out of the hands of their officer, Mr. Elliott, who would not undertake the construction of a work he could not recommend. The contractor had cut through the inner sea wall to construct his work: the hurricane of Friday before last drove the sea over the falls, through this cutting, inundated several hundred acres of land, and destroyed the works, we are told, to the damage of 1,000*l.*; thus showing the impolicy of trusting works of such importance to inexperienced hands.

Denge-marsh, the third level of about 11,700 acres, comprising the peninsula of Dunge Ness and Lydd, is a separate jurisdiction of more elevated land, a large portion being shingle.

Guildford, or Guldeford, Level, contains 3,200 acres of land, lies close to Rye, and comprises a tract of very superior pasture and arable land, discharging its waters into the Rother.

The lords of Romney-marsh, acting under the advice of their resident engineer, Mr. Elliott, are now carrying a new sewer 15 yards wide, and emptying itself at the lowest spring tide, by which they hope effectually to drain the whole marsh, and particularly the low lands before alluded to, called the Dowells. When completed (and it is to be hoped no unnecessary economy will be introduced to delay this great work), Romney-marsh will be conspicuous as a well-protected and well-drained tract of reclaimed land.

VENTILATION OF THEATRES.

Every frequenter of a theatre must be uncomfortably affected by the great heat and closeness which generally exist, broken though they be by occasional gusts of the coldest and most cutting draughts of fresh air. It used to be the fashion with the managers in announcing the reopening of the theatre after the recess, to add that, in addition to a superb redecoration, it would also be well warmed and ventilated (generally by a new and improved system, it was added). This was repeated so often and so variously, that one was always looking for the results of the promised improvement. The house had certainly been repainted; it was decidedly warm, whether warmed or not; but as to the promised ventilation, it was "nowhere." We must suppose that the managers have all given it up in despair, as the subject has quite dropped, and people must breathe as well as they can under the circumstances.

The great difficulty is of course to get the air in, or at least to get it in at a comfortable temperature: it will readily escape by the chandelier and the top outlet. Eventually all the air comes from the street: if then we can convert the passages leading to the pit into a series of locks, the same as applied to rivers and canals, by the proper position of doors, and that by closing the door leading to the pit, we open that communicating with the street, we shall have our air-lock charged with a fresh and tolerably pure atmosphere. Having charged the passage, let us close the outer street door, and open the pit door: the enclosed air will flow forward to supply the interior demand, while it may have been warmed by a stove placed in the passage. We shall of course have leakage by this as by any other plan, but we stand a much better chance of getting what we want comfortably by taking advantage of necessary passages in this way, and by warming our passages, than leaving everything to chance and draughts. H. C. Lloyd.

THE BUILDERS' BENEVOLENT INSTITUTION.

On Thursday, 29th ult. a special general meeting of the friends and supporters of this charity was held, for the purpose of electing four males and two females (instead of two, as previously announced) from a list of twelve candidates. Mr. G. T. Keyes (in the absence of the president) took the chair.

There are now on the funds twenty-nine persons, sixteen males and thirteen females, making, with those elected on 29th ult. thirty-five. Since the late dinner, 200*l.* stock had been added,—100*l.* to the relief, and 100*l.* to the building fund.

The Chairman, in opening the proceedings, stated that he had been requested to mention, that owing to the success which had attended the late anniversary festival,—producing, as it did, a large amount to the funds, and increasing their means in hand,—they were enabled to elect six instead of two persons, as previously announced. That showed that when they got a windfall they made the best use of it, and, instead of making the balance at their banker's larger, they gave the candidates the benefit of it, at the same time increasing their funded stock.

Mr. George Bird (the treasurer) said he hoped that the builders would soon put it in the power of the committee to purchase land for the erection of the almshouses. He had little doubt that if a commencement was made, by the purchase of the freehold ground, the almshouses would soon be completed. He trusted that the builders would no longer allow it to be said that they had a benevolent institution without almshouses, and that they would at once come forward and remove that stigma by subscribing liberally to the fund.

The result of the ballot will be found in our advertising columns.

THE CONCERT-ROOM, ST. GEORGE'S HALL, LIVERPOOL.

The form of the apartment will be seen in the plan we gave of St. George's Hall some time ago. It is an oval, of 72 feet by 77 feet, while a recess behind the stage of 30 feet by 12 feet, adds much in the points of effect and convenience. Connecting this recess with the room is a spacious arch, 25 feet in width and 37 feet high. An ample stage or orchestra fills this space, and projects into the room: it is capable of accommodating an orchestra of sixty performers, and a semi-chorus of seventy.

The seats for the audience are arranged to hold about 1,100.

A gallery runs round the room, omitted, of course, at the stage: the face of it forms a series of projections or bows, on plan, forming a wavy outline. Pilasters, or pedestals, with a sculptured figure or Caryatides, on the front face of each, act as supports and ornaments to the gallery.

The walls are divided, by broad pilasters, into fifteen bays or compartments. The pilasters run from the floor, through the gallery, up to the cornice, which breaks round it and forms a crowning cap, supported by consoles in pairs, having festoons of bay-leaves from one to the other. Between them is a bust of Apollo, and a sculptured lyre, in each alternate capital. The wall space between the pilasters is panelled in wood, fixed free of the wall, the whole of the wall surface acting thus as a sounding-board to the speaker or singer on the stage. Continuing round the room, and underneath the main cornice, is a handsome frieze,—a manifest ornament to the room. In each wall compartment, griffins, eagle-winged, guard a circular shield, on which are inscribed, in raised letters, gilt, the names of celebrated musical composers.

In the recess at the back of the proscenium are eight fluted Corinthian columns, 21 feet in height, decorated with gold. Between each column is an immense plate of silvered glass, repeating the ceilings and part of the walls. The arched ceiling over this recess is perforated for ground-glass panels, which, with a window of elliptic form in the wall underneath, gives light during the day. A cove of bold outline springs from the cornice which runs round the room: this is panelled in circular and diamond-shaped compartments. Above this cove is a decorated band, and from this, at 37 feet from the floor, stretches the flat ceiling, with open latticed panels, radiating. In the centre of this flat ceiling is an oval opening for light, about 14 feet by 11 feet 6 inches, surrounded by a band of sculptured fruit and flowers, and further ornamented with oak-leaves, &c. with mouldings and minor ornaments.

The panelling of the cove and flat ceiling has two margins: the principal one is tinted buff, the secondary one blue: the mouldings and all the carved work are of cream colour, edged with gold. The cornice is of cream colour, with some small mouldings gilt: the dentils and the sculptured frieze have a background of gold. The wall panelling, of deal, is painted in imitation of ornamental woods.

ENGINEERING WORKS AT ENFIELD.

On the 27th ult. the newly-constructed works of the Enfield Local Board of Health were publicly opened, including the artesian wells, steam-engines, and pumping apparatus. The fire-hose was affixed to the hydrants at several parts of the district, when it was demonstrated that a volume of water by jets could be thrown over the highest house, in case of fire, without the presence of a fire-engine. The "compensating reservoir" is situated at a distance of three miles from the pumping-engines, and at an altitude of 173 feet above the pumps.

A system of sewerage has been carried out by Mr. Pilbrow, the engineer, contemporaneously with the waterworks.

The steam-engines are from the works of Headly and Mawing, Cambridge. The contractors for the erection of the engine-house were Messrs. Patman, of Enfield, who also constructed the summit reservoir on the "Ridgway," and the outfall brick sewer. The contractor for laying both water as well as the sewer pipes was Mr. D. Dowel, of Hammersmith.

Old Water-Colour Society.—Mr. John Lewis has been elected president of this society, in place of Mr. Copley Fielding, deceased.

NEW ENGINEERING AND BUILDING PATENTS.

The following are extracted from a list of specifications of patents recently filed, as given in the *Mechanics' Magazine*:—

Hays, William Bennett, of Cambridge-street, Pimlico, Middlesex, civil engineer. An improved breakwater. Patent dated April 7, 1855. (No. 769.) The inventor constructs his breakwater by placing platforms one over the other, with intervals between them, and so inclined to the horizon as to present the lower part of each platform to the sea, and to cause the water when in motion to pass between the platforms in a sloping upward direction.

Devy, Philippe Amedee, of Old Jewry-chambers, Old Jewry. Improvements in the construction of coke ovens. (A communication.) Patent dated April 11, 1855. (No. 808.) This invention has for its object a peculiar construction of coke oven, with a view constantly to carry on the process of coke-making, partly by the aid of external heat applied to the mass of a coke-oven, by the ignited products which pass off from the coal in the oven, and by introducing air at an opening or openings over the charging door.

Bellford, Auguste Edouard Loradoux, of Essex-street, London. Improvements in pumps. (A communication.) Patent dated April 9, 1855. (No. 783.) This invention consists in "the combination of an air chamber communicating with the pump above all the valves with a vacuum chamber communicating with the pump below all the valves."

Oudry, Leopold, electro-metallurgist, and Alphonse Oudry, Imperial Government engineer, both of Paris, France. Certain improvements in preserving wood, metal, and other substances. Patent dated April 11, 1855. (No. 795.) Claims.—1. The covering of articles of cast or sheet iron with a layer of metal to protect them from destruction. 2. The application of electro-metallurgy to covering the wooden hulls of vessels, and the wood-work for gates of sluices, jetties, and reservoirs. 3. "The partial application of a thick layer of zinc, by means of electricity, upon non-zinced rivets uniting pieces zinced in a bath of molten zinc."

The following is from a list of provisional specifications not proceeded with:—

Hemming, Frederick Shand, of Birkenhead, Chester, engineer. Improvements in the construction of buildings, which improvements are particularly applicable to military and other hospitals. Application dated April 11, 1855. (No. 798.) The inventor proposes to line the walls of buildings with a material which possesses the property of absorbing noxious and deleterious effluvia. The non-conducting and absorbent material which he prefers employing is peat charcoal, but any other suitable solid deodorizing agent may be used.

Provisional protection was granted on 5th November, 1855, in the following amongst other instances:—

2,478. Henry Clinton Page, of Commercial-road, South Pimlico, Middlesex, sculptor. An improved method of indurating marble and stone, and of permanently fixing colours therein, when colouring matters are applied thereto for producing a variegated pattern or device on the surface thereof.

BUENOS AYRES GAS-WORKS.

The contract for these works has been undertaken by Messrs. Bellhouse and Co. of Manchester, who have shipped nearly all the iron work connected with the manufacture and distribution of the gas. The excavation and brickwork are in a forward state, and it is expected that the contract will be completed in six or seven months. The designs and specifications have been prepared by Mr. Wm. Bragge, civil engineer. The amount of the contract is nearly 47,000*l.* and it is expected that about twelve months will be required, from date of contract, for its completion. The following tenders of schedule prices, were received from six firms, for the work connected with the tanks for gasometers, which will show that "wide tenders" are not confined to our hemisphere:—

	Excavation.	Puddling.	Concrete.	Brickwork in Cement.	In Mortar.	Plastering in Cement.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Planella	6 6	2 3½	16 10½	35 7½	30 0	2 9½
Knight	2 3½	0 11½	28 6	59 7	25 10½	2 7½
McVicker	1 6	3 9	16 10½	31 10½	27 2½	1 6
Deberle	1 8½	1 3½	22 1	23 10	17 7½	2 5½
Traynor	2 3	1 10½	18 0	27 4	25 0	2 5½
Tobin	1 0½	0 4½	9 9	25 0	23 0	1 1 3½

The Board of Public Works.—We understand that the salary of Mr. Austen, the newly-appointed secretary to the Board of Public Works, will be 1,250*l.* per annum.

Notices of Books.

The Life of Luther, in Forty-eight Historical Engravings. By Gustav Kœnig. London: Longman and Co.

We have looked through these admirable illustrations with unmixed pleasure and satisfaction. The letter-press, too, which accompanies them, by Archdeacon Hare and Susanna Winkworth, is of superior character, and gives an impressive view of the great Reformer's life and labours. Herr Kœnig's designs are pictures in little, full of story and expression, and display the most careful industry, with no small amount of genius. One version of these illustrations, engraved on wood, was published by Mr. Cooke in 1853, with a translation of Professor Gelzer's notes to the German edition, but this gave a very insufficient notion of the originals, as presented in the edition now before us.

A more admirable gift-book for Christmas-day, birth-day, wedding-day, or any day, could not be pointed out.

VARIORUM.

"Decimals without displacing the Penny," is a twopenny tract by Mr. William Shirrefs (Bulman, Paternoster-row), in which the legislature is strongly urged to beware of displacing the penny from our coinage. Considering the ignorance and prejudice amongst the lowest order of the community, and the tenacity and firmness with which the all-pervading penny and its halves and quarters are rooted in the habits of the country, it is certainly most desirable to avoid the displacement if possible of any one of these three copper coins. They constitute the very basis of the whole of our monetary system, and it would be preferable to alter the higher and less universal coins, should the decimal system be introduced, of which there now appears, from the recent appointment of the Royal Commission on the subject, to be more probability than before. While, on the one hand, there is risk of the ignorant, either as buyers or as sellers, imagining that they are injured or robbed by displacement of the copper coinage, or by any change whatever in its value, and even precedent for the fear of riot under such circumstances, and of its even being made a political handle of by revolutionists; we know, on the other hand, that the gold coinage has been changed without any such risks. Those familiar with the guinea circulation, for instance, never imagined, so far as we have heard, that they were cheated of a shilling out of every guinea when the sovereign was substituted, but any such tampering with the penny might have a very different fate. Why not make the penny the decimal unit, and retain the halfpenny as the half and the farthing as the fourth part of that unit,—at all events until the whole of the apex of the pyramid be changed? In such case, the half-crown and crown pieces would be the next full decimal elements in our present coinage, the half-sovereign the next, and the sovereign the next, and probably the intrusion of a tenpenny and a fivepenny piece, while withdrawing the other old silver coins, might be all the alteration requisite to complete the elements of change.——"Hygiene, or the Handbook of Health," by Mr. H. W. Lobb (Simpkin, Marshall, and Co.), is a small volume, consisting of two parts, which would have been better separate. The first is more particularly designed for "members of district boards under Sir Benjamin Hall's 'Local Management Act,' magistrates, clergymen, &c." to whom in fact the whole is addressed, as well as to the public generally; and the other a kind of "Mother's own Book," relating chiefly to the management of infants. As regards the latter part, "district boards," "magistrates," &c. may wonder why such hints should be addressed to them: as to the former, mothers will be somewhat mystified with disquisitions on "local legislation by the parish authorities," "paving and lighting," "extra-mural burials," &c. mixed up with what they will doubtless regard, and rightly so, as useful information about the best treatment for babies. The author says, he "shall make no apology for the large extracts" he has "made from the authors he has consulted," as he does not pretend to produce an original work; but in respect to the first part he might at least have indicated some of the chief sources whence he drew his information. Either he does not know the real workers in the sanitary movement, or he ignores them, the only two persons to whom anything like justice in this respect is done being Mr. Dickens and Mr. Simon.——Mr. James Cuthill, the Camberwell horticulturist, has had published by Hamilton and Co. of Paternoster-row, a little "Treatise on the Vine Disease," which is "now destroying the crops of grapes throughout the vineyards of Europe." Mr. Cuthill offers various practical suggestions as to training, pruning, soil, manure, &c. It will be a sad circumstance if the vine is about to die out. It was planted by Noah, at "the foundation of the world that now is," when "the world that then was perished." Was it intended as a kind of secular timepiece, whose running out was to indicate the expiry of the present state of things, and the advent of a better, in the coming reign of "the spirit of Truth," and the return of "the true Vine." The millenarians might make something of this suggestion. What will Dr. Cumming say?—— The last issue of Longman's "Traveller's Library," is a "Narrative of the Niger, Tshadda, and Binue Exploration," by Mr. T. J. Hutchinson, Consul for the Bight of Biafra, in two parts. Mr. Hutchinson speaks with great admiration of the energy and courage of Dr. Barth.

Miscellanea.

The Iron Trade of Middlesborough-on-Tees.—During the last few months large excavations of ironstone have been made in Middlesborough. Recently the ironstone has been discovered in such quantities as to lead to the establishment of extensive and successful smelting works. The ironstone is said to be only slightly inferior to the Scotch, and more valuable in several important branches of trade.

Organs in Presbyterian Churches. — The Presbytery of Lancashire has held a special meeting at Manchester, for the purpose of deciding whether organs should have any *locus standi* in Presbyterian churches within their bounds. After full discussion by a full court on the merits of the case, it appeared, on a division, that fifteen members were in favour of organs, four members being the minority. This decision ends the question locally till the synod meets next April, in St. George's, Myrtle-street, where the first organ has been introduced.

A Hint.—As you frequently notice the efforts which are being made to improve the dwellings of the labouring classes by societies, will you be kind enough to allow the following method of helping themselves to appear in your pages. There is in this immediate neighbourhood (Edgware-road) a very dirty and squalid-looking court misnamed Paradise-place. It consists of about a dozen very small houses of two rooms each, one over the other, without any opening at the back. The poor people who inhabit them have only one dust-bin for the whole of them, and two filthy closets at the further end of the court, and which latter are within a foot of the two last houses. It happened that a few years ago two of the inhabitants of this place heard a lecture such as are often now-a-days given by kind gentlemen to the humbler classes, and the advice then offered to them seemed so easy to be put in practice that they immediately adopted it. It was simply *to buy what they wanted to eat or drink entirely at a chandler's shop, or at a butcher's or baker's.* It was promised that by so doing they would be enabled to pay for wholesome apartments, and so it proved. In a very few weeks one of them removed to a clean neighbouring street, and the other has ever since been found in a decent cottage at Kensal New-town.—W. H.

City Baths and Washhouses.—The subject of public baths and washhouses for the city of London is at the present time engaging the attention of a sub-committee of the corporation. Nothing at present, as far as we are informed, has been definitely determined; but we believe we may state, that in all probability the report of the committee will include a recommendation to the Court of Common Council to appropriate the western portion of Farringdon-market for such an establishment.

Sebastopol brought to London.—A Paris correspondent of a continental contemporary says, "They tell me that an Englishman has left London for Sebastopol, with a little vessel of his own, to carry out an idea which is thoroughly English. He goes out to obtain stones from the fortifications of the place, with which he intends building a house in the environs of London. This original is expected to arrive with his cargo very shortly."

Fall of a Cornice.—Mr. Brent, the deputy-coroner for Middlesex, held an inquest on Saturday last at the Middlesex Hospital, touching the death of Mr. James Howe, a master builder, residing in Marylebone, who was killed by the overturning of a large overhanging cornice. It appears that the deceased Mr. Howe had been building a house in Foley-place, and on the day of the accident had been on the scaffolding, superintending the fixing of the cornice. On the 27th ult. just as the work was on the point of being finished, the huge blocks of stone turned over, and fell upon the scaffold, breaking away the platform, and snapping off the supporting poles like so much matchwood, eventually falling on the pavement of the street, to the imminent danger of passers by. The deceased, with two of his workmen, was precipitated to a depth of 50 feet. Mr. Howe was so severely injured that he died in a few days; the two workmen were also injured, but recovered. The jury returned a verdict of "Accidental death."

Accidents.—At the Fulham Gas Works on Monday in last week, a workman was at work on a scaffold, at a height of nearly 30 feet, when by some mishap he lost his footing, and fell to the ground. He was taken to St. George's Hospital, where he remains in a precarious state.——At Wednesbury, an inquest was held on Thursday in last week, on the body of a workman who had been at work in the brickfield of Messrs. Stubbs and Birch, at Goscote, on the preceding Tuesday, and on crossing the ground the projecting part of a horse machine, used for grinding clay, struck him on the head with such violence as to deprive him of life in about twenty minutes. The jury returned a verdict of "Accidental death."——At Birmingham, on Wednesday before last, an accident occurred to a bricklayer, employed on some building at the Proof-house: while standing on the scaffolding, he missed his footing, and fell to the ground, a distance of some 12 feet. He was seriously injured on the head, and contused in various parts of the body.

Falling in of a Well, and extraordinary Escape.—At Mildenhall, in Suffolk, on Monday in last week, some men were engaged in putting a new "vat" at the bottom of a well, about 30 feet deep, in the yard of a currying office, next the churchyard, a man named Charles Webb being below, and another named Jackson at the crank. Webb had placed a part of the segments forming the vat, and Jackson was cautioning him to bring the edges closer together in order to secure the pinning, when he observed two or three bricks falling. Webb seized the rope, and called "Pull up!" when instantly the brickwork, from the very top of the well, with a large quantity of the soil behind it, fell in a mass, burying him beneath full 20 feet of materials. All idea that his life could be preserved was abandoned, for the surface appeared as closely covered as a filled-up grave; and it was some time before anything was done, the men at first deeming it too hazardous to venture down, so loose and friable was the soil, and so hollowed out were the sides, whilst the wall of a neighbouring out-house actually overhung the cavity. After some little delay, however, assistance was procured, and the wall having been taken down, the men worked most diligently in removing the fallen materials, but with little, if any, hope of more result than the recovery of the poor fellow's body. At length, however, to the astonishment of all interested, Webb was found not only alive, but without a single broken bone. He was very slowly and cautiously extricated; and after being thirteen hours buried he was at length got out little the worse. He was found standing close to one side of the well, which was a little skewed back from the perpendicular, to which cause, humanly speaking, he owed his life, and was so wedged in with the crowbar which he had been using, and some pieces of timber, that it was only by a brick at a time, or a handful of earth, that the work of extrication could be proceeded with.

National Gallery. — Among the plans and notices, says the *Times*, deposited at the Private Bill-office of the House of Commons, for Bills to be brought before Parliament next session, is one for a large hotel, on the plan of the Hotel du Louvre, Rue de Rivoli, Paris, to be built on the site of the National Gallery (a committee of the House of Commons having recommended the removal of the Gallery), and also on the ground in the rear, now chiefly occupied by the barrack-yard and St. Martin's work-house.

The Leeds Wellington Statue.—This statue, by Marochetti, arrived in Leeds during last week. The artist was to have been there, but being desirous of greeting his sovereign, the King of Sardinia, on his arrival at Dover, he wrote to say that he must postpone his visit to another occasion. It has been decided to erect the statue forthwith, in front of the Town-hall, after which it will be covered, and so remain till its inauguration, which will probably not be until the opening of that building.

Carlisle School of Art.—The annual meeting of the subscribers to this school was held at the Town-hall, Carlisle, on Tuesday evening before last. The secretary read the report, from which it appeared that the school was opened in October, and has been since in operation, and that the average number of students at the central school during the past year had been fifty-nine. Various public and private schools had availed themselves of the services of the master, and an exhibition at the central school had been visited by above 2,000 persons. Mr. Davidson, the treasurer, stated that the number of pupils at present receiving instruction was greater than it had ever been before, and he had no doubt it would go on increasing. He was sorry, however, that the institution was in debt; but that arose from the large expenditure in fitting up the central schools and filling them with the necessary casts. The state of accounts showed that there was a debt of 125*l.* to be made up; but that balance was entirely for preliminary expenses. He was happy to say that the current expenses had hitherto been met, at least, almost so, by the receipts. To clear off the debt the amount already received was 52*l.* 4*s.* so that they only wanted about 70*l.* more.

The Amateur Musical Society.—This well-known society of instrumentalists inaugurated their tenth season on Monday last, at the Hanover-square rooms, by an attractive concert before a crowded audience. Composed of the best executants in London, and conducted by one of the first non-professional musicians in England, the progress of this society has a claim upon the interest of art-lovers in general. The particular feature of this concert was Mr. S. W. Waley's performance of a new pianoforte concerto, with orchestral accompaniments, written expressly for the society, and played in a masterly manner by himself. It is a grand work for an amateur, and was enthusiastically applauded. The "*London Deutscher männer chor*,"—a parallel society of German residents in London,—for the practice of German vocal concerted music, under Herr Pauer, sang with great precision some part-songs of Mendelssohn and Spohr.

The Salford Museum and Library. — The seventh annual report of the committee of the Royal Salford Museum and Library to the town-council has just been issued. The libraries now contain 16,205 volumes (without enumerating separate tracts and pamphlets), the increase during the past year, by purchase and donations, having been 3,818 volumes. The reference library contains 11,371, and the lending library 4,834 volumes. The reference library has been opened 307, and the lending library 297 days during the year, and the total number of volumes issued from both has been 115,457. "The reading-room," continues the report, "has been regularly supplied with the London *Times* and all the Manchester papers, and in addition, with copies of the *Illustrated News*, *Athenæum*, *Builder*, *Gardener's Chronicle*, *Punch*, and *Household Words*, weekly; *Blackwood*, *Frazer*, and *Tait's Magazines*, *Bentley's Miscellany*, *Hong's Instructor*, *Sharp's London Journal*, *Chamber's Journal*, *Leisure Hour*, and *Zoologist*, monthly; the *Edinburgh and Quarterly Reviews*, and a few other papers and periodicals. In the lending library there has been a great increase in the issues of books, and it is gratifying to your committee to be able to state, that the books applied for by the frequenters of this library are of a better class of literature than those which it circulated for the first six months after its opening. The demand for books in this department has been so great, that your committee calculate that nearly the whole of the library has been in circulation *ten times* during the past year. The number of visitors to the Museum during the past year has been considerably more than on any previous year. In concluding their report your committee have the greatest satisfaction in stating that the conduct of the visitors to the Museum and Libraries has been orderly and commendable, and that no wilful damage has been done to any of the specimens in the Museum; nor, with one unimportant exception in point of value, have any of the books been stolen, lost, or damaged."

The Application of "Peat Gas" to Towns. —An Irish correspondent of a London contemporary states that one of the country towns is about being supplied with the illuminating gas extracted from peat, and adds, that the fact that this gas can be produced in country towns in Ireland at about one-third of the cost of coal gas, and that it is equal in brilliancy to the latter—as attested by hundreds of parties who have seen it burned—are quite sufficient to prove the value of the invention, viewed commercially or nationally; and that it is calculated that a ton of charcoal can be obtained from about four tons of peat; so that, independent of the gas-tar, oil, &c. the manufacture of charcoal alone would be a source of large profit, considering the small outlay that would be required to fit up the necessary apparatus, owing to the simplicity of the invention.

Institution of Civil Engineers.—At a meeting, November 27th, Mr. James Simpson, president, in the chair, the paper read was "On the Application of Volute-springs to the Safety-Valves of Locomotive and other Boilers," by Mr. J. Baillie, communicated by Mr. R. Stephenson, M.P. In order to commence the discussion on the paper, a "Description of an improved form of Safety-Valve, for Steam Boilers," by Mr. J. Fenton, M.I. was read by the secretary. The object of this valve was the prevention of accidents, arising from the liability of the ordinary mush-room-shaped safety-valves to stick fast: this was effected by making the valve spherical, with a hemispherical seat and a hemispherical cup bearing upon the ball valve: this cup was connected to the valve lever by a spherical joint; all the other joints of the lever and attachments being also on the ball and socket construction, so that all were free to move in any direction and no sticking of any part was possible. An illustration was given of the adaptation of the volute springs to hydraulic safety-valves for equalizing the pressure on watermains, and obviating the injurious effects of the concussion caused by the oscillation of the column of water. This system, which had been introduced by Mr. Croker, for the Amsterdam Water Works, was easily adjusted to a head of 170 feet, respresenting a pressure of 39·2 lbs. per square inch, or a total load of 1,970 lbs. on the valve: it had been in use for six months, and might be perfectly relied upon. The arrangement was very simple, consisting merely of a vertical branch of 8 inches diameter springing from the horizontal main-pipe of 6 inches diameter. On the top of the branch pipe was fixed a valve and set of gun metal, so arranged, that upon the lugs were fixed the wrought-iron bolts holding the cross-bar, between the under-side of which and the top of the valve was placed a volute spring of about 2¼ tons pressure: the exact pressure was regulated by adjusting bolts provided with stop-nuts, and the apparatus could be accommodated to the required head with great facility and precision.

Lectures on Architecture. — Mr. Edward Hall, F.S.A. known by his writings to most of our readers, delivered (Nov. 30th and Dec. 4th), at Westbourne College, Bayswater, two lectures,—the first on "Architecture, its Purpose and Origin;" the second, on the "Principles of Practical Art, as applied to House Decoration and Furniture." Mr. Hall possesses the great recommendation of thorough knowledge of his subject.

Lecture on Architecture at Clevedon.—On Monday before last, a lecture was delivered at the Public Hall, Clevedon, by Mr. C. E. Davies, F.S.A. on "Architecture." There was a full and attentive audience. The lecturer reviewed chronologically the peculiarities of Saxon, Norman, Early English, Decorated, and Perpendicular architecture; illustrating his subject by drawings and diagrams on the black board.

Strikes.—The carpenters employed by ship-builders at Goole and Grimsby have struck work for a rise of wages. The present rate of wages at Grimsby is 4*s.* 6*d.* a day, with constant work. The Goole carpenters urge that they ought to receive the same wages as the Hull and other carpenters are receiving. Hence they demand 6*d.* a day additional. The masters do not appear to be inclined to accede to the demands made on them.

Modern Building.—Allow me, as a constant reader of your valuable paper, to say that it gives me much pleasure to find that it is your unvaried and steady aim, to promote strength and durability in the construction of every building. As I am a builder of fifty years' standing, my experience has proved the fact, that for many years there has been a constant tendency to cut and pare down the expense of erection, even by the architects themselves; and then (what is called) the successful candidate, in order to make the best out for himself, has shaved off a little more; so the result proves a discredit to all the parties concerned. In other cases there has been an attempt to erect large massive buildings without any apparently adequate support. I was forcibly reminded of this by your recent paper, which represented a corner shop propped up to prevent an accident. Surely the present learned generation may find a useful lesson in comparing modern fancy work with the more substantial building of past centuries. According to my mind, new principles in architecture are a rare occurrence, and I should feel obliged to some of your correspondents to show what is really new, which combines strength, durability, and ornament, so that the present race of architects and builders may have the full credit due to them; but I am afraid after all that you can do, many plans will be made by those who do not understand their practical bearing; and also that there are too many (gentlemen) contractors, who know but little of that work which they profess to do.—An Old Builder.

TENDERS

For eight houses at Peckham. Mr. James Sheppard Scott, architect. Quantities not supplied :—

Thorp	£3,760	0	0
Stredder	3,300	0	0
Tarrant	3,000	0	0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

"Books and Addresses."—We are forced to decline pointing out books or finding addresses.

MR. ALBERT SMITH'S MONT BLANC, HOLLAND UP THE RHINE, and PARIS, is now open every evening (except Saturday) at Eight o'clock. Stalls (which can be taken from a plan at the Box-office every day, between Eleven and Four, without any extra charge 3s.; Area 2s.; Gallery, 1s. The Morning Representations take place every Tuesday, Thursday, and Saturday, at Three o'clock.

PRIZE CATTLE SHOW of the SMITHFIELD CLUB. The Annual Exhibition of Prize Cattle, Seeds, Roots, Implements, &c. commences on TUESDAY Morning, and closes on FRIDAY Evening, 11th, 12th, 14th, and 14th DECEMBER. BAZAAR, KING-STREET, and BAKER-STREET. Open from Daylight till Nine in the Evening. Admittance, One Shilling.

ROYAL POLYTECHNIC.—During the CATTLE-SHOW week, from the 10th to the 15th, there will be a great increase in the Lectures on Chemistry and Electricity, and also in the general entertainments and unrivalled Dissolving Views—Open from Twelve to Five; Evenings, Seven to Ten. Admission, One Shilling.

TO LAND SURVEYORS.

AN excellent opportunity presents itself to any Young Gentleman wishing to embark in the above business, in consequence of the death of a highly respectable Land Surveyor, whose papers, maps, &c. might be handed over to a successor, upon payment of a reasonable premium. The business has been carried on by the late proprietor for nearly twenty years; is in a borough and market town to the west of England, and at present there is no other resident land surveyor either in the town or immediate neighbourhood.—Address, pre-paid, Mr. H. KENT NORRIS, Solicitor, Devizes Wilts.

MANAGING and CONFIDENTIAL CLERK.—WANTED a clever, active Man, to take principal charge of the whole of a firm's books, with cash account. He must be a thorough accountant, and have held a similar position for from three to five years. In a house of respectability in London, and in a concern, such as a builder's or engineer's, where time and materials have to be accurately booked, prime costs kept, &c. None but a person who has held a position as stated need apply. A clever responsible man is wanted.—Address, with salary and references stated, to F. G. care of Messrs. Dewey and Dale, Shoe-lane, Fleet-street.

TO SILVER PLATERS.

WANTED, a MAN, to go abroad for three or six certain. He must be thoroughly competent and accustomed to plating and bronzing as fittings. None need apply who cannot furnish first-rate testimonials as to character and ability.—Address, Messrs. WM. BIRD and CO. 5, Martin's-lane, Cannon-street, London.

WANTED, a COLLECTING CLERK, who is accustomed to accounts and the routine of an Office. Sureties will be required.—Address, stating age and salary expected, to M. M., Buck Steinmer, Mount-place, Westminster-bridge-road, Lambeth.

SHOP FOREMAN.

WANTED, by a Builder, at the west end of London, a person to act as SHOP FOREMAN. He must be a first-rate joiner, and have had a large experience in the management of men, and in executing a superior description of work.—Address, by letter, stating qualifications, to J. T. 15 South-street, Grosvenor-square.

WANTED, by an ARCHITECT and SURVEYOR in the City, holding appointments, an OUT-DOOR PUPIL, to whom will be afforded peculiar advantages for learning the profession.—Address, S. E. Office of "The Builder."

TO ARCHITECTS.

WANTED, immediately (in the Country), an ASSISTANT, thoroughly competent to prepare all requisite drawings, specifications, get out quantities, and to undertake the superintendence of works if necessary. The appointment must state terms, and furnish satisfactory references and testimonials as to ability and general character.—Address, A. A. Mr. James Wheatley's, Stationer, Huddersfield.

WANTED, for the Stockport Borough Gas-works, a MANAGER, whose age shall not exceed fifty years. He will be required to devote the whole of his time to the duties of his office, and to enter thereon on the 1st January, 1856. Sealed applications, with testimonials enclosed, stating age and present occupation, to be addressed to the Chairman of the Gas Committee, Millgate Works, Stockport, on or before WEDNESDAY, the 26th DECEMBER instant, endorsed, "Application for Gas Manager." Salary, 250l per annum.

JOHN VAUGHAN, Town-clerk.

Stockport, December 4, 1855.

WANTED, a clever, practical Man, to SUPERINTEND the CONSTRUCTION and ERECTION of a PUBLIC MARKET of Iron and glass. One who has had experience in such work will be preferred. Apply, if by letter, stating full particulars and wages required, to J. NELSON and SONS, 47, Briggate, Leeds.

TO PLUMBERS, BUILDERS, &c.

WANTED, by a thorough practical Plumber, a SITUATION as FOREMAN, or to MANAGE a BUSINESS; can keep the accounts, understands gasfitting, zinc working, &c. Satisfactory references.—Address, J. S. 5, Wilson-street, Finsbury.

TO BUILDERS, CONTRACTORS, BRICKMAKERS, &c.

WANTED, a SITUATION, by a practical Man, who has for the last fourteen years been in a builder's establishment as Foreman of Engineers, during which time he has had much experience in the construction and erection of machinery of various kinds. The last four years of the above time have been employed in erecting steam engines and machines for brickmaking on a large scale. Most satisfactory reference can be given to his present employer.—Address, D. W. Office of "The Builder."

TO CARPENTERS, BUILDERS, AND OTHERS.

WANTED, by a steady, experienced Young Man, aged 23, a permanent SITUATION as CARPENTER and JOINER. Good reference can be given.—Apply by letter, stating wages, &c. to A. B. No. 22, Bedford street, Bedford-row.

TO ARCHITECTS

WANTED, by a Young Man, a SITUATION as DRAWING CLERK to an Architect or Engineer.—Address by letter, post-paid, to W. L. 10, Belgrave-street, Argyle-square, King's-cross.

WANTS a SITUATION, as ENGINE-DRIVER, and to take charge of machinery, or to drive and stoke, a steady Man, who has had much experience in sawing and other machinery, and can have ten years' character from his last place.—Address, W. M. Keen's Newspaper Office, Stratford, Essex.

TO ARCHITECTS AND SURVEYORS, OR BUILDERS.

WANTED, by a Young Man, aged 24, a SITUATION with either of the above. Is well acquainted with the routine of both offices, a good draughtsman, can superintend and measure up work, make specifications, take dilapidations, &c. and has been accustomed to look-keeping. Good references. Address, R. B. S. care of Mr. George Wallis, 3, Pleasant-row, Old Kent-road.

TO BUILDERS &c.

WANTED, a SITUATION as CLERK, by a Young Man, aged 24. Has just left a builder's office (previously with an architect); a good draughtsman, accustomed to superintend measurements, measure work, book-keeping, &c. and has a good knowledge of building materials. Can be well recommended.—Address, W. J. care of Mr. Clifford, Stationer, London-street, Greenwich.

TO MANUFACTURERS AND WORKERS IN PLASTER, COMPOSITIONS, WOOD, STONE, MARBLE, AND METALS.

WANTED, ENGAGEMENTS for an expert DECORATIVE DESIGNER and MODELLER, for the above materials; also, for an ARCHITECTURAL MODELLER, in the Mediæval Renaissance, Modern Italian, and other styles, and who executes models of buildings to scale. Terms moderate for continued employment. Engagements preferred in London, Liverpool, Manchester, Birmingham, Wolverhampton, or Sheffield, for which places he can immediately leave.—Address, for work, or from manufacturers in brass, iron, and bronze.—Apply, by letter or personally, to F. T. No. 78, The Bield's-road, Red Lion-square, London.

WANTED, by an experienced, respectable Man, EMPLOYMENT as TIMEKEEPER, WHARFKEEPER, or COLLECTOR.—Address, X. Office of "The Builder."

WANTED, by an experienced BOOK-KEEPER and ACCOUNTANT, temporary EMPLOYMENT in any department of the Counting House: has studied Companies, contractors, and others requiring assistance, will find the advertiser a person of intelligence and ability.—Address, W. Office of "The Builder."

TO ARCHITECTS AND BUILDERS.

WANTED, by the Advertiser, a Young Man, aged 24, a SITUATION as CLERK in an Architect's or Builder's Office, is a fair draughtsman, and understands the general part of the building business generally.—Address, F. C. D. 17, Bessborough-place, Belgrave-road, Pimlico.

TO PAINTERS, BUILDERS, AND HOUSE AGENTS.

WANTED, a SITUATION as FOREMAN of PAINTERS, or as Painter, Grainer, and Writer. Is perfectly acquainted with taking out quantities.—Address, J. B. 5, Pickering-place, Bayswater.

TO ARCHITECTS BUILDERS, &c.

WANTED, by a Person of considerable experience, a SITUATION, as FOREMAN of PLASTERERS' WORK in general. Has been accustomed to superintend extensive works, and can model if required. First-rate reference can be given as to fitness, integrity, &c. No objection to the country.—Direct to F. G. 36, York-road, Lambeth, Surrey.

WANTED to APPRENTICE, two respectable Youths, aged respectively 13 and 14 years, one of whom has a decided taste for sketching. Branches of the building trade preferred.—Communications, prepaid, to be addressed to Mr. THOMAS, 1, Alma terrace, Stockwell Private Road, Clapham.

WANTED, by a Young Man, a constant SITUATION as PLUMBER. Is a thorough good workman. Liberal wages would be expected, and country would be preferred.—Address, A. B. 16, Princes street, Portman-market.

TO MASONS, DIRECTORS OF CEMETERIES, &c.

WANTED, by a steady Man, a SITUATION as LETTER-CUTTER on STONE, MARBLE, &c. and GENERAL MASON. Is an experienced draughtsman and colourist.—Address, M. N. 6, Evans-street, Upper North-street, Poplar, London.

TO BUILDERS AND PLUMBERS.

WANTED, by a respectable Young Man, a SITUATION as a good plumber, and will fill his time up in painting if required. Good references can be given.—Address, post paid, J. G. at Mr. Guthrie's, 18, Paradise street, High-street, Marylebone, London.

TO ARCHITECTS, SURVEYORS, LAND-AGENTS, AND OTHERS.

THE Advertiser, aged 22, is open to an ENGAGEMENT; is a neat draughtsman, can assist at taking out quantities, &c. Salary a secondary consideration. Unexceptionable references.—Address, E. W. care of Mr. Hill, 4, Grafton-mews, North-road.

TO TOWN-TRAVELLERS

THE Advertisers wish to arrange with a TRAVELLER (one in the timber trade preferred) who has a good connexion with first-class builders for the SALE on COMMISSION, of ARTICLES which are largely consumed by them and who could undertake their agency as an addition to his present business; no others need apply.—Apply, with real name, address, and particulars, to K. L. 18, Brudenell-place, New North-road.

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

THE Advertiser, aged 23, the Son of a Builder, is desirous of an ENGAGEMENT in either of the above offices. Has been accustomed to superintend works. Can make fair and working drawings, prepare specifications, and is practically acquainted with building in all its details. Is by trade a joiner.—Address, J. S. L. care of Mr. Bennett, Waterloo-road, next door to the York Hotel.

PLUMBING.—EMPLOYMENT WANTED by a respectable, experienced Man. Does not profess painting and glazing, but willing to make himself useful. Respectable reference.—Address, W. T. 1, Three Falcon-court, Fleet-street, City.

TO ARCHITECTS AND SURVEYORS.

OCCASIONAL ASSISTANCE OFFERED, by a Young Man of eleven years' experience, either at home, or at the offices of the profession.—Address, A. B. 38, Duke-street, Grosvenor-square.

AN ASSISTANT desires a permanent SITUATION in an Architect's Office.—Address, T. L. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

AN ARCHITECTURAL DRAUGHTSMAN accustomed to prepare finished, working, and detail drawings, measure architects' work, take out quantities, &c. is desirous of a RE-ENGAGEMENT, either as CLERK of WORKS or in an Office. Good testimonials. Salary moderate.—Address, A. B. 2, Melbourne-terrace, Worcester.

TO ARCHITECTS AND SURVEYORS.

AN experienced and thoroughly practical DRAUGHTSMAN desires an ENGAGEMENT either temporary or permanent. References and testimonials to gentlemen of eminence. Terms, moderate.—Address to H. S. S. 2, Grove-terrace, Bedford-road, Clapham-rise.

TO CIVIL ENGINEERS

A CLERGYMAN of moderate means, wishes to place his son in the FAMILY and OFFICE of a CIVIL ENGINEER, where the health and morals, as well as the professional instruction, of a pupil will be religiously attended to. Any friend who will kindly mention such a situation will greatly oblige the advertiser.—Address, prepaid, Rev. S. G. Post-office, Bath.

A DRAUGHTSMAN, aged 23, wishes for an ENGAGEMENT in an Architect's or any similar office in the country. Can make fair and working drawings, and would engage for a moderate salary, he having been out of practice of late. Highly respectable references.—Address, A. M. A. Mr. Clyde's, Post-office, Ipswich, Suffolk.

TO ARCHITECTS

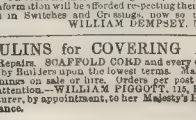
A CLERK of the WORKS, who is about completing extensive works, is open to a RE-ENGAGEMENT; has first-rate testimonials.—Address, A. B. No. 16, St. Swithin's-lane, City.

AS ASSISTANT SURVEYOR.—A Young Man of respectability is desirous of obtaining an ENGAGEMENT in an Office of a Surveyor or Land Agent. He is a good draughtsman, and capable of print ng titles, &c. Satisfactory references. Address, A. B. Mr Bateman's, Law Stationer, Took's-court, Chancery-lane.

TO BUILDERS AND BRICKLAYERS.

A SITUATION WANTED by a BRICKLAYER of industrious and steady habits. Understands his business in the building and jobbing line. Wishes to meet with constant employment. Wages on the usual terms. No objection to a country job. Can have a good character from his late employers.—Address, A. A. 1, Charlton King's-road, Kentish-town.

TO BUILDERS, PLUMBERS, PAINTERS, &c



AS PLUMBER, or THREE-BRANCH HAND: has been sixteen years in the business, and is steady and industrious. Direct, A. M. at Wolf's Library, No. 65, Albert-street, Barnsbury-road, Islington.

AN ARCHITECT'S ASSISTANT, who has been nine years in the profession, and has recently been engaged upon several first-rate building, is open to an ENGAGEMENT. He is a good designer, and thoroughly understands detail and construction.—Address, G. G. 39, Michael's-place, Brompton.

TO CAPITALISTS and OTHERS.—A Gentleman, possessing a most valuable and attractive Marine Estate, in a fashionable situation, expected to be laid out, on which many mansions, villas, and other buildings have been erected, producing a large annual income, and possessing unusual productions, and capabilities for greatly increasing it (by the creation of further ground rents and otherwise), without risk, would either SELL, or admit one or more as JOINT PURCHASERS and PROPRIETORS, with a capital of 500l and upwards, either to take an active or dormant part in the further development of the whole, commencing with 5l. per cent. who might, if desired, have a residence on the estate. One property has been valued by two eminent surveyors at about 2000l and is well calculated for a gentleman of business habits, wishing occasional or permanent occupation. Principals only will be treated with, and no agent need apply.—Particulars may be had of Mr WEBBER, 3, Caroline-street, Bedford-square.

TO CAPITALISTS.—FOR SALE, a SHARE of a very valuable RECENTLY PATENTED INVENTION connected with the Fine Arts, which will enablean extensive manufacturing business to be carried on, so as to realise a handsome profit without risk. This affords a good opportunity to any persons wishing to embark in a light genteel business requiring but a moderate amount of capital. None but principals treated with.—For particulars, apply to J. K. 320, Oxford-street.

VENTILATION.—PURE AIR.

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draughts being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 17, Union-street, Borough; and of all respectable ironmongers, builders, &c.

THE RAILWAY SWITCH and CROSSING COMPANY.—Directors of Railways, Engineers, and Manufacturers, are informed that the Offices of the Company are removed to 161 St. Martin's-lane Charing cross, where, on application, every information will be afforded respecting their extended improvements in Switches and Crossings, now so universally adopted. WILLIAM DEMPSEY, Manager.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the usual prompt attention.—WILLIAM PIGGOTT, 118, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Pratt-street, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO.; beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stourbridge, Worcestershire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 8d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldhamite and Grey Stone Lime Works, on the Medway, near Rochester. March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'S BEST VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, FARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, FAVIORS', STOCKS, and other BRICKS.

PORTLAND CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

GREAVES'S BLUE LIAS LIME.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

BATH CEMENT.
CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.
BRICK, LIME, and CEMENT MERCHANTS.
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Farian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewers Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT,
No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or hall to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c

BATH, PORTLAND, and ROMAN CEMENTS, GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

THE LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by RICHARD WINTER (Manager to the Company), Cement Works, Dunball, Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the ever increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

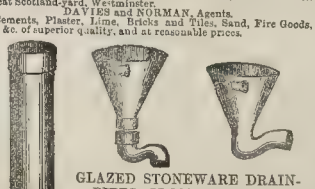
CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent N.B. These Cements supplied or shipment, on advantageous terms.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0



Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their continuity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE PORTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.
G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.
DAVIES and NORMAN, Agents.
Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 65, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Ivelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PRIZE BRICK-MAKING MACHINE.—CHAMBERLAIN'S PATENT.—This portable machine will make 20,000 solid bricks per day, with 3-horse power. One man to feed the machine with clay, and boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helen's, September 5th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 5th, 1855.—Apply for particulars to Mr. HUMPHREY CHAMBERLAIN, Kempsey, Worcester.

THE PATENT BRICK-MACHINE COMPANY invite ORDERS for their improved machines, the only ones that manufacture solid bricks equal to hand-made. A machine, and bricks made by it, may be seen in a field near London. H. C. MOUNT, Secretary.
37, King William-street, City.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.—Grey Stocks, 25s. per thousand; Grizles, 20s. per thousand; Rough Stocks, 20s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

THE BEST HERTFORDSHIRE MALM SECONDS;

Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 8, ADELAIDE-PLACE, London-bridge.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Stoneware Pipes, Closet pans, Furnace-blocks, Fire-bricks, Gas-retorts, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.
London Agent: J. COX, 2 and 3, High street, Lambeth.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B PEARSE and CO Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent.—Mr. J. UNWIN, Private Residence, 39, Nelson-square, Blackfriars road

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and fire, bricks fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wichwood, Cambridgeshire, begs to offer pantiles at 58s. per 1,000; floor bricks and 6-inch pavings, at 37s 6d. per 1,000; 8-inch pavings, at 57s 6d, per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Reasons of the Jurors," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster.

The Second Edition of this Company's Circular, just published, is now being forwarded, post free, to Directors, Engineers, Managers, and others interested in Railways.

The Circular contains Engravings, detailed Estimates of cost of construction, and descriptions of many valuable Patents, with the latest results of experience in the working of the various patented systems of Permanent Way, either the property of, or worked by the Permanent Way Company.

These patents (a selection) are now adopted by Companies owning several thousand miles of Railway, are approved of by most of the eminent Railway Engineers, in this country and abroad, and the system of Fish jointing, in particular, has received the unqualified approval of H. M. Commissioners of the Board of Trade and their Inspecting Officers.

The Permanent Way Company are prepared to grant licenses on liberal terms, to Railway Companies and Manufacturers for the use of all or any of the Patented Inventions, which have for their object the safety and comfort of the travelling public, and economy in construction of the Road and Rolling Stock.

That the objects are accomplished, the following extracts will confirm:—

"There can be no doubt that the practice of Fishing the Rails, which is becoming very general, is a great element of safety; the principle cannot be too much encouraged."—Extract from Report of Colonel Wynne, R.E. Chief Inspector of Railways to H. M.'s Commissioners of the Board of Trade, dated April 27th, 1854.

"My Lords direct me to observe, that they trust that the remarks of the Inspecting Officer, as to the desirability of the Fished Joint being adopted to a greater extent upon the Railway, will receive the attentive consideration of the Directors."—Extract from letter of Captain Galton, R.E., Secretary to the Railway Department of the Board of Trade, in reference to the foregoing Report.

"Dear Sir,—In reply to your favour of the 1st instant, I beg to say that I experience no difficulty whatever in keeping the nuts of the bolts tight."—Extract from letter of Mr. H. Woodhouse, Engineer, London and North-Western Railway.

"I would, however, beg to state that, in point of safety, the first and most essential element of railway working, the Fish Joint, on your system, is in my opinion *indispensable*—Extract from letter of Mr. J. E. M'Connell, Locomotive Engineer of the London and North-Western Railway.

"On a district of about thirty miles, where the greatest length has been Fished, the saving in labour of maintenance amounts fully to thirty per cent."—Extract from Mr. R. Jacomb Hood, Engineer to the London, Brighton, and South-Coast Railway.

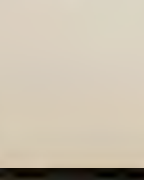
Among others, the Company call attention to the following Patents recently placed under its management:—Mr. William Pole's important Improvement in Fish Joints, and Mr. Paul Prince's Improvements in moulding Railway Chairs.

Licenses, and every information, may be obtained upon application to CHARLES MAY, F.R.S., Managing Director of the Company, 26, Great George-street, Westminster; or to WILLIAM HOWDEN, Secretary.

THE PERMANENT WAY COMPANY.—The attention of the Permanent Way Company has been called to claims made by Mr. C. M. PARSONS, of No. 2, Duke-street, Adelphi, to the "Fishing" of Rails, of the action usually known as the "Contractors' Rail," and the use of fishes in all cases where the joints of Railways are supported by sleepers.

Although the Company deem their rights to be indisputable, they have, in order to satisfy any doubt that may exist, arrangements may exist, submitted the subject to the best legal authorities, and have received the united opinion of Sir F. Thesiger, Mr. Sergeant Channell, Mr. Hindmarch, and Mr. Webster, that the adoption of "Clamps, splicing plates, alias fishing plates," as claimed by Mr. Parsons, in his patent of the 26th February, 1850, which is nearly two years subsequent to the original patent, the property of the Permanent Way Company, would be an infringement of the latter, patent, and that the Permanent Way Company have the exclusive right to apply what are usually called "Fishes" to the sides of Rails at their joints, whether they are called by that or any other name. Whatever may be the section of the Rail to the side channels of which the fishes may be applied, by whatever means they may be fixed thereto, and whether a sleeper be placed under the joint or not.

The Permanent Way Company give notice to their licensees, that they will protect them against the claims set up by Mr. Parsons, if such claims be persisted in.



By order, WILLIAM HOWDEN, Secretary.

26, Great George-street, Nov 30, 1855.

NOTICE to BUILDERS and OTHERS.—Whereas Mr. TROUP has been informed that a person named MORING has recently pretended to be owner of the Warrior-square Building Estate in the centre of the borough of Hastings, Sussex—This is to give Notice, that the said Moring is a trespasser, and unknown to Mr. Troup, and all persons are hereby cautioned against treating with the said Moring or his agents. N.B. The Mayor of Hastings has further information, which may be examined on application to the Inspector of Police.

NO CHIMNEY WANTED for RICKETS'S PATENT CALORIFERE GAS STOVES in CHURCHES, HALLS, or SHOPS;

And for Conservatories, or any close apartments, pipe can be attached to carry away the burnt air.

RICKETS'S CHEAP GAS STOVE, Price, £1. 15s.

Made of Sheet Iron, suitable for Heating small Countinghouses, Bedrooms, Cellars, &c. &c.

MANUFACTORY, AGAR-STREET, STRAND, LONDON.

Liberal Discount to Builders.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying moist moulded clays, sound at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE; it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

DRAUGHTS ROUND DOORS and WINDOWS.—GREENWOODS PATENT INDIA-RUBBER STOPS, to supersede flat or leather, for the purpose of keeping out dust and draught round doors, windows, closets, show-cases, &c., making the same air-tight. Price 4d. per foot. Spring Slides for bottom s of doors, 4s. each.

JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London-bridge.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by BUTTER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

IMPROVED CONSTRUCTION, and SMOKY CHIMNEYS PREVENTED.

The Chimney Contractor, with Horizontal Register made of Iron, to be use; for the formation at the commencement of Chimney. Made for Flues 9 inches by 9 inches, 14 inches by 9 inches, and 14 inches by 14 inches.

The UNIQUE CHIMNEY-POT, Multum in Parvo, a Remedy against Smoky Chimneys, unsightly and dangerous Contrivances, is inclosed at the top, has a diagonal and double outlet, prescribes the flue dry, and will not clog with the soot.

Sold at No. 3, Princes-street, Bedford-row.

THE PATENT DRAUGHT and DUST EXCLUDER (BOURELET'S COMPRESSIBLES) not apparent when fixed in the angles of doors, windows, and glass-cases, the cheapest and most effectual invention for the purpose.—At R. HELBRONNER'S, Sole Patentee, 307, Regent-street, next the Circus, Oxford street. Depôt at BURGESS and KEY'S, 103, Newgate-street, City.

TO BUILDERS AND OTHERS.

Prepared flooring and cut stuff of every description at equally low prices. A list forwarded on receipt of postage-stamp.

Borough-road, Southwark; and Elm-street, Gray's-inn-lane.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TO PIANOFORTE-MAKERS, CABINET-MAKERS, AND THE TRADE GENERALLY.

THE cheapest and best Stock in London of WALNUT VENEERS and SOLID WOOD, is at WILLIAM MARSHALL'S Timber-yard, Vincent-street, Old-street-road.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

¼ inch White, 13s. 6d. per square.		¼ inch Yellow, 15s. per square.	
½ ditto	18s. "	½ ditto	16s. 6d. "
1 ditto	18s. "	1 ditto	30s. "

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.

ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.

Address, E. SIMMS, SAWING, PLANING, AND MOULDING MILLS, King's-road, Chelsea, and Wilton-road, Pimlico.

EDWARD SIMMS begs to inform builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from ¼-inch to 1¼-inches thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Pantile Laths, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application. Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

WYBURG, 3 feet by 7 inches, and 9-inch Redwood, Deals, and 3½ feet by 7-inch Battens, imported two years ago, and now in capital condition.—Apply to J. W. HOLDERNESS and CO. Exchange-buildings, Hull, December 1, 1855.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about two yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by an enclosing postage-stamps.—Please note the address—No. BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Fulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or at Messrs. ARROWSMITH and CO 80, New Bond-street.

FOR SALE, a PAIR of COACH-HOUSE DOORS, 2-inch, 10 feet high, 7 feet wide, 3 feet 6 inches Collinge's hinges.—Apply, 3, London-street, Paddington.

PARTNER.—An Architect and Surveyor, holding salaried appointments, and established in good practice, in a leading thoroughfare near Temple-bar, wishes to arrange with some gentleman to join him as PARTNER. A premium required.—Address, C. Q. Mr. Ockerby's, Law Stationer, 16, Castle-street, Holborn.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.
Established 1831.

At 1st March, 1855, the amount of the accumulated Capital exceeded	£910,000
And the Annual Revenue exceeded	163,000
The amount paid to the Representatives of Deceased Members was upwards of	500,000

This affords the strongest evidence of the continued prosperity of this Institution, and of the immense benefit to the families of deceased members.—For prospectuses and all information, apply to WILLIAM COOK, Agent.

126, Bishopsgate-street, London.

EQUITY and LAW LIFE ASSURANCE SOCIETY, No. 26, Lincoln's-inn-fields, London.

Bonus added	257 10 0	164 0 0	311 10 0

Copies of the last Report, Prospectuses, and every information may be had upon written or personal application to the Office.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 30, Brown-street, Manchester.

THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy-Chairman.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy-holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.

The Annual General Meeting of the Society was held on the 30th of May, 1855, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that during the two last years, 1853 and 1854, between 500 and 600 new Assurance had been effected, producing an increase of premium income amounting to 1l. 0s. per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the last year in consequence of the visitation of the cholera, it had not been found necessary to reduce, in the slightest, the allowance of 3½ per cent. previously awarded to the Policy-holders.

Credit is allowed for half the Annual Premiums for the first five years.

A. R. IRVINE, Managing Director.

14, Waterloo-place, London.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON, Instituted in 1820.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, or an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which 140,000l. is invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to	£2,500,000
The premium fund to more than	800,000
And the annual income from the same source, to	100,000

Insurances, without participation in profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary.

FOWLER'S
IMPROVED FARM AND
COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.

The usual allowance to the trade.

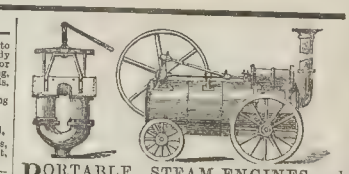
These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Plants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to



THE AGENTS—
Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

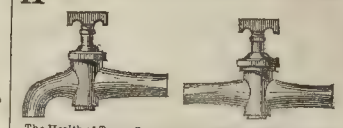
STEAM PUMPING ENGINES.—
PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

ENGINES.—For SALE, THREE 12-horse high-pressure horizontal ENGINES, admirably suited for winding; 12-inch cylinders, metallic pistons, either with or without boiler. Also two powerful double-purchase CRABS, capable of lifting 30 tons each. Also a wrought-iron TANK, 30 feet by 4 feet, by 4 feet, 2 plates.—Apply, by letter, to No. 20, BOX, Post-office, Derby.



PORTABLE STEAM-ENGINE.—A new 8-horse PORTABLE STEAM-ENGINE, with tubular boiler, for SALE. Can be seen at work at Mr. GOODWIN'S, 67, Great Guilford-street, Southwark, of whom particulars may be obtained.

PUMPING MACHINERY. — Lifting and Forcing Pumps, Patent Centrifugal and Double acting Pumps, deep Well Pumps, Steam-Engines; portable and fixed; Hydraulic Rams, Water Wheels, and every description of machinery, of the most improved construction, manufactured and supplied by GWYNNE and CO., Hydraulic and Mechanical Engineers, Essex-wharf, Strand, London.

WANTED, a strong, well-made Three, Four or Six-horse Power High Pressure STEAM ENGINE for driving a Saw mill. An Oscillating Engine would be preferred. Also, a Circular Saw Table, with Saws to be driven by the above.—Answers, stating lowest price and full particulars, to be addressed to W. B. G. Post-office, Blandford.

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 11-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 82, Blackfriars-road.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

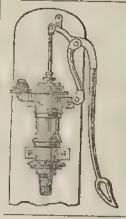
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

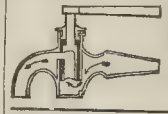


Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 28s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.



TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive levers and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Lifting and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

TO WATER COMPANIES AND PLUMBERS.
BURDEN'S PATENT HIGH-PRESSURE COCKS.—These cocks are remarkably simple in their construction, very durable, cheap, not liable to get out of order, and have been most successfully used for a period of three years, under a continuous head pressure, varying from 200 to 450 feet.

SAMUEL SHEPPARD, Sole Manufacturer,
JAMES STREET, ST. PAUL'S, BIRMINGHAM.

DRAINING PIPES for 200 acres of land to be delivered at WORCESTER-PARK, near Kingston, Surrey, in the months of JANUARY and FEBRUARY next. BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dock-yard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c. &c. Agents, CHARLES RICHARDSON, No 6, South Wharf, Paddington, London.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP.

FOR STREET USE.

Price, with Gutter Plate, 15 inches by 13 inches, each 23s.; weight about 3 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.

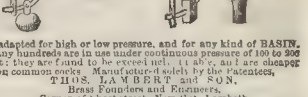
10 inches by 8 inches, each 10s.

The above articles are protected for the Patentee by the British Government, on account of their simple construction, for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water in the pan. When stench-traps are laid down generally speaking no attention is ever paid to them afterwards, this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves last those places where the air is vitiated by obnoxious gases proceeding from drains, &c.

Any inhabitant sufferer by the said nuisance, is entitled, by the Sanitary Act to lay a complaint before the public or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings and if wishful, testimonials. Please order from any respectable ironmonger contractor, or the Patentee, JAMES LEWIS, Ironfounder, Aleyarreny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham

PATENT DRAIN-PIPES, UNGLAZED,

manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.



PRICES.

3 inch bore, in 9 ft. 6 in. lengths, at	3d. per foot.
4 " " " "	4d. "
6 " " " "	6d. "
9 " " " "	9d. "
12 " " " "	1s. 3d. "
15 " " " "	2s. 0d. "

These pipes are made under steam pressure and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by the manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE.

No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,

Brass Founders and Engineers,

Corner of Short-street, New Cut, Lambeth.

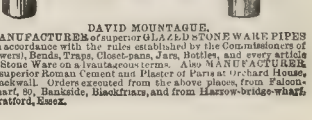
N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

SUPERIOR LAND DRAINAGE.

AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES,

BENDS, JUNCTIONS, and SYPHONS—Pipe-wares allowed by all to be of the best manufacture, of the unparalleled quality, combined with cheapness will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.



PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS,

manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. PRICE for Closet and Apparatus COMPLETE FROM 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 27, Old Fish-street, near St. Paul's, London.

CROWN GLASS, 18 TABLES, 32s. PER CRATE.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Bisckfriars, and from Harrow-bridge-wharf, Stratford, Essex.

Tyler, Esq. to SELL by AUCTION, at the SURREY ZOOLOGICAL GARDENS, on THURSDAY, 13th DECEMBER, 1855, at TWELVE, the whole of the extensive and costly ERECTIONS on these well-known premises, comprising the large circular glazed house, with hot water heating apparatus, capable of conversion into one or more conservatories, the three extensive and nice cow-houses, carnivorous house, monkeys' house, aviary, and small aviaries, iron bars, brick and timber buildings, water-closets and fittings, and numerous other erections, the whole of which are of recent date. May be viewed the day preceding and morning of sale, or previously, by written order, to be had of the Auctioneers, W. and C. Pugh, 6, Blackman-street, Southwark.

TO TIMBER MERCHANTS AND OTHERS.

The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, as and let in Frames, Saw-pits for converting Timber, &c. Freights paid on delivery.—Apply to G. Nokes and Co. as above.

GUILDHALL, November 29, 1855.—The Committee for letting the City's Lands will meet at Guildhall, on WEDNESDAY, the 12th DECEMBER next, at ONE o'clock precisely, to receive PROPOSALS for BUILDING LEASES for 61 years, from Christmas, 1855, of several PLOTS of GROUND on the north side of Wormwood-street, Bishopsgate. Also to receive Proposals for a Lease of a House, No. 34, on the north side of Featherstone-street, Finsbury, for 12 years less three days, from Christmas, 1855. Plans of the property may be seen, and further particulars and forms of Tender obtained at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

TO WHARFINGERS, COAL MERCHANTS, OR OTHERS REQUIRING WATERSIDE PREMISES.

TO BE LET, BEAUFORT WHARF, Carting-lane, Strand; all that capital wharf, with waterway for eight barges, with stabling for twenty horses, extensive lofts and warehouse, &c.; with a neat dwelling and counting-houses, and every convenience for carrying on a large business. Apply to Mr. Preston, J.n. Appraiser, 19, Wycl.-street, Drury lane.

PUBLIC-HOUSE.—An eligible SITE for a PUBLIC-HOUSE, at HACKNEY, TO BE LET on Building Lease, of a Corner Plot of Ground. Advance will be made to a respectable builder.—Apply to Mr. George Morgan, Architect and Surveyor, 3, Chancery-lane.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Mr. George Morgan, Architect, 3, Chancery-lane

WATERLOO-BRIDGE WHARF, Commercial-road, Lambeth. These spacious PREMISES, with ten dry arched warehouses under the Waterloo-bridge-road, TO BE LET on LEASE. There are two capital houses, with cranes and scaffolding on the wharf, and counting-house which has been used as a timber yard for nearly forty years, are in good repair.—For terms, apply to HENRY MOIT, Esq. Solicitor, 4, King's-road, Bedford-row.

FOUNDLING HOSPITAL, Dec. 7, 1855.—The Committee of Governors will meet at the HOSPITAL, on SATURDAY, the 22nd instant, at TEN o'clock, to receive PROPOSALS for a LEASE of PREMISES, in Sugar-loaf-court and Garlick-hill, Upper Thames-street. Plans of the property may be seen, and further particulars obtained, at Mr. HENRY CURREY'S Office, No. 4, Lancaster-place, Strand.

HOUSE PROPERTY in the METROPOLIS.—WANTED to PURCHASE, FREEHOLD or LEASEHOLD PROPERTY, to pay a good per centage.—Send full particulars to A. B. Mr. Rogerson's, 157, Fenchurch-street.

TO BUILDERS.

WANTED, to EXCHANGE a FREEHOLD HOUSE at BRIGHTON, in a first-rate situation, and fit for a family of distinction, for a good residence, in an eligible part of the west-end of London, or for house property of the first-class also in London.—Apply, with full particulars, to B. N. care of Mr. Draper, 6, Little Tower-street, City.

A VALUABLE PLOT of BUILDING LAND, near to a railway station, on the London and Epsom line, TO BE DISPOSED OF, with a frontage of about 300 feet by 200 feet.—For particulars apply to Mr. W. B. SHAW, 40, King William street, London-bridge.

TO BUILDERS.—TO BE DISPOSED OF, a well-established, steady, and flourishing BUILDING BUSINESS, in the south of Hampshire, which has been successfully carried on by the proprietor for fifteen years. The annual returns are about 5,000l. The premises, including workshops, yards, saw-houses, sheds, and foremen's houses, will be let at a moderate rent. A genteel Dwelling-House may be rented near. The stock-in-trade and the building plant to be taken at a valuation, in the usual way, but the amount of stock which is at present considerable, may be reduced to suit the convenience of the purchaser. Possession may be had at Christmas or Lady-day next. A foreman of bricklayers, and a foreman of carpenters, both of whom have been in the proprietor's employ for twelve to fifteen years each, together with a capital staff of experienced, steady, sober workmen, may be secured, as the business is in full work, the proprietor declining this portion of his business in consequence of increased professional duties in which he is engaged. No one need apply who cannot furnish unexceptionable references. The whole of the books will be open for the in-spection and examination of any party whose references are approved. All communications to be addressed to Mr. CHARLES PINK, Surveyor, Wood-end, near Fareham, Hants.

TO ARCHITECTS, &c. — TO BE DISPOSED OF, an old-established PRACTICE, in the south of England.—Address, DELTA, Ivy House, Albion-place, Southampton.

TO ENGINEERS.—TO BE DISPOSED OF, by order of the Executrix, a moderately large ENGINEERING BUSINESS, now in full work, which has been successfully carried on by the late proprietor for twenty years past. The capital required will be about 10,000l.—Address, for particulars, to Messrs. EDWARDS and SMITH, Accountants, 15, Great Carter-lane, Doctors'-commons.

TO BE DISPOSED OF, a BUSINESS in the BUILDING LINE, with convenient Premises, &c.—For further particulars address S. S. Post-office, Knockholt, Kent.

TO BUILDERS. — TO BE SOLD, a BUSINESS as above, five miles eastward of the Bank. For stock, implements, and business, together with the unexpired term of nineteen years of three houses (if taken at Christmas), price 250l. Part of purchase money can remain unpaid if preferred, for three months.—Direct to G. A. Office of "The Builder."

TO BRICKLAYERS.

TO BE DISPOSED OF, an old-established BUSINESS in the above line, doing a good jobbing trade. This genuine concern is well worth the attention of parties wishing to commence in the above trade, as ill-health is the sole cause of its disposal.—Full particulars given on application by letter, or personally, to Mr. HENRY BURCHETT, Bricklayer, Clobham, Bagshot.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, mixed with the VM mark—in Hull by Messrs. BLENDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London—Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; and by the Manufacturing and Publishing Agent, Mr. FREDK. BRABY, Putney Works, Newroad. In Manchester and Liverpool, by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. in London, by Messrs. H. ANDERSON and CO., Timber-dealers, and in Southampt n, by Mr. H. J. BUCHAN. The OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Wade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, for the adornment of our buildings, and as the only true material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, moulded, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

TO MOULDERS.

WANTED, MOULDS for every description of TERRA-COTTA WORK.—Apply by letter to Z. Post-office, Belper, Derbyshire.

London: Printed by Charles Wyman, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing office of Cox (Bros.) & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said Charles Wyman, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, December 8, 1855

BOROUGH of HALIFAX.—To ENGINEERS and SURVEYORS.—WANTED, a SURVEYOR, fully competent to take charge of the borough waterworks, easworks, sewerage, and other public works of the borough, besides the usual business of the Corporation, including that of the Local Board of Health. He must be familiar with the practice of engineering in connection with the above-mentioned works, able to conduct surveys, prepare plans, drawings, and estimates of works of every description, and will be required to devote the whole of his time to the duties of his office. Salary, 250l. per annum. Applications, with testimonials of qualification and competency, to be addressed to the General Purposes Committee, endorsed, "Application for Office of Surveyor," and to be forwarded, under cover, to the undersigned, on or before the 1st day of JANUARY, 1856.—By order,

EDMUND MINSON WAVELL, Town Clerk, and Clerk to the Halifax Local Board of Health.

Town Clerk's Office, Halifax, November 15th, 1855.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head-Master R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects :—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c, the Figure from the Antique and the life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE ; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students, in Sloane-terrace, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

WANTED to PURCHASE, in good condition, "THE BUILDER," the Volume only for 1853, either bound in cloth, or in separate numbers.—Apply (stating price) to Mr. CHADWELL, Bookseller, Peterborough.

COMPETITIONS.

DARLINGTON BURIAL BOARD.—The BURIAL BOARD for the Township of DARLINGTON, are prepared to receive DESIGNS, SPECIFICATIONS, and ESTIMATES, for ERECTING TWO CHAPELS, ENTRANCE LODGE, GATES, FENCING, and LAYING OUT the proposed NEW BURIAL GROUND (twelve acres in extent), the total amount not to exceed 2,200l. Premiums will be given for the two designs most approved of, viz.: 90l. for the first, and 11l. for the second, the plans, &c for which they are given to be the property of the Board. Competitors must state the amount of Architect's charges required, over and above the premium, for furnishing all working drawings necessary, and superintending the work, if the Board should require their services. The designs, estimates, &c. must be sent to me, at No. 8, Arden-street, Darlington (where a plan of the site may be seen), on or before the 24th DECEMBER.

By order, H. DUNN, Clerk to the Board.

Darlington, November 29, 1855.

TO ARCHITECTS.

THE FEOFFEES of the COMMON LANDS of ROTHERHAM, in the county of York, are desirous of receiving DESIGNS for a GRAMMAR-SCHOOL and RESIDENCE for the Master, to be erected in a close of land containing near an acre, adjoining the Moorgate road, near Rotherham, belonging to the feoffees. The school, which should not be under the same roof with the master's residence, must be sufficient to accommodate 150 boys. The cost of the school alone (exclusive of the site and of the master's residence), to be about 2,000l., and the cost of the master's residence to be about 600l. The design should be such as to allow of the school being built previously to the residence. Plans, each bearing some motto, accompanied by a sealed envelope, containing the name and address of the architect using such motto, to be sent to the undersigned, on or before the 21st day of JANUARY, 1856. The plans and envelopes of the unsuccessful competitors will be returned. The successful competitor will be required to superintend the erection of the building at the usual commission of 5l. per centum on the outlay. Should the master's residence not be built at the same time as the school, the successful competitor will receive the sum of 10l. in addition to the commission on the outlay upon the school, and 5l. will be given for the second best plan. A lithographed plan of the site, and all further information may be obtained on application to Mr THOMAS BADGER, Greave of the Feoffees, Rotherham.

December 10th, 1855. THOS. BADGER.

RUGBY TOWN-HALL COMPANY.—The Directors are prepared to receive DESIGNS and ESTIMATES for a TOWN-HALL and Public Building, at Rugby, and hereby offer a premium of 20l. for the best of Plans, Elevations, and specifications; and a further sum of 10l. for the second best. The selected designs to become the sole property of the directors; and the successful competitor will, if duly qualified to the entire satisfaction of the directors, be entrusted with the carrying out of the design at the usual commission, in which case the first-mentioned premium will merge in the commission. All the drawings to be on a scale of one-eighth of an inch to a foot. The drawings and estimates must be delivered at the Offices of Messrs. WRATISLAW and FULLER, Solicitors, Rugby, on or before TEN o'clock a.m. on the 31st day of JANUARY next, addressed to the Secretary, from whom a plan of the site, and a lithographed plan of the proposed site, can be obtained on payment of 2s. 6d. The designs not accepted will be returned, but beyond the above-mentioned premiums no allowance will be made to any other competitor.

Rugby, December 6, 1855.

CONTRACTS.

CONTRACT for GRAVEL.—The Committee of the REGENT'S CANAL COMPANY are desirous of receiving TENDERS, on or before the 24th of DECEMBER next, from parties willing to CONTRACT for the GRAVELLING of the CANAL, &c. for a Term of Three Years. The specification may be seen at the Company's Offices. Tender to be inclosed in a cover, sealed and marked, "Tender for Gravel," By order of the Committee,

EDM. L. SNEE, Secretary.

Regent's Canal Office, No. 20, City-road Basin, Nov. 28, 1855.

CONTRACT for DREDGING.—The Committee of the REGENT'S CANAL COMPANY are desirous of receiving TENDERS, on or before the 24th of DECEMBER next, from parties willing to CONTRACT for CLEANSING the CANAL, &c. for a Term of Three Years. The specification may be seen at the Company's Office. Tender to be inclosed in a cover, sealed and marked, "Tender for Dredging." By order of the Committee,

EDM. L. SNEE, Secretary.

Regent's Canal Office, No. 20, City-road Basin, Nov. 28, 1855.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court House, No. 1 Greek-street, Soho-square, on TUESDAY, the 18th day of DECEMBER inst. at ONE o'clock p.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING a certain intended BRICK SEWER, 1,700 feet in length, or thereabouts, with other Works in connection therewith, in Park Village East, Regent's park, in the county of Middlesex, and the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected and their particulars obtained, at the principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 17th day of DECEMBER inst. The Commissioners do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho square
Dated this 11th day of December, 1855.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-Mall, on or before the 22nd DECEMBER, 1855, for the ERECTION of SOLDIERS' BARRACKS and CANTEEN, at the Wellington Barracks, St. James's-park. The specification and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineer's office, 11, Jame-street, Pimlico, between the hours of TEN and THREE o'clock, from the 12th to the 22nd DECEMBER. The plans, &c. for the Creation of a block of Soldiers' Barracks, can be seen at the Royal Engineer's Office, till the 22nd DECEMBER, instead of the 15th DECEMBER, as previously advertised. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, London District, Dec 6, 1855.

NOTICE to BUILDERS.—Royal Engineers' Office, Portsmouth, November 8, 1855.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, from such persons as may be desirous of entering into a CONTRACT for the ERECTION of proposed HOSPITAL at Winchester Barracks, county of Hants. Plans and specification may be seen at the Royal Engineers' Office, Portsmouth, where also forms of Tender may be obtained every day (Sundays excepted) until DECEMBER 1, 1855. Tenders to be delivered on or before DECEMBER 3 1855. The War Department reserve to themselves the right to reject the whole or any of the TENDERS. No notice will be taken of any Tender unless made on the printed forms, to be obtained at the Royal Engineers' Office, Portsmouth.

NOTICE to EXCAVATORS and CONTRACTORS for EARTHWORKS, ORDNANCE WORKS. The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-Mall, London, on or before TUESDAY, the 1st day of JANUARY, 1856, from persons desirous of CONTRACTING for EXCAVATING and REMOVING GROUND at DOVER CASTLE, to form a Site for the Erection at a future time of an Officers' Barrack; also for the Out-buildings, Terraces, Yards, and Roads of approach to the same. A plan, sections, and specification of the Excavations to be executed, may be seen by persons fully competent to undertake the work (none others need apply), and forms of Tender obtained at the Royal Engineer's Office, Dover Castle, between the hours of TEN and FOUR o'clock, from MONDAY, the 17th of DECEMBER, to MONDAY, the 31st of DECEMBER, 1855, Sundays and Christmas Day excepted. A person belonging to the Royal Engineer Department will attend each day, from Ten to Twelve o'clock, to point out the ground to be excavated. The party whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 1,000l. for the due performance of the Contract for the above work. Tenders to be addressed to the Director-General of Contracts, Pall-Mall, London, and endorsed "Tender for Excavations at Dover Castle." The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover. December 8th, 1855.

WIGAN NEW WORKHOUSE. — To BUILDERS. — The Guardians of the Wigan Union hereby give Notice, that they are prepared to receive TENDERS, for the whole or any of the respective WORKS required to be performed in the ERECTION of a NEW WORKHOUSE. The drawings and specifications may be seen at the Guardians' Boardroom, in Wallgate, in Wigan, on and after MONDAY, the 17th inst. until MONDAY, the 7th of JANUARY next, where also printed lists of the quantities can be obtained, together with any further information that may be required. The Tenders are to be sealed and endorsed, "Workhouse Tenders," and delivered to me free of postage, at the said Board-room, on or before the 8th day of JANUARY next. It is to be understood that the Guardians do not pledge themselves to accept the lowest Tender. TRAVIS and MANGNALL, 3, Norfolk-street, Manchester, are the Architects, from whom all information may also be obtained.

WILL. ACKERLEY, Union Clerk, Wigan.

Wigan, December 6 1855.

BUILDING CONTRACT for FIVE HOUSES. Millwall, for E. WALTERS, Esq.—Drawings and specifications at the Offices of the Engineer, Mr. DAVID HOSKINS, Esq. Architect, 4, Garden-court, Temple, from the 14th to the 18th inst. on which day TENDERS are to be delivered by TWELVE o'clock. Lowest or any tender not necessarily accepted.

GLASGOW CORPORATION WATER-WORKS LOCH KATRINE AQUEDUCT.—CONTRACTORS WANTED for the Line BLAIRHILLACHAN CONTRACT, including tunnel, 2,625 yards in length, and other works. The plans, sections, and specification of the first contract for the execution of these works will be ready for inspection on and after 5th DECEMBER next, in the Town Hall, at the Cross of Glasgow entry by No. 12, Trongate-street, and also at the Inn, at Aberfoyle, near the west of the Contract. At these different places, as well as from the subscriber in Glasgow, all necessary information will be obtained. The works to form the subject of this contract will extend from the entrance to the valley of the Duchray Water, being a length of about eight miles and will include an immediate, and, say, next year's supply of from 4 to 5 millions gallons, and every other work connected with this portion of the aqueduct, together with the formation of about 25 miles of new road from the local of Loch Chon to the road leading from Inversnaid on Loch Lomond to Stronachlacher, on Loch Katrine. Further information may be obtained from Mr J. F. DAMANT, the Engineer, at his Offices, in John Dalton-street, Manchester; and from Mr. G. H. HILL, the Assistant Engineer, at Blairhuchlachan, on Loch Ard, near Aberfoyle, who will accompany contractors over the ground. TENDERS for the WORKS DESCRIPTION of the WORKS, sealed and marked "Tender for Blairhuchlachan Contract" will have to be delivered to the undersigned, Mr. BURNET, at his Office, Council Chambers, Glasgow, on or before 3rd JANUARY next.—By order of the Committee,

JOHN BURNET, Secretary

Glasgow, Nov. 22, 1855.

[For remainder of Contracts see next page.

CONTRACTS.

TYNEMOUTH CEMETERY.—The Burial Board for the Parish of Tynemouth hereby give notice that they are prepared to receive TENDERS from parties willing to contract for the execution of the following works:—

CONTRACT No. 1.—For preparing Materials, and Building about 1,734 Lineal Yards of Rubble Stone Wall, eight feet high, round the proposed Cemetery; also a Dwarf Wall, 400 yards in length, to receive Palisading.

CONTRACT No. 3.—For providing and fixing about Lineal Yards of Cast-iron Palisading, five feet six inches in height.

CONTRACT No. 4.—For Cutting and Levelling the Surface, providing Material and forming about 12,850 Square Yards of Grave, or Ash Paths within the Cemetery. Also, for Excavating and Laying about 4,200 Lineal Yards of Drain Pipes.

The plans may be examined at Lupton's, and copies of specification and form of Tender may be had, on payment of 1s. 6d. for each Contract; and any further information obtained, on application at the office of Mr. THOMAS PENNICK, Borough Surveyor, North Shields. North Shields Sealed Tenders to be delivered at the Town Clerk's Office, North Shields, before TWELVE o'clock on FRIDAY, the 21st day of DECEMBER, 1855, endorsed "Tender for Contract No. 2, 3 or 4," as the case may be. The Board are not bound to accept the lowest or any Tender.

THOMAS C. LEITCH, Town Clerk.

North Shields, Nov. 28, 1855.

SALISBURY CEMETERY.—To BUILDERS and CONTRACTORS.—The Burial Board for the parishes of St. Thomas, St. Edmund, and St. Martin, Salisbury, are desirous to receive TENDERS for the several WORKS required to be done in ERECTING a PORTER'S LODGE and ENTRANCE BUILDINGS, the BOUNDARY ENCLOSURES and TWO CHAPELS, and in LAYING OUT and FORMING the ROADS and FOOTPATHS of the new cemetery on the London road. The plans and specification of the works may be seen at the Rev. Mr HENRY E. COX, Architect, of No. 3, Adelaide-place, London bridge; or at the Office of the undersigned, any day between the hours of TEN a.m. and FOUR p.m. until the 8th JANUARY next. The Burial Board will not be subject to receive Tenders for the separate Tender, or for the whole works; but they do not bind themselves to accept the lowest or any Tender. A separate Tender for laying out and forming the roads and footpaths will be required. The Tenders are to be forwarded to me on or before the 8th day of JANUARY next, and marked on the outside "Tender for Salisbury Cemetery," and if for either of the trades, stating which. The contractor or contractors will be required to give such security as the Board may require for the due performance of the works, agreeably to the plans general conditions, and specifications, such security to be prepared at his or their expense.

G. SMITH, Clerk to the said Board.

Salisbury, December 10, 1855.

TO BUILDERS.

RUCKLAND RECTORY, LINCOLNSHIRE.—The design, specification of works, and conditions of CONTRACT for BUILDING an intended NEW RECTORY HOUSE and OFFICES at RUCKLAND, in the county and diocese of Lincoln, may be seen at our Offices in Louth, by builders desirous of submitting Tenders for the execution of the Works, from WEDNESDAY, the 12th, to THURSDAY, the 20th days of DECEMBER instant.—Tenders to be delivered to us on or before FRIDAY, the 21st day of DECEMBER.

MAUGHAN and FOWLER, Architects.

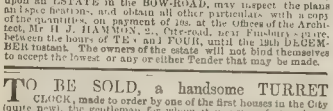
Louth, Dec. 4, 1855.

The contractor will have the privilege of making his own bricks for the works, on land immediately contiguous to the site.

THE NETHERLANDS LAND ENCLOSURE COMPANY CONTRACT for ENCLOSURE WORKS.—The Directors are prepared to receive TENDERS for the CONSTRUCTION of a POLDER BANK, situate at BATH ZEELAND. Plans and specifications may be seen on and after the 20th day of DECEMBER instant at the Contractor's Office, at Bath, and at the Engineer's Office, 24, Great George street, Westminster, where all necessary information may be obtained from Messrs. BIDDER and GEORGE ROBERT STEPHENSON. Tenders to be addressed, under seal, to the undersigned, at No. 2, Moorgate-street, London, on or before the 15th JANUARY, 1856. The Directors do not pledge themselves to accept the lowest or any Tender.

By order of the Board,

GEORGE FASSON, Secretary.



2, Moorgate street, London, December 11, 1855.

N B.—The plans for the canal are now completed, and when approved by Government, the contract will be offered to public Tender.

ROADS and SEWERS.—Contractors desirous of TENDERING for the ROADS and SEWERS upon an ESTATE at the BOW-ROAD, may inspect the plans and specifications, and obtain all other particulars with regard to the quantities, on payment of 10s. at the Offices of the Architect, Mr H. J. HAMMON, 2a, Otto-road, near Finsbury-square, between the hours of TEN and FOUR, until the 18th DECEMBER instant. The owners of the estate will not bind themselves to accept the lowest or any or either Tender that may be made.

TO BE SOLD, a handsome TURRET CLOCK, made to order by one of the first houses in the City (quite new), the gentleman for whom it was manufactured not having occasion to put it up. For particulars, apply to THOMAS EVANS, Land Agent and surveyor, 9, Brunswick street, Barnsbury-road, Islington.

TO BUILDERS AND WHEELWRIGHTS.

WANTED, a good SPRING-CART, suitable for Builders' work. Send particulars to W. Sugar Loaf, Queen-street, Cheapside, City.

TO MANUFACTURERS.

SKINNERBURN IRON-WORKS, Newcastle-upon-Tyne, FOR SALE by PRIVATE CONTRACT. These works are situated on the west side of the Forth banks, and contiguous to the River Tyne and the Railways at Newcastle. They consist of a commodious Foundry, an excellent and powerful forge-hammer, with arrangement for making almost every description of forged work for steam-engines, iron ship-building purposes, and machinery generally, with steam-engines, cupolas, furnaces, stoves, cranes, pattern and smiths' shops, &c. requisite for carrying on an extensive business both in the foundry and forge department. In addition to the above, there are some spacious open yards and other buildings, consisting of a five-stalled stable, with coach-house and harness rooms adjoining, and two dwelling-rooms above, four convenient cottages, and a square of cottages, containing six rooms, counting-house, &c.; the whole of which, together with the works, is Freehold Property. The works are in full operation, and the term for which they have been leased is about expired. The property may be purchased with or without machinery.—For particulars, apply to Messrs. INGLEDEW and DAGGETT, Solicitors, Newcastle-upon-Tyne.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view and in use, for park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

COMPACT SAW-MILL.—TO BE DISPOSED OF, the MACHINERY and POSSESSION of a compact SAW-MILL, in Southwark. The machinery is quite new, and includes one deal frame circular saw-bench, 8 horse power, direct-acting engine and boiler, shafting, driving gear, &c. The premises are held at 35l. per annum. The machinery will be sold in one lot, for removal, if desired.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

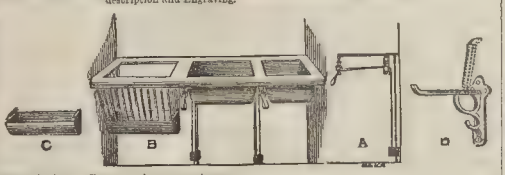
PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.



DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the most features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-iron, the ball of which is taken to the back of the manger-works with freedom and rise up or down the guide-bar, and is noiseless in its operation as also a sure preventative against the most vexatious horse being cast in the stall.

B. The Patent Portable Seed-box can be taken and detached from the rack section at disturbing the hay. The easing of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

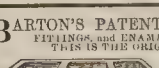
C. The Seed-box detached made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bin for combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized and enamelled.

IMPROVED SURFACE-DRAIN, with safety cover; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.



Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1855 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THIS IS THE ORIGINAL PATENT

for important improvements in stable-fittings, hay-box, manger, and water-trough, as one fixture, including a method surmounting all others for conveying the straps and halter-weights to the back of the fittings, to prevent the horse being cast in the stall. Stable Fittings of every description, plain, enamelled, or galvanized. Also the newly invented Loose Box Fittings, Surface Gutters with movable cover-plates, Stable Posts, Ramps, Sills, and all kinds of Stable Furniture in Stock.

JAMES BARTON, IRON FOUNDER, &c. 370, OXFORD-STREET, London.

MANUFACTURER OF KYLE'S PATENT VENTILATING and SMOKE-CURING CHIMNEY CAPS, part used by her Most Gracious Majesty—200 on Buckingham Palace. In use also on St. James's Palace, Windsor Castle, Government Offices, &c. Wrought iron, 25s.; zinc, 20s.; cast iron, 35s. each; the latter as durable as the building itself.

Drawings and Prices lists forwarded on receipt of two postage stamps.

Address, BARTON'S Iron Works, 370, Oxford-street, London.

THOMAS EDINGTON,

PURCHASER and INSPECTOR OF

CASTINGS on COMMISSION,

17, GORDON-STREET, Glasgow.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

WARMING LARGE BUILDINGS.—

CUTLER and SONS respectfully state that they are prepared to Contract for the Erection of their Improved Powerful Apparatus for effectually and economically Warming Churches &c which they undertake in every instance to guarantee. It may be seen in constant use at their Premises, 16, Great Queen-street, Longacre, London.

ROYAL POLYTECHNIC GAS FIRE.

BACHHOFFNER and DEPRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this simple and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire securing, at the same time, perfect ventilation.—To be seen in action at DEPRIES'S Office, 14, Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road,

Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1 mile 1 foot in length, at the small expense per day in fuel and labour of 4s. 6d. This achievement in heating by hot water is unprecedented.

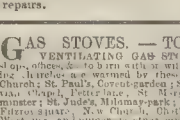
BUILDINGS HEATED by HOT WATER.

G. B. COOPER, IRONWORKS, 11, DRURY-LANE.

Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

ECONOMIC COOKING-STOVE.—

DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of Republic. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co's establishment, where may also be obtained engravings with prices, or forwarded freely post. DEANE DRAY, and CO opening to the Monument, London-bridge. Established A.D. 1700.



CUNDY'S PATENT PURE WARM-AIR

STOVES, the only Pedestal Stove which gained a Prize Medal (class 478), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, Schools, Entrance halls, Libraries, and Warerooms. CUNDY and SONS, Sole Licensees and Manufacturers, 16, Great Queen-street, Long-acre, London.

GAS STOVES. — TOZER'S PATENT

VENTILATING GAS STOVES, for churches, halls, shops, offices, &c. to burn with or without chimney. The following churches are warmed by these stoves:—St. Pancras Old Church; St. Paul's, Covent-garden; St. Mark's, Hornsey; Moravian Chapel, Fetter-lane; St. Mary's, Bourne-terrace, Westminster; St. Jude's, Molemay-park; St. John's, Charlotte-street, Fitzroy-square; New Church, Chatham; and Christ Church, Westminster, and numerous other public buildings. All Stoves, from 5s. each. A prospectus, with drawings, will be forwarded on receipt of a postage stamp, by THOMAS TOZER, Manufacturer, 55, Dean-street, Soho.

IMPERIAL IRON FOUNDRY, and ECONOMIC RANGE MANUFACTORY.

Three-feet Range	£6 11
Three-feet Oven	7 0
Three-feet Kitchener	7 15
Three-feet Register	9 6
Four-feet	10 10
Four-feet Kitchener	12 12
Five-feet	14 14

Oven Boiler, Hot Plate, Bronze & Steel Fenders, &c. &c.

This valuable KITCHEN RANGE, the Manufacturer has found, after long experience in Gas Cooking Apparatus for years, and given the utmost satisfaction. It may be used either with the fire open or closed, thereby avoiding the objection that the Register Grate is the first fall thrown out when the kitchen is required to be used free from unwholesome vapour.

The Prize Medal and Honourable Mention awarded to the Range at the Great Exhibition.

To be seen in operation at 60, Margaret-street, Cavendish-square.

J. SHERWIN, 62, TABERNACLE-WALK, FINSBURY.

Cash, and two per cent. discount for Ready Money.

CANNON IRON FOUNDRY, 80, Goswell-

street, St. Luke's, JONES and BRANT, Manufacturers of all descriptions of CASTINGS in Iron, and on the Premises they can now supply them with Patented Ornamental Iron Columns, Girders, Rail Bars, Gates, Iron Railings, Balconies, Window Guards, Verandahs, Ornamental Staircase Brands, Iron Staircases, Tomb Railings, Rails, Palisading, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BARKER'S OVEN WORK, Force Pumps and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

FOUNDRY AND IRON WORKS,

68, DRURY-LANE, and 1, CHARLES-STREET, DRURY-LANE.

GLOVER, BROS.,

solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either Structural or Ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Chairs, Park Gates, Lamp and Newel Posts, Tombs, Pipes, Wheels, Pinions, Lattices, and Screw Cramps, Flange and Hoop-plate Metal. An improved Hook Bolt, adapted for internal uses.

A large Stock of Rain-water Pipes, Plain and Ogee Gutters, Air-bricks, Grates, Weights, Sash Weights, Sweet Gratings, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 30 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Verandahs, Staircases, Cast-iron Girders, Fire-proof Doors, Book-safe and Strong Rooms, Tanks and Boilers, and every description of Ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,

68, DRURY-LANE, and CHARLES-STREET.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to look at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongers' Establishment, 58, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of

GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show, every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—35 and 5% High Holborn.

BRAMAH LOCKS, FIREPROOF IRON SAFES, WATER-CLOSETS, and PUMPS.—BRAMAH

and CO. have the pleasure to state that a two-inch Silver Medal has been awarded to them by the Jurors of the Paris Universal Exhibition. Manufactory and Warerooms, 124, Piccadilly, London. Every article made by BRAMAH and CO. bears their address—124, Piccadilly.

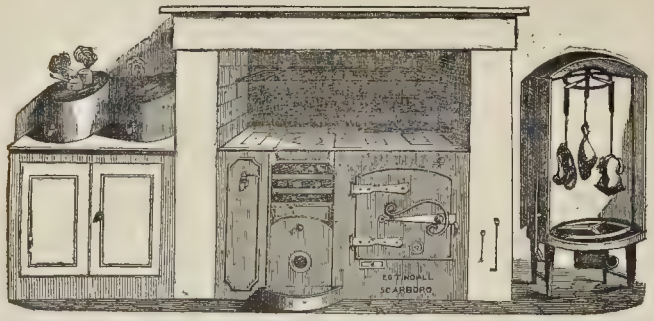
A PRIZE MEDAL for SUPERIOR LOCKS

was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Founding, Nails wrought and cut, Copper and Zinc, Patent Locks of all descriptions; China, Glass, and Wood Furnishers of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, much admired, &c. &c. &c. &c.

J. H. B. BOOBBYER (late STURGE) and BOOBBYER, established nearly 50 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

PARKIN AND MARSHALL,



GENERAL MERCHANTS, AND MANUFACTURERS OF

TABLE CUTLERY, PEN and POCKET KNIVES, SCISSORS, RAZORS, ELECTRO-PLATED WARES, FILES, SAWS, EDGE and JOINERS' TOOLS, AUGURS, STEEL, &c. &c.

TELEGRAPH WORKS, SHEFFIELD.

OFFICES—{NEW YORK 71, JOHN-STREET. BOSTON 25, KILBY-STRLET, U.S. MELBOURNE—94, COLLINS-STREET EAST.

CORPORATE MARK—XLALL.— Granted by the Cutlers' Company, 1789.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undernamed Articles, manufactured by Mr. ENOCH OLDFIELD TINDALL, Iron Works, Scarborough, viz:—TINDALL'S PATENT PORTABLE MANGLES, WASHING and WRINGING MACHINES, NAPKIN PRESSES, COOKING RANGES, LAUNDRY STOVES, SANATORY TRAP AND GRATE CHAFF CUTTERS, OAT, BARLEY, MALT, AND LINSEED MILLS, BEAN MILLS, OILCAKE BREAKERS, PORTABLE SAW-MILLS, TURNIP CUTTERS, &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are rapidly superseding the old-fashioned Ranges of our country.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Flats at once, occupies only 12 inches in space, is removeable from one room to another and will be found invaluable in Public Hospitals, Infirmaries, Laundries, and Private Families.

SEATON'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia (as well as not being liable to choke, and easy to clean) that has been introduced.

THE MANGLES AND WRINGING MACHINES have been introduced into the Royal Household, most of the Public Laundries, and also into many thousand Private Families, who bear testimony to their efficiency and superiority over all others.

THE OAT, BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They effect great saving and should be in every stable.

Drawings of Mangles, &c. with Testimonials can be had on application at Telegraph Works, Sheffield, or of the Retail Agents, who are appointed in almost every principal Town in the United Kingdom.

ESTABLISHED 1817.

WILLIAM HARMER'S Smiths' Works,

Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 10, Horseferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c. supplied with General Ironmongery at the lowest wholesale prices.

Hop Floor Brads, 18s. 6d. per cwt.

Sash Weights, 7s. 6d. per cwt.; 9-inch Air Bricks, 3s. 6d. per doz.; 6-inch Sink Traps, 9s. per doz.; strong Coal Plates, with hooks, 20s. per doz. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

SAWING, PLANING, and MOULDING

MACHINERY. SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kingsroad, Chelsea, and added to their very extensive and first class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

FENDERS, STOVES, and FIRE-IRONS.

Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisitely of workmanship. Bright Stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 5l. 10s.; ditto, with ormolu ornaments and two sets of bars, 5l. 10s. to 12l. 12s.; bronzed fenders, complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 8l.; ditto, with rich ormolu ornaments, from 3l. 13s. to 7l. 7s.; fire-irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth plates. All which he is enabled to sell at these very reduced charges.

Firstly—From the frequency and extent of his purchases; and Secondly—From those purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS.

The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufactures, in Metal and Glass, all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have one designed expressly for him; these are ON SHOW over his SEVEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. two-light to 16l. 16s.

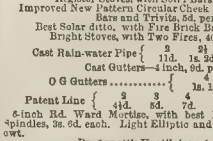
THE BEST SHOW of IRON BEDSTEADS

in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads, from 16s.; Portable Folding Bedsteads, from 12s.; Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d.; and Cots, from 20s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.

The alterations and additions to these very extensive premises (already far the largest in Europe), which have occupied the whole year, are now nearly completed; they are of such a character that the entire FIGHT HOUSES is now devoted to the display of the most magnificent Stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated and Japanned Wares, Iron and Brass Bedsteads and Bedding), arranged in Sixteen Large Show-rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.

Catalogues, with engravings, sent free by post.

39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established A.D. 1820.



TO STONEMASONS, BUILDERS, RAILROAD CONTRACTORS, AND OTHERS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not unable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor INODOROUS FELT, for damp walls and for damp floors, under carpets and door cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 39 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to APPLY DIRECT to this the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and Co's Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. GRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.
CARPETS, plain or in rich Velvet pile, with appropriate Borders.
PAPER-HANGINGS of various kinds.
OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture
The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.
To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with its ancient character.

14, Wigmore-street, January, 1853.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., YENTNOR, ISLE OF WIGHT. —Second Testimonial.—"March 16th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons have lately examined it, and the action of the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

GUTCH'S SCIENTIFIC POCKET BOOK.

Now ready, price 3s. 6d. roan tuck,

LITERARY and SCIENTIFIC REGISTER and ALMANACK, for 1856; with an ample Collection of Useful Statistical and Miscellaneous Tables. Dedicated, by special permission, to Prince Albert.

By J. W. G. GUTCH, M.R.S.L., F.L.S., Foreign Service Queen's Messenger.

"As perfect a compendium of useful knowledge in connection with literature, science, and the arts as it is necessary everybody should have acquaintance with."—*Times.*

DAVID BOGUE, Fleet-street.

NEW ISSUE, 1856

JOHNSTON'S NATIONAL ATLAS of HISTORICAL, COMMERCIAL, and POLITICAL GEOGRAPHY, with a complete Index, compiled from the Maps

By ALEXANDER KEITH JOHNSTON, F.R.S.E.

Geographer to the Queen.

Price, half-bound in russia or morocco, with Plates and Notes on Physical Geography £8 8 0

Without the Plates and Notes on Physical Geography .. 4 14 6

"Truly a splendid publication, and fully deserving national patronage." *Literary Gazette*

London: BLACKWOOD and SONS; LONGMAN and CO.; and E. STANFORD. Edinburgh: W. and A. K. JOHNSTON.

Now ready, Gratis and postage free,

A LIST of SURPLUS COPIES of RECENT WORKS withdrawn from Mudie's Select Library, and offered at greatly reduced prices for cash.

CHARLES EDWARD MUDIE, 510, New Oxford-street, London; and 76, Cross-street, Manchester.

Just published, Part IV. containing Four large Plates, in a neat Wrapper, with Advertisements, price 6s. 6d. Also Division I. comprising the First Four Parts, or Sixteen Plates, price 10s.

EXAMPLES of BUILDING CONSTRUCTION, being a series of Working Drawings, to a large scale, of the Details of Public and Private Buildings.

By HENRY LAXTON,

Of the "Civil Engineer and Architect's Journal," author of "Laxton's Builders' Price Book," &c.

No. 19, Arundel-street, Strand; and of all Booksellers.

The Builder.

VOL. XIII.—No. 671.

AS the diploma question is to be again brought before the Institute of Architects, it is desirable that we should return to the proceedings of the last meeting, and give briefly the opinions of some of the speakers on that occasion. In connection with the Institute, however, let us first mention a very liberal donation of books, with a volume of drawings of antique ceilings and plans, purchased at the sale of Adams' effects, and the sum of five guineas, from Mr. W. J. Booth, fellow; and, further, give publicity to the intimation on the part of the council, that there are still fifteen editions of "Vitruvius" wanting to complete their collection, and that members who possess them, and may feel disposed to present them to the library, or may be able to afford information at any time where they may be procured, will render an essential service to the Institute by so doing. Six copies have been added since the publication of the list at the beginning of the past session, and they now possess between forty and fifty copies of various editions.*

Mr. Tite, M.P. who was in the chair, on the 3rd inst. opened the proceedings, by stating that the council had received a Memorial from the Architectural Association, in favour of a professional examination and diploma; and, further, that the syllabus of the course of examination to which the members of the Institute of Actuaries had voluntarily agreed to subject themselves, had been forwarded to him by Mr. Cates. The list of scientific pursuits in which a system of examination was adopted had thus been completed—with the exception of architecture and engineering,—for it appeared that, under the sanction of the authorities of Lincoln's-inn, a severe system of examination had also been established for barristers, which it was expected would hereafter be legally enforced.

The following is the text of the memorial:—

"Your memorialists, representing the younger members of the architectural profession, beg to lay before the Royal Institute of British Architects, their desire for the establishment of an examination, which should eventually serve as the basis for the issue of such a diploma as shall certify that the holder thereof is fully qualified to practise as an architect.

They have been induced to take this step, from the consideration of th edifficulties which, in the present day, beset the early stages of architectural education.

In preparation for entrance upon their articles, in studies during the period of their sojourn in an office, and in the critical interval from the completion of their articles to the moment of commencing practice, the students of architecture are without sufficient guidance. In no case have they that important and valuable direction given to their several studies, which is found to be so successful an inducement to the complete mastery of other professions, and this evil produces its more important effects when students of architecture, having completed their articles, commence practice on their own responsibility.

The want of proper knowledge on the part of the architect, combined as it is with a want of information on the part of the public, leads to many of the anomalies which are now so frequently observable in the practice of the profession, and to the presence in its ranks of many who have not the power, and in some cases, of those who have not the will, to uphold its credit.

So much attention has been lately turned towards the necessity of testing by examination the competency of all candidates for public employment, that your memorialists are led to submit that the present is a highly opportune period for bringing the subject under your consideration. They feel that they are addressing those who represent the architectural profession, and by whom only an authoritative step towards the establishment of an examination, or the granting of a diploma, could be taken. They are also assured, that the senior members of the profession could hardly take the initiative till the necessity for that course had been brought before them by those who have more recently entered the profession.

Your memorialists do not feel themselves called upon to enter into further details, because they are convinced that the members of the Institute must, from their position, be fully cognizant of the evil results of the present system; and, therefore, do not doubt, that the council will take an early opportunity of organizing an examination, such as shall be found best calculated to aid and direct the student, and to bring the real qualifications of the architect before the public."

The memorial having been read, Mr. Papworth proceeded to recapitulate his observations on a previous occasion, which we have already published. He showed, by a letter, that, "the mode of application to be admitted as an ordained surveyor in Scotland, is by petition to the town-council, stating what branch of the profession the petitioner is desirous to be examined upon, and requesting that the council would take him on trial with a view to his being ordained if found qualified. On receiving the petition, the council then generally remit to their Superintendent of Works, with one or more ordained surveyors, whom they name to take the petitioner on trial, to report to them on his qualifications, which being done, the petitioner is then requested to appear (if found qualified), on a certain day named, before one of the magistrates, when he is sworn to do justice, and has to find caution that he will do so. This latter part is a mere form; and, indeed, the whole proceedings have got to be a matter of form altogether. The examination is usually gone over in the course of two or three hours, and there are but few, if any, instances of an individual having been rejected."

The speaker considered that admission to the Institute was not a sufficient guarantee of skill—that it was a club, so to speak, chiefly of London architects. As such a club, the Institute could not do more than constitute a Board of Examiners, with the control and consideration which their possession of the principal architects in England, as a chartered body under royal patronage, could give to a committee of themselves. The exemption of any candidate from examination would be a fatal error. The Institute, he thought, should never require the diploma of any candidate for election into its own body.

Mr. Bailey, associate, made some remarks on the part of the Architectural Association. In reference to the kind of examination which they contemplated, the Association had been very careful not to presume to dictate to the Institute in any way. He might, however, observe, that the qualifications required in the Spanish system, which had been submitted by Mr. Burnell, were of so low a standard, that it seemed impossible that the system should succeed. On the other hand, the qualifications required on the Prussian system were too high. The latter, however, was part of the academical system at Berlin. The Prussians possessed many highly qualified and scientific architects, but the public did not appreciate or place confidence in them. Thus, in Berlin, nobody was heard of but Schinkel, or in Munich, but Klenze: in the small towns there was merely the court architect and no one else; a great number of highly qualified young German architects remaining in what might be termed a state of armed neutrality. Mr. Papworth had said that the fact of passing an examination ought not to constitute a qualification as a member of the Institute, but on that point he differed with him. At present, no previous examination as to ability being necessary, but merely respectability, the personal acquaintance of three architects, fellows, and sufficient wealth to be able to pay the annual subscription,—no honour was attached to the fact of being an associate. On another point raised by the last speaker he entirely differed with him. To ask a fellow of the Institute to pass an examination was absurd and impracticable; as it would in that case be impossible to draw the line between the examiners and the examined. If among the elder members of the profession there were any wanting in some of the necessary qualifications, they would gradually die off, and their places would be filled by younger men.

Mr. G. R. Burnell, visitor, read a statement of the qualifications required for the examinations in the School of Mines and the School of Engineers, in Spain. Having resided for eight years on the continent, he (the speaker) had ample experience of the diploma system, and it appeared to him that it had signally failed, and he believed if adopted compulsorily in England it would not produce any good result. The system in fact compelled those who aspired to public situations to go to the schools in which the particular education required for the diploma was given, and thus the tyranny of schools was substituted for the former tyranny of corporations. Moreover, a species of monopoly was established which was fatal to originality and individual character. The experience of the present war was not in favour of the system of examination in our own and other great military academies; indeed, the only really great general—Omar Pacha—had not gone through the discipline of the schools. Again, the French engineers were, perhaps, the most learned and scientific body in Europe, but (with the exception of the improvement of the light-house introduced by Fresnel) none of the great modern improvements in engineering had originated in France. The application of cast and wrought iron to buildings, the improvements in suspension-bridges, railways, docks, the electric telegraph, locomotive and other steam-engines, gas lighting, &c. had all originated in England or America, where the profession was open to all comers and without monopoly; and this system, he was convinced, would be the safest and the best for the public.

Mr. Pocock, Fellow, observed that in a profession embracing both art and science, a system of examination must involve uncertainty and difficulty. One individual, with great natural talent, might possess small yet sufficient acquirements in science and practice. Another, with a small but sufficient modicum of art, might possess so large an amount of science as to make a better display than he whom nature had endowed with more of the talent of the artist. The great difficulty in the question, indeed, would be in dealing with the distinction between the architect as compared with the mere builder, and in conferring a diploma which should properly point out the qualifications of each. Even *a priori* he concurred in the *a posteriori* conclusions of Mr. Burnell, that the diploma system would lower rather than raise the standard of professional ability. There would be a great difficulty in fixing the exact standard for the examination. Unless it were sufficiently high, a great many men who now aspired only to rank as builders would be able to pass it, and the modesty which now restrained them from passing off as architects would not be felt if they could obtain a diploma as being properly qualified. A diploma would doubtless be valued by a young man, whom the public might hesitate to employ without it; but if the title of architect was reduced in value by this proceeding, as he thought it would be, the young architect would no longer be thankful for it.

Mr. H. H. Burnell, Associate, stated that he had received communications from Professor Forster, and other foreign architects, warning the profession against the contemplated step as tending to trammel enterprise in every way. It appeared to him also somewhat ungracious that any professional body should seek for an examination for themselves. In the other professions such a system had been adopted by the Legislature, or enforced by society finding the

necessity of protection. He did not think society felt that want very much as regards architects; and, moreover, it should be remembered that before examination came instruction, and it would be necessary to have schools in which to instruct pupils in the subjects of examination, because at present in an architect's office the pupil only learnt experience and business.

Mr. Penrose, V.P. thought it was most desirable that the subject should be fully discussed. The danger pointed out of the tyranny of schools would be a serious evil if not obviated, and this danger the adoption of anything like the Prussian system would peculiarly involve. In the analogous case of the universities the authorities, in preparing young men for the different pursuits of life, did not point out any particular line of study as fitted for any one profession; yet in the recent examinations for the East-India Company's and other appointments, the Universities, and especially Oxford, had been very successful. He considered this an argument in favour of an examination for a diploma, if it were not granted in an exceedingly concrete form, or as pointing out one particular cut and dry line of architectural practice. The danger which Mr. Pocock had mentioned of rendering the diploma too easily attainable, would, in his opinion, be more likely to ensue if the artistic principle were introduced in the examination; but this was a matter of detail which he would merely suggest for consideration. If the diploma merely ensured that the person holding it was duly qualified in certain indispensable studies, it would do much good, and would probably be better than a more decided architectural examination.

Mr. C. Barry, Fellow, considered it was the bounden duty of the profession to take such steps as might assure the public against malpractices, but he thought their labours should end there. The born artist would make his way with his natural endowments, which could not be taught, and which no examination could bring out. At the same time there were artists highly capable of influencing generations by their ideas of art and beauty, but perfectly incompetent to be entrusted with the execution of buildings. It was desirable, therefore, that such artists should be either associated with practical men, or themselves become practical, if any kind of examination could make them so. A compulsory examination would contain the germ of failure, because it involved a degree of trammel and hindrance to original effort and exertion; and certainly it would be quite impossible to make it imperative on the old as well as on the younger members of the profession. The only object of an examination was to prove competency, and the fact that the older members of the profession had attained a high station was sufficient proof to the world that they were perfectly competent, and independent of any kind of examination that could be organized.

Mr. T. H. Lewis, Fellow, referred to the objection that without a stiff examination builders would be able to practise as architects also. His knowledge of first-rate builders convinced him that they would be able to pass a stiff examination; but a very slight qualification or undertaking would be sufficient to prevent their taking a diploma as an architect. They should declare before examination that they did not intend to practise as architects. He should be happy to see builders come forward and pass an examination, but it should be as builders, and as builders only.

Mr. I'Anson, Fellow, said that the question before them was, how far the public would benefit by the plan proposed, and he did not think it would be worth anything to the public. The public would go to clever men, no matter how they got into the ranks. Sir Joseph Paxton, the originator of the Crystal Palace, was a striking instance of this; as he had now considerable practice as an architect. Rennie and Stephenson had risen, by their own genius only, to be among the greatest of modern engineers; and numerous other instances might be cited. A diploma would not keep out unqualified men. A builder with a little more pride than his fellows might become an architect, and, if he possessed talent, as good an architect as those who had gone through a professional career. A diploma might give confidence to young men, but they had already a diploma in having gone through an architect's office, and in having their articles endorsed. Upon the whole he did not see how a diploma could benefit either the public or the profession.

Mr. A. J. Baker, associate; Mr. Henman, associate; and others, having spoken briefly,

The Chairman stated that so far as he was concerned, there had been no idea of subjecting architects already in practice to an examination. They would otherwise have to examine the examiners. The object he had in view was to elevate the profession. They were often told that English architects had no chance as compared with those of France. That he believed was a mistake; but if true, it was from the want of architectural education, and that education would be promoted by a system of examination. He did not ask the council of that Institute and the examiners who might be appointed to examine *builders*,—let the Builders' Society do that if it thought proper,—the real object was to raise a body of scientific *architects*. He could perfectly understand a man ceasing to practise as a builder, and becoming an architect, but the custom of practising both as a builder and an architect was a grave blot upon this country, and he believed it was unknown in others. A distinct line of professional education should be required, and about which there could be no mistake; and the only way to effect that, was enabling students, after leaving an architect's office, or after a course of study, to come to a body willing to recognise them, and inquire into their attainments, and to see that they had been directing their studies in the right course. The public would then know that the candidate had been well taught, and was competent to undertake their business. It was said the French system did not work well; but *there* a system of minute classification had been adopted which trammelled the mind. All such mistakes were easily avoided, and the whole plan should be as free as it could possibly be made. The majority of course would bind the meeting; but when the Government advocated an examination for district surveyors, when one learned profession after another desired to institute examinations, and when the younger members of their own profession came to them and asked them for an examination, he put it to the meeting whether they ought not to adopt it.

On the motion of Mr. Ashpitel, the discussion was then adjourned.

We have received several letters assenting to the view we expressed last week, and we insert two communications on the question. The second of these was written before the appearance of our last number.*

THE DIPLOMA QUESTION.

I GATHER from the observations in your last number respecting the discussion at the meeting of the Institute a few days previously, that this question has now assumed the form of a specific proposal, offered by the Architectural Association, as representing the students of the profession, to the Institute of Architects, as representing the practitioners, to the effect that if the latter will provide the examiners, the former will provide the candidates; and some adventurous orator seems to have hinted the idea that the process of investigation then to be conducted would probably, in an incidental way, astonish the investigators by showing them so much of what the architect ought to be, as to awaken comparisons odious to themselves.

Although I was not present at the discussion alluded to, so that the views I happen to hold may have been already argued, I cannot help venturing to say what I think, if only in this view of the matter, that if every one who has anything to say were to say it, and every one who has nothing to say hold his peace, we should speedily come to some conclusion; upon other questions as well as the present.

This proposal of the students to submit themselves to examination for a diploma of proficiency ought to be received with extreme caution. It is a desirable preliminary that we should know first that the proposal is really authorised by a sufficient number of students to be entitled to respect; and secondly, we should be satisfied that the memorialists themselves are actually qualified to pass a respectable examination.

Much mention has been made of "quackery" in this matter, and the very whisper of the word is always a host of argument in itself: the diploma is to send the quack to the workhouse, and to bestow upon the "educated practitioner" his carriage and pair. Those who argue thus mean well, I know; but let them think a little more closely before they say much more of this quackery. For what is a quack? An unscientific practitioner of science, one who has not been adequately, systematically, *scientifically* taught. And, beyond all dispute, in this age we ought to countenance no such practitioner in any profession; rule of thumb ought to be lying quiet underground with the occult influences of old times before Newton saw the apple fall. Some of our friends know very well, if others may not, that the proposal of a diploma implies the existence of a curriculum. If we are to have a diploma to mark the perfect man, of course we have a recognised adequate scientific process of education to refer to. Alas! we have none. We are in the odd position of a scientific profession with no curriculum at all—not even the form of such a thing—every one picking up at random what knowledge he can, and where and how he can; that is to say, *we are all quacks*. It may be an unpleasant idea, but let us look it fairly in the face.

It is not sufficient to reply that we have office pupilage and private study. Neither the one nor the other is what scientific men recognise in these days as scientific education. Self-education can never be dispensed with, it is true; but I need scarcely observe, that if regularity be the soul of anything, it is the soul of professional training, the foundation without which private study is universally considered to build up but a crazy structure. Surely it must be a poor sort of learning in this nineteenth century, if the learner is to find his own way as he can. Suppose the subject medicine, for instance, and let the student follow our desultory current of office work and private reading, even under the most favourable auspices; what would he be at the end of it all in the eyes of the M.D., F.R.C.S., L.A.S.? In common phraseology, a quack. And the profession whose mode of training is of such a kind, would be styled a profession of quacks, and must make the best of it.

This diploma question can only be practicalized by being amplified into the education question. A diploma is nothing in itself but the certificate of a complete instruction, and examination but the concluding test of a curriculum. With no means of adequate education to refer to, examination would be a farce, and the diploma a mockery. When these means are provided, the diploma will follow as a natural appendage, and be honoured as a genuine certificate; in present circumstances, it would be inevitably disregarded as a fictitious pretence, an insult to the spirit of scientific progress.

The course of instruction essentially necessary for the architect, is not such as to dishearten the student, although it must not be supposed to be trivial; and I would remark, that essentials only can properly be insisted

* We have to thank Mr. J. J. Hirst, architect, for a translation of additional "Regulations for the Education and Examination of those who devote themselves to the profession of Architect," in Prussia. Also of "Proceedings at the Examinations for Clerk of Works," &c.

upon, inasmuch as the duties of the office (which cannot safely be interrupted for even a single year), leave but little time at the pupil's disposal for study. The Berlin programme is but a mystification of the matter, and scarcely deserves to be carefully perused. It is only surprising that there is nothing of the *Ego* and *Non-ego* in it, of Kant, and Fichte, and Jean Paul. In England, we may arrive at the desired goal, by both a shorter and a plainer road. For there is nothing prodigious about it, nothing marvellous or mystical; nothing but a little practical science, perfectly well understood, and easily taught;—mathematics to a certain point; general physics; geology, mineralogy, chemistry, and the like, in relation to building; the whole science of building and its materials; estimating; drawing in its various branches; the design of plan; and, lastly, architectural art, historically, æsthetically, and practically: there seems nothing more than what can be reasonably brought within these few departments of knowledge, and the student who proves himself familiar with such a course as this, and is provided with evidence of proper pupilage in the office, and on the works, would be fairly worthy to be declared an architect. Seven years or more, including two of trifling at the beginning, and two or three of salaried clerkship at the end, would be, in my idea, the term of study for this course, keeping up office work continuously throughout, and leaving travel to be part of that private self-education which no academical curriculum can properly include.

The Institute of Architects has now been sufficiently long in existence to be entitled to consider itself as having safely passed through its preliminary and probationary stage. The mere establishment by William IV. in the seventh year of his reign, of a particular confederation for the profession of architects, is no complete and final measure in itself. It is the initiative only of a much more extensive and a progressive process through which a profession like ours in an age like the present must inevitably pass.

The present discussions point to a further step in the progress of the movement, of which the establishment of the Institute was the commencement. The profession is now confederated and consolidated; its place in the social scheme is known to itself, and known to the public at large: it is in a position now *to act*. Its very first act must of necessity be (whether the step be taken at present or not), an act of education. Confederation does not educate; the existence of the Institute is no evidence of our profession being a properly educated one; it is but the preliminary measure by which any profession, inadequately educated, proceeds presently to improve itself in knowledge.

At a time when the press and platforms of the country are boiling over with nothing but war; when even a poet laureate sings in vague measures the beauties of blood-thirstiness and the ennobling tendencies of the tomahawk; when an Exhibition of the Industry of all Nations is closed with an oration upon "the all-absorbing theme," it is refreshing to plain unchivalrous men of study who hope to die in their beds, or at all events without a bayonet in their bowels, to read the calm philosophy and sterling wisdom of the SPEECH at Birmingham. A word for every one, it is a word for us especially. *We* require to examine into the question whether our branch of knowledge and endeavour is yet reduced to scientific form, or rather to inquire how so to reduce that which we all know is perfect chaos with us. "No human pursuits make any material progress until science be brought to bear upon them: from the moment that science has touched them with her magic wand, they spring forward." The profession of the architect, like the rest, will make no real progress until science or systematic knowledge is brought to bear upon it; and from the moment that this is done, it will spring forward as others have done.

I should like to see the Institute now expand itself (for the time is ripe) into a national College of Architects, with an established curriculum of education, and a diploma at the close, and perhaps some one who can make as good a speech as that at Birmingham for the practical patron.

It is not necessary to discuss the details of the question of the practicability of such a suggestion. These are not to be guessed at hastily, but deliberately devised; if the end be approved, the means can be found.

It is to be hoped, at all events, if the diploma discussion is to be renewed, that men of influential standing will feel it their duty to contribute their opinions; and that the Institute will appoint a committee to consider the whole subject, and report upon it. The question is evidently one in which it is advisable, not only to endeavour to further the real progress of our art and profession, but to avoid a conflict which may presently assume, if unregarded, an unpleasant aspect.

In matters of importance there ought to be as little anonymous discussion as possible. I therefore venture to subscribe myself openly, your old correspondent, ROBERT KERR.

OBJECTIONS TO A DIPLOMA IN ARCHITECTURE.

I HAVE read with great attention Mr. Papworth's statement to the Institute, without failing to observe—I doubt not in common with many of your readers—that his tone, as well as that of M. Lance and Mr. Tite, is eminently apologetic; that not one clear, commanding reason has been urged to clench the question; and it is not even attempted to be shown that where diplomas exist, the skill of the recipients is consequently superior to our own, and that they enjoy a higher degree of the respect of the public at large. These are points which have been avoided with a care that reflects little credit on the prominent actors in the matter. The position of English architects is not now very distinguished, and the public will not entertain a higher opinion of them from such childish talk as that about "bachelors, masters, and doctors in architecture." There were days when architects did not require an artificial stimulus to exertion, or to take refuge in a diploma certifying their "elementary knowledge,"—days when the genius of Phidias stamped its impress on a temple worthy of the goddess whose name it bore; when Giotto raised that fair tower of which the Signoria were so proud; when, before the stern and lofty Angelo, pontiffs rose and princes stood uncovered; and when William of Wykeham toiled in the art he loved so well. Against these revered names the present certified architects of Spain and Prussia are set up. Heaven save the mark! If we are reduced to this, much lower we cannot fall. The pride and boast of Berlin is the Brandenburgh Gate; and if the result of a diploma is to encourage the erection of *facsimiles* of ancient structures, this alone is a sufficient reason against it. Diplomas, sir, will never manufacture an architect. True, the medical and legal professions have their certificates, but there is a vast difference between these and that of the fine arts; all the difference between callings whose technicalities may be mastered by rules, and one that cannot be so acquired. The lawyer and the surgeon, too, will rest very slightly on a document which can inspire but little confidence in the more intelligent public. Restrictive measures are, I believe, inimical to the spirit of the age; above all, they are repulsive to artists and men of science. They compromise the freedom of art, and will not make architects more respected; for whenever they proved their competency by their works, they were absolutely reverenced. That a diploma *will make* them more thoughtful and skilful is an obvious fallacy, if we reflect that constructive ability is not their peculiar deficiency, and that the great wants are appropriate expression, taste, and common sense. These a diploma will never secure; for, observe, its object is to guarantee a certain amount of elementary constructive knowledge. We are at the turning-point which decides the question. The proper construction of a boiler is a far more legitimate ground for demanding a certificate from its manufacturer. Construction is the child's-play of architecture, in which many builders have most skill: that knowledge in the architects I have named was subsidiary to their talent as painters and sculptors. True, French arches and other absurdities of construction are perpetuated, but it is not because architects do not know better, but because they *will not* know better; and, instead of reforming themselves and the art, waste their time in foolish twaddle about ancient structures; in measuring this old building, in writing about that, in talking of the dignity of the profession and the desirability of exclusive diplomas, to render them more *genteel* in the eyes of the world, while entirely neglecting to shadow forth the spirit of the present life in their erections. This *is* their chief requirement; for so long as our structures are inexpressive of our civilization,—an unintelligible jumble of other men's tangible thoughts, and a dishonest repetition of past ideas and effete mythological symbols; so long as glaring anachronisms, misplaced adaptations, and unmeaning ornaments are perpetuated, so long will architecture be deemed a dry, false, and tasteless art, and its professors be despised and underrated. In works requiring considerable mathematical knowledge, the architect has been properly displaced; and the civil engineers, as a body, are a triumphant proof that a diploma is an unnecessary encumbrance; brilliantly as they have overcome, without precedents and without guides, the almost superhuman obstacles in their way. If a diploma be not required in construction, in expression and taste no architect is qualified to grant one. This is allowed; and Mr. Papworth himself says, that "Taste cannot even be a question for the examiners."

"On a diploma *alone*," remarks Mr. Tite, "depends the advancement of the art." The causes, sir, of its present decline lie too deep to be remedied by diplomas; and as to the gratuitous assumptions that "the *only* opposition which the measure of establishing a diploma *can* encounter, would be from those who feel some hesitation as to the possibility of their deserving it,"—the modesty of the insinuation is as remarkable as the unfair begging of the question. If such be Mr. Papworth's usual mode of treating those who differ from him in opinion, I am unable to compliment him upon it. The special pleading of Messrs. Tite and Papworth will settle the whole question; and, further, I believe that the institution of a diploma will tend to *retard* the progress of the art. Such questions are to be put as "a candidate may be expected to answer on referring to the works in the library of the Institute." It is the undue importance attached to these precious books, these everlasting authorities, which has contributed above any other cause to foster the copying spirit of the age. An architect cannot be manufactured by books,—by being taught that certain models are perfect, and he has but to copy, and, as he now does, attempt to repeat them. The great men mentioned were not educated by books: they went to Nature herself; and, exercising their *own* minds, and using their *own* eyes, thence drew their stores of information. We must expect that few architects of independent spirit, fairly established in the honourable practice of their profession, will ever condescend to recall the schoolboy learning of which they have long since carefully disencumbered themselves, in order to obtain the inestimable advantage of a certificate of their elementary knowledge.

The architects of France seem to have been very anxious for a diploma. Six years were consumed by the *Société* in the statement and discussion of the case. A good cause may be very briefly put, and its justice is obvious; but the French architects, at the end of their deliberations, were just as confused as at first. I trust that those of England will take warning, that while they are *talking* about their qualifications, the time for *action* is passing away.

EDWARD L. TARBUCK.

THE ARCHITECTURAL EXHIBITION:—ITS PROSPECTS.

A WRITER in the *piquant* columns of *Blackwood's Magazine*, discoursing upon the notions of Mr. Ruskin, and his "*umbra*," Mr. Street, and the valuable contributions to art-literature by Mrs. Jameson, Mr. Leslie, and others, discovers that architecture holds a leading place amongst subjects of present interest. We hope that the fact is so. Truly, the writer seems to apprehend that the mere antiquarianism in, or at best, the history of, architecture is that which is occupying attention,—that the influence of societies called archæological, ecclesiological, or architectural, and the teaching of writers prejudiced in one direction, or untried by the test of *practice*, are not exactly all that is to be desired. Moreover, and we thank this non-professional writer for saying it, there are sources of expression in, and delight from, the works of our art, quite apart from the antiquarian value, or from the adjuncts, sculpturesque and pictorial, to which the *architecture* has been strangely viewed, by some of its supposed admirers, as mere framework. For the proof, see any building of recognised merit: the writer in *Maga* instances the Gothic cathedral.

Now, what the eye of every lover of art, sensibly or insensibly, is more or less impressed by, in old works, we architects must bring to be the usual and prominent means of delight in the works of our own time. The idea of "education of the eye" is founded upon simple facts. If the eye could take in, the untutored mind could not possibly retain, all that is presented to

it in this beautiful world. Accordingly, special preparation of some kind is required in each branch of natural history, or other field of application of the observing faculties, to the end that the full use may be made of the mere organs of sight. What is the exact process undergone between the mirror of the object,—the *retina*,—and the brain, is so far beyond our power to discover. The object is even depicted upside down, yet by the mind is seen aright. It, however, may be concluded that the "knowledge of objects" begins with a vague presentment of the form, fills in the leading features, and proceeds to microscopic observation according as the mind may be *interested* or not. Everything before the eye is not at once seen: and every artist knows this from his individual case, and from his experience of what occurs with the public.

In architecture, now, chiefly marked and striking features succeed in arresting the attention, and the consequences are disadvantageous to the rapid progress of art. An architect who would gain the public eye, or succeed in competitions, is tempted towards the picturesque, or the polychromatic, or anything so that it be strong and striking; for, the results of the higher qualities of design are slow in the impression they produce. Nothing like the keenness of observation which is to be deduced from the fact of the Greek details would seem to be, under present circumstances, possible. Novelty—though an object we are not disregarding—has a better chance than studied design,—than proportion of parts, or profile of mouldings. However, these are not inoperative on the public eye,—even where not separated from the general impression; and we believe the safer course to be in the study of them, and in the gradual elevation of public taste, rather than in the working down to the level of it, and the following temporary fashions as some architects seem still disposed to do.

Some familiarity with the class of forms, and higher knowledge being required for the mere sight and memory, it is useless to expect speedily that indispensable condition of development of art in architecture—an appreciating public — under circumstances as they are. "Familiarity" has its disadvantages—though we will not quote the proverb; and if *buildings* are things which must stand forth to the public eye, they have got to be viewed as every-day objects, noticeable only when they manifest some little eccentricity. There may be excuse for this, from the low position which our art held for a century until recent years; for, even the works of the school of Burlington and Kent seem to us hardly to equal what art in architecture should effect, and that of which we believe existing architecture is capable. The public eye has been so long offered the stone in place of bread—plainness or deformity, or mere fashion, where there should be *art*—that it is slow to credit the existence of the higher quality.

Quite apart then from its *obvious* use, and effect on general taste,—THE ARCHITECTURAL EXHIBITION has a distinct field of valuable influence on the public,—by showing the fact, that certain elements of buildings *are* the subjects of deep study and design, and so leading to the more frequent recognition of them in the building itself. And it is worthy of remark, how many obstacles there are, and, sad to say, perhaps will be, to the effect of the building upon the public. We have a climate and atmosphere at best unfavourable, during great part of the year, to the enjoyment of anything out of doors, or to the very sight of architectural detail. We have not discovered, or at least practised, means of freeing the mouldings and ornaments of our structures from what clogs up their interstices and distorts their profiles. The new stonework of the Carlton Club House is already darkened, by comparison with the newly-cleaned front of that portion of the building which has a few years older date; whilst some stones crumble and disintegrate before a building is finished; and we have not discovered the means of preserving the beauty of details in many other cases. The practical architect, if sometimes he carp at forms, where he should appreciate beauties, *can* realize what another observer often would not penetrate to, by reason of the impediments. But in an exhibition, architectural drawings, whether merely geometrical or perspective, should afford the means of learning much that the building itself could afford only under several different circumstances of observation. Therefore, although the sum of effect from mere drawing is in no degree equal to what is conveyed by a building itself, the drawing has a value of its own, both with reference to the profession and the public. On all accounts, it is to be desired that the language of plans, elevations, and sections should become familiar to the public. It is also desirable that the exact use of a perspective view should be better understood, than we might suppose it to be, judging from works exhibited of late years. That use is not on the one hand to show a mere outline of the architecture, and on the other, it is not to represent the building as it might be seen under some one atmospheric effect. The use of an architectural perspective view is, in short, just that of every other picture,—namely, something different from the mere reflection of an actual scene. Beyond the representation of all natural effects, the artist has to present a complete description. The use of an effective drawing is not to be forgotten; but there is a higher use in the *drawing* than that of mere atmospheric effect.

As we have striven—and we apprehend not wholly without result—to draw the attention of some architects to the importance to them of the Architectural Exhibition, so are we anxious thus early to speak of its importance and interest to the public. The works which will be found in the Suffolk-street Gallery, when it is thrown open to the public on Wednesday next, include about 600 drawings (with a few photographs), and an important collection of specimens of decorative art, materials and manufactured articles, and new inventions. The walls of the rooms, the screens and tables, could hardly contain more works, to allow them to be seen: the existing state of architecture is more efficiently represented than last year: the drawings of old buildings are comparatively few in number, and those of merit: and it seems that if the Exhibition progresses as it may be expected to do, the rooms will next year be too small, as was by some persons apprehended. The restriction against the admission of works previously exhibited, seems to have operated favourably rather than otherwise. Some of the series of drawings of the different competition designs (of which several are shown), had, indeed, to be rejected. In design for, and specimens of, wall and ceiling enrichment, from scroll and floral decoration to the higher class of art in oil and fresco vehicles, there are some meritorious productions, which will be serviceable both to the executant and the architect, by giving the opportunity for a better knowledge of each other. It appears to us, after inquiry, that much might be done in the way of decoration in interiors, at less cost than such work often entails; and the knowledge of those who are the practical artists is one of the advantages of this exhibition. Structural principles, however, in some of the works which are meritorious in execution, are not always observed. There are also a few good designs for furniture. In future years more in this department may be hoped for. Last year, the coldness of the gallery was a source of inconvenience: this year Mr. Pierce has contributed one of his stoves to each of the rooms. Passing through the rooms, before publication of a catalogue, we were able to discover contributions by Messrs. Fowler, Sydney Smirke, A.R.A.; Clutton, Decimus Burton, E. I'Anson, Charles Barry, E. M. Barry, Ashpitel and Whichcord, D. Brandon, Lamb, T. H. Wyatt, M. D. Wyatt, J. J. Cole, Goodchild (one compartment of St. George's Hall, Liverpool, as completed by Professor Cockerell), W. and J. W. Papworth; Scott, A.R.A.; Richardson, Kerr, H. Horeau, W. P. Griffith; Weightman, Hadfield and Goldie; Gabriel and Hirst; Dollman, Truefitt, Walters, Murray, Billings, W. G. and E. Habershon, Rev. J. L. Petit, Allom, G. Aitchison, and by many of the rising members of the profession. Some of the designs for the Oxford University Museum, and the Birmingham and Midland Institute, will afford interesting matter for comparison; Manchester warehouses, and those of New Cannon-street are both represented; and designs for some of the Government Schools of Art may be found, which may be thought to realise consistent treatment, and some considerable advance in taste.

It is evident that the consistent application of materials is occupying increased attention, and some of the designs which exemplify this have much originality; although in some cases, as in the treatment of decorative brickwork, the taste for external colour is carried to excess. There are one or two good designs for gates in wood and iron.

When we were at the gallery, the hanging was hardly complete, so that many important names may be amongst the exhibitors which we have not noticed. Our suggestion for classification of the drawings has not been entirely followed; but we admit that it involved some difficulties.

The lectures which will be given on Tuesday evenings, commencing January 8th, will doubtless be well attended, a considerable number of tickets, which it will be seen are season-tickets for both exhibition and lectures, having been sold. We could have wished, indeed, that the subjects of the lectures had been chosen, at this juncture, more immediately with a view to the education of the public, and the dissemination of principles of taste. Mr. Fergusson would surely have been pleased to treat of the Principles of Beauty in Architecture. If the lectures seem likely to draw sufficient audiences, perhaps even yet some change or addition might be made as to the scheme. We must look to the merits of individual designs after the opening *conversazione* next week. Meanwhile, let us say, that the rooms should be visited by every one interested in art.

CONSIDERATIONS UPON SOME OF THE OBJECTS CONNECTED WITH ARCHITECTURE IN THE PARIS EXPOSITION, 1855.*

THE *service du Bâtiment* comprehended the design and general arrangement of the buildings externally and internally. The chief names which appear in the official list under that head, are those of MM. Vaudoyer, as commissaire; Rossigneux, as commissaire adjoint, with the special care of the decoration; De Crémont, as architect, with the maintenance and decoration; and Trélat, as architect engineer, with the maintenance and decoration of the gallery (the annexe) on the quay. But I cannot suppose that it was owing to these gentlemen that so many architectural models and designs were not in the Exposition des Beaux Arts; an arrangement which caused several meritorious productions to be lost in the crowd of manufactures, and too many of them in the darkness which prevailed under the galleries. Very few market prices were affixed in the Exhibition, although information of that sort was invited; and it was impossible not to observe, that where articles were marked with prices, and as "sold," they chiefly belonged to one of three categories—cheapness, trifling prettiness, and direct imitation of natural objects. Thus, the cheaper objects produced by the electrotype process, although not in good taste—the library chairs (upon English models) from Hamburgh—and the English flower-stands, fenders, scrapers, umbrella-stands, knockers, and hat-stands, were so marked; as well as a majority of the pretentious littleness which was to be seen throughout the building. It seemed that nearly all objects of direct imitation (as sculpture) from nature were sold, however they might be coloured, or whatever their material might be; for instance, a bundle of blue canes as an earthenware garden-seat, or three apparently leather cushions piled one upon another, in the same material; as well as umbrella-holders of birds, cupids, and dogs; plates of leaves; heads of animals as brackets, and many more.

The display of natural resources in stones, limes, bricks, slates, and woods, from Australia and Canada, was too important to be passed unmentioned, although I had no opportunity of studying them. I cannot refrain from expressing a hope that our Government will see that it is its duty to endeavour to place those collections in England.

* The following must be considered as extracts only from a paper read by Mr J. W. Papworth, Fellow, at the meeting of the Royal Institute of British Architects, November 8th.

Putting aside the rich and numerous Australian collections of Mr. Clark and of Mr. Macarthur, and the good collections of small specimens of marbles from Portugal and Tuscany, it will be found that Greece and France produced the chief specimens of marbles. Porphyrite from Crocœa; rosso-antico from Damaristica and Cynopolis; agate-breccia from Xilokeratia; breccia from the Taygetus; the amygdaloidal marble of Parori (Sparta); cipollino from Pyrgari in Lageia; the black marbles of Mantineia and Laconia; the green marbles of Tænus; the red marbles of Cape Tænarus; marbles and breccias from Nauplia; and alabastroidal marble (of which it is said that antique lachrymatories were made) from the island of Psythalia (Piræus); are the names found in the collection forwarded by the Greek Government.

Dervillé and Cie sustained the honour of the French marbles by the collection of fine specimens, of no small size, shown in 1851; and their efforts were seconded by those of Maillardet and Cie and of more than forty private exhibitors, of whom ten showed marbles worked up as chimney-pieces. This number does not include an interesting collection of the marbles of Corsica; a translucent onyx-marble from ancient quarries at Aïa-Teébalek, near Tlemcen (Algeria); a fine marble table of the grey red-veined marble, called rouge-royale, from the quarries at Franchismont; another of a marble from the quarries of S. Hubert, at Roquefort (Luxembourg); nor the ornamental columns supplied by Geruzet. Two productions should have stepped out of the pale of manufactures into the domain of art; one was a clock-case, 18 inches by 18 inches, with three groups, costing 80*l.* by Dubois: the other was a white marble vase, 24 inches high, and 12 inches in diameter, at the same price, by Margas: it was a beautiful, yet bold, Roman design, with flowers extremely well executed. A chimney-piece from the same firm was of nearly equal merit, and was the best of the French chimney-pieces, which were of a higher class than those sent to this country in 1851; and showed that the mouldings of Vignola are the best suited to the coloured French marbles. There were also some very good second-rate chimney-pieces, especially one which was marked as the pattern approved for the Mediterranean steamers. Besides the works of three other Belgian exhibitors, there were several chimney-pieces exhibited by Leclercq, which were sold—in marbre Napoleon, a grey marble from Boulogne; in brocatelle brun from Dinant, and in Siena (at 84*l.*); the two last being better than a white Carrara marble (at 360*l.*). The green Connemara marble, exhibited in the English division, appeared to advantage. Tuscany, as might be expected, stood first in the display of the inlaid work, called Florentine Mosaic. Mention should be made, for its size, of the great vase, 5 feet in diameter, and 12 feet high with its pedestal, sent from Bagnères de Bigorre; and a stone, called Portland stone, from the estate of Portland, in Jamaica, was shown, as turned by common wood-cutting tools: there is a similar stone in that island called Southampton stone: the even texture and extremely clean arris which work in this material presents, would indicate the probability of its introduction here for decorative work. Wurtemburg sent a fine collection of building stones; Cologne Cathedral some work out of the mason's yard over-laboured and refined; and Austria a machine for making tubes of stone, a fallacy exploded here fifty years ago. Fourteen establishments contributed specimens of slate raised in France. There was nothing in these collections remarkable; but I was unprepared for an exhibition of Italian slating: the slates from Sweden seemed of good quality. The English enamelled slate was a specialty. The French division contained about thirty exhibitors of cement and artificial stone: Portland and Roman cements would seem to be equally well known by name on both sides of the channel; and it is remarkable that only half that number exhibited limes, while only five showed plaster. The French scagliola work appeared paler than such work in England; and I may add, that my hearers will find that this paleness, the effect of white, is common to every branch of coloured continental manufactures. The vases, 30 inches high, and 14 inches wide, in a Greek taste, made of chunam in India, were very remarkable.

To say that the twenty French and two or three other exhibitors failed miserably in their painted and stained glass, is only to express the opinion generally pronounced: it is easy to dismiss a whole class with a contemptuous sneer, but it is the duty of those who pronounce such a decision to be able, if not willing, to give the grounds of their decision. The following reasons guided my own judgment. In the class of flashed glass simply, the glass was washy: if there was any pot metal it had the same defect. The artists of the mediæval ages were so far fortunate that their material, *even when unstained*, was translucent, but only semi-transparent, and therefore looked substantial: their followers enamel the present transparent glass in imitation of the dirt of ages, which they seem to fancy gives that *solidity* to ancient glass: the fallacy will be evident when it is considered that they seek a "transparent dirt;" and that the semi-transparency of ancient glass is easily ascertainable. As a general rule, the modern works in the Exposition were too much paintings in the strict sense of the word: those artists who age their glass are obliged to cover it with enamel, to put shadows, hatchings, anything that will break the washy appearance of their material, or else to paint it entirely in enamel: this accounts for the prevalence among the exhibitors of imitations of the glass painting style of the fifteenth and sixteenth centuries, and the grisaille-work of succeeding times; but the public says "This is not the lustrous effect of old glass:" those artists who do not age their glass are told by the same public, "This is tame in comparison with old glass," and the public, without knowing why, is right in both cases. The host of ecclesiologists who besiege our glass-painters, torment them fairly enough with the dilemma; from which some of the painters have ingeniously relieved themselves by the expedient of servilely copying some celebrated examples, which are of course irreproachable, and then retaliating upon their critics, "This is an exact copy of your ideal, can you object to it?" The critics, unless prepared to say that the painter cannot even copy, dare not raise a further objection: there is no blame to be thrown upon novelty of design, or excellence of drawing; and thus we may account for the prevalence among the exhibitors of imitators of the stained glass of the earlier periods. Coloured glass windows, to be really effective, require few qualities, yet they are hardly to be obtained. Solidity of material I have already mentioned: purity of colour remains to be achieved; and when that part of the restoration is accomplished, good drawing will have to combat with the prejudices of this enlightened age, which praises Pre-Raffaellism and manufactures Pre-Cimabuity. What does the friend of Raffaelle and the pupil of Michelangelo say? Cimabue was a pupil of the Greek masters, who executed "figures with senseless eyes, outstretched hands, standing on the points of their feet." He departed from the dry formal manner of his instructors, giving "more life and movement to the draperies, vestments, and other accessories, and rendering all more flexible and natural than was common to the manner of those Greeks, whose works were full of hard lines and sharp angles—and this rude, unskilful, and commonplace manner the Greeks had acquired, not so much from study or for settled purpose, as from having servilely followed certain fixed rules and habits, transmitted through a long series of years by one painter to another down to those times, while none ever thought of the amelioration of his drawing, the embellishment of his colouring, or the improvement of his design or invention." But Cimabue drew from nature—a new thing in those times, says Vasari; and I may say, almost unheard of in glass painting at present. It must suffice to say that some glass painting, executed for the church of Notre Dame, at Montbrison, having good modern figures with the drawback of bad colour, was exhibited; that the grisaille work was not bad; that an English modern window had the good idea of a lace glass, with medallions of arabesque and Renaissance ornament; and that the prices of one manufacturer were, per foot square, Grisaille and Byzantine work, 4s. 9d.; modern pictures, 8s.; twelfth and fifteenth century work, 9s. 6d.; sixteenth century work, 12s.; partly modern and partly ancient, 10s.; glazing, 7½d. or 8d.

The terra-cotta adjuncts to building purposes were numerous. Fine sharp architectural ornaments in this material were sent from Westphalia, Winterthaim, and Wagram. Large terra-cotta articles, 24 inches square and good, were sent from Karandis in Belgium; and the largest figures in the exhibition of this material were sent with ornamental works, by Gossin Fils, of Paris. Thiry, of Paris, and Miesbach, of Vienna, occupied places for figures, vases, balustrades, &c. only inferior to Follet, who sent excellent vases in a Moresque Greek style; and to Garnaud, who showed architraves, pretty vases, and balustrades: his pattern-book is worth inspection. Besides Clayton's brick and tile machine (bought by a member of the jury), which attracted great attention, and that sent by Whitehead, of Preston, there were twelve similar machines in the French division: five exhibitors sent French bricks, and small cement and beton blocks; and there was a large collection of Dutch bricks. Earthenware pipe tubes were not very numerous. The façade, built up of his own bricks and tiles, by Borie, made a very pretty architectural display, and was a good lesson in ornamental brick-work. The Florentine tiles appeared to be very good. Madrid sent some pretty and large tiles: there were also very large tiles from Holland; foot tiles, double with cross holes, and earthen sieves. France possessed fourteen exhibitors of tiles in different materials, as clay, glass, iron, and cement, and of varied manufacture, encaustic, and in low relief, for paving, &c. for stoves, &c. in the old Renaissance style, and for roofing in many patterns.

There were many pretty portions of ironwork in the Exposition; for example, the standards to the Coalbrook Dale Company's stalls; and the signboards, &c. sent by Bouilliant, Dupont, and Cie, of Evreux; but the first rank in ornamental ironfounding was occupied by a cast-iron pyramidal monument, in a good German taste, sold for 140*l.*; and by the gratings, the fans costing 3*l.* each, and the castings from embossed lace papers, exhibited by Count Stolberg Wernigerode. Next in rank would be the Eisenwerk Lauchammer, Saxony; the works of Barbezat and Cie, for iron and bronze castings, of Colas Frères, and of Muhl Wahl and Cie, whose works in the Place de la Concorde are so well known, stood highly in my estimation for taste and execution: with them may be named Eck and Durand, who exhibited, besides a kneeling figure of a princess of no great merit, several fine lamp-posts; and Calla, who also sent six fine lamp-posts. I particularly name the last two firms, because a member of our profession, whose name I have forgotten, was asking me before my visit the name of a manufactory in which he might find a good selection of handsome patterns for that extreme difficulty—a street lamp-post. The best piece of plain French ironwork, on a large scale, was a field-gate, in the open air out in a corner of the exhibition precincts: iron gates, also in the open air; an iron fountain in the mixed styles of Nature and the Renaissance; and a pretty railing, claimed particular attention; but their interest was much inferior to the wonderful wrought-iron hinge-work, and similar productions, especially a piece belonging to M. Viollet Leduc, which, if modern, was the best of the sort that ever came under my inspection: the name of the producer is Boulanger, of S. Denis.

The Intendance Royale des Mines et Forêts du Hartz, Hanover, exhibited statuettes, 24 inches high, of the Apostles, for 15*l.* the set; and also a Caminofen, modelled by Halzemann, which were as excellent of their kind as the other productions from the same establishment were poor. Hanover also sent iron tubing, in lengths of 56 inches each, glazed externally as well as internally. The Swedish iron and steel work was fine, and the castings from Liège were superb in style and execution. Belgium showed iron plate, stamped with excellent effect, as in 1851; but the ironwork from the Netherlands was neither well modelled nor sharply and

cleanly cast. The same bad taste as in its jewellery prevailed in the stamped iron plate from Prussia, which, mechanically speaking, was good. I was surprised to find Florence in the list of cities distinguished for iron casting: two turnscrew staircases, one with wooden treads, a superb balcony-cantiliver, a lamp-bracket, and a handsome railing, were all of at least the second rank. In 1851 notice was taken of Austrian iron post paper, in the shape of remarkably thin sheet iron, and of Prussian zinc, not thicker than common writing-paper. This year France has added brass as thin as tissue-paper. It may be a question whether covering woodwork, for example a cornice, as at Berens and Blumberg's, in St. Paul's-churchyard, with these substances, would be in conformity with the use of fireproof materials required by the Metropolitan Buildings Act. The collection of English ironwork was not satisfactory. The design of some of the Canadian stoves, and the carving of their patterns, with castings by Rodden, of Montreal, were superior—but their joiner's ironmongery inferior—to the average specimens in England. Some of the English firms which ranked highest in 1851, did not support their previous fame. The chairs exhibited by the Coalbrook Dale Company, in a sort of Moresque Renaissance style, were tolerably good; and the pair of gates, priced by Cottam and Hallen at 240*l.* were fair, but flat. The best of this class was Bailey's fine grille. About a dozen plates of iron produced among seven exhibitors by various processes were from $\frac{1}{12}$ to $\frac{1}{8}$ in. thick; from 1 ft. 4 in. to 6 ft. 6 in. wide, and from 14 ft. to 39 ft. 8½ in. long; between 65 ft. and 136 ft. 9 in. superficial, and from 692 lbs. to 3,417½ lbs. in weight.

In zinc work, France was chiefly represented by the Vieille Montagne Company and by Baudoin. The latter firm exhibited a handsome hipknob, 4 feet high, price 16*l.*; sashes, ornamental roof-work, vases, &c.; but the Prussian zinc-work was, as heretofore, more agreeable to me. The pretty—whatever a great English authority might think of the application of certain outlines and details—gilt and painted zinc Mauresque stall belonging to De Diebitsch, of Berlin, was full of apparently pretty things. The minor works in metal deserving mention consisted of wire seats and tables for use in gardens; square-bodied patent metal tubes; the imitation of bronze articles submitted by Dubois and Soulais, which were good in execution, but selected with less taste than was desirable; and the electrotyped frames of the productions sent by the Austrian Imperial Printing Office.

The collections of useful and ornamental woods were numerous and magnificent: Tuscany, the Papal States, Spain, Venezuela, the United States, Sweden, and Canada, were among the minor exhibitors; Greece and Australia were among the largest. Among various treatments of wood were injection; anti-corrosive coating; large panels rendered invariable for painting, coach-making, and furniture; and thin sawn wood (*feuilles de carton bois*); and Bavaria showed pine-wood cut into thirty leaves in the inch, and mahogany cut into eleven leaves in the half-inch. The number of exhibitors of wood carved as decoration or furniture was very considerable (214). England sent the greatest number, 56; France, 47; Holland, 18; Denmark, 15; Tuscany, 15; Sardinia, 14; Sweden, 10; Norway, 7; Prussia, 7; Belgium, 6; Bavaria, 4; Switzerland, 5; Spain, 5; Austria, 2; Baden, 2. The carving bestowed upon these works was in general mechanically good: the taste of the ornament is all I shall have to mention after noticing the delicate workmanship of Knecht, Planson, Lagnier, of Bordeaux, Guéret, Tweedy, of Newcastle, and Wallis, of Louth.

The eighteen French, six English, and some Genevese manufacturers of paper-hangings, did not present anything which seemed peculiarly meritorious: for mere paper, Pirie, of Aberdeen, was considered by some French connoisseurs to show the pearl of the Exhibition. The specimens of parquetted floors, from all parts of the Continent, at about 10d. per foot superficial, were numerous as might be expected. It is hardly safe, perhaps, to judge from the examples exhibited, but those made of small bits split terribly: large bits stood better. The employment of caoutchouc, which was honoured by a medal in 1851, has considerably increased. The taste displayed in picture-frames and pretty ornaments, polished like jet, was of a high order, and creditable to the exhibitor Charles Goodyear. Ivory, as a material for carving, appears to excite much attention in France: the large Renaissance casket, by Moreau, deserves much praise; as did the Renaissance casket, 9 by 4, in one piece, by Hebert, costing 40*l.* In ivory turning no difficulties seem to exist: unless a mistake has been made, one cup was 6 feet 7½ inches high, by 1 feet 11½ diameter. At least ninety-eight exhibitors in wood or ivory turning, and thirty-six others in fans, canes, sticks, parasols, and umbrellas, sent their productions: among them Collette was really conspicuous for the artistic merit of his sticks, finely carved and headed, at the price of 8*l.* each. There was one remarkable exhibition of leather for decoration. Dulun asserts his enrichments to be 200 per cent. cheaper than wood: his hangings cost from 5s. 6d. to 12s. 6d. per yard, according to their richness; and chair coverings 4s. to 7s. each. An imitation of these hangings was charged at 1s. 6d. per yard. The imitations of wood in graining from Toronto were excellent, from France good, but both Moxon and Kershaw stood in the first rank for marbling and graining. Two French tradesmen observed that the work of the latter (grained and imitation inlaid doors) had no chance against so much that was real, and that the work of the former only required patience, which no Frenchman would condescend to give to the work. Two hydro-fuges, besides Claudell's coating for decoration and fresco painting (apparently excellent); mastic hydraulique, Laurent-Machabée, 45, Rue de Vaugirard (also apparently excellent), and the process of Lebrun of Moissac, namely, — "ineffacable colouring on stucco" were worthy of observation.

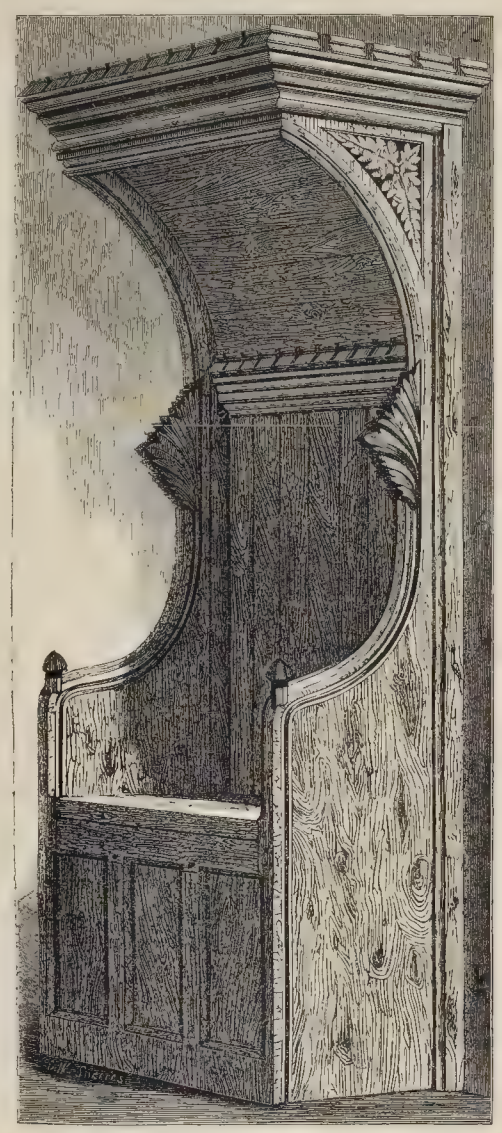
Seven French exhibitors supplied draining instruments and tools: seven others exhibited sawing and mortising machines. The great crane employed in the execution of the building, and two machines for breaking stones (*mortier concasseur*) for roadways, were simple and ingenious. The *psalizometer* was a sort of bevel equally useful in the *coupe des pierres*, or in the *coupe des draps*, for which last it was invented. The Austrian carpenter's bench was not a bad one: it would be worth the trouble of some society to have one in England for exhibition to the builders, the price of one highly finished being 1*l.*: it was exhibited by Wertheim, of Vienna, whose collection of tools was very complete and interesting; his catalogue should be obtained, for everything seemed of the most improved shape, and of good quality. The Prussian tools were far inferior in appearance. All the American moulding planes were sold. The profiles would have been good, if they had not been so very mean: this is a vice which seems prevalent in the modern buildings at Paris: I mean those erected since 1840, as they appear to be treated with less boldness of projection in details every year: this may account in some degree for the mania of polychromatization. The Canadian joiner's work looked at first sight fair, but on consideration it was machine-work to a considerable extent; and the material required to be cleaned, according to our notions, before the priming coat could be laid. The stuff seemed rasped, with little hairs of the grain of the wood standing out. A 1¼ four-panelled door with ogee moulding on one side, and a 5-inch two-faced bead ogee and square architrave with plinth, was marked at 15s. which has been called very cheap by some periodicals, ignorant that a better article, under the same conditions, can be got here for the same price. The two best examples of French joinery were contributed in a window, by Bernard Hoen: the other in a ratchetted bookcase, made by the pupils of the Institut Impérial des Sourds-muets at Paris. Three French manufacturers had given their attention to scouring papers: granite, lava, emery, glass, flint, silica, and porcelain are the articles employed upon cloth or paper for polishing. As to large bellows, the only specimens I saw were made in England. The door-springs by Renaud of Paris (rue Pétrelle, 22) appeared to me to deserve the attention of our manufacturers: they occupied only the position and the usual appearance of the hinges. The merits of the different French systems of sashes and sash-fastenings, with sun shades, both internal and external, were beyond the passing observation of a stranger to their usual mode of manufacture.

There were considerable novelty and merit in the seven systems proposed for the construction of wooden pulpit staircases or vices. They were on three principles, viz. with a solid newel, like the usual iron ones; with an open well-hole, the carriage being an iron plate; and with a continuous writhed string, which was much the most curious and the best looking: the steps had no risers shown in the full-size specimen exhibited. A double staircase was, if I remember rightly, also exhibited.

The prices of old bells recast seemed to be 3½d. per lb.; of new bells, 14d. and 2d. additional for their mountings. There were several expensive contrivances of wheels and pinions for facilitating bell-ringing; but Besson's bells were very remarkable on several accounts. He claims the merits which follow on the adoption of the late improvements of the bell being turned in a lathe; on the power of lengthening or shortening the clapper, and on the details of hanging the bell; but the portion which most engaged my attention was the gudgeon and its seat. The seats, *coussinets articulés*, as he calls them, from 1*l.* per pair upwards, are a variety of the knife-edge balance: the case which they give to the ringer is such, that with one finger on a whipcord fastened to the wheel, he rings a bell of about 6 cwt.; and on asking him the number of men requisite to raise a bell of 15,000 lbs. he answered that two could do it if the bell were on these seats. Bells mended by Delcroix Mangin, of Chalons-sur-Marne, and bells cast of steel at 8d. per lb. attracted much notice.

The employment of resin in making artificial stone; paper covered with composition to imitate slate, stone, &c.; and calico soaked in marine glue for roof covering—were French inventions; while asphalted millboards, said to be incombustible, and artificial slate for drawing-board, were Austrian productions. Publicans' fittings and asphalted felt were only forwarded from England. A cap for smoky chimneys from Poitiers; thirteen French water-closets, which I did not examine, as they were in the division of Pharmacy and Surgery; three fire-escapes, in the shape of ladders, and one in that of a box of carbonic acid gas; two street-sweeping machines; as many chimney-sweeping machines; and speaking-tubes (which appeared to be a novelty and source of amusement to the French public), complete the subjects of this class which I have to name.

There seems to be no good reason why all the architectural drawings, if not the models, should not have formed part of the Exposition des Beaux Arts. The design of a college at some place in Canada, by Kivas Tully; Welland County Court-house, by J. Gillespie; and the City-hall, at Toronto, which give evidence of the existence of a really good school in Canada, were hardly distinguishable in the darkness under the galleries of the Exposition de l'Industrie. The architectural models were almost entirely from France and England. The former, from the stores of the Ministère de l'Agriculture, du Commerce, et des Travaux Publics, contributed Pont Napoleon over the Seine at Berry, built by Couche, for a railway as well as for carriages and passengers; Pont d'Arcole over the Seine at Paris, built by Oüdry; Viaduct Bridge at Dinan, over the Rance, designed by Reynard, built by Mequet and de Gayffier; Railway Viaduct Bridge at Tarascon, over the Rhone, built by Talabot; another at Arles, over the Durance, built by Talabot; another over the Bouzanne, built by Borrel; another at Asnières, over the Seine, built by Flachat; and the Aqueduct of Roquefavour over the Are, built by Montricher. Private exhibitors contributed the model of the metal Cupola of the Observatory at Paris, as in 1851; the Viaduct of five arches, each 131 feet 3 inches span over the Rhone at Lyons; Marseilles and Toul Cathedrals; the Church of



S. Jean des Vignes at Soissons; and Polonceau's Roof over the Station at Versailles, of the Rive Gauche Railway. From Switzerland there were some pretty models of chalets. In the English department there were models of the New Market at Holloway, by Bunning; the Victoria Bridge (stone) over the Clyde, at Glasgow, five arches, 1851-54, by Walker and Burgess; the Suspension Aqueduct at Stanley, near Wakefield, and a Bridge at Leeds, by Messrs. Leather; the moveable Viaduct at Ulverstone, and a Bridge by Brunlees; and Mr. Lassell's iron revolving Observatory Dome, at Bradstones, near Liverpool. India sent the model of the Roofmuttee Mosque, at Ahmedabed (A.D. 1499). From Canada there were several models, viz. the Brock Monument, on Queenstown Heights, Western Canada, 185 feet high, which is a composite column, by William Thomas, architect, at Toronto; the Court-house at Montreal; and the celebrated Victoria Box-bridge across the River St. Lawrence, at Toronto. Besides these, there were several specimens of ingenuity —such as an idea of ventilation by means of ceilings decorated with deep girders; a balustrade and stirrup for an iron bridge; a design for a railway station roof, made with trellised baths caught in by rods everywhere, apparently good for iron construction; and the fine model of the roofs, 60 feet square, over the workshops of Nepveu and Co. at Clichy. This model, presented to the Conservatoire des Arts et Métiers, where it should be studied by travellers, was the only example in the Exhibition of the modern style of framing roofs as practised usually in England.

It may be asked, what good has been derived by our profession from these exhibitions? Whatever may be the tenor of the awards of the juries, I believe that two things are clear results. Our employers have had the opportunity of seeing, in that France which is supposed to be their leader in fashionable knowledge, that architecture is not a trade, but one of the beaux arts; and ourselves have had the opportunity of making such acquaintance with the French architecture of the present day, as to demolish much of the tendency to self-abasement before it, which has been too common in this Institute.

WOODWORK, CHICHESTER CATHEDRAL.

THE accompanying engraving represents an "old arm-chair," at Chichester Cathedral: it is a good specimen of woodwork, the design being simple. Some imagine (see some of Pugin's woodwork, for instance) that a Gothic seat must be very elaborate and very expensive,—open panels below, groining and crocket-work above.

We have several times engraved hints from Chichester, which is a building visited by architects less than it should be: there is much to be seen there valuable and interesting.

WOODWORK, CHICHESTER CATHEDRAL.

METROPOLITAN COMMUNICATIONS.

MR. GYE'S PLAN FOR A GLASS STREET.

OUR professional readers are doubtless by this time pretty well acquainted with the various plans proposed for the improvement of the metropolitan communications, as set forth in the report of the House of Commons' committee, which investigated that subject during the last session of Parliament. It appears, however, that more than thirteen years since, Mr. Gye, the director of the Royal Italian Opera, Covent-garden, projected a scheme for connecting the different parts of the metropolis by means of a gigantic arcade; and in the month of November, 1845, read to Sir Charles (then Mr.) Barry, in the presence of Mr. Manby, secretary to the Society of Civil Engineers, a paper explanatory of this scheme. The following brief extracts are made from that identical document which has been submitted to us. After stating the acknowledged necessity for some relief being given to the overcrowded traffic in the main thoroughfares of the metropolis, the projector says:—

"The arcade will extend from a point near the Bank of England to another at Trafalgar-square, taking the line north of Cheapside, Fleet-street, and the Strand. It will be constructed entirely on arches of sufficient height to pass the numerous streets, without presenting any obstacle to the ordinary traffic, entrances being made at the principal cross streets. The width of the arcade itself, besides the space occupied by the shops, will be nearly that of King William-street, City, from house to house. The roof of glass will be 70 feet in height. The structure will not be in one straight line, but will present a series of direct arcades, crescents, and rotundas, forming one uninterrupted covered promenade, accommodating itself to the various churches and public buildings by which it will have to pass. To these buildings it will serve as a most convenient approach, and will have branch avenues to many of the most important, such as the proposed railway stations, the theatres, &c.

As in some parts of the line, property of comparatively inconsiderable value will be passed through, the dimensions of the structure will, in places, be greatly increased; the arcade, on its way, expanding into several magnificent galleries or halls.

Portions of the arcade will be appropriated to reading-rooms, exhibition-rooms, concert-rooms, large apartments for public meetings, baths, cafés on the Paris plan, &c. as well as to shops of every variety of trade, except such as might from their nature be unfitted to the place. An extensive flower market, constructed entirely of glass, will occupy one portion of the line. In

fact, it is intended that the whole shall form a splendid avenue, combining the grand desideratum of a covered communication with a spacious and luxurious promenade."

With the exception of the brick arches, Mr. Gye proposed that iron and glass should be the chief material employed. His prospectus also sets forth a plan for conveying letters and parcels inside iron tubes, and propelled by atmospheric pressure, in the same manner as Mr Vallance proposed to propel passengers many years since at Brighton. Mr Gye conceived his scheme to be a remunerative investment as well as a great metropolitan improvement. He says the property to be purchased would embrace few or no frontages, that the construction would be inexpensive, and that the vast concourse of customers would enable the shopkeepers and stand-holders to pay high rentals.

The prospectus further says, "The objects of the projector are not confined to this one line, east to west, his proposal being to carry out a system of arcades throughout the metropolis."

It certainly appears from the above extracts that Mr. Gye has the merit of priority over many of the plans lately proposed, if not that of having shadowed forth a gigantic Crystal Palace some years before that now celebrated building was thought of.

NINETEENTH-CENTURY ARCHITECTURE.

PARIS SEEN WITH LONDON EYES.

Amidst the absorbing questions of the present moment, as to the state of the *profession* of architecture,—the means of education in it, and its position in the world, I venture to call attention to the position of the *art* itself.

And in so doing, I have adopted a title which may seem high sounding and pretentious for the few remarks I am about to make, but it has struck me, and I now throw out the suggestion as worthy of consideration, that if this heading were adopted for a series of papers, in illustration of the various points bearing upon the condition of architecture in this, the nineteenth century, to be followed by earnest discussions thereon, not only comparing our nation with the world, but ourselves with one another, we might obtain a knowledge of the position of our art, of the resources at our command, of the efforts being made, of the end to look forward to, which would materially assist in the advance of those great principles which can alone form a firm basis for a true and lasting development of the art of our times.

For as far as the well-being and onward progress of the art of architecture exceeds in importance the puny interests of its professors at any given time, so far does the consideration from time to time, of the state of sloth or activity of the healthy or sickly condition of the *art*, exceed in importance the consideration of the architects' position in the world, and of the estimation of his profession by others. * * * Far be it from me to undervalue that eighth lamp of architecture, which some one picked up and trimmed [in the *Builder*], when Mr. Ruskin had forgotten it, "the lamp of getting a living!" especially at the present time, when our choice seems to be between nothing and the militia. Far be it from me to give aught but my best encouragement to efforts now being made to improve ourselves in the knowledge of our art, and to place us in a higher position with the public; but, amidst all our debates, examinations, and diplomas, let us keep our chief object in view, adopting anything which seems capable of assisting, and rejecting everything which may seem to retard the onward progress of our art.

The race-course of nineteenth-century architecture is before us, and as we have cast aside the trammels of "authority" with which the last century bound itself, we have said to the copyists and soulless imitators of the Palladian and every other school of art, to use the words of *the* poet of the age,—

> "It is time, oh men of the copying hand and mocking eye,
> Your old historical, dead-alive art should die."

If the proposed examinations will assist in the development of the plant, which I believe is flourishing in the soil of England, a healthy school of architecture; if, as I am inclined to believe, extra requirements will lead to extra exertions, then let them be established by all means, and let us trust to the public appreciation of our efforts for part of our reward; but if, as some fear, such increased cultivation should draw the nourishment from our young plant to give it to others of a less valuable nature, and it thereby becomes sickly and unfruitful, then I would be the first to oppose such dangerous undertakings.

However, I confess, that unless for such a mighty genius as a Giotto, Michelangelo, or Raffaelle, or even our own Wren, there is a limit to the range of an architect's studies (with all due deference to the ancient Vitruvius, and I wonder what he would have made of Gothic architecture if he had to learn how to proportion that as well as his orders of temples); there is a limit if he wish to excel the works of the better times, or even to keep pace with those of the present; and it seems that precisely in those countries where these limits have been passed, architecture flourishes least in a healthy state; but is stunted and dwarfed by excessive care and extreme attention, not to the plant itself, but to the wheelbarrow which brought the earth, and the shovel which planted it. Now it is the general acknowledgment of the vantage ground which the English school of architecture occupies in the Exposition Universelle which has given rise to the preceding remarks. We have unexpectedly found ourselves leaders in the art in which we were supposed to be so far behind our neighbours, and sad must be the disappointment of those who, despising our efforts at home, and thinking them "utterly bad," find that others are worse,—that it is altogether vanity—no art, no design, no life anywhere.

But if we do occupy that proud position, we must strive hard and unceasingly if we would retain it; for France, at least, is close on our heels, if she does not actually occupy the post of honour. Let us glance at the Exposition. From the kind of works exhibited, and the manner of showing them, with the peculiar style of drawing, I should infer that the plan of art education in France, and the want of it in England, had most to do with the style of art produced, and the expression actually given to that style in execution.

Academies, examinations, certificates, and medals, doubtless are excellent machinery, as affording opportunities for, and incentives to labour, rewards from time to time, and encouragement to the end.

The practical advantages of travel are secured by the means instituted for that purpose. Yet what system can count its advantages without a corresponding series of disadvantages? what balance can be struck unless the losses be taken into account as well as the profits?

May not this machinery have a tendency to support precedent, weigh down thought with authority, cramp the youthful freedom of design, and put down the rising aspirations after progress? Nay, is not the very word "Académie" synonymous with adherence to rule, and generally expressive of a decided want of imagination.

The collective power with which the French proceed in all their works, whether it be the power of the state, of the municipality, of an academy, or a society, in opposition to the private enterprise of the English, may produce works of a grander and more magnificent character, but cannot be so successful in works of originality; yet where the individual mind has play in a bit of detail, this originality is evident, and as we shall have occasion to see in some entire buildings. It is our reproach that we offer so few solid encouragements for students in the art of architecture compared with France; yet the result seems that more self-dependence is produced—more freedom and fewer honours.

We have nothing in the English Architectural Gallery, in the Exposition Universelle, to compare with the series of drawings for the "*Archives des Monuments Historiques*;" studies which must have an immense effect on the art of our times. Elaborately-executed, full of accurate measurements, they are historical documents of which France may be justly proud. The delicacy of drawing, and the preponderance of classic studies, have led to a taste for delicacy of execution in buildings and a delight in "flat" classic forms, though the mixture of Gothic feeling is evident in the disposition of these forms, and there is little doubt that the elaborately beautiful works of M. Viollet le Duc will help still further to develope this latter element in future designs.

It must be acknowledged that the precedence which the English seem to take in the Exposition in a measure arises from the fact that we exhibit chiefly works actually executed or in progress, while the French seem content to rest their architectural fame on the before-mentioned drawings of students. Hence no real comparison could be made, judging merely from the walls of the Exposition; but Paris itself was around, drawn full size, and coloured, and backlined by the sun itself; and so I imagine the French architects presumed their buildings wanted no further illustration; the English drawings serving to remind one what there was at home to prevent one being carried away by the charming points of French detail.

Time would fail, and it would be beyond the purpose of the present paper to speak of any but the most recent works; and it were useless to search in Paris for a great dome like St. Paul's, or in London for a small one like the Invalides.

Where, in the one city, is the balance for our grand series of smaller Wren churches, or in the other for Arcs de Triomph, and the grand plots of architectural "Places?" Our Royal Exchange may not quite balance their Bourse, yet the Bank of England more than makes up the deficiency, even with the Banque de France and its new gateway as a counterpoise. The Madeleine and Chamber of Deputies must weigh down our British Museum and University College. The Louvre is without a counterpart, and I know of none to our Somerset House, except we take the Hôtel de Ville. The Boulevards are thoroughly French; our "squares" most truly English. In public monuments, behold our latest offering to the memory of Sir Robert Peel, and groan aloud!

We have to compare (on our parts) our Palace at Westminster, our clubs, our streets, and our churches, with the latest Parisian efforts.

The chief characteristics of the Paris school seem to be delicacy of detail everywhere; free but sparing application of columnar and trabeative classic art, combined with a frequent and happy system of arcuation; everything in low relief; mouldings of a flat Greek character, often applied with the spirit of Gothic freedom; and constant use of ornamental carving.

A Parisian façade seems to be a drawing in stone, full size, literally an immense lithograph. A large, flat mass of stone wall, with few slightly projecting blocks, is carried up in the street line, and on it is engraven with the chisel the design of the architect, to scale, the projection of the pilasters and strings being about the proportion of the thickness of the ink lines on the paper design. The carving is relieved about as much as a good back line would indicate, and altogether the work will repay the trouble, if you stop close to it to examine it; but it is deficient in boldness and almost in outline at any distance.

Some of the Paris façades engraved in the *Builder* will illustrate my idea. There is the Mairie, third arrondissement (1848), by M. Gerard:* it exhibits a beautiful series of arches on the ground-floor, simple in detail and in excellent proportion, but with a mixture of pilasters, tall and short, in the upper floors, crowned by a bell-turret formed of two pilasters and entablature over a flat segmental arch. There is a freshness and beauty of proportion about this which pleases me much, and it seems peculiarly adapted to its position in a street.

The Timbre Impérial (Stamp-office), in the same street, possesses much novelty and appropriate treatment.† But, what in these buildings seems appropriate, becomes out of place in those which are detached and capable of being viewed from a distant point. Thus, the façade of the new Bibliothèque Ste. Geneviève looks poor and

* See No. 629, p. 91, *ante*.
† See *Builder*, August 23rd, 1851.

flat from one side of the "Place" in which it is situated, and the want of a bold entrance is painfully felt. At the same time, there is much beautiful detail which would tell to advantage in a street. This building has a basement of Florentine character (*i. e.* with small round-headed windows done in flat,—the Strozzi Palace planed smooth), carrying a series of nineteen arches on piers, and a deep and rich cornice without much projection.*

Even the façades of the Palais de l'Industrie as well as that of the Palais des Beaux Arts, are open to the same remarks. The round arches in the former are very charming; and there is a solemn dignity in the simplicity of the hemicycle of the entrance to the latter. The carving and broad architraves around those seven fine arches almost compensate for the general want of boldness and depth of shadow.† The single archway to the Palais de l'Industrie is fine, and the sculptured figures give a great charm to it; but I say nothing about the columns and entablature which surround it, except that as they cannot pretend to be "correct," they might have formed the subject for a little more design.

This centre block in the façade, however, seems to be brought too forward to exhibit the full length of the building to advantage, and confuses the perspective,—*here* a little less projection would have been a benefit. The most beautiful portions of the building, and indeed I may say of any I know in Paris, are the staircases. Elegance and delicacy seem quite in place here, and whether we take the round arches themselves, with the charming vistas seen beyond, or the balusters, with their finely-drawn ornaments, or the plaster work of the ceilings, all seems to me as it should be. Large vases and stained-glass windows help the general charming effect.

There is, however, a gateway just added to the Banque de France (with the name of M. Gabriel Cretin, architect, inscribed thereon) which cannot be said to be deficient in boldness, and is, I think, a very pretty example of the French school. On each side of a deep hollow-moulded round archway, stand two Roman-Doric columns, which carry an entablature, raking over the top of the arch and forming a hollow pediment.

While the French have thus worked out a system, or at least struck out a path in the direction of arcuation, we seem hitherto to have retained in our public (and in many private) buildings chiefly the Palladian grandeur of columnar architecture, although, in many of our club-houses, this has been replaced by an Italian style, which has been aptly termed "fenestral," as the window is the chief feature in the design. Yet our Gothic tendencies have begun to work out something altogether different to what Paris can produce in the Great Houses of Parliament, and the new Rolls Court, of Fetter-lane. It seems we shall have to work much before we *adapt* Gothic to present uses, though it seems to me we might *design* it suitable for every modern purpose; our well-grounded studies in this our old national style, and our successful results in church architecture, *must* lead to some development of it in our mansions and our streets. The want of breadth and repose in the Downing-street offices is, to my mind, much worse than the French flatness, of which I have spoken; but the last result of our club-house style, the introduction of noble coloured materials nobly placed, is more satisfactory.

Our idea of arcuation seems generally confined to a rustic basement—as in the fine arches which form the entrance to the Army and Navy Club—but the application of it, as in the Museum of Economic Geology (although a copy from Venice, as in the instance of the Carlton Club), shows a taste for more massive, deeper, and more relieved members, than prevails in Paris. There is a force of outline in this building and its details, which is a marked contrast to the shallowness of the French examples alluded to.

If the public buildings of Paris are deficient in boldness in the line of street, much more may we expect the general houses and shops to be so; yet, on the whole, what with the play of fancy in the details of windows and doors, shop-fronts, balconies, and often much surface decoration, there is great interest in the new Rue de Rivoli, many new parts of the Boulevards, houses in the Rue Faubourg Poissonier, and elsewhere in Paris where architects are at work, though there is of course plenty of shop-keepers' art as well. The collective system in which the French like to dwell, many in one house, affords an opportunity which the architects have not lost of making a handsome entrance—doorway and hall, with a tasteful *conciergerie* at the end, and staircase to match. Here the imaginative and delicate hand of the draughtsman displays its skill to advantage, and the decorator often is required to complete the work. Indeed, it is a day's work to look at the various portals, on either side of the Rue de Rivoli.

They are, however, mostly of one character, and as might be expected, exhibit the peculiarities of the style more than any other parts. A flat segmental arch, 8 to 9 feet wide, between two fluted pilasters carrying an entablature,—the mouldings of which butt in some way against (or some even run over, under, or round) a central shield which bears the number of the house. All is of the greatest freedom of design as to proportion, but the mouldings can all be referred to a Greek feeling,—a near relationship to the Doric cyma and echinus,—while they are often shown in section, without any "return," in a way the Goths would, but the Greeks would not, have adopted. This is remarkably illustrated by the lamp-posts at the door of Ste. Geneviève, and in nearly every example.

The corona of the architrave,—if it be a regular entablature,—also is supple as a Gothic string, under the influence, we may suppose, of the Gothic shield, for its composition is as rigid as a Greek could wish. Foliage and flowers occupy every available nook in a charming manner. Windows, after the usual Italian form, are treated in the same way. One house in this street is conspicuous as having a sun-dial on the front, with four figures in low relief, representing the four seasons, hovering above, below, and on either side.

If we cannot have carved house front, we can have contrast and colour in the use of brick and stone together; and, in fact, I prefer a groundwork of yellow, or red and black brick, to a mass of white staring, and almost dazzling stone. Thus, the great warehouses in St. Paul's Churchyard and New Cannon-street, to my mind, contrast favourably as to general tone with those of Paris. Many are well designed, and may serve to show our taste; but there is a portion of the Ordnance-Office, Pall-Mall, lately erected by Mr. Pennethorne, in which the ground-floor, at least, will serve as a standard of boldness, and it possesses also a cornice which it delights me to see a more common feature every day: that is, a real cornice to the *roof*, not above the last story but two beneath the attic. The new shops at the corner of Chancery-lane, have more novelty, perhaps, but less beauty.

The doorways in *our* highway architecture serve to break the general outline of the building, are proportioned to it,—if made features of at all,—and are generally hooded in porticos; they have little design about them, and less in the passages and the door,—a common four or six panel affair—is generally shut. There is some design, however, in that already mentioned on the south side of St. Paul's.

Of Domestic architecture we have *none*, if we except such palatial edifices as Bridgewater, Dorchester, and Hertford houses, or that of Mr. Hope, &c.

It is melancholy to think what miles of stucco-fronted terraces, squares, places, and crescents, have been erected for the nobility and gentry,—the educated classes,—without one spark of life, one single gleam of the spirit of original art. Almost all the villas and country residences have a greater deficiency of art than a city pin-warehouse, or a national school.

The French do surpass us in this point, and many fine instances might be mentioned.*

I have not time to strike the balance between those "great" railway works in which both we and the Parisians have done great things, yet I am inclined to believe the same conclusion would be arrived at as in our street architecture, that we hold the palm for successful daring construction, and the French for beauty in decoration and finish of surface.

But it is in our ecclesiastical art that I feel we are pre-eminent, and which induces me to look forward with confidence to the time when, having completely mastered the principles of Gothic art, and shown our power of original design, we shall be permitted as a body—as individuals now are encouraged—to *design* our buildings for domestic as well as ecclesiastical purposes, with a view to convenience, propriety, and every-day requirement, without being questioned as to the correctness of our archæology, or called upon to pronounce the exact hour when our details were first produced. The only example of a new Gothic church I saw in Paris was St. Cecilia, with cast-iron columns, cast-iron galleries, cast-iron window-tracery, with a plain and somewhat ugly exterior of stone. Our churches I need not mention,—every one knows the beauty of that at Vauxhall-bridge, of St. Stephen's, in the same direction, and the novel works in Margaret-street, and complains of their inconvenience. That, however, will be remedied sooner or later.

Our last remarks shall be of Restorations, and here we give unqualified praise to the liberality of our neighbours. Notre Dame, the Sainte Chapelle, the Louvre, the Palais de Justice, and the Hôtel de Ville, Tower of St. Jacques—all will bear witness to the spirit which never visits us in so magnificent a form. If France had our buildings, our highways, our parks, and our great men, we can imagine how differently they would be treated.

In conclusion, I infer from general observation that in our public buildings and street architecture we are beyond our neighbours in possessing the groundwork of a lasting phase of art, while they have an unsubstantial novelty of detail, from which, however, we may learn to polish and adorn our rough-hewn surfaces, and "design in beauty," while we "build in truth." In Domestic citizen architecture we are worse than behind, but in the true spirit of Gothic Revival, and in the comprehension and successful practice of mediæval art, we are unrivalled and alone.† C. F. HAYWARD.

MODERN IMITATIVE ARCHITECTURE.

A SHORT paragraph, in a recent number of the *Builder*, forcibly recalled to my memory some of the eminently suggestive remarks lately addressed by Mr. Tite to the Institute of British Architects at the opening meeting of the session. The paragraph in question informs us that "Mr. Oliphant, of the New-road, has just completed a fourteenth-century window, designed as a memorial of the late Lord Eldon." Stated in this simple matter-of-fact way, the absurdity of the thing seems really self-evident. A work, designed, no doubt, as closely as possible, in the style of the *fourteenth* century, is to be set up as a memorial of an eminent man of the *nineteenth*: the only portion of that work answering to and indicating its intended purpose is probably an inscription. But it will perhaps be said the window is to be inserted in a building in the style of the period chosen, and any other style would be inharmonious. Is this the way in which our ancestors in any period preceding the eighteenth century acted? I think the numerous monuments, which their actively pious zeal has left for our admiration and emulation, distinctly prove the contrary. There is scarcely one of our beautiful cathedrals which has been carried out in one uniform style: the successive generations of earnest men who laboured at the completion of these noble piles have each left

* See *Builder*, February 19th, 1853.

† With regard to these two latter works (Bibliothèque St. Geneviève and Palais de l'Industrie), I may remark, that as both have a series of names inscribed on the exterior, we may, on that account, excuse a comparatively shadowless surface,—as we desire a smooth paper to write upon. This idea of fitness may overcome the idea of dulness of surface.

* One broad window and much carving on the route going towards the Arc de l'Etoile; and a large French Gothic mansion, near the Palais des Beaux Arts in which all the detail of the period is carried out in the ornamental (though extravagant) hip knobs, &c. while the walls are dull and plain. A house near it in the Arabian or Oriental style, with some pretty detail as well as queer, may be mentioned.

† Read at a meeting of the Architectural Association.

the impress of their own labours in the good work, and I venture to think that the successive portions of those buildings are generally so well fitted together as to produce a harmonious result, greatly as the individual parts may differ in style and treatment. The bold self-reliance of the architects of the Middle Ages enabled them to continue for several centuries steadily progressing in a course of development of successive modifications of style, each, in some respect at least, original and beautiful, and differing from its predecessor.

In the early period of the Renaissance and revived Classical style, the same self-reliance of the architects is apparent in their works: though employing classical *details*, probably to the best of their knowledge, they were not afraid to recast them in their own mould; and the originality of their works has procured them an amount of admiration which will never be allowed to the most perfect *copy*. We are constrained to admire the master-mind in an original work, even where it does not coincide with our own taste.

The want of self-reliance appears to be the great characteristic shown in the works of the architects of the present century: with but few exceptions, our buildings are at best but imitations, often admirably and beautifully correct in detail, but originality of thought is sought for in vain. With means of study immeasurably superior to those of former ages, we are unable to do more than *imitate* their works. We have now happily become alive to the great beauty of the monuments their skill has left us, but we appear so lost in the admiration of them that we have not the courage to emulate their originality.

In constructive science we feel our own power, and boldly use it; but then, as if ashamed of our temerity, we are careful to hide our skill, and clothe our work in a dress for which there is a *precedent*. Our construction is, in fact, an *original reality*, our architecture an *imitated sham*.

Charles Fowler, Jun.

"FIREPROOF FLOORS."

As the letter of "C. E." on the above subject in the *Times* of the 6th inst. is calculated to lead to very erroneous impressions as to a system of construction very generally admitted to be a great improvement in building, I beg you will do me the favour of inserting a few lines in reply.

1. The system in question, although the subject of a patent, is *not* subject to high royalty charges. In very many instances (by far the majority), no charge whatever is made, although the expenditure of thousands of pounds in the introduction of the system might well justify such a charge.

2. Insurance companies *cannot* make any allowance from so low a premium as the ordinary one of 1s. 6d. per cent.; but the proprietor has the remedy in his own hands by insuring for a fourth or a fifth of the amount he would otherwise insure for, and this is what is done.

3. It is a great error to say that the system is not economical in cost as compared with the old plan of girders and arches, to say nothing of economy of space, absence of lateral thrust, and thicker walls generally required by the latter mode; and though it is certainly more expensive than ordinary wood floors, the difference in a well-built house amounts to an extremely small per centage on its cost, even when a boarded surface of floor is applied to the fireproof foundation.

4. If "C. E." had known the difficulty originally experienced in meeting with *any* firm willing to prepare the requisite rolls for the manufacture of the iron joists, he would cease to wonder at there being "but one firm" prepared to roll them of all the requisite sizes; but as this does not in the slightest degree enhance their price, and moreover secures excellence of quality and rapidity in the execution of orders, it is a decided advantage; were this really an evil, it is one which in the nature of things would speedily correct itself.

5. The oxidation of the plaster ceiling arises from the rapidity with which houses are too generally finished, and would not occur if sufficient time were allowed for buildings to dry. It admits, however, of a very simple and efficacious remedy, by which much more perfect ceilings than the ordinary ones may be secured.

6. As to any "practical difficulty" in laying a wooden surface on the fireproof construction, it is wholly imaginary, this surface being employed in nine out of every ten floors so constructed, with perfect facility and the most satisfactory results; and so far from the system inducing dry-rot, it happens, curiously enough, that in the recent examination of a large building erected several years ago, those floors which were fireproof were quite free from it, while *others in the same building not so constructed were extensively affected by this evil!*

This system, like everything else, may be subject to abuse from the want of ordinary care and attention; but to argue from this against its proper use is certainly not in accordance with the ideas of progress which you, sir, labour so hard to inculcate. I trust to your well-known desire to assist in obtaining truth to insert this reply to objections which must, I think, have arisen from a very imperfect acquaintance with the system commented upon, and which the writer erroneously speaks of as identical with the French floors, from which it differs in several particulars.

The Proprietor of the Patent.

THE CRYPT OF ST. PETER'S CHURCH, AT OXFORD.

It is now several years since we paid a first visit to Oxford, and yet the circumstances of it ring like pleasant music in the memory. The clean and picturesque streets, the long and varied rows of collegiate and other buildings, the spires, the tower and quadrangle of Christ Church, the dinner in its noble hall, the interior of the cathedral in the gloom of twilight, which, casting a shade over injudicious modern alterations, added to the grandeur of the general proportions; the walk through sculptured archways; gardens with old trees; structures, rendered doubly interesting and picturesque by the hand of time, and coverings of ivy and other foliage; peeps into libraries and halls, in which were ranged portraits of kings, queens, and men of learning—some grim and dark with age, others of brighter hues, the work of Reynolds, Lawrence, and the painters of modern date; rare manuscripts; original sketches by Raffaelle, and other magnates in art; and many a relic of former times: here and there, mixing most fittingly with the buildings, sauntered the professors, students, and other grades of the university, in their varied costumes: the clear and beautiful Isis, overshadowed by trees (a pleasant contrast to the stream with another name at London), gay with smart boats and cheerful boatmen; the chiming of bells; the occasional sounds of organs and choristers in the chapels, and other incidents, cause a summer's day to be much too short to get even a slight glimpse of the beauties of far-famed Oxford.

The sun set during our ramble, almost without our missing it, and many a choice picture was formed in the moonlight, shining as it did on figured niches, on turrets, into traceried windows, and behind fine examples of architecture, relieving the masses in broad and distinct shapes. However, a more minute examination of Oxford gives an increased amount of interest to the scholar, architect, artist, and antiquary. Passing over many other matters of the highest interest, and pondering over the great celebrity of Oxford at the present time as a school, the mind goes back to days when the great men of the land depended on the might of force rather than the cultivation of the brains. Even in the fifteenth century, in what was the early period of the university, the city of Oxford appears to have abounded in schools for preliminary instruction, some of which were in the houses of the burghers, and others attached to the religious institutions. But the first establishment to which the title of *schools* appears to have been particularly appropriated was erected in the year 1439, by Thomas Hooknorton, abbot of Osney: this is marked in the map by Ralph Aggas. The multiplication of books, by printing and otherwise, led to the increase of schools and the founding of libraries.

Wise men prepared the way (which by the present results seems to have been but a humble one) for the great library of Oxford. Some of these worthies, who did not see their intentions carried out during life, left money to do it. Some disputes between the University College and the Oriel College, respecting the site of the library, prevented the final and regular application of the fund till the year 1480, when the books were added to the collection of Henry IV. his four sons, Henry, Thomas, John, and Humphry, Thomas Arundel, archbishop of Canterbury, Philip Ripindon, bishop of Lincoln, Edmund, Earl of March, and Robert Curtney, chancellor of the university, in whose time, and by whose labour, it was brought to perfection. Humphry, Duke of Gloucester, "who," says the historian, "was surnamed the Good, and well deserved the title, is justly considered as the founder of the library and of the divinity school, which was completed and opened for public use in 1480." Warton describes the books given by him as the most costly copies that could be procured, finely written on vellum, and elegantly embellished with miniatures and illuminations. A single specimen only of these valuable volumes was suffered to remain. It is a beautiful MS. in folio, of Valerius Maximus, enriched with the most elegant decorations, and written in Duke Humphry's age, evidently with a design of being placed in this sumptuous collection. All the rest of the books were destroyed by the *visitors* to the university in the reign of Edward VI. A great number of classics were condemned on this occasion as anti-Christian. From the year 1555 the library *remained empty*, until it was restored by Sir Thomas Bodley. Books soon became numerous in Oxford, and with them fine works of art.

So many things suggest themselves, that it is no easy matter to jump over them to the ancient church of St. Peter's, the crypt of which forms the subject of the annexed engraving.

Respecting the history of the church there is some doubt. The crypt has been considered Saxon, but this opinion rested solely on the authority of a MS. transcribed by Camden, and which it is supposed had been tampered with. Judging from the architecture, it may safely be referred to the Norman period. Mr. Britton, in his fifth volume of "The Architectural Antiquities," gives an outline of the arguments, with a plan and other illustrations.

At the time of the Domesday Book, a church in this parish is mentioned as belonging to the Conqueror, and by him it was transferred to Robert d'Oilly, the founder of Oxford Castle, from whose heirs it returned to the Crown by escheat. Henry III. gave the perpetual advowson to the Society by which it is still held.

The exterior of St. Peter's Church is exceedingly picturesque, and in the interior of the chancel, are some characteristic details. The tower is peculiar, tapering towards the top, like the Old Castle of Oxford, and exhibits interlaced arches. The church has been altered at various periods, and contains some good details of perpendicular architecture. The engraving of the crypt, with its circular arches and varied capitals, prevents the necessity of particular description.

The crypt is 36 feet in length and 21 feet in width.

In Sir J. Peshall's "Ancient and Present State of the City of Oxford," collected from the MSS. of A. à Wood, p. 78, will be found an account of St. Peter's, containing, among other particulars, a list of the several chantreys founded within it, and an extract of an indulgence granted A.D. 1320, by a Bishop of Lincoln, to all persons within his diocese who shall attend the sermons there preached before the university in this church during Lent. The auditors in consequence became so much increased that the church could no longer contain them, and a stone pulpit was erected in the churchyard for the purpose of haranging the congregation there. The pulpit has long since vanished.

B.

Rise of Wages.—The Southampton journeymen painters have had their wages raised to 4s. a day throughout the town.

THE CRYPT OF ST. PETERS CHURCH, AT OXFORD.

WALTHAM FOREST.

ORIGINALLY this forest covered a large portion of Essex, which was, up to the sixteenth century, like most counties of England, overgrown with timber. Hainhault and Epping Forests were comprehended in the chase of Waltham; and, according to Evelyn, the first onslaught upon the forests was made by Henry VIII. when he suppressed the monasteries, converting the property to his own use, and disposing of the oak timber.

Antecedent to that period but little oak was used in buildings, sallow and the commonest woods sufficing for ordinary habitations, until the general clearance brought more substantial materials into demand.

The second great clearance took place in the reign of James I. when Sir Julius Cesar, his Chancellor of the Exchequer, first caused minute surveys to be made, the profits whereof must have been welcome to his embarrassed treasury, for the price of oak timber is recorded to have been then 10s. a load (of 50 cubic feet), and firewood, 2s. the cord. This, if the relative value of money is taken into account (as having increased at least eightfold), will stand nearly on a parity with the rates of the present day. The redundance of standing oak timber of that age could not have been less than tenfold the present growth; but the imperfect state of roads and total want of canals and other means of transport, added much to the prime cost of the article.

Subsequently, during the Civil Wars, the waste and devastation of timber was such, that according to Evelyn (who wrote about 1704), "nothing less than a *universal plantation* could supply the defect." He himself, at his beautiful estates at Wotton and elsewhere, planted largely, practically exemplifying the views laid down in his "Sylva," as he saw clearly the solidity of such investments, shrewdly calculating the value of long-deferred profits; "for who," added he, "would not preserve timber, since within a few years the price has been quadrupled?"

The metes and bounds of Waltham Forest were settled under a statute of Charles I. by inquisition and perambulation made 8th September, 1640. At that time, twelve entire parishes, and parts of nine others, were comprehended within the limits of the forest. The insulated parishes were, Wanstead, Layton, Walthamstow, Woodford, Loughton, Chigwell, Lambourne, Stapleford Abbots, Waltham, Epping, Nasing, and Chingford: in point of fact, the forest took a range of at least fifteen miles square or 225 square miles, extending from Romford on the east, to Waltham Holy Cross on the west, and from Nasing on the north, to Ilford on the south. Of that enormous tract, doubtless very extensive private estates constituted a part, subject to rights of forest and chase; and the greater portion of the residue had been granted or sold by Henry VIII. and succeeding sovereigns.

It is hard to suppose that no maps were laid down under that inquisition: none, however, have been suffered to come before the public; but the computation was, that this forest then consisted of 60,000 statute acres (rather a small remnant from 400,000), of which 48,000 were private property, and 18,000 unenclosed and waste.

It is clear that after the Great Fire of London, 1660, the abundance of timber, and probably the expediency of the occasion, caused a vast consumption of oak; for a sort of Metropolitan Building Act (by anticipation) was then first launched, enjoining that certain timbers and scantling should be used and observed in all new structures, and thus London arose fortified from her ashes.

The early historical accounts of Epping and Hainhault are scant, but such as they are, they exhibit, like all the other forests and their traditions, a long series of encroachments, malversations, and wholesale plunder, which seems only to have been narrowed with the diminished extent of forests, and freebooting chases in general. Every commission issued by the Crown made the system of Governmental mismanagement the more palpably notorious: even to the time when the hero Nelson was commissioned to inspect the Forest of Dean—anxious about the oaken bulwarks of his fame, as for the glory of his country, he, in the year 1803, deplored the "abuses suffered to be perpetrated by *favoured people*;" and here it may be pardonable to repeat his words, as given before in the *Builder*—"Those shameful abuses are probably known to those high in power! but knowing the abuses, it is for the serious consideration of *every lover of his country* that they should be done away."

To refer to the inclosures or alienations now going on in the Forest of Dean (said by Nelson to contain 23,000 acres of the *finest timber-producing land in the country*) is not the object of *this* paper, but the misapplication of resources throughout the whole of the forests appears to be carried out in perfect consistency with usage, and with the practice of Governmental officials in all ages.

As to Waltham, a report of the Crown Commissioners made so lately as 1792, stated "that such had been the mismanagement pursued since the beginning of the century" (from 1700 to 1800) "that old management should be altered, and new regulations established, so that the forest might be useful nurseries for the Navy; or *that they should be sold*, and be converted to tillage or pasture, *so as to add to the produce* and population of the kingdom." Here, then, is the solemn declaration of commissioners delegated by the Crown, as set forth in the second paragraph of their report; and what effect has this, ay, or any of the reports achieved for all the other forests?—reports emanating from high authorities, paid dearly for by the nation, duly printed, and as duly forgotten! What has become of Lord Colbourn's Parliamentary Commission as to the New Forest, containing 100,000 acres? The result of all that expenditure of senatorial time, of material, and national revenue is, that some sixty-seven acres were lately advertised for sale! Some 60,000 acres lie waste and wholly unproductive!! What has become of the late reforming (but perhaps too dictatorial) commissioner, Mr. Kennedy, and of his report and recommended treatment of *Epping Forest?* Why, just that matters are as they were, if not worse. In 1849-50 the expenses of management exceeded the income by 1,396*l.* 6s. 10d.; in 1850-51, by 164*l.* 15s. 4d.; and in 1851-2, by 400*l.* 9s. 9d. What progress or amendment may have been made by the great State new brooms we may possibly know as soon as the result is in print.

If Mr. Kennedy, as commissioner, did not give perfect satisfaction to his *political* superiors, it was not because of supineness nor incapacity: no, his labours were incessant, and terminable only with his vocation: his report has, at least, facts and truisms which cannot be confuted. And first, as to Epping Forest, they are these, viz.:—

1. "Nothing can be more unsatisfactory than its condition.

2. A most lawless state of affairs exists in it, and innumerable encroachments have been made!

3. The only resident officers that exist in it (in the department of the Lord Warden) are most inefficient!

4. *The Crown has in Epping no right to the soil*, but only that of *Forest*; so it cannot be justifiable, on the part of the Crown, to resist encroachments by expensive litigations; but measures ought to be taken to compel parties to purchase up the value of their encroachments, *as regards the rights of the Crown!* But it seems very desirable that, so near London, and amidst a vast mass of residences of parties who value the lengthy open space of Epping Forest, *encroachments should be put a stop to?*"

Now, here is the case made out by the astute commissioner, and it might be generalized, as to most of its details, in describing the condition of all the Forests. In Epping the Crown has no right to the soil or freehold: not so in Hainhault Forest. In the latter, which was most favourable to the growth of oaks, the Crown had rights; therefore that Forest, containing near 4,000 acres, was inclosed, and 2,000 acres (the best of it) has been fenced off, and appropriated by the Crown. This, too, is more vicinal to London,—extending from Ilford to Chigwell-row; and, moreover, the standing timber at the time was worth, if not more than the freehold, at least as much. In 1852, 27,000*l.* worth was sold off: how much more remains, it would require an actual survey to tell, but probably 50,000*l.* yet to be realized,—a pretty windfall this to the Crown!

An attempt was made to inclose and appropriate the whole extent to the Crown: that was, however, resisted by the holders of ancient tenures in Chigwell-row,—such as the lord of the manor of that ilk, Mr. Smith, of Sooketts Hall; Mr. Shillibeer, of the Grove, and numerous others; so that haply, as yet, the glorious woodlands and glades of that charming locality are still open to the but too unfrequent visits of smoked and kippered Londoners, who are for the most part unconscious of the sylvan privileges in store for them,—the swelling combe of Chigwell, the wide and verdant slopes, its massive gnarled oaks and native bosquets; but most the enchanting views,—from Highgate with its lofty spire, seen dimly over mantling smoke, the City and its towers are faintly sketched, to make a softened background for the flood which here reveals itself,—a thousand masts with countless spreading sails, in favouring hours (which seldom bless our clime) disclose the silver stream of Father Thames,—and then the banks and docks and Greenwich piles, till Woolwich and its crowning hill lead back the wandering vision to the wavy plain.

So far, a reserve has been made for the people of 1,000 acres. Oh! let not the destroying axe molest a branch of the royal oaks, the growth of ages: spare them for the sake of age—of youth—of the toiling classes, whose property they are: spare them for the present generation, and their posterity: already have they witnessed many a pic-nic—many a love-sick tale. Our host Smith, at the rural *brewery*, is the best jurisconsult as to the property in those trees, as well as to the benign influence of simple agrestic revels in their shade.

As to Epping Forest, even now, some 12,000 acres, *the Crown has no property in that*,—the soil is not so favourable for timber: it is, nevertheless, clothed in wood and verdure, stands high, with swelling hills. To whom does that belong? To the people. If required for the recreation of crowding millions, surely royal forest rights could not interpose. And yet it is astounding how little is known of this fine expanse, so fit for the recreation of multitudes. The high beeches and other eminences command wide and enchanting prospects; and that so few (comparatively) should frequent the place, is marvellous, seeing that it is but seven miles from the centre, and only five from Mile-end to the hither fag end of the forest: the extent, however, ranges ten miles from end to end, and what will this be when the rail shall be laid down along the whole length? At present but a Sabbath day's journey there and back,—it will hereafter be scarce two hours!—just the distance of the Crystal Palace.

There are too few places of resort for the business population to rusticate, while the encircling towns and cities, yearly spreading round the metropolis, make occasional excursions a necessity: the advantage to public morality and taste, as well as to health, points out that reserves must be made for the inhabitants of a city grown to excess of agglomeration. How few can go to Richmond? still fewer to Windsor Park. Hyde Park is too close, too fashionable; Primrose-hill and the Regent's are encircled with houses; Victoria Park (it is so called) has no inviting characteristic other than its name. But to talk of a *fête champêtre*, or even a junketting party, thither, would be ridiculous: there is enough of the artificial in the exquisitely floral, and highly ornate arcades of the Crystal Palace. What the people want is liberty,—simple liberty, to enjoy the fair face of Nature; and that, uncared and untortured by the artist or gardener. Leave, then, Epping to Nature, and Nature to the people.

It is quite clear, and we have argued it often, that the wide extent of forests in England is a waste, a profligacy, and a crime. They create an erratic, freebooting, and lawless population—they stint the resources of an enormously swollen people; and whilst they demoralize the poor, they are a snare for the greedy rich, who push their borders dishonestly onward, encroach-

ing on the lands they covet (qy. is *Snareslrook* aptly named?)—yet as said before, those wastes ought to be enclosed with discretion, and ample spaces should always be left in the vicinages of great towns for the exercise and refreshment of such populations: industry is recompensed by the indulgence. If health is before wealth, that of the multitude should be studied: an apophthegm current 2,000 years ago is as applicable to our times as it was then: "*Salus populi*," &c. Attention is sometimes paid to the "*Vox populi*," more particularly when backed by demonstrations: without these even published remonstrances are but the still small voice of—

QUONDAM.

CHURCH-BUILDING NEWS.

Albury (*Herts*).—The chancel of the church here has been restored at the cost of upwards of 400*l*. by Mr. Wm. Brown, of Lynn, under the direction of Mr. Pritchett, architect; the whole expense defrayed by the Venerable Archdeacon Jones.

Moulton.—There is talk of a restoration of the parish church here.

Langley.—About two years since the Rev. W. B. Pusey, rector of Langley, being desirous of erecting a new church in the parish, in place of the old structure, undertook the entire work at his own charge. The consent of the parishioners having been obtained, the work has since made due progress till its completion, and the edifice was consecrated by the Archbishop of Canterbury, on Tuesday before last, and opened for public worship. The building is in the Pointed style, consisting of a nave of three bays, a large chancel, a steeple, and spire, with a porch on the south side. The interior of the building is elaborately decorated. The entire roof and walls are highly coloured, and all the windows are filled with stained glass. The entire church is paved with encaustic tiles; these being alternated in the chancel — which rises by easy grades of low steps towards the communion-table, with slabs of grey Sicilian marble. The "altar" railing is of metal, elaborately designed and wrought; and a couple of sedilia are placed near the table, with a niche above to hold the bread and wine till required for the Sacrament. One of the bays is stalled for a choir, with a seat partitioned off for a reading-desk. The pulpit is placed just below the chancel step, but there is no desk or seat set apart for the parish clerk. The sittings are all of massive oak, open, and intended by the rector to be left free and unappropriated—females occupying one side of the church, and males the other,—an arrangement, however, which, according to the *South-Eastern Gazette*, the parishioners have refused to sanction. The windows are fitted with pictorial representations of sacred history, embracing the Fall of Man, the Expulsion from Eden, the Deluge, the Offering of Isaac, the Annunciation, the Nativity, and the principal events in the life of our Saviour, with the Crucifixion, Entombment, Resurrection, Descent of the Holy Spirit, and several incidents in the lives of the Apostles, with a representation of the Last Judgment; the whole in a high style of ornamentation.

Bristol. — St. Nicholas Church was to be re-opened on Sunday last. The edifice has been painted and coloured throughout, the windows stained, new stairs made to the gallery, the organ repaired, and the gas turned into the old chandeliers. Portions of the heavy cornices, it was found on examination, had got loose, and it is wonderful, says a Bristol paper, that they had not fallen before.

Carmarthen.—The district church of St. David, Carmarthen, has recently been enlarged in anticipation of its becoming a parish church, so as to afford accommodation to every parishioner free of expense. The addition consists of a nave of four bays, with a clerestory, north and south aisles, and south porch. The length of the nave and aisles is 50 feet 6 inches, and width, 25 feet and 11 feet respectively. The height from the floor to the apex of the nave roof is 60 feet. The aisle windows are of three lights, and at the west end is a large four-light window, 35 feet in height. The clerestory contains windows of two lights, and cinque-foiled circular windows alternately. The roofs are covered with dun-coloured tiles, with an ornamental crest. The walls are built with stone from the neighbourhood in random coursed work, with dressings of Combe Down stone. The area of the nave and aisles is seated with open benches, stained and varnished. The arcades separating the nave and aisles are of Bath stone, with moulded capitals and bases. Colour has been introduced in the roofs, which are constructed on carved ribs resting on stone corbels. The floor, with the exception of that part occupied by seats, is paved with black and red tiles. The style of the addition is of the Early Decorated period, and as it in no respect resembles the original building, it is to be hoped that the time is not far distant when a chancel and transept, with a central tower and spire, as designed by the architect, may be carried into execution, and a greater harmony of effect produced than at present exists in the two portions of the church. The additional accommodation amounts to 1,000 sittings, making altogether 1,500. The work has been carried out by Mr. J. James, of Narbeth, from the design of Mr. R. K. Kenson, architect. The plastering was done by Mr. Thomas, of Carmarthen.

Derby.—A monument has just been placed in the Cemetery, Nottingham-road, Derby, to perpetuate the memory of Captain Thorold, of the First Regiment of Derbyshire Militia. It consists of an obelisk, 15 feet high, worked in Yorkshire stone, and weighing 6 tons. The base has a moulded pedestal, with a carved wreath: surmounting this is the obelisk, with the flag of the regiment, together with the sword, scabbard, and sash of the deceased officer, represented on the front side. The inscription is on the pedestal.

Wakefield.—The foundation-stone of a new "Wesleyan Reform" chapel, for Brunswick-street, Thornes-lane, was laid on Tuesday before last.

Leeds.—The consecration of the district church of St. Barnabas, Brewery-field, Holbeck, took place on Wednesday before last. The church is situated on the north side of Sweet-street, on a vacant piece of ground presented by Mr. T. Benyon and Mrs. H. Benyon. The church is in the Middle Pointed style of architecture. There are 700 sittings, with stalls in the chancel, and a great proportion of the seats are free. The windows are glazed with tinted or cathedral glass, and after daylight the building is lighted up by sun-lights in the centre roof, under the direction of the Leeds New Gas Company. This, according to the *Leeds Intelligencer*, is the first instance in which this mode of lighting has been applied to an ecclesiastical building in this part of the country. The following were the contractors for the work, in their several departments:—Mr. T. Whitely, Woodhouse, mason; Mr. T. Hunter, joiner; Mr. Preston, slater; Mr. Garlick, plasterer; Mr. Bollands, Bradford, plumber; and Mr. Boyle, of Burmantofts, the tiles for the floor. The warming apparatus and the bell were supplied by Messrs. Singleton and Tennant. Mr. Chantrell, the inspecting architect of the Incorporated Society, reports favourably of all the work.

Thorner (*Leeds*).—On Wednesday in week before last St. Peter's Church, Thorner, which has been considerably enlarged and improved, was re-consecrated by the Bishop of Ripon. The church has been almost entirely taken down and rebuilt. The roof, chancel, vestry, and all the pews, stalls, and sittings in the church, as well as the pulpit, reading-desk, organ, and font, and the whole of the windows and stone work on the north side, have been removed. A new and enlarged chancel and a new vestry have been built, and the other parts of the church have been rebuilt and restored. In the restoration the original style (Perpendicular) has been followed. The wall of the south aisle and the porch have been rebuilt, and suitable windows inserted in the north aisle. The old arcade has been repaired. The nave roof, of ancient design, being found too decayed for restoration, has been replaced by a new one identical in design. The floor has been reseated with low open seats, affording accommodation for nearly 500 persons. The tower has been opened to the nave by a new arch (screened across); a useless west doorway blocked up, a new west window added, and the ringers' floor raised. Eastward of the nave the whole is new. The chancel is co-extensive with the old one, with the addition of north and south aisles, under separate gables, each opening into the adjacent nave aisle by one, and into the chancel by two arches, enclosed by oak screens. The chancel roof is divided into five bays by principals, with arched braces, and tracery above the collar beams. The bays are panelled up to the ridge, with bosses at the intersections, and an embattled cornice at the eaves. The chancel fittings are of oak. The floor is of encaustic tiles, those in the sacrarium being of a richer pattern. The glazing of the east window is of plain quarries, but a stained glass window is contemplated. Under the vestry is a hot-water warming apparatus, supplied by the Low Moor Company. Externally the old portions of the fabric have been repaired, and the soil has been lowered. The whole of the alterations have been made from designs prepared by Mr. Healey, of the firm of Messrs. Mallinson and Healey, of Bradford, architects.

Gateshead.—The new Wesleyan chapel at Low Team, Gateshead, was opened on Sunday in week before last. The contractor was Mr. W. Elliott, of Low Team. The building was designed by the contractor, who is also, it seems, a local preacher. The total number of seats is about 200, of which one-half are free; and the entire cost of the structure will be about 300*l*. It is intended to light the chapel with gas.

Edinburgh.—The Lord Provost's committee of the town-council have agreed to a report, recommending as the most desirable of three proposed sites for the restoration of Trinity College Church, the space of ground at the south end of Waverley-bridge, and immediately to the west of Warriston-close-stairs, if it can be obtained at a reasonable price. The other sites considered by the committee were the ground originally purchased for the rebuilding of the church at the steps of the Calton-hill, and the site near Burns' Monument, where the stones of the ancient edifice are piled. The committee are said to recommend that a report should be taken from Mr. Bryce as to the probable expense of the foundation.

Glasgow.—The interior renovation of the cathedral is now proceeding with more than usual activity; and in the course of two or three months it is expected that the Principal will take up his position in it once more.

Ayr.—On Friday evening before last, says the *Ayr Advertiser*, the inhabitants in John-street, Wallacetown, in the vicinity of the Territorial [Free] Church in course of erection there, were greatly alarmed by a heavy fall of masonry, which shook the ground around, and which was rapidly succeeded by a second fall of a similar nature; and it was found that the southern gable of the church, which was entirely completed, had given way and fallen towards the river. It had been observed two or three days previously that the foundation had sunk, and that this end of the building—which, being at the foot of a slope, was very lofty and heavy—was much rent. We understand, adds our authority, that the loss will not fall on the builders (Messrs. Fergus and Clark), who executed their work according to specification. A bazaar was held in Ayr last summer to assist in raising funds for the erection of this edifice, and it was expected that the building would be opened in the spring, entirely free from debt.

RECOLLECTIONS OF PETER NICHOLSON.

Few men have done more to extend useful knowledge amongst those multitudes who are engaged in building operations, than the gentleman whose name heads the present article. Before the author of the "Architectural Dictionary" undertook to apply the rules of mathematics, and simplify them for the use of the ordinary mechanic, the waste of materials and uncertainty of various operations in carpentry, masons' work, bricklaying, &c. was very great; and it was a step in progress when the works of Peter Nicholson, on the "Geometrical Construction of Staircases," &c. rendered matters which before could only be managed with great difficulty, by a few rules, easy to all of common comprehension. At the time of the publication

of these books the great body of our building workmen, and many of the so-called architects in the provinces, used what is sometimes called "the rule of thumb;" the saving, therefore, in materials, by the application of certain rules, it is difficult to calculate. It was in many other respects a great benefit to English architecture when Nicholson reviewed generally the application of mathematical principles. I have heard more than one architect say how much they owed to the hints of this useful instructor.

The writer of these brief notes, then a youth of about sixteen years of age, well remembers, twenty-three years since, his first interview with Peter Nicholson, who was then a man seemingly about sixty years of age. He was of middle size, rather stoutly built; his countenance pale, and the face full of intellectual expression: the perceptive organs were largely developed, and projected in a great ridge over the eyes, which were still further shadowed by iron gray, shaggy eyebrows: the head was well covered with hair of the same colour. It was a remarkable face, particularly the upper part of it, and one which the painters of the old school would, in the character of an alchemist or philosopher, have delighted to place in breadth of light and shadow, spectacles on nose, a loose-fitting blue dress-coat, with bright brass buttons, and of that particular cut in which the pockets were made outside of the tails, horizontally, behind: roomy nankeen pantaloons, and ordinary hat, completed the outward of the mathematician, as he was introduced to me by my kind and worthy teacher in the art of engraving. This took place at Newcastle-upon-Tyne. At that time the employment of the engraver was of a very miscellaneous character, and consisted of the cutting of door and coffin plates, lettering brass moulds for casting bottles, dog-collars, ladies' thimbles, crests and cyphers on plate, invoice-heads, card-plates, plans of estates, &c. illustrations of natural history, rough views of places, and twenty other matters. Mr. Thomas Bewick, the famous naturalist and engraver on wood, carried forward a business similar to this in the same town, and particularly prided himself on his skill in engraving clock-dials, many of which were at that time cut on brass, and elaborately chased;* nor were the varieties of engraving the only craft followed, for when the copper-plate printers, who then were not a very steady lot, took to drinking for a few days, the master engravers would doff their coats, tuck up their shirt-sleeves, and manfully throw off the impressions needed for pressing use.

Mr. Nicholson added to the already numerous branches of our business by producing rough drawings of cubes and other mathematical forms, which, with descriptive letters, he wished to have engraved on copper plates, and the construction of which he proceeded with great clearness to explain. This was the beginning of many works which I myself and a fellow apprentice engraved at intervals during five or six years. These consisted of illustrations of isometrical and common perspective, the projection of shadows, the construction of skew-bridges, conic sections, spiral lines, elliptic arches, &c. Many of them were most complicated affairs, and I have often since wondered at the quiet patience with which he would put up with the difficulty of making us understand. He seldom got out of temper, and if he did, it was almost worth putting up with it, in order to see the simple and kind way in which he would afterwards atone for it. Generally, he was in manner very mild and affable, and always willing to give information if it was asked for or required.

Many still alive well remember much useful knowledge and excellent advice in the principles of art which they have received from Peter Nicholson, who, like several other men of genius, was particularly modest and diffident of his ability.

The profits derived from the numerous editions of Mr. Nicholson's works must have been very great: the copyrights, however, had got into other hands, and the man who had conferred such decided benefits on the community by the publication of his useful practical knowledge, saved thousands, and so much advanced constructive art, was left in declining years to still labour hard and with but scanty provision.

By the leading architects and scientific men of Newcastle-on-Tyne and the neighbourhood, Mr. Nicholson was held in high esteem, and a public meeting was held in the town to endeavour to smooth his latter days, and press the just claims which his services had upon the Government. Many a warm eulogium was passed at this meeting on the venerable mathematician. An architect to whom the town and district has been indebted for several noble buildings, and who at the commencement of life was an assistant to his father, who was a common cartwright in a little Northumbrian village, said;—"I, gentlemen, would never have been an architect had I not fortunately become possessed of the works of Mr. Nicholson." Some good resulted from the meeting, and the kind feeling manifested must have been cheerful to the old man. The statement of his claims was listened to with seeming attention and much civility by the Government, and promises were held out of consideration: the case, however, would seem to have, like many other deserving ones, got tied up with *red tape*, and a change of ministry having taken place, it was lost sight of altogether.

There may, in a certain way, be advantage in squeezing as much as possible out of a man of genius: it is, however, very wrong to drive the willing steed to death, and it was painful to me, on visiting Newcastle after an absence of a few years, to find Mr. Nicholson still fagging on with private teaching, and the production of fresh books: the mind was willing, but the faculty was impaired, and although the compasses trembled in the hands, and the instruction to the young men was not so distinct as formerly, he was still obliged to battle on.

Peter Nicholson was not a man possessed of much of the poetry of art or architecture, but few have been more useful in their generation.

AN ARTIST.

* When Bewick's fame was widely-spread, many celebrated persons who called to visit him were surprised to find painted on a board, "Thomas Bewick's Workshop."

PROVINCIAL NEWS.

Spalding.—At the "roof rearing" of the new Corn-Exchange here, the contractors, Messrs. Sharman, on Friday evening before last, treated the men engaged in the erection, to the number of between fifty and sixty, to a substantial supper at the Red Lion Inn.

Wisbech.—Arrangements are being made for procuring a site for the proposed waterworks for Wisbech. There are two sites, of about eight acres each, available, one at 120*l.* an acre, and the other, nearer Wisbech, but without so much clay, at 100*l.* an acre. The plans and specifications for the waterworks were received by the local board at the meeting last week, announcing the proceedings as to site, but the consideration of them was postponed.

Harwich.—The re-opening of Harwich National Schools took place on Wednesday evening before last. They have been re-erected from the design and under the superintendence of Mr. H. Darken, of Harwich. The boys' room, on the ground floor, occupies an area of 1,000 superficial feet, and is of proportionate height: it is approached by a porch from the churchyard. The girls' room is of same dimensions, with a canopy roof and ornamental girders, &c. and is approached by a staircase from another porch, which forms a wing to the western gable, and is carried up in the form of a tower, upon which a bell turret is erected. The staircase is lighted by an ornamental stone window, glazed with quarry lights in coloured glass. The windows to the schools are in imitation of oak, and are glazed with fluted glass, with swing casements for ventilation. The master's house is placed at the eastern end of the schools, and contains six rooms and cellar. The outlay has been between five and six hundred pounds, principally raised by voluntary contributions, and by a ladies' fancy bazaar.

Windsor.—The new buildings erected for the purposes of the House of Mercy, at Clewer, were formally opened on Thursday before last, by the Bishop of Oxford, assisted by the Provost of Eton, chaplain to the House of Mercy, the Bishop of Barbadoes, and upwards of 100 others of the clergy, with a numerous miscellaneous assemblage of ladies and gentlemen. According to the local *Express*, an amount not far short of 6,000*l.* has been expended in the erection of the buildings, and it is said to be in contemplation to erect an additional wing for the accommodation of fallen women who at one period belonged to the superior classes of society. This is estimated to cost an additional 1,200*l.* of which a portion has already been subscribed. The altar was covered with embroidered cloth, and behind it was a cross, artistically designed in flowers, while on each side were two ornamental candlesticks.

Wingham.—Sir Walter James, bart. has announced his intention to give, through means of the Nonington, Wingham, Ash, and Eastry Agricultural Association, two prizes—one of 10*l.* for the best plan, tender, and specification for a set of cottages to accommodate the families of agricultural labourers, the cost to be limited to 100*l.* per family; and the other a premium of 5*l.* for the best short essay, on the accommodation required for lodging and boarding single men, being farm servants.

Portsmouth.—The new bridge at the Landport and Southsea end of the Milldam-road will shortly be completed. It is being built upon seven stone piers, laid on a concrete foundation. The roadway is formed by a layer of concrete upon oaken planks bolted to the ribs underneath; the ordinary material for roads being laid above all. On its completion, a commodious thoroughfare will be formed between Portsea and Southsea.

Rugby.—At a meeting of the Rugby Town Hall Company on Tuesday in week before last, it was resolved to name 2,500*l.* as the highest cost of the new building; and it was at the same time resolved, that plans and estimates should be advertised for in the *Builder*.

Liverpool.—It is said that the foundations of one of the Albert Dock warehouses are giving way under the heavy loads packed into it.

Manchester.—The new public hall in Peter-street is making progress. A report by Mr. Walters states that the large hall is nearly roofed in. The elevation in Peter-street is now above two-thirds its height, ready for the floors over assembly-room, and the work generally is in a forward state for roofing over this portion of the building. The roof of the hall has been slated and glazed since the date of the report.

Salford.—It is expected that the new market, erected by the corporation, in Chapel-street, Salford, will be opened next Saturday. It is 120 feet long by 30 feet wide, and contains an area of 400 yards. An equal extent of open land behind the market can be used for open stalls, should the accommodation be required. There are also five lock-up rooms for the use of the occupants of the market. The shops which front Chapel-street will have plate-glass windows, and the others sliding shutters. Gas has been introduced, not only for lighting but heating stoves. Water is supplied to each shop or stall: the shops are each 10 ft. by 8 ft.: they will be occupied by butchers, fishmongers, and greengrocers. The market front is in the Tuscan style, with arches crowned by vases, medallions of the Queen and Prince Albert, figures of Britannia and Justice, the borough arms, &c. Mr. James Evans, the Salford district surveyor, designed the building, and it has been erected under his superintendence. The cost will be about 1,200*l.*

Leeds.—Notice has been given, that application is to be made to Parliament in the next session for an Act (among other things) to enable the corporation of Leeds to "secure to the public, places of public resort or recreation, and for that purpose to purchase, by compulsion or otherwise, and to dedicate to the public use and enjoyment for ever, the whole of the commons, moors, or wastes, with the cottages or tenements thereon, at or near Hunslet, in the township of Hunslet and parish of Leeds."

Sheffield.—The Sheffield poor-law guardians having proposed, as already noted, to provide a new workhouse for the union, a rate-payers' memorial has been sent to the Central Board, praying them to withhold their sanction to the proposal; but this the Central Board, on consideration, have declined to do.

Dronfield.—Contracts have been entered into for the erection of gasworks and completing

the undertaking, in accordance with plans by Mr. Cashin, architect, and Mr. Hedley, engineer. The contract for the building of works, &c. has been let to Mr. Gibson, of Green-hill, for 606*l.*; and that of supplying and fixing machinery, apparatus, and pipes, to Mr. Howard, of Rochdale, for 710*l.*—both sums being considerably below the estimates submitted by Mr. Cashin to the promoters. The capital of the company is 2,000*l.* subscribed in 400 shares of 5*l.* each. The whole works, however, will, according to the contracts entered into, be completed for a sum which will leave a balance of 400*l.* or 500*l.* in hand, to meet any extension of pipes, &c. beyond those included in the contracts. The contracts are to be completed in March next.

West Hartlepool.—At a recent meeting of the Local Improvement Act Commissioners, according to the *Gateshead Observer*, the design most approved for the new market was that of Mr. Thomas Oliver, jun. architect, Newcastle. A sum of 1,685*l.* was ordered to be paid for the new-market site. Mr. Smith, the surveyor and inspector of nuisances, sent in his resignation, which was accepted.——Building operations in West Hartlepool, it appears, proceed with vigour—the demand for houses continuing fully equal to the supply. In a month or two Church-street will be completed.

Jarrow.—The docks here are going on satisfactorily, the contractors (Messrs. Jackson, Dean, and Gow), having about 600 men engaged in preliminary operations; and in the course of two months they expect to have 2,000.

Edinburgh.—Complaint was made last week to the city council, that the Queen's-park, which is public property, was being encroached on by the erection of an ironfounder's yard on the actual turf of the park. The council resolved to request the Lord Provost, who was in London, to obtain some explanation of the circumstance from Sir B. Hall, or otherwise to memorialize the Commissioners of Woods and Forests on the subject.

Aberdeen.—The buildings of a reformatory on an extensive scale, and intended as a model institution as well as for local benefit, have just been commenced at Old Mill, about two miles from the city of Aberdeen. The estate of Old Mill, consisting of about eighty acres, was bequeathed by the late Dr. Watt, of Newdeer, for a reformatory of this character, and, the county having come forward to some extent to supplement the funds, it is expected that the new institution will become a most efficient one.

THE CRYSTAL PALACE AS AN EDUCATOR.

As I think it possible that your correspondent, "W. S." may be the representative of many who misunderstood my previous communication under the above heading, perhaps you will allow me to enter into a further explanation of my objection to the present classification and arrangements at the Crystal Palace, expressing as I know that I do, the sentiments of a very large number of the visitors to that establishment who look upon its contents in a moral point of view, and regard it as having some ultimate bearing upon the character of the nation generally, as well as upon that of its visitors in particular.

In the first place, then, I fear that the expression I made use of, that "the Crystal Palace must either become a School of Art," &c. has been interpreted as though, using it in a particular sense, I meant to say that it would become a studio for the education of young artists, exclusively, as the schools of art in London and other places. This would be obviously absurd, as no possible number of students would support the institution, even if it were fitted (which is not the case) to become such an academy. But it is admirably well fitted for a school of art in a general sense, *i.e.* one in which every human being who enters it becomes a student, eager for instruction, and who finds sufficient recreation in the material by which that instruction is imparted. These are the students who will make the Crystal Palace successful, as a commercial speculation, and they must consist of every man, woman, and child, in the kingdom. The majority of these will enter the building ignorant of history and of art, ignorant of most of the manufactures of their country, unacquainted with the processes by which the commonest articles are produced, and without being able to see what is beautiful in nature, and is there reproduced in many versions by the artist; but I assert, that it is the fault of the managers and classifiers of the Exhibition if they depart still ignorant of either. This may seem a bold thing to assert, yet who, knowing the influence of public exhibitions, and remembering the capabilities of the Crystal Palace, can venture to deny that under a liberal and judicious management of the Institution such might be the case. Why should not the arrangement of the courts be a modelled history, and the classification of the sculpture inculcate morality? One valuable feature of the Exhibition in Hyde Park, was the large number of manufactures which were explained, both by the actual working of the machines and by examples of the raw material in various stages of its progress until it became the manufactured article. This is a phase of industry not sufficiently represented at Sydenham, and is an immense loss.

Your correspondent allows that the contents of the Crystal Palace are "scattered somewhat promiscuously, presenting," he adds, "as nature does, a variety of characters at a glance." Now, though nature from one point of sight may be seen in many characters, and though the object by which any general effect is produced may be heterogeneous, yet a student of nature knows that each part contributes what is required for the completion of the whole, and by filling its own proper position only, results that unity which is characteristic of the works of the Creator. Though nature has not placed the Circassian and the Nubian side by side, and though the "stony records of the past," the Apollo and the Sphinx, are widely severed, yet when we search and drain every country of its treasures for illustration of the epochs of past ages, and bring them altogether under one roof for comparison, it is not positively necessary that the distance which geographically separates them in reality, should be represented on a smaller scale by their relative position in the Crystal Palace. A man goes to it, and expects to find its contents readable, like a book in his own language, a history of past and present times, and not a map indicating position, or a wrongly-bound volume with its pages not running in consecutive numbers. He expects to find there an illustrative index to the contents of the whole earth, and naturally supposes it is arranged chronologically in historical order.

We know that it is only by comparison and analysis we may hope to arrive at rational conclusions concerning the true and the beautiful; and if there is no opportunity of ascertaining either by these means, how are the thousands to be led into that love of the beautiful which your correspondent says must be the result of, and result in, the success of the Exhibition?

Doubtless, to a professional student (which I take to be the meaning of the expression of an earnest student), it matters little whether the Apollo be placed in the Sheffield court or the Grecian. He knows who produced it, and the period in which it was produced. Not so those for whom expressly the Palace was created, and they go there to learn such things. A London mechanic who visits the Exhibition, learns only by the pedestal which is the Dr. Johnson from St. Paul's, and which the Farnese Hercules from Rome. There they both stand in the nave of the building, the former a nude, the latter a seminude, but both muscular figures, and both reclining in much the same position. One, the latter, is the embodiment of physical force, which, though rather diagrammatical in its treatment, is a fine piece of modelling, and a magnificent development of muscular strength. This is the impression the artist intended to convey to the mind. The former is an awkward piece of obesity, badly designed, and badly modelled, anatomically developed in order to give an idea of greatness, overlooking the fact that Johnson's greatness was his Herculean *mind*, and not his Herculean *muscles*. Nevertheless, here they both stand, and nearly side by side. Does their position in any way indicate their history, or is that left to the pedestal? Is the public to look upon both as examples of the "grand and beautiful," or regard them rather merely as epochs in the history of sculpture?

It is said by your correspondent that the handbooks furnish a key to the history of art as seen in the contents of the Crystal Palace. They are certainly admirable essays on their respective subjects; but to call them handbooks, is a cruel mockery. To call them *pocket*-books would more correctly represent their locality after being purchased by the visitor, who can seldom read argumentative compositions on the details of a subject when the reality is before his eyes, and so much more attractive. Compare—both in price and character—the handbooks of the Crystal Palace with the first part of a handbook to the Museum of Ornamental Art at Marlborough House. The latter has 108 pages of descriptive matter, concise in its character, and full of information, and contains nearly eighty artistic engravings: its price is sixpence. Suppose three more parts to follow this with the same amount of text and the same number of illustrations: a very valuable catalogue will be the result, for the comparatively moderate amount of two shillings. Even this is a large sum for working people to pay,—but turn from this handbook to those of the Crystal Palace: each court has its special little volume, with its special price, so that a complete handbook of the whole collection is an expensive work, of little use except to the well educated, having scanty and bad engravings, and essaical descriptions.

These handbooks are a grand and fundamental error. There is in them too apparent evidence of the commercial character of the Crystal Palace, and this portion of the speculation does certainly detract from the popularity and usefulness of the whole.

Let liberality be used. A handbook worthy of the name should be of a tolerable size, say octavo (the size of the catalogue at Marlborough House, before referred to), its contents classified in divisions, which again should be divided into historical groups; the principal, or representative objects in each group be enumerated, with a concise and clear description; and, as a *sine qud non*, each of the more important objects should have a well-drawn outline appended to the description. Such a book might be published in two parts; the first, containing all that related to ancient and modern history and art, with their accompanying illustrations; and the second be explanatory and illustrative of the strides of civilization, the present state of commerce, the processes of manufactures in this and other countries, with the other contents of the Exhibition not enumerated in the former part. They might each of them reach the dimensions of 200 pages, and contain the same number of illustrations. These parts, strongly stitched, enclosed in a loose leather cloth cover, I would have sold for not more than a shilling each. Every visitor would find it necessary to possess a copy, which would be really a handbook whilst at the Palace, and a delightful memento of the Exhibition ever afterwards.

It need not usurp the place of the present books,—they are valuable to the professional student and the scholar,—but should supply to the uneducated what nothing else can, viz. the information required to understand the Exhibition. It may at first sight appear doubtful in a commercial point of view, but if carried out in a spirited manner, I am convinced that it would be anything but a loss to the company, whilst its convenience and influence would be inestimable and immeasurable.

The mistake is, that the management of the Crystal Palace is not sufficiently comprehensive. It is treated too much as the speculation of individuals, or at most, as a national toy, to be amusing on holidays. This is not its mission. It may be the means of enlightening an ignorant nation, of educating an uneducated people, of elevating public morals, of leading and guiding public taste, and enabling it to appreciate private talent; of eliciting latent genius, and encouraging the persevering; and thus, by benefiting every class of society, improve the whole character of the nation.

WALTER SMITH.

THE ROYAL ACADEMY MEDALS.

On Monday, the 10th instant, the medals of the Royal Academy were presented to the several successful candidates. The students in architecture appear to be deficient in energy. For the gold medal there was but one design, and this the academicians considered did not deserve the medal. The medal was offered for the best design for an edifice for the exhibition of works of art, science, and industry. The author of the design exhibited had evidently taken the Exhibition building as a model, adding a Grecian elevation, very roughly done. Worse still; for the silver medal, offered for the best accurately figured drawing of the Great Hall of Hampton Court Palace, plan, longitudinal and transverse sections, and details, there were no candidates!

The following medals, together with Reynolds's "Discourses" and Lectures, by Professors Barry, Opie, and Fuseli, suitably bound and inscribed, were awarded:—Gold medal for the best historical picture—subject, Death of Alcibiades, Timandra being present,—to Mr. Joseph Powell. Gold medal for the best composition in sculpture—subject, Eve supplicating forgiveness at the feet of Adam,—to Mr. John Adams. Silver medal for the best study from the living draped model, size of life, to Mr. White Brown. Silver medals for the best from the Life School, to Mr. Philip Richard Morris, and to Mr. James Waight. Silver medals for the best drawing from the antique, to Mr. Samuel John Carter, and to Mr. George Augustus Reson. Silver medal for the best models from the antique, to Mr. Henry Purcell: an accident happening to this model, and through ill-health of the author, it was not done in time to be admitted for competition, but by a praiseworthy act on the part of his opponents, who signed a memorial to the academicians for the model to be admitted, it was so, and became successful. For the second best to Mr. Samuel

on; for the third best to Mr. George James ller. Silver medal for the best drawing of perective to Mr. Thomas Sich. Silver medal for the st drawing in sciography, to Mr. Augustus Henry rker. Silver medal for the best medal die to Mr. seph S. Wyon. The proceedings terminated with address from the President, Sir Charles L. stlake.

AUSTRALIAN NEWS.

THE Adelaide Australians, happy mortals, have thing to think of but "What shall we do with our rplus?" This is literally the leading question of e day by last accounts. The *Adelaide Observer*, in aling with it, remarks that "it is altogether unnessary to retain such huge balances: it is not the stom in England, and there is nothing in the situaon of this colony," it adds, "to justify such an extraordinary procedure. . . . There are, doubtless, any public works of importance loudly demanding e attention of the Executive: why should not our are money be usefully employed in such works?" irst of all, it recommends the development of colonial ads. And then a Quarantine Hospital and a Health stablishment might be erected on the peninsula or me other convenient locality. An electric telegraph, continues, should be immediately constructed beween the city and the port. A couple of powder agazines, it is conceived, are much needed: and so a. The surplus in question amounts to no less than 86,822*l.* besides 30,700*l.* invested in port railway onds, and, continues the editor of the *Observer*, the agent-general in England has a cash balance in and of 29,131*l.* 7s. 3d.; the secretary of state olds; 'for agent in England,' whom we presume to e the colonial architect, now absent on leave, the am of 36,000*l.*; and the agent-general holds, in ddition to cash balance, Exchequer-bills to the amount f 40,594*l.* 8s. 10d. Here we have a sum amounting o 105,726*l.* 16s. 1d. in the hands of one, two, or hree persons—it is not clear which—described as 'agent' and as 'agent-general.'"

On the subject of roads, the same writer calls ttention to "the enormous sums of money that are eing consumed in the formation of public roads, and o the comparatively small results which appear to be chieved thereby." During the last two or three ears this "road question," it appears, has been rising teadily to greater importance, and it is urged that ome decisive steps now must be taken to meet it. After some strictures on the constitution of the Road Board, the writer of a leading article on the subject ays,—"One thing is clear,—money must be forthoming: if the colonists want good roads, they must urnish the funds for making them. And how to get hese funds—there is the knot of the question." Hence the reference to the roads in considering what should be done with the really handsome and enviable surplus.

At the port improvement progresses. A large saw-mill establishment is about to be built there, and patent vertical saw-mill machinery of 20-horse power had lately arrived, in July last, from Glasgow, being an improvement on some Great Exhibition prize machinery.

Amongst other new works about Adelaide, we note the opening of the new city market; the erection of a proposed church at Glen Osmond, for which operations were commenced in June last; the erection of an extensive building about 100 miles from Adelaide, tenders for the masonry and the carpentry of which were advertised for about the same time by Mr. W. Weir, architect; and a memorial stained-glass window for Christ Church, Adelaide. This window had been designed and executed by Mr. E. Brooks, of Poole-street, North Adelaide, and was fixed in its place just before the last despatches were sent off in August. It is placed in the east end of the church and is described as being in the Norman style, and consisting of three geometrical forms. The centre contains a decorated monument of three sides, with representations of Faith, Hope, and Charity at the several angles. It is this central portion of the window which is executed in stained glass. It is of a rich gold colour, with frosted glass for the background, and surrounded by a border of deep blue. There is on the opposite side of the church a blank window, in which the rev. incumbent was desirous to have inserted a stained-glass window to the memory of the first colonial chaplain, the late Rev. Mr. Howard.

The *Banner of Belfast*, in the colony of Victoria, of date 28th July, gives a description of a "Church of England" recently erected there from a design by Mr. Nathaniel Billing, of Belfast. The stonework had been completed as far as then contemplated, the tower being only built so far as its connection with the nave rendered necessary. The style is Early English, of the lancet period. The material is blue stone in irregular courses, with dressings of freestone from near the river Merri, on the Belfast side of the Punt. The plan is cruciform, with the tower at south-west angle, fully developed chancel (the only one, it is believed in the colony), and with vestry on the north side. The windows are of three and two lights, with heads carved by a resident carver. The clear internal length from west to east, including chancel is 116 feet, the internal width from north to south, including transepts, 82 feet. The chancel is 31 feet long inside, connected with the nave by a lofty arch of 17 feet space: similar arches, but somewhat lower, connect the transepts with the nave. The clear width of nave is 28 feet. The buttresses project 3 feet on each side-wall. The height to top of spire will be 127 feet. The roof is open to the ridge, making a clear internal height of about 39 feet. The architect also furnished a design for the Roman Catholic Church of Geelong, but declined to accept the second prize (75*l.*) awarded to him for it.

A resident of Melbourne says,—"in our literary world two new candidates for public favour have just appeared. The Australian *Builder* promises to supply a want that is more felt here than in the old country, where such a publication has long been deemed a necessity. The Melbourne *Punch* is an old friend with a *new face*, in which the lineaments of his English sire are sufficiently preserved to excite our hopes that the merry monarch of Fleet-street will become naturalized in Australia."

THE ARCHITECTURAL MUSEUM.

THE autumn session was terminated on Monday, the 10th instant, with a lecture "On the Formation of a National Museum of Architectural Art," by Mr. C. Bruce Allen, which, in spite of the cold weather, was well attended. At its close, Mr. Lomax announced to the meeting that the Museum would be shut during Christmas week, but that it would afterwards continue open on Monday and Wednesday evenings till further notice; that the *award* of the prizes would take place early in January, but that the *presentation* would be deferred till the spring, when a special meeting would be held for the occasion; that the committee hope shortly to announce the course of lectures for the Midsummer session of 1856, together with the particulars relative to the prizes for that year; and that amongst the subjects of competition, metal-work will have place.

Art workmen were reminded that they could secure all the advantages of the Institution, including admission to the lectures, and the annual meeting of the members, by a subscription of 5*s.* a year; and their attention was called to the present moment, as being a good time for entering their names, as the subscriptions become due on January 1st in each year.

On the whole the session has been very successful, and the lectures have been very well attended.

WHAT ARE WE TO DO?

DO, pray, come to my assistance. I am quite bewildered with the various ideas and theories now put forth, as connected with the architectural world. A certain set—call them, if you please, the Anti-Restorationists—tell us, that no old work should be restored; that the ancient stone should, above all things, be respected; that the design of a beautiful building may perish from off the face of the earth,—it may become like a blank page, or as devoid of architectural appearance as an old stone quarry to the general observer; but it must not be touched,—no matter if every line and feature can be sworn to, the restoration is not *the* thing, and all interest is consequently gone.

"A thing of beauty is a joy for ever," as you very truly observed some time ago; but the Anti-Restorationist says, all beauty is gone if the object be restored, from which I conclude that the beauty is artistical rather than architectural: the tints and colours on the stone, the romance connected with a bygone age, the identical stone itself, and not the architectural features, are the *desiderata*: the thing of beauty of the fourteenth century is not such if repeated in the nineteenth century. How am I to reconcile this apparent anomaly?

I most thoroughly appreciate and delight in the appearance of an old building, and am fully aware that, however beautiful the design of new work, or a strict copy from old, may be, many years must elapse before it assumes the charming effect which age alone can give; but I cannot understand that excessive sympathy with old stone which will sacrifice a splendid composition, and be content with a crumbling and unintelligible mass, in lieu of what all acknowledge to be beautiful,—will, in fact, care nothing for the picture so long as they can retain the canvas. Pray enlighten me, and let me know if our much-abused friend, "Common Sense," has any hand in this movement, or whether it is simply a whim and fashion of the day.

In glass-painting, again, we have one set of artists going one way, another in a directly opposite course. The first say, Let us have nothing but repetitions of old work, the human figure humpbacked, wry-necked, with distorted limbs; animals and architectural arrangements that are simply impossible; and absurd things, which, taken as a whole, might be creditable to *Charivari*, and the only point in which is, that the second commandment has not been broken; many of them copied from subjects which have been the best efforts of their originators, and carried out with the highest feeling, but without the necessary knowledge of drawing. How one of these ancient men would laugh at our folly, could he arise and find us copying his defects, rather than from his models; defects, too, which he would have gladly remedied had his opportunities been such as are now afforded.

How many years is necessary to establish the great interest? Would one of the most energetic copyists go back to the time of Watt for a steam-engine, and take his first production for a pattern, as being most mediæval? And would he not, when questioned as to his absurdity in so doing, flourish aloft the shield of "authority?" that dreaded word, at sound of which all unbelievers are bound to hold their peace.

The other set of glass-painters are the antipodes of those I have just been speaking of. If they wish to represent a man or an angel, they make them unmistakably what they are intended for; and all objects taken from nature are made to look as natural as possible. This treatment is surely correct?

I do trust that this letter may call from you or some of your well-informed readers a reply or replies, that may help to settle these very troublesome questions, and release us from such slavish notions; and you will thereby benefit many, by teaching them what to avoid and what most to seek for—amongst others, yours,

P.

STAINED GLASS.

St. Paul's Church, Brighton.—A three-light window, representing the Annunciation, Resurrection, and Feast of Pentecost, and tracery, with censing angels, has just been put up here, executed by Mr. Lavers, from drawings by Mr. Alfred Bell.

Leigh Church, Surrey.—A window, by the same artist, representing the Descent from the Cross, has just been put up in this church, which was reopened on Monday, the 10th inst.

Buttermere Church, Surrey.—Two windows have been erected here, of Lavers's printed quarries and borders, under the directions of Mr. R. J. Withers, architect.

St. Andrew's Church, Plymouth.—Through the liberality of the Mudge family, the interior of this church has been further embellished by the erection of another stained-glass window (in memory of the late Admiral Mudge, and his wife). The work has been executed by Messrs. Wailes, of Newcastle-on-Tyne, whose reputation is considered to be well sustained by it. The centre bay of the tracery of the window contains a shield, with the motto of the family, and "All's well," emblazoned on it. The two side bays indicate the profession of the deceased officer. Beneath, in the upper part of the four bays, is a row of four shields, with the family arms, quartered with others, and below the figures of the Evangelists. Beneath there are additional coats of arms, terminating with the inscription.

Preston Church, Weymouth.—Messrs. Gibbs have just executed, in stained glass, the east window of Preston Church, Weymouth. It consists of a large pictorial subject of the Crucifixion. The window is of three openings. The artists have introduced the two thieves, one in each side opening. In the grouping of the subject, they have avoided the cutting of the figures by the mullions. Perspective drawing has been introduced, with rich colouring, in the treatment of the window, the tracery as angels, bearing the monograms on shields. The window is the gift of some members of the family of the vicar, the Rev. Talbot Baker, and carried out according to their wishes.

Trinity Church, Weymouth.—The new window of stained glass in the chancel of this church is now completed. This work has been erected at the cost of the Rev. H. and Mrs. Cheales, of Ringwood, in memory of the late Mrs. Offley, mother of Mrs. Cheales. The tracery is filled with angelic symbols and angels bearing scrolls, on which are written texts of Scripture. In other parts are placed full-size figures of the Apostles, and the crucifixion and ascension of our Lord. Underneath is the inscription.

Magdalen College Chapel, Cambridge.—It has been determined to erect a stained glass window in the chapel of Magdalen College, in memory of the late Dean of Windsor. It was at his particular instance that the college chapel was restored and beautified. The expenses of the proposed window, which it is proposed shall be of the highest class, will be chiefly defrayed by the members of the college.

Weeton Church.—The internal appearance of this church has recently been enriched by the addition of two stained glass windows in the chancel, which have been subscribed for and presented to the church by a few tradesmen, from respect towards the Earl and Countess of Harewood, by whom the church has been erected and endowed. The subject of the window nearest the east end is "The Two Sacraments:" in one light there is a figure of John the Baptist baptising our Lord, and in the other light there is a representation of the institution of the Lord's Supper. The other window, immediately above the seat occupied by his lordship, contains a figure of St. Barnabas, St. Barnabas's day being not only the birthday of his lordship, but the name of the saint to whom the church is dedicated. The windows have been executed by Messrs. Wailes.

Carlisle Cathedral.—The remains of Archdeacon Paley being interred in the north aisle of Carlisle Cathedral, and the plain marble tablet, recording his name, &c. having recently been removed, it is suggested that a favourable opportunity is now afforded for the erection of a memorial window of stained glass, in honour of the renowned divine and moralist. Already offers of subscriptions have been made, and there is little doubt that contributions would be forwarded from all parts of the kingdom if the project were fairly set afloat under proper auspices.

Kendal Church.—Touching our mention of a new window in Kendal Church, a correspondent, "Arthur Billing," writes as to the other twenty-two windows in the building:—"The church consists of a nave, two aisles, chancel, and side chapels: the nave has a clerestory of sixteen windows: these were subscribed by some of the gentlemen forming the committee, the vicar, his wife, and the builder. Two windows at the west end of the north aisle are memorials: one window in the Bellingham Chapel is the same, by a gentleman of the committee. The great west window is also a memorial, to his son, by Mr. James Gandy, of Heaves Lodge. The window of the Lady Chapel, at the side of the east window, is a memorial to the ancient family of Chambre, by Major Chambre and his son; and there is one other of little pretensions. These will be found to make up the number alluded to. The two memorials at the west end of the north aisle, four of the clerestory windows, and the latter were executed by Mr. Pilkington, of St. Helens. Twelve of the clerestory windows, the great west window, that in the Bellingham Chapel, and the Chambre memorial, were executed by Mr. Warrington, of London.

GOLD.

INSTITUTION OF CIVIL ENGINEERS.

At the meeting on the 4th inst. the paper read was "On the Vertical Structure of the Primary Rocks, and the general Character of their Gold-bearing Varieties," by Mr. Evan Hopkins. In the course of it, the writer said it was commonly imagined that the diggers were obtaining great riches, and, therefore, that public companies ought to make great profits; but according to the author, this idea was founded in misconception. The diggers, on an average, barely obtained an amount of gold equal in value to 2*l.* per man per week; whereas the companies paid upwards of 3*l.* per week for similar labour: this fact, coupled with that of the companies not being able to procure productive gold ground, would, to some extent, account for their ill-success in the colonies.

The following statement was given, to show the value of gold obtained since 1851, chiefly by ordinary digging and washing, from two of the most productive gold regions in the world—California and the colony of Victoria:—

CALIFORNIA.

In 1851.	Value in round numbers	£6,898,500
1852.	" "	9,155,800
1853.	" "	10,781,400
1854.	" "	10,302,000
1855.	Estimated (on 9 months' produce).....	8,644,000

THE COLONY OF VICTORIA.

Part of 1851 and 1852.	Value in round numbers	£14,000,000
1853.	" "	11,500,000
1854.	" "	8,300,000
1855.	Estimated (on nine months' produce)	8,000,000

The author expected, that by granting more liberal terms to systematic companies of diggers, increasing the facilities for obtaining and accumulating water, adopting improved modes of washing, &c. the produce of gold, from the colony of Victoria alone, would not fall much below the value of 6,000,000*l.* per annum for some years to come, which was about double the amount of gold now obtained from the Ural or Siberian gold-fields.

GAS FOR THE MILLION, *VERSUS* RUSSIAN TALLOW.

In a recent number "An Englishman" called attention to a substitute for the Russian tallow used in the manufacture of soap. The consumption of it may also be much diminished by the extended use of gas, to the great and permanent benefit of this country, and of vital interest at the present time. The use of gas may be increased to an enormous extent, as there are many small towns and villages entirely without it, in which works might be erected at little cost, and prove a most lucrative investment. I would suggest the formation of a national company, or of one say for each county, to supply such places with gas at a moderate price. By obtaining a General Act of Parliament, much preliminary expense would be avoided, and afterwards a great saving in management, &c. would be effected. Each place to be supplied could have a certain number of shares allotted, with the option of taking its own works when complete, at cost price. The Limited Liability Act might be made of service for this purpose. A very great increase in the consumption of gas could also be effected in towns where it is at present supplied, if the companies would provide all fittings complete, charging a moderate rent for the use of them, holding a deposit from each party supplied, allowing interest thereon, and returning the same when the fittings are returned, or arrangements made with the succeeding tenant.

I should be a consumer at present; but as I must leave my present abode within a year, I might have to remove fittings to a place where there is no gas, or submit to a great sacrifice, which would not be the case with the companies, as they could remove them to another house, or keep them in stock, with a certainty of their being wanted, and of course the prime cost to them would be much less than to me.

I have reason to believe there are thousands in London alone, similarly situated to myself, so you will see the importance of the matter, which must be my excuse for trespassing so much on your space.

ANOTHER ENGLISHMAN.

TESTIMONIAL FROM THE SMITHFIELD CLUB.

At the annual dinner of the Smithfield Cattle Club, held at the Freemasons' Tavern, on the 12th inst. under the presidency of the Earl of Richmond, a very handsome testimonial was presented to Mr. Brandreth Gibbs, for his valuable services during a number of years as honorary secretary. It consisted of a candelabrum for six lights, representing an oak tree, with spreading branches and foliage. In the centre is a trellis-work frame, to support a crystal bowl. Around the foot of the tree are grouped a short-horned ox and other cattle, modelled from nature, and standing upon a chased tripod base, with three panels properly ornamented and inscribed. Also a pair of chased wine-coolers, or flower vases, with demi-horses as handles, standing on square plinths, in the panels of which are represented various prize animals. All were manufactured by Messrs. J. W. and F. B. Thomas, of New Bond-street.

The chairman, in presenting it, gave some well-deserved praise to Mr. Gibbs, who responded in a singularly good speech of considerable length. One of his suggestions—that the improvements or discoveries made by the prizeholders, should be published annually, in the shape of a pamphlet,—should be adopted forthwith.

Miscellanea.

EASTERN COUNTIES RAILWAY AFFAIRS.—There is a "tremendous blow-up" in the management of the affairs of this railway, the shareholders and manager being at sixes and sevens, the former voting the latter's instant dismissal, and the latter (Mr. Waddington) insisting on his right to maintain his position till February next. An adverse report by a "Committee of Investigation" is the moving cause of this explosion; but as Mr. Waddington demands time for his reply, and as Englishmen are celebrated all the world over for "fair play," and for "hearing" before they "strike," it is to be hoped that the shareholders will not rashly persist in carrying out their vote of condemnation before hearing, especially as a house so divided against itself cannot well stand, and a disputed authority will assuredly lead to much mischief, both to themselves and to the public, whose lives will be additionally risked on their line, so long as such a state of things continues.

ENFIELD WATERWORKS.—In a notice of the opening of the above works in your last week's impression, it is stated that the engines "are from the works of Headly and Mawing, Cambridge." Will you please correct the mistake this week, and allow us to say that the engines, boilers, and pumps were erected by HEADLY and MANNING.

OXFORD ARCHITECTURAL SOCIETY.—On 28th ult. the members of this society, and others from Oxford and its vicinity, attended a *conversazione* given in the society's rooms by the president, the Rev. Rector of Exeter College. The Rev. T. James read a lecture on "Church-work for Ladies." The paper referred chiefly to the works of the needle, but also called the attention of ladies to many other departments in which they might be usefully employed in forwarding the objects of architectural and ecclesiological societies, and in promoting the greater comeliness of our churches. Later in the evening, Mr. G. E. Street gave a description of some of the pieces of work which were exhibited in the room. A special general meeting had taken place on the 27th, for the purpose of electing officers for the ensuing year. The last meeting of the society for the term was held on Wednesday before last.

LECTURE AT OXFORD, BY COLONEL RAWLINSON.—A lecture on recent discoveries in Assyria and Babylonia was delivered in the Sheldonian Theatre by Colonel Rawlinson, C.B. Hon. D.C.L. on 5th inst to an audience calculated at 1,500 persons. The lecture was mostly extempore. The lecturer traced briefly the progress of cuneiform discovery from the beginning of the century to the present time, giving a graphic account of his own adventures in procuring copies of some of the chief inscriptions. The lecture was illustrated by diagrams and views, and by a large map of the Mesopotamian valley, from Korsabad to Mugheir, by paper casts taken from the rock inscriptions of Hamadan, by transcripts of these inscriptions in a clear large type, by a full-sized cast of the famous black obelisk, lent for the purpose by Dr. Acland, and by other means. At the conclusion of his lecture, which was applauded very warmly throughout, and for which the lecturer was formally thanked, Colonel Rawlinson called special attention to the importance of the subject, not only as filling up a great blank in history, but especially as confirming and authenticating the historical truth of Scripture, which many persons at the present day — more perhaps on the continent than in England—were seeking to call in question.

THE COLD IN WESTMINSTER ABBEY CHURCH.—Can nothing be done to render the Abbey Church of Westminster as fit to receive a congregation in the *cold* weather as the other churches generally in this metropolis? With whom does the matter rest? The same method of raising the funds for warming the church as was adopted in respect of the stained glass in the south transept windows, might surely be rendered available. See what has been done in the way of warming at St. Paul's. Go and feel what remains undone at St. Peter's. Much has otherwise been done of late to accommodate the public in the Abbey Church, under the skilful superintendence of their present architect; "*raison de plus*" that the public should be enabled to avail themselves of the advantage, without the drawback of perishing for two mortal hours in what is, *quoad* temperature, an ice-house.—A. B.

THE LIVERPOOL MASTER MASONS.—The annual dinner of the master masons and builders of Liverpool was served up on Tuesday evening before last, at the Durham Ox, Brownlow-hill. Mr. George Bowers occupied the chair, and Mr. Barker, of West Derby, supported him in the vice-chair. Amongst the tradesmen present were Messrs. Wells, Wilson, Thornton, Glaister, Yates, Tomkinson, J. Hook, Hargreaves, Buerley, Nuttall, Woodward, of Ruabon, Arthur Holme, &c. The proceedings of the evening were pleasingly enlivened by amateur singing.

EXPLOSION OF A STATUE.—An odd sort of gas-explosion took place at the Royal Exchange, Edinburgh, last week, while a workman was examining a large plaster cast of a female figure, about 7 feet high, which stood in a niche of the lobby, and through which a gas-pipe passed to a branch in the hand. The statue exploded with a loud report, and burst into a thousand pieces.

NEW BUILDING MATERIALS.—The French talk of a recent crotchet (a beer-house building speculation, probably) of some one said to be on the way to Sebastopol for stones to build with near London,—as being peculiarly English. The genius which suggested the rearing, or, at least, the plastering of an edifice near Paris with buttons, was certainly as peculiarly French; but what shall we say of the following, which is going the usual "round of the press?"—"An ingenious hatter of Paris has constructed a house of felt, made out of 24,000 old hats. This house contains parlours, dining and bed rooms, and a kitchen. It is erected on a platform upon the plain of St. Denis, and can be transported from place to place!" Our immortal friend *Punch* might allegorize such an edifice by "tiling" the inventor himself with an endless turreted series of old hats, ever affording him "a roof above his head" wherever he may go. Holywell-street, however, is completely eclipsed by the Frenchman's "tile of tiles."

Society of Antiquaries, Newcastle-upon-Tyne.—The monthly meeting of this society was held Wednesday before last, in the Castle of Newcastle,—Mr. J. H. Hinde in the chair, when several donations to the society were presented; and Dr. Bruce intimated to the members that Mr. Roach Smith's catalogue of the Faussett Collection would shortly be ready, and, through the liberality of Mr. Mayer, of Liverpool, it would be published at a price (two guineas) that would simply defray the cost of production. It was resolved that the society should take a copy; and also subscribe to Mr. Smith's "Roman London," Mr. Clayton remarking, that anything of Mr. Roach Smith's was worth having. Dr. Bruce then read his paper "On the recent Explorations at Tremenium, on the Roman Wall," carried on during the summer at the instance of the society. The *Gateshead Observer* gives a report of this paper and the entertaining account of the miscellaneous collection of remains, ancient and less ancient, found during the explorations, and comprising Roman fibulæ and "Egyptian" teakettle-spouts, amphoræ and cannon-balls, Samian ware and oyster-shells,—which latter, though rifled by the Romans, were doubtless "natives."

Important to House-owners.—Much uncertainty having existed as to the legal nature of the agreements on paper between landlords and tenants, the following communication to the proper authorities, and their reply, will be interesting to all concerned:—"To the Commissioners of Inland Revenue, Somerset House, London.—Middlesbro', Aug. 18th, 1855.—Sirs: The seaport town of Middlesbro', in the county of York, contains about 14,000 inhabitants, and many dwelling-houses and shops are let from quarter to quarter, and from year to year, upon written memorandums of agreement, where the rents be under 20*l.* a year; and as some difference of opinion exists respecting the proper stamp-duties to be laid on such agreements, your opinion is requested, whether the common lease-stamp for such an agreement will be sufficient, or what other stamps (if any) all such memorandums require?—Your most obedient servant, Wm. Myers, Solicitor."——*Answer.*—Inland Revenue, Somerset House, London, 27th August, 1855.—Sir: The Board having had before them your letter of the 18th inst. I am directed, in reply, to state that the documents therein referred to will be chargeable with stamp-duty as leases, whether the tenancy be from quarter to quarter, or from year to year.—I am, sir, your obedient servant, Thomas Tingle.—W. Myers, Esq."

The Royal Scottish Academy.—The twenty-eighth annual report of the council of the Royal Scottish Academy of Painting, Sculpture, and Architecture has just been issued. The council begin their Report by congratulating "their constituents on the continued prosperous condition, and still opening prospects of the society." They allude to the establishment of the academy in the new building, and refer to the opening of the exhibition in the new gallery, to the works of art it contained, and "the full-dress reception on the evening of the 30th of April, when upwards of 1,200 ladies and gentlemen accepted the invitations issued. The popularity of the exhibition," it continues, "may be inferred from the fact, that the number of visitors exceeded that of any previous year by a full fourth. Of these, large numbers were attracted from the now neighbouring city of Glasgow, and other surrounding localities. The evening exhibitions, notwithstanding the enlarged accommodation, were, during the whole season, even more crowded than before. Considerable purchases were made by the Committee of the Royal Association for Promotion of Art in Scotland, by the Art-Union of Glasgow, and by private individuals—though many works of a high character remained unsold." The council advert to a gratifying communication from the Art-Union of London, stating that "the exhibition of the Royal Scottish Academy," along with that of "the Royal Hibernian Academy," is added to the list of exhibitions from which prizeholders are allowed to make their selections.

Wanted, a "Surveyor and Constable."—I notice a curious advertisement in your last number, from the Ware Local Board of Health. After advertising for a person to execute the duties of surveyor and inspector of nuisances, it goes on to say: "He must be fully competent to prepare plans, and give estimates to the Board of the probable cost of any works which they may require to be done, and he will be sworn in as a *constable*, which, I suppose, means that he must take upon himself the office and duties of a policeman, &c. Surely a person must have been respectably educated, and must well understand his business, to be able to prepare plans and make estimates for whatever works may be required in a district of about 5,000 inhabitants; and will such a person feel himself "honoured" when sworn in as a "constable," and called upon to act as such?—X.

Accident on the North Kent Railway.—On the evening of 7th inst. an alarming accident occurred to the up-train from Woolwich, near New-cross station, where the train was divided at one of the switches, breaking the coupling-chains, crushing several of the carriages against the dwarf wall, and seriously contusing many of the passengers, particularly of the third class. From subsequent inquiries, there appears to be reason to suspect that the switchman is to blame, by having introduced a piece of wood at the switch at a critical time, and in an endeavour to correct his own error.

Prizes for Architects.—Your correspondent, "J. B." (Nov. 24) is justly indignant at the miserable premiums offered for laying out the cemeteries at Hastings and at Northwood. But there is one point which he has overlooked, and which merits particular attention. It is that whereas the Burial Board of Northwood offer ten guineas for laying out their cemetery, and require likewise ground-plans, sections, and elevations, with estimates for the chapels, lodges, and other buildings,—that of Hastings offers 10*l.* merely for laying out the cemetery: the design is required to show the site only of the chapels, &c. This is a most important distinction. If architects *will* send in elevations, sections, and other drawings of buildings when it is merely required that the ground be properly laid out (and how often is this entirely disregarded as being of little or no importance),—can it be wondered at that burial boards and other public bodies should form so low an estimate of the services of architects?—C.

Proposed Industrial School.—On the motion of Mr. Antrobus, seconded by Mr. Turner, the Court of Justices have ordered that the sum of 7,500*l.* be raised on the security of the county rate for the purchase of land whereon to erect an industrial school for the juvenile offenders of the county of Middlesex, &c. The committee have selected a site at Feltham, within the county, about fourteen miles from the metropolis.

Metropolitan Bridges.—It has several times occurred to me in crossing London-bridge, that a great improvement might be effected in this crowded thoroughfare by erecting an elevated footway for foot-passengers, right over the centre of the carriage-way, the structure being supported at each side and in the centre by columns, and then adding the present footways to the carriage-way, reserving only some 2 feet on each side for the use of carmen. This would afford space for a regular concourse of four trains of carriages crossing, two on one side, in one direction, and two on the other in the opposite direction,—carts and slow-moving vehicles forming the two outside trains, and carriages and fast-moving vehicles the two inside trains. Two stairs at each end of the bridge, one on each side of the carriage-way, would afford access to and from the footway above.—W. B.

Trisection of Angles.—The importance of geometry to builders, architects, surveyors, and engineers, is of paramount consequence, and need not be dilated upon here. The letters on trigonometrical surveys, which lately appeared in your journal, gave great satisfaction to several of your readers to my knowledge, and awoke in many latent thirstings after science. I may mention that, at a Literary and Scientific Institution to which I belong, they led to much mathematical discussion on the object of such studies, the use and application of them to various arts and sciences, and also as to the limits of human knowledge, as instanced in the unwearied attempts of mathematicians to solve the problem of the quadrature of the circle, the duplication of the cube, and the trisection of angles. In connection with this subject, on referring to an encyclopædia, we found the following information:—"Trisection.—This term is chiefly used in geometry for the division of an angle into three equal parts. This is one of the great problems whose solution has been so much sought by mathematicians for above 2,000 years, being in this respect on a footing with the quadrature of the circle and the duplication of the cube. The problem of the trisection of an angle is ascribed to the responses of the Delphian oracle, and its solution has frequently called forth the powers of the most able mathematicians, both of ancient and modern times. In order to *construct* the problem, Nicomedes proposed the conchoid; and an elegant solution is given by Newton, in his 'Universal Arithmetic,' by means of the hyperbolic curve. Leslie, however, instead of attempting a solution in which so many had signally failed, thus expresses his opinion:—'Such are the final conditions on which the trisection of angles depend, that to fulfil them in general exceeds the powers of elementary geometry.'" It would appear, then, that the solution of this problem has not as yet been satisfactorily achieved. If, however, any of your readers and correspondents know of any solution, and will send it to you for insertion, it will oblige and confer a favour upon great numbers of your subscribers.

Constant Reader.

Norfolk and Norwich Fine Arts' Association.—The statement of receipts and disbursements for the recent exhibition, shows that more than 300*l.* have been paid to artists, and that after defraying all expenses, there is a surplus of 21*l.* 11s. in the hands of the committee. Mr. Claude Nursey, the headmaster of the Government School of Art, acted as hon. secretary. The numbers in the classes in connection with the Norwich School of Art, are at the present time—Central school pupils, 148; pupils in out-door classes, 728; total, 876.

Glasgow Athenæum Soiree.—On Thursday evening, the 6th, the third *soirée* of the Glasgow Athenæum was held in the City Hall, Glasgow. The meeting was a crowded one, notwithstanding the great size of the hall. The Earl of Eglintoun was in the chair, and delivered a practical and sensible speech, in which he called upon the rich and the influential of Glasgow to put their shoulders to the wheel, to leave no stone unturned, to leave no means untried which are calculated to have the effect of providing good and adequate instruction for their poorer fellow-citizens. The assemblage was afterwards addressed by the Lord Advocate, Sir M. S. Stewart, Professors Swinton, Blaickie, and Nichol, Mr. A. Hastie, M.P. Sir Archibald Alison, and others, and various appropriate resolutions passed.

The Adulteration of Annatto.—A paper has been read, at the rooms of the Pharmaceutical Society, Bloomsbury-square, by Dr. Hassall, on the subject of the Adulteration of Annatto, a vegetable colouring matter much used by dyers, painters, and soap-makers, and also employed to colour cheese, milk, and butter. The following substances were detected entering into its composition: very large quantities of wheat, rye, and barley flours in fourteen specimens, turmeric powder in several, chalk in a great many, this in some instances amounting to over 60 per cent.; sulphate of lime or gypsum in several, salt in a great many, an alkali in several, red earths, as Venetian red and reddle in a great many, lead in three samples, and copper in others.

Ball-taps.—I think there are few but will agree with me that the ordinary metallic ball-cock in water cisterns is exceedingly objectionable, if not positively dangerous. The use of lead pipes for the conveyance of water is universally condemned, but the constant contact of our water with such poisonous metals as copper and brass, has scarcely been noticed. The corrosion of these cocks is not only dangerous, but it renders them unserviceable, proving a source of inconvenience where no waste pipe is attached. I would suggest the employment of glass or earthenware cocks, with gutta-percha balls or floats. They could not convey any impurity to the water, would be as cheap, or cheaper, than the ordinary cock, and of course would prove valueless to depredators, on the look out for old metal.—W. G.

The Society of Antiquaries of Scotland.—The seventy-sixth anniversary meeting of this society took place on Friday in week before last, in its hall, George-street, Edinburgh. Dr. L. Alexander, as senior vice-president, occupied the chair, and delivered an introductory address, of which the meeting requested that he would furnish an outline to the secretary for preservation. The secretary then read a report of the society's transactions during the past session. The treasurer reports that the funds are now in a better position than they have been for many years. The fourth volume of the "Archæologia" is forthwith to be completed, and there is reason to expect that the "Proceedings" of the society will hereafter become more attractive, as the funds enable the council to add to its illustrations and bulk. The removal of the museum to the new buildings on the Mound is now not far distant. During the past year various objects of interest have been added to the museum, both by purchase and donations. The visitors during the past eleven months have amounted to 16,909; being more than 3,000 above the numbers in the previous year.

Mr. Bunning has been presented with a handsome diamond ring, by the Marquis D'Azeglio, by order of his Majesty the King of Sardinia, as a memorial of his Majesty's approbation of the decorations at Guildhall on the 4th of December.

The new Clock of Canterbury Cathedral.—The new clock and bells at the Cathedral of Canterbury have been completed. The clock was supplied by Mr. W. H. Trimuell, and the frame is 9 feet 4 inches long; weight of clock, two tons; weight of pendulum ball, 460 lbs. (spring suspension), which is said to be heavier than any yet supplied. The clock will strike the quarters on the first and fourth bells, and hours on the old bell "Dunstan," hanging upon the top of the Oxford steeple, above the leaden roof, and weighing 7,500 lbs. Two of the bells which were cracked have been recast; and such means of strengthening the tower have been resorted to as will permit the bells being rung again, as of old. There will be ten bells.

MODEL OF TIPTREE-HALL FARM. — Among the novelties which Mr. Pepper has lately added to the attractions of the Polytechnic Institution, is a large model of Tiptree-hall Farm, the scene of Mr. Mechi's well-known experiments in agriculture. The size of this model is such as to enable the system of housing and feeding cattle which Mr. Mechi has pursued to be understood at a glance; and to facilitate the examination, the modellist (Mr. Merrett, architect and surveyor, Fetter-lane) has made the roofs of the buildings removeable. Everything, therefore, is plainly seen—the steam-engine, the cattle-sheds, the pig-geries, the corn-stacks, and all the accessories of the farmyard.

MONSTER GLAZED STONE WARE TUBES. — Engineers have long felt the want of something to form conduits for waterworks, which should carry water pure and sweet to their reservoirs. A correspondent states, that some pipes are being made at the manufactory of Mr. J. Cliff, 4 feet 6 inches diameter, 3¼ inches in substance, and 4 feet long, for an engineer in Lancashire.

WATERLOO-BRIDGE COMPANY. — At the ordinary half-yearly meeting of the proprietors, the report of the directors stated that the total income of the company for the half-year amounted to 10,858*l.* 16s. 11d. and the expenses of management and for keeping the structure in repair, to 1,432*l.* 11s. 6d.; leaving a balance of 9,426*l.* 5s. 5d.; from which there was to be deducted 489*l.* 18s. 3d. income-tax; 1,245*l.* 15s. 3d. interest on bonds; and 7,500*l.* the amount of a 4s. in the pound dividend on 37,500*l.* annuities, leaving 190*l.* 10s. 11d. to be carried to the reserve, making it 1,690*l.* 8s 4d.

NEW IRON SHOT-TOWER.—A tower formed of cast iron, for the manufacture of shot, has just been erected in New York, by Mr. J. M'Cullough, a shot-manufacturer, the designer and builder being Mr. James Bogardus, who is called the first projector of iron houses. The foundation of the tower is of solid masonry, 4½ feet thick, on a basis 18 feet below the surface of the ground, and 25 feet diameter: on this is bolted the first portion of the iron structure, through twenty holes, 18 inches apart, by wrought-iron bars 2 inches diameter, to which the lower tier of cast-iron pillars are keyed. This tier of cast-iron columns supports the entire superstructure, and they are said to be of sufficient strength to sustain a weight of 28,000 tons. Upon the tops of the first tier of these columns there rests a cornice, made in ten sections, each pair meeting over the centre of a column. Upon the lines of junction stand the next tier of columns, then another cornice, succeeded by more columns, all made to break joint, and firmly bolted together. These are carried up to the height of 174 feet above the ground. The tower tapers from 25 feet outside diameter to 15½ feet, the inner compartment being 2 feet less. The metal employed in the construction is something under 100 tons, less than 170th part of what the first tier of columns would sustain. Mr. M'Cullough estimates that this tower is capable of making 5,000 tons of shot per annum.

SELF-CONTAINED HOUSES. — Having lived in Edinburgh several years, I have necessarily seen a better class of houses for the poorer classes than is common in London. A number of small houses under the same roof—*self-contained* houses as they are called—are more comfortable than a large single house divided into several houses, and let to separate families. There is great need of improvement in this way in London. But capitalists are not likely soon to build better houses for the labouring classes. They must be stimulated to it. Probably a London Building Society would stimulate them. Such a society, beginning with a moderate capital, and taking advantage of the Act of Limited Liability, might build small, comfortable, elegant houses, after plans of your suggestion. A very good per-centage would be realized on the outlying capital, and the present style of houses would speedily give place to a better. *It is possible to give a comfortable dwelling-house for a small rent, and yet realize a good per-centage on the capital.* Capitalists acknowledge this; but of course they must have as large profits as possible—the larger the better. For this reason London houses are what they are; and I see no hope of improvement unless a society begin it.—J. M.

OLD LEATHER.—A correspondent urges the use of old and waste leather, and cuttings of every description, as a substitute for *papier mâché* in the manufacture of architectural ornaments. He says: "This material by itself, or in combination with ordinary *papier mâché*, is admirably adapted for the manufacture of various useful and ornamental articles, now made from gutta-percha or *papier mâché* exclusively; at the same time it would reduce the present cost of such articles in no inconsiderable manner, old leather being at present next to valueless. I have deposited various specimens at the Society of Arts, in the hope that some encouragement will be given to this invention."

PATENT DOVETAILED ARCH-BLOCKS. — These blocks, designed by Mr. W. Austin, of Holywell-street, Westminster, for the construction of tunnels, arches, drains, &c. when once united in a complete ring, are said to be inseparable and indestructible. The blocks can be made to unite so closely and uniformly in their joints, that little or no cement or mortar is required. The blocks being prepared to any size, from 1 to 100 cubic feet, in iron moulds, insures their uniformity and regularity, internally and externally; and no labour beyond that of fixing or setting is required. Considerable facility is afforded for this by the orifices through the blocks, which form grip-holes for sling-chains in lowering into the works, or for hoisting, if used vertically; but the principal intention of the orifices is to strengthen the works by forming dowels, or vertical ties, for grout or bolts to pass through, each block breaking bond. The principle is also applicable for straight walls of masonry, and can be used in horizontal positions; such as railway-tunnels, sewers, and aqueducts, &c.

FALLING IN OF A SEWER. — Thomas King, a labourer, lost his life by the falling in of a sewer, in Union-row, Walworth, on Wednesday, the 28th ult. when he was buried with four other men, who providentially were not killed.

TENDERS

For St. Luke's Church, New-road. Mr. J. Johnson, architect. Quantities not supplied:—

Rowland and Evans	£6,541	0	0
Carter	6,409	0	0
Dove, Brothers	5,978	0	0

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments, tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No 2, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded by any enclosing a penny-stamp. Please note the address 2, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any order that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, worked out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Ta-ble Chairs, &c. execute at the shortest notice. Specimens of Carved Work, so liable for various purposes, can be seen at the Works, and Estimates furnished up in application.

FOREIGN PARQUET FLOORS.—Handsome and thoroughly-seasoned floors, of one-inch wainscot, in pattern, one shilling per foot.—HIGGS and CULLINGFORD, 59, Davies-street, Berkeley-square.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant decorative Flooring, so extensively used in Paris and other continental cities, is now introduced into this country. An extensive assortment of specimen and patterns commencing at 1s per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO 20, New Broad-street.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Prices 8s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 2, James street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marbles, and with the greatest attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Sienna, Siena, Verd Antique, Brocatella, Dove, St Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of other Chimney-Pieces in Jasp, Emperor's Red and Amber Marble, for Bed-room and Bil-liard-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tablets, Tombs, and Pedestals for Busts, Statues, and Vases; and Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marbles, at the lowest remunerative prices.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

GUERNSEY GRANITE.—Contractors and Others supplied from a single cargo upwards. Apply to C. D. BENNETT, Quarry Proprietor and Granite Merchant, St. Sampson's, Guernsey; or 84, Lower Thames-street, London.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace. Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 7, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLAS and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

ANCASTER STONE, so remarkable for its free working quality, combined with great durability. Price, and cost of transit to any part, may be obtained, upon application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOALES and WOOD are to the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Dotterel-in, Hare-hill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curbs and Pitching, all at the very lowest prices.
N.B. Good 2-inch Tooled Paving, at 40s. per 100 feet, cash.

AUSTIN'S ARTIFICIAL STONE.—This material, frequently confounded with Portland Cement) has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, viz. Vases, Figures, and Fountains, has been accumulated, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 4,000 and 5,000 pieces. In coarse stuffs cast from Terra-cotta, and all other kind of Pottery, there is no distortion of form by the process of baking, and instead of the glaze surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof. AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.
*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED
WILCOX & CO.
FLINT MILLS, MILLWALL, POPLAR.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOALES and WOOD, Market Wharf, Regent's park.

TREVALGA SLATES.—T. B. HANNAFORD is not only in a position to supply any quantity of the above Slates (or execute Slating), at extremely low prices, but pledges himself to furnish a first-class material, in every respect similar to those with which he has covered in the principal Mercantile and Governmental buildings in the City. Slate Paving, squared all round, ready to lay, warranted stronger than 3-inch York, at 4d. per foot super.—TREVALGA WHARF, Ratcliffe-cross.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those of urged by other parties for very inferior imitations of his work. PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Orphanage Works, Model Prison, Pentonville, and other Penitentiaries, Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.

W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL Pits, lately removed from No. 81 Wharf, Harrow-road, to 3, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot walks, Malt houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN PILKINGTON, PULONCEAUS BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK, LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements, read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied or shipment, on advantageous terms.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS BROTHERS, Manufacturers of Roman, Parian (under patent, and all other Cements in use for building purposes. Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

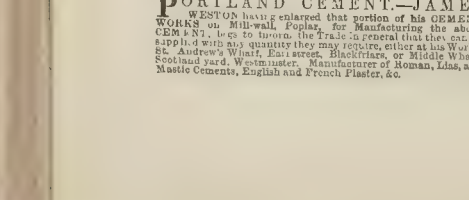
NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them directly to transmit any orders they may receive to any station on the before-mentioned line, and consequently they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.



Agents in London—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c. IN EVERY VARIETY.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, East street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

BATH, PORTLAND, and ROMAN CEMENTS, GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WESTERN of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterate state, from quarries on their own property. The company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent to rail or shipped from their wharf, direct to all ports.—Agents required, and a liberal discount allowed. Orders received by RICHARD WINTER (Manager to the Company), Cement Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLACKFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that remains in colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 8d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'s BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and PIER GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS, STOCKS, and other BRICKS.

6, SOUTH WHARF, PADDINGTON.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

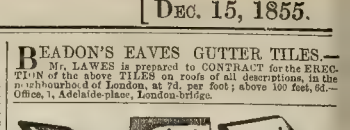
N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT,
No 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will receive their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the River Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.



11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the best quality manufactured at the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

TO LIGHTERMEN and OTHERS.—Persons willing to UNDERTAKE the DELIVERY of a quantity of SHELLS and SAND, are requested to apply for particulars to Mr. LOTT, 123, Warwick-street, Pimlico.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the EXECUTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of tiles, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvertoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PRIZE BRICK-MAKING MACHINE.—CHAMBERLAIN'S PATENT.—This portable machine will make 20,000 solid bricks per day, with 3-horse power. One man to feed the machine, and two boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helen's, September 6th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 5th, 1854.—Apply for particulars to Mr HUMPHREY CHAMBERLAIN, Kempsey, Worcester.

THE PATENT BRICK-MACHINE COMPANY invite ORDERS for their improved machines, the only ones that manufacture solid bricks equal to hand-made. A machine, and bricks made by it, may be seen in a field near London. H. C. MOUNT, Secretary.
37, King William-street, City.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz: Grey Stocks, 23s. per thousand, Grizzles, 24s. per thousand; Rough Stocks, 20s.; Place, 16s. Terms, cash on delivery.—Apply to Mr. G SMEED, Sutton-lane, Kent.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS;
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.

Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY
MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Ginger's sewage-pipes, Closet pans, Furnace-backs, Fire-bricks, Gas retorts, Crucibles, &c. &c. The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.
London Agent: J. COX, 2 and 3, High street, Lambeth.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

Depôt, Acar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent.—Mr. J. UNWIN, Private Residence, 59, Nelson square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests customers to favour him with a visit, in order to inspect his stock, and judge for themselves.

Malm Face, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO., at the Counting house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of a proved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c. &c.—Messrs. MEESON and CO. supply at cost prices, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, drain for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, fine chalk, chalk rubbish, gravel, loam for foundations, &c. &c. Whiting (the best quality lime, both white and fine, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

BRICKFIELDS, in good working order, TO BE LET, about half a mile from the Croydon Station, Sydenham.—Apply to Mr. C. PERCEVAL LITT, Solicitor, 1, Angel-court, Throgmorton-street, London.

THE FARNLEY IRON COMPANY, WORTLEY, NEAR LEEDS,

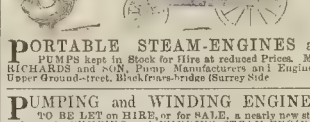
PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.



N.B. The above can be worked either by hand, horse, or engine power.

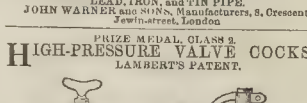
Iron Pails 28s per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-i ch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

TO WATER COMPANIES AND PLUMBERS
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.



LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London

ENGINES.—For SALE, THREE 12-horse high-pressure horizontal ENGINES, admirably suited for winding; 12-inch cylinders, metallic pistons, either with or with out boiler. Also two powerful double-purchase CRABS, capable of lifting 30 tons each. Also a wrought-iron TANK, 20 feet by 4 feet, by 4 feet, ¾ plates—Apply, by letter, to No. 20, BOX, Post-office, Derby.

PUMPING MACHINERY. — Lifting and Forcing Pumps, Patent Centrifugal and Double acting Pumps, deep Well Pumps, Steam-Engines portable and fixed, Hydraulic Rams, Water Wheels, and every description of machinery, of the most improved construction, manufactured and supplied by GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex wharf, Strand, London.

PORTABLE STEAM-ENGINE.—A new 8-horse PORTABLE STEAM-ENGINE, with tubular boiler, for SALE. Can be seen at work at Mr. GOODWIN'S, 67, Great Guildford-street, Southwark, of whom particulars may be obtained.

PRIZE MEDAL, CLASS 9.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster.

The Second Edition of this Company's Circular, just published, is now being forwarded, post free, to Directors, Engineers, Managers, and others interested in Railways.

The Circular contains Engravings, detailed Estimates of cost of construction, and descriptions of many valuable Patents, with the latest results of experiments in the working of the various patented systems of Permanent Way, either the property of, or worked by the Permanent Way Company.

These patented systems are now adopted in Companies owning several thousand miles of Railway, are approved of by most of the eminent Railway Engineers, in this country and abroad, and the system of Fish jointing, in particular, has received the unqualified approval of H. M. Commissioners of the Board of Trade and their Inspecting Officers.

The Permanent Way Company are prepared to grant licenses on liberal terms, to Railway Companies and Manufacturers for the use of all or any of the Patented Inventions, which have for their object the safety and comfort of the travelling public, and economy in construction of the Road and Rolling Stock.

That the objects are accomplished, the following extracts will confirm:—

"There can be no doubt that the practice of Fishing the Rails, which is becoming very general, is a great element of safety; the principle cannot be too much encouraged."—Extract from Report of Colonel Wynne, R.E. Chief Inspector of Railways to H. M.'s Commissioners of the Board of Trade, dated April 27th, 1854.

"My Lords direct me to observe, that they trust that the remarks of the Inspecting Officer, as to the desirability of the Fished Joint being adopted to a greater extent upon the Railway, will receive the attentive consideration of the Directors."—Extract from letter of Captain Galton, R.E., Secretary to the Railway Department of the Board of Trade, in reference to the foregoing Report.

"Dear Sir,—In reply to your favour of the 1st instant, I beg to say that I experience no difficulty whatever in keeping the nuts of the bolts tight."—Extract from a letter by Mr. H. Woodhouse, Engineer, of the London and North Western Railway.

"I would, however, beg to state that, in point of safety, the first and most essential element of railway working, the Fish Joint, on your system, is, in my opinion indispensable. Extract from letter of Mr. J. E. M'Connell, Locomotive Engineer of the London and North Western Railway.

"On a district of about thirty miles, where the greatest length has been Fished, the saving in labour of maintenance amounts fully to thirty per cent." Extract from Mr. R. Jacomb Hood, Engineer to the London, Brighton, and South-Coast Railway.

Among others, the Company call attention to the following Patents recently placed under its management:—Mr. William Pole's important Improvement in Fish Joints, and Mr. Paul Prince's Improvements in moulding Railway Chairs.

Licenses, and every information, may be obtained upon application to CHARLES MAY, F.R.S. Managing Director of the Company, 26, Great George-street, Westminster; or to WILLIAM HOWDEN, Secretary

THE PERMANENT WAY COMPANY.—The attention of the Permanent Way Company has been called to claims made by Mr. P. M. PARSONS, of No. 6, Duke-street, Adelphi, to the "Fishing" of Rails, of the section usually known as the "Contractors' rail," and the use of fishes in all cases where the joints of Railways are supported by sleepers.

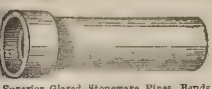
Although the Company deem their rights to be indisputable, they have, in order to satisfy any doubt that Mr. Parsons's advertisement may have created, submitted the subject to the best legal authorities, and have received the united opinion of Sir F. Thesiger, Mr. Sergeant Channell, Mr. Hindmarch, and Mr. Webster, that the adoption of "Clamps, splicing plates, alias fishing plates," as claimed by Mr. Parsons, in his patent of the 29th February, 1848, which is nearly two years subsequent to the original patents, the property of the Permanent Way Company, would be an infringement of the latter patent, and that the Permanent Way Company have the exclusive right to apply what are usually called "Fishes" to the sides of Rails at their joints, whether they are called by that or any other name. Whatever may be the section of the Rail to the side chairs of which the fishes may be applied, by whatever means they may be fixed thereto, and whether a sleeper be placed under the joint or not.

The Permanent Way Company give notice to their licensees, that they will protect them against the claims set up by Mr. Parsons, if such claims are persisted in.

By order, WILLIAM HOWDEN, Secretary.

26, Great George-street, Nov. 30, 1855

THE NORTHAMPTON GAS-LIGHT COMPANY.—Persons desirous of CONTRACTING with the above Company for the PURCHASE of their COKE for the Year commencing on the 1st day of JANUARY, 1856, are hereby informed that sealed Tenders, at per Ton for the same, may be delivered at the Company's Works, in Northampton, up to the 15th day of DECEMBER next, addressed to Mr. JNO EUNSON, Jun. Manager. The terms of payment, and other stipulations, will be the same, "mutatis mutandis," as those for the current year, and will be produced on application to Mr. EUNSON. The Committee of Management do not pledge themselves to accept the highest Tender. WILLIAM DENNIS, Clerk.



THE RAILWAY SWITCH and CROSSING COMPANY.—Directors of Railways, Engineers, and Manufacturers, are informed that the Offices of the Company are removed to 103, St. Martin's lane, Charing-cross, where, on application, every information will be afforded respecting their Patented Improvements in Switches and Crossings, now so universally adopted. WILLIAM DEMPSEY, Manager.

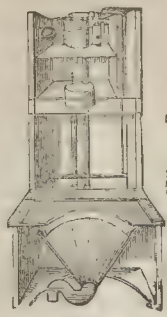
DRAUGHTS ROUND DOORS and WINDOWS.—GREENWOOD'S PATENT INDIA-RUBBER STOPS, to supersede list or leather, for the purpose of keeping out dust and draught round doors, windows, closets, show-cases, &c. making the same air-tight. Price 2d. per foot. Spring Sides for bottoms of doors, 4s. each.

JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London-bridge.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.



Pan, 3s. 6d.

Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

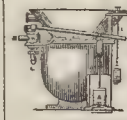
Drawings and List of Prices will be forwarded free on application.

SUPERIOR STONEWARE GLAZED

PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their made pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz 25 per cent. discount off the list for Bends, Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c., all at low cash prices.—E. and W. STURGE, Bridge Wharf, City road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

SUPERIOR GLAZED STONEWARE



DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

UNDERHAY'S PATENT

REGULATOR CLOSETS for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more ornamental, than as other Many thousands are in use, and greatly approved of.

Manufactured by CHARLES BOTTEN and SON, Brass Founders, Crawford-passage, Clerkenwell, London.

COLLIER'S TERRO-METALLIC and

RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. R. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

PATTEN'S PATENT HIGH-PRESSURE

WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. PRICE for Closet and Apparatus COMPLETE FROM 22s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

CROWN GLASS, 18 TABLES, 32s. PER CRATE.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-

VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 73, Strand, London.

PATENT DRAIN-PIPES, UNGLAZED,

manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.					
3 inch bore, in 2 ft. 6 in. lengths, at				3d. per foot.	
4	"	"	"	4d.	"
6	"	"	"	6d.	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

VICTORIA POTTERY, LEIGH,

NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE.

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

GREENWICH HOSPITAL BURIAL GROUND.—Notice is hereby given that the Commissioners of Greenwich Hospital are prepared to receive TENDERS, or OFFERS of FREEHOLD LAND, from Six to Ten Acres, eligible for the purposes of a Burial Ground for that Institution. The Tenders must state whether the land offered is freehold, the situation and extent thereof, and the price for which the same will be sold. The Tenders must also be signed by the persons having legal authority to sell the land therein referred to, and must be addressed to the Commissioners of Greenwich Hospital, and sent to them on or before WEDNESDAY, the 19th of DECEMBER instant.—By order of the Commissioners,

J. W. NICHOLLS,
Secretary of Greenwich Hospital.

FOUNDLING HOSPITAL, Dec. 7, 1855.—The Committee of Governors will meet at the HOSPITAL on SATURDAY, the 22nd instant, at TEN o'clock, to receive PROPOSALS for a LEASE of PREMISES, in Sugar-loaf-court and Garlick-hill, Upper Thames-street.—Plans of the property may be seen, and further particulars obtained, at Mr. HENRY CURREY'S Office, No. 4, Lancaster-place, Strand.

By order of the Committee,

J. BROWNLOW, Secretary.

GUILDHALL, 6th December, 1855.—The Committee for Letting the City Lands will meet at GUILDHALL, on WEDNESDAY, the 19th day of DECEMBER instant, at ONE o'clock precisely (instead of the 12th instant, as previously announced), to receive PROPOSALS for BUILDING LEASES, for 31 years, from Christmas, 1855, of several PLOTS of GROUND on the north side of Wormwood-street, Bishopsgate. Also to receive proposals for Leases of a House, No. 35, on the south-west side of Houndsditch, and Two Houses, Nos. 47 and 54, on the north side of Featherstone-street, Finsbury. Plans of the property may be seen, and further particulars and forms of Tender obtained, at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

HOMERTON-ROW.—Within Three Minutes' Walk of the Hackney Station North London Railway, within Two Minutes of the Bank, with Omnibus communication.—TO BE LET, BUILDING FRONTAGES, suitable either for Fourth-rate Shops, or Private Houses, of not less value than 30l. each. The present opportunity is well worthy of attention by Builders, as there will be a sale (immediately) contiguous to the property of Old Materials, well adapted for building purposes.—For further particulars apply to Mr. FRANCIS CROSS, Architect, 33, Moorgate-street, City.

TO BUILDERS, SOCIETIES, NURSERYMEN, &c.—TO BE SOLD, TEN ACRES of FREEHOLD LAND, for 1861, situate at Farnham, Surrey, adjoining a Nursery and an allotted Estate of a nearly completed road, and within mile from the Government. The land is a flat, of a peaty soil, and well adapted for American and nursery plants. To be let on Lease, or purchase money paid by instalments. To agent not liable. Any of those requiring an answer are requested to inclose a directed stamped envelope to M. M. Office of "The Builder."

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

TO BUILDERS.—TO BE DISPOSED OF, a well-established, steady, and flourishing BUILDING BUSINESS, in the south of Hampshire, which has been successfully carried on by the proprietor for fifteen years. The annual returns are about 5,000l. The premises, including workshops, yards, saw-houses, sheds, and foremen's houses, will be let at a moderate rent. A genteel Dwelling-House may be rented near. The stock-in-trade and the building plant to be taken at a valuation, in the usual way, but the amount of stock (which is at present considerable), may be reduced to suit the convenience of the purchaser. Possession may be had at Christmas or Lady-day next. A foreman of bricklayers, and a foreman of carpenters, both of whom have been in the proprietor's employ from twelve to fifteen years each, together with a capital staff of experienced, steady, sober workmen, may be secured, as the business is in full work, the proprietor declining this portion of his business in consequence of increase of personal duties in which he is engaged. No one need apply who cannot furnish unexceptionable references. The whole of the books will be open for the inspection and examination of any party whose references are approved.—All communications to be addressed to Mr. CHARLES PINK, Surveyor, Wood-end, near Fareham, Hants.

TO BUILDERS. — TO BE SOLD, a BUSINESS as above, five miles eastward of the Bank. For stock, implements, and business, together with the unexpired term of nineteen years of three houses (if taken at Christmas), price 250l. Part of purchase money can remain unpaid if preferred, for three months.—Direct to G. A. Office of "The Builder."

TO BUILDERS and OTHERS.—TO BE LET, on a repairing lease, a desirable HOUSE, near the Adelphi. For terms, apply to Mr. BRAY, Jun. Surveyor, 16a, King's-road, Bedford-row.

TO TANNERS and OTHERS.—TO BE LET, or SOLD, the old-established TAN-YARD, HOUSE, and PREMISES, situate at Greenhill, Gateshead, Durham. The tan-yard has been for a great many years, and still continues, in full work, with a good supply of raw goods and English oak bark from the surrounding neighbourhood. An introduction to the business connexion, with immediate possession, can be given. The yard, stock, implements, &c. to be taken at a valuation, or time agreed upon to allow the proprietor to "tan out." A few acres of first-rate grazing land adjoining the premises, may be had with the tannery, if desired; also, a cottage and garden The premises can be seen by applying to the foreman, Mr. JOHN WALSH; and further particulars obtained of J. F. BURBIDGE, Esq. Grantham; WILLIAM MUSSON, Esq. Peterborough; and Messrs. MANT and ROBERTSON, Solicitors, Bath.

WATERLOO-BRIDGE WHARF, Commercial-road, Lambeth. These spacious PREMISES, with ten dry arched warehouses under the Waterloo-bridge-road, TO BE LET on LEASE. There are two capital houses, with cranes and scaffolding on the wharf, and the premises, which have been used as a timber-yard for nearly forty years, are in good repair.—For terms, apply to HENRY MOTT, Esq. Solicitor, 4, King's-road, Bedford-row.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 10-ton Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

TO PAINTERS AND PAPERHANGERS TO BE REPAIRED, the private HOUSE, No. 129, Piccadilly, according to a specification, which may be seen on the premises, on 15th, 17th, and 18th DECEMBER inst. from TEN to FOUR o'clock.—Tenders to be sent, on or before the 21st DECEMBER, to the Architect, G. GORDON, Esq. 17, Cambridge-road, Hammersmith.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; and by the Manufacturing and Painting Agent, Mr FREDK. BRABY, Pitzroy Works, Newroad. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21 and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red coloured Terra-cotta. A great variety and large stock now for sale at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

¼	⅜	½	⅝	¾	⅞	1	1¼	1½	2
9d.	11d.	1s.1d.	1s.3d.	1s.5d.	1s.7d.	1s.9d.	2s.	2s.3d.	2s.6d.	2s.9d.

Super-extra stout quality.

2	2½	3	3 inches.
2s.	2s.3d.	2s.6d.	2s.9d.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

9d.	10d.	1s.	1s.3d.	1s.6d.	1s.9d.	2s. per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints. Branch Pipes, and Jets, are also supplied.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 28s. 6d. per 1,000; floor bricks and 6 inch pavings, at 37s. 6d. per 1,000; 4 inch pavings, at 27s. 6d. per 1,000; plain tiles, at 35s. per 1,000, delivered Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, &c.—Notice is hereby most respectfully given, that the LONDON DEPÔT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Pileries," Tunstall, Staffordshire, as the first of the kind in the world.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying most moulded clays, sound at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to MR. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE: it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to MR. JOHNSON HANDS, Brick and Tile Works, Epsom.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, December 15, 1855.

BOROUGH of HALIFAX.—To ENGINEERS and SURVEYORS.—WANTED, a SURVEYOR, fully competent to take charge of the borough water works, sewerage, and the public works of the borough, besides the usual business of the Corporation, including that of the Local Board of Health. He must be familiar with the practice of engineering in connection with the above-mentioned works, able to conduct surveys, prepare plans, drawings, and estimates of works of every description, and will be required to devote the whole of his time to the duties of his office. Salary, 250l per annum. Applications, with testimonials of qualification and competency, to be addressed to the undersigned, not later than endorsed, "Application for Office of Surveyor," and to be forwarded, under cover to the undersigned, on or before the 1st day of JANUARY, 1856.

EDMUND MINSON WAVELL, Town Clerk, and Clerk to the Halifax Local Board of Health.

Town Clerk's Office, Halifax, November 19th, 1855.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, DECEMBER 26, Mr. B. A. C. HERRING will read a Paper on Portland Cement, illustrated by Specimens and Sketches. The Class of Design will meet on JANUARY 8th, 1856. Subject for Sketch, "The Capital of a Pilaster, of which the upper diameter is 9 inches."

Lyon's Inn hall.

ARCHITECTURAL EXHIBITION and COLLECTION of PATENTS and MANUFACTURES connected with BUILDING, NOW OPEN at the Galleries of Suffolk-street, Pall-mall East, from Nine till dusk. Admission, One Shilling; or at all times to the Galleries, and to all the Lectures by season-tickets, Half-a-crown each.

First Lecture on Light on Tuesday Evening, January 8, "Ancient Assyrian Architecture," by Jas. Fergusson, esq. F.R.A.S.

Lists of Lectures, tickets, and all particulars, to be had at the Galleries.

MUSEUM of PRACTICAL GEOLOGY, Jermyn-street.—NOTICE.—During Christmas week and henceforth the Museum will be opened FREE to the Public every day but FRIDAY. By order,

TRENHAM REEKS, Curator.

BOARD of TRADE DEPARTMENT of SCIENCE and ART. — INSTRUCTION in ART. TRAINING SCHOOL, MARLBOROUGH HOUSE, Pall-mall, LONDON.

Art-Superintendent, RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of the hers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Freehand, Architectural and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c, the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

ARCHITECTURAL EXHIBITION, 9, SUFFOLK-STREET, PALL-MALL EAST. Architects and Builders are specially requested to examine the specimens of BATH and CAEN STONE, inserted by BARRETT'S PATENT PROCESS, now to be seen, No. 47, in the Department for Materials at the above Exhibition.

COMPETITIONS.

TO ARCHITECTS.

THE FEOFFEES of the COMMON LANDS of ROTHERHAM, in the county of York, are desirous of receiving DESIGNS for a GRAMMAR-SCHOOL and RESIDENCE for the Master, to be erected in a portion of land now forming near an acre adjoining the Moorgate road, near Roller Iron, belonging to the Feoffees. The school, which should not be under the same roof with the master's residence, must be so arranged as to accommodate 100 boys. The cost of the school at present appears to be 1,000l, and the cost of the master's residence 700l. The designs should be such as to allow of the school being built previously to the residence. Plans, each bearing some motto, accompanied by a sealed envelope, containing the name and address of the architect using such motto, to be sent to the undersigned, on or before the 21st day of FEBRUARY, 1856. The plans and drawings of the successful competitor will be returned. The successful competitor will be required to superintend the erection of the building at a certain commission of 2½ per centum on the outlay upon the school, and 5 will be given for the second best plan. A lithographed plan of the site, and all further information may be obtained on application to Mr. THOMAS BIGELL, Greave of the Feoffees, Rotherham.

December 10th, 1855. THOS BADGER.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD for the PARISH of LOUGHBOROUGH, in the county of Leicester, is desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground-plans, sections, and elevations for laying out a new BURIAL-GROUND, of about 7 acres, planting and draining the ground, building a receiving-house, curator's dwelling, with entrance gates and two suitable chapels, the expense of the buildings not to exceed 1,500l. The party whose plans, designs, and estimates may be approved, will be paid 5l. for the same, which will become the property of the Board; and all designs not approved will be returned. All plans, &c., must be delivered at the Offices of Messrs. HAND, WALLIS, and SON, in Loughborough, carriage and free of expense, without the author's name, but with a motto, on or before the 1st day of JANUARY next, addressed to me and endorsed, "Designs, &c. for Loughborough Burial-ground." A sealed letter, containing real name and address, should accompany each design. The Board do not bind themselves to accept any design. A plan of the ground can be seen, the depth of draining required ascertained, and any further information may be had on application at the said Offices of Messrs. Hand and W. H. Toone. By order,

W. H. TOONE, Clerk to the Board.

Loughborough, December 12, 1855.

RUGBY TOWN-HALL COMPANY.—The Directors are prepared to receive DESIGNS and ESTIMATES for a TOWN-HALL and Public Building, at Rugby, and hereby offer a premium of 20l. for the best set of plans, elevations, and specifications; and a further sum of 10l. for the second best. The selected designs to become the sole property of the directors; and the successful competitor will, if duly qualified to the entire satisfaction of the directors, be entrusted with the carrying out of the design at the usual commission, in which case the first-mentioned premium will merge in the commission. All the drawings to be on a scale of one-eighth of an inch to a foot. The drawings and estimates must be delivered at the Offices of Messrs. WRATISLAW and FULLER, Solicitors, Rugby, on or before TEN o'clock a.m. on the 31st day of JANUARY next, addressed to the Secretary, from whom particulars, together with a lithographed plan of the proposed site, can be obtained on payment of 3s. 6d. The designs not accepted will be returned, but beyond the above mentioned premiums no allowance will be made to any other competitor.

Rugby, December 6, 1855.

DARLINGTON BURIAL-GROUND.—The TIME for sending in Designs is EXTENDED to the 14th of JANUARY. Each design to be sent in under a motto, By order, H. DUNN, Clerk to the Board.

Darlington, December 19, 1855.

CONTRACTS.

GLASGOW CORPORATION WATER-WORKS—LOCK KATRINE AQUEDUCT.—CONTRACTORS WANTED for No. 1, or BLAIRHULICHAN CONTRACT, including tunnel, 2,785 yards in length, and other works. The plans, sections, and specification of the first contract for the execution of these works, will be ready for inspection on and after 4th DECEMBER next, in the Town Hall, at the Cross of Glasgow; entry by No. 13, Trongate-street; and also at the Inn, at Aberfoyle, near the site of the Contract. At these different places, as well as from the subscriber in Glasgow, all necessary information will be obtained. The works to form the subject of this contract will extend from Lock Katrine to the valley of the Duchray Water, being a length of about eight miles, and will include all tunnelling, masonry, cast and wrought iron aque ducts, and every other work connected with this portion of the aqueduct, together with the formation of about 20 miles of new road from the head of Loch Chon to the road leading from Inversnaid on Loch Lomond to Stronachlachar, on Loch Katrine Further information may be obtained from Mr. J. T. BATEMAN, the Engineer, at his Offices, in John Dalton-street, Manchester; and from Mr. G. H. HILL, the Assistant Engineer, at Blairhulichan, on Loch Ard, near Aberfoyle, who will accompany contractors over the ground. TENDERS for the CONSTRUCTION of the WORKS, sealed and marked "Tender for Blairhulichan Contract," will have to be delivered to the subscriber, Mr. BURNET, at his Office, Council Chambers, Glasgow, on or before 3rd JANUARY next.—By order of the Committee,

JOHN BURNET, Secretary

Glasgow, Nov. 22, 1855.

CONTRACTS.

NOTICE to EXCAVATORS and CONTRACTORS for EARTHWORKS, ORDNANCE WORKS. The Commanding Royal Engineer of the Dover District hereby gives notice that he will RECEIVE TENDERS until noon, at the Office of the Director-General of Contracts, Pall Mall, London, on or before TUESDAY the 1st day of JANUARY next, from persons desirous of CONTRACTING for EXCAVATING and REMOVING GROUND at DOVER CASTLE, to form a Site for the Erection at a future time of an Officers' Barrack; also Sites for Regimental Buildings, Terraces, Inward Roads of Approach to the same. A plan, sections, and specification of the Excavations to be carried out may be seen by persons duly competent to undertake such important Works, and Forms of Tender obtained at the Royal Engineer Office, Dover Castle, between the hours of TEN and FOUR o'clock, from MONDAY, the 17th of DECEMBER, to MONDAY, the 31st of DECEMBER 1855, Sundays and Christmas Day excepted. A person belonging to the Royal Engineer Department will attend each day, from Ten to Two o'clock, to point out the ground to be excavated. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 1,000l. for the due performance of the Contract. Tenders for the above work to be addressed to the Director-General of Contracts, Pall Mall, London, and delivered at the Office of Contracts at Dover Castle.

N.B. The War Department reserve to themselves the right of excluding the whole or any of the Tenders.

Royal Engineer Office, Dover Castle, December 8th, 1855.

TO BUILDERS and OTHERS. — Sealed TENDERS for the following SERVICES on the coast of Cornwall, viz.:—

No. 1. At Pendennis—Construction of a 24-gun Battery and Side-arm Shed, as well as an extension of the present Magazine, &c.

No. 2. At Pendennis—Construction of a 24-gun Battery, Magazine, Side-arm Shed, &c.

No. 3. At Pendennis—Bitts, buttresses, &c.

No. 4. At St. Mary's—Construction of a 9-gun Battery and Side-arm Shed, and Repairs and Alterations of the old Magazine, &c.

Prospective plans, &c., will be received by the War Department, Pall-mall, London, on or before 12th JANUARY, 1856, at noon. Detailed specifications and estimates Nos. 1 and 2 may be seen at Oliver's Hotel, Dunstan, on the 7th instant; and Nos. 3 and 4, at Crumble's Hotel, Hayle, on the 9th instant, between the hours of TEN and FOUR at each place. An Officer will attend on the 7th and 9th instant at the above-named Hotels, to explain the plans to such persons as may appear to be desirous of tendering, and to leave the whole of the two days specified for inquiry and examination.

The Engineer-in-Chief's Office, 23rd December, 1855.

THE NETHERLANDS LAND ENCLOSING COMPANY. CONTRACT for ENCLOSURE WORKS. TENDERS are prepared to receive TENDERS for the CONSTRUCTION of a BOLDER BANK, situate at BATH ZEELAND Harbour, according to plans now open to inspection at the Office of the Company, No. 4, Great Queen-street, Westminster, where all necessary information may be obtained, from Messrs. BIDDER and GEORGE ROBERT STEPHENSON. Tenders to be addressed, under seal, to the undersigned, at No. 2, Mount-street, Londonderry, on or before the 15th JANUARY, 1856. The Directors do not pledge themselves to accept the lowest or any Tender.

By order of the Board,

GEORGE PASSON, Secretary.

2, Mount-gate-street, London, December 11, 1855.

N.B. The contract for the above work is completed, and when approved by Government, the contract will be offered to public Tender.

TO BUILDERS.—KNIGHT'S BRIDGE.—The Magistrates of the counties of Berks and Hants, are this day receiving TENDERS for RE-BUILDING KNIGHT'S BRIDGE, over the River Kennet, on the road from Kingsclere to Newbury. Persons desirous of contracting for the same, may see the plan, specification, and particulars, at the Offices of the County Surveyors, Messrs. BIDDLE and BROADSTONE, Reading; or Mr. T. STOPHER, St. 18 Swithin-street, Winchester, on and after WEDNESDAY next, between the hours of TEN and FOUR. Sealed Tenders, endorsed "Tenders for Knight's Bridge," to be sent to me at Reading or Winchester, on or before TUESDAY, JANUARY 15, 1856. The lowest Tender will not necessarily be accepted. By order of the Committee of Management,

J. B. CLACY, } County Surveyors for Berks and
T. STOPHER, } Hants.

39, Broad-street, Reading, St. Swithin's street, Winchester.

December 18, 1855.

TO BUILDERS.

NATIONAL SCHOOL at KINGSKERSWELL, near Newton Abbot, South Devon.—All parties willing to TENDER for the ERECTION of a SCHOOL and HOUSE, in separate Tenders, may see the plans at the offices of Mr. MASLEN, S. of the parish of Ilsington, between the hours of 9 and 4 daily; and tenders must be sent, sealed, to the Secretary of Building Committee, Parsonage, Kingskerswell, on or before the 1st JANUARY, 1856. Further particulars may be obtained by application to Mr. J. W. HOOKER, Architect, Cheltenham, where a copy of the plans and specifications may likewise be seen.

CONTRACT for AFRICAN MAHOGANY. Notice is hereby given to all persons who may be desirous of CONTRACTING for the SUPPLY of 100 LOADS AFRICAN MAHOGANY, that proposals addressed to "The Director-General of Stores, War Department, Pall-mall," with the outside "Tender for African Mahogany," will be received on or before the 24th instant. Parties tendering are requested not to use any form but that which can be obtained on application to the above officer, any day previous to that date (Sunday excepted), between the hours of TEN and FOUR.

War Department, Pall-mall, Dec. 14, 1855.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS. — The ERECTION of a NEW UNION WORKHOUSE. — Persons desirous of Contracting for the Erection of the Workhouse for the Union of the West Ward of the City of Canterbury, and Worcester for the ERECTION of a NEW UNION WORKHOUSE, consisting of separate accommodation for 600 inmates, together with the several offices, buildings necessary to be connected therewith, at Lathom, in the parish of West Derby, may inspect the drawings and specifications thereof, at the Offices of Messrs. [illegible] Architects, No. 2, Bedford-row, Holborn, and Mr. [illegible] Architect, Liverpool, on and after the 22nd day of DECEMBER inst. and may obtain Forms of Tender, where full particulars of the Contract may be seen, on payment of Two Guineas, each. Tenders must be sent in, and addressed to each of the parties, not later than One o'clock on THURSDAY, the 3rd day of JANUARY next. The contractors will be required to give such security as the Board may require for the due performance of the said works according to the plans, and the general conditions, specifications, and schedule of prices to be prepared as to the same. The Board will not bind themselves to accept the lowest or any other Tender.

By order of the Board,
CHARLES STRINGER, Clerk.

West Derby Union Office, December 15, 1855.

SALISBURY CEMETERY.—To BUILDERS and CONTRACTORS.—The Burial Board of the Parishes of St. Thomas, St. Edmund, and St. Martin, Salisbury, are desirous to receive TENDERS for the several Works required to be done in LAYING OUT and FORMING the BURIAL GROUND, recently added to the Cemetery, and for ERECTING a PORTER'S LODGE, and BURIAL CHAPELS, and in PAVING OUT and FORMING the ROADS and FOOTPATHS of the new cemetery on the Wilton-road. Copies of the plans and specifications may be seen at the Rev. J. M. HENRY E. COLE, Architect, of No. 2, Adelaide-place, London-bridge; or at the Office of the undersigned, with whom Tenders are to be left on or before the 5th JANUARY next. The Burial Board will not object to receive Tenders for the separate Works for the whole or any part of the Works, except the lowest or any Tender. A separate Tender for laying out and forming the roads and footpaths will be required. The Tenders are to be forwarded to me on or before the 31st of JANUARY next, addressed to the undersigned, Solicitor to the Salisbury Cemetery, and for other of the bodies, at my office. The contractor or contractors will be required to enter into such security as the Board may require for the due performance of the works, agreeably to the plans, general conditions, and specifications, such security to be approved by the Board.

G. SMITH, Clerk to the said Board.

Salisbury, December 10, 1855.

HOLLOWAY and NORTH METROPOLITAN FREEHOLD LAND and PERMANENT BUILDING SOCIETY.—To CONTRACTORS.—The Committee of the above Society are desirous of receiving TENDERS for MAKING ROADS, ERECTING SEWERS, &c., on their Estate at Holloway. The plans, etc., may be seen, and information, applied for to CHARLES BARLOW, the Surveyor, No. 31, Bloomsbury-place, Southampton-row, Holborn, on Saturday, the 22nd inst., between the hours of Ten and Two o'clock. Tenders are to be addressed to the Secretary, at Belle Vue-villa, Holloway, on or before the 31st of DECEMBER instant. All parties tendering are requested to attend the Committee-room on WEDNESDAY, the 2nd day of JANUARY, 1856, at SEVEN o'clock p.m. at the Office of the Solicitor, E. C. SEAMAN, Esq. No. 12, Panoras-lane, Cheapside.

TO IRON FOUNDERS.

FILEY WATERWORKS.—CONTRACT for CAST-IRON PIPES.—The Filey Water Company are prepared to receive TENDERS from parties willing to CONTRACT for the SUPPLY of about FOUR MILES of CAST-IRON MAIN PIPES. The specification may be seen at the office of W. JOSIAH P. FAIRBANK, of South Parade, the Company's Engineer, on and after MONDAY, the 24th instant. A printed form of specification, with form of Tender, will be forwarded on receipt of 2s. 6d. Sealed Tenders, addressed to the Directors of the Filey Water Company, and endorsed "Tender for Cast-Iron Pipes," must be forwarded, free of carriage, to the Engineer of the Company, on or before the 1st day of JANUARY, 1856.

JOSIAH F. FAIRBANK,
Engineer and Secretary to the Filey Water Company.

South-parade, December 15, 1855.

MIDDLESEX and ESSEX TURNPIKE-ROADS.—To ROAD CONTRACTORS and OTHERS.—The Trustees of these Turnpike-roads will meet at the Office on FRIDAY, JANUARY 11th next, at TEN o'clock in the morning precisely, to receive TENDERS in writing, for the PURCHASE of the Value of GRAVEL, BALLAST, to be used in the reparation of that part of these roads which is between North-street, Whitechapel, and Bow-bridge. The Trustees require that such gravel be first screened, and then carted for spreading and carriage on such portion of the line of road, and be once sifted through screens 2½ inches and ¾ inches in the mesh, and containing three bushels to the Trustees to load liberty at their own expense to cart such gravel ballast through screens of 2½ inches diameter, and for the carriage and spreading of the gravel ballast as aforesaid, until the 25th of MARCH, 1856. Payment will be made with three months' credit for each stock of such gravel ballast as may be delivered, and carted and spread as aforesaid. The Trustees do not bind themselves to accept the lowest or any Tender.

GEORGE DARE,
Clerk and Solicitor to the Trustees.

Turnpike Office, Bow, Middlesex, December 15th, 1855.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of a new CHAPEL and VESTRIES at Camberwell, can see the drawings and specification at the Office of the Architects, Messrs. W. G. and E. HABERSHON, on Bicester-square. Tenders to be delivered on MONDAY, the 31st DECEMBER, at FOUR o'clock precisely. The Committee do not bind themselves to accept the Lowest Tender.

A QUANTITY of BRICKWORK to BE LET, the Contractor to find mater ials and scaffolding. Plans may be seen, and all particulars known, at 5, Burnford place, Caledonian-road.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

The Earl Verney and Roseberry.
The Right Hon. Earl Feather, M.P.
Right Hon. R. Chris Nisbet Hamilton, M.P.
J. C. Colthild, esq., M.P.

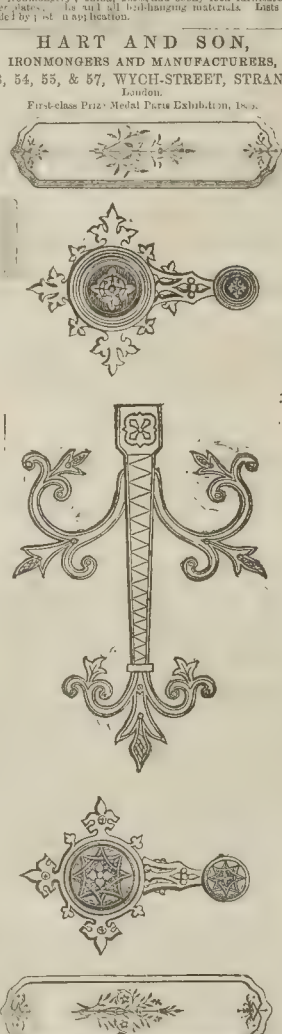
TO ROAD CONTRACTORS, &c. — The Executive Committee are prepared to receive TENDERS for COMPLETING the ROADS, DRAINS, GARDEN, FENCES, &c. on the Clarence Estate, Putney. The Estate is situate on the high ground to the south of the Suburban, on and after WEDNESDAY, DECEMBER 26, between the hours of ELEVEN and TWO. Tenders to be delivered between TWELVE and ONE o'clock, on FRIDAY, JANUARY 4, 1856, addressed to the Surveyor, and endorsed "Tenders for Completion of Roads, Putney Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, New Bridge-street, Strand, December 8, 1855.

TO BUILDERS.

HEANOR WATERWORKS. — Contract No. 2. — The Local Board of Health for this district are ENGINEER thereto, to contain a 15-horse power steam engine, a BOILER HOUSE, to contain two 12-ft. by 6-ft. boilers, and a STEAM CHIMNEY, 60 feet high. The drawings and specifications may be seen at the office of Mr. JAMES NORRIS, of Nottingham, the Engineer to the Local Board. The Tenders are to be delivered on or before TUESDAY, the 1st day of JANUARY next.



H. B. SPENCER, Clerk to the Board.

Board-room, December 17, 1855.

IRONMONGERY.—Builders and the Trade generally will effect a considerable saving by purchasing IRONMONGERY (CLOSE and ROSE, Wolverhampton Factory and Stove and Range Manufacturers, 35, Gay-road, corner of Tabernacle-row). A large stock kept of every description of builders' ironmongery; china, glass, and ebony lock furniture and finger plates. Iu and all bell-hanging materials. Lists forwarded by post on application.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND,
London.

First-class Prize Medal Paris Exhibition, 1855.

Specimens from Paris Exhibition to be seen at the Architectural Exhibition, Pall mall.

Illustrated Priced Catalogue to be had on application.

JOHN PARKIN and CO. late BLAKE and PARKIN, NEW MEADOW STEEL WORKS, SHEFFIELD, MANUFACTURERS of CIRCULAR and MILL SAWS, IMPROVED CAST-STEEL FILES, for the use of engineers and machinists, PATENT TEMPERED MACHINE KNIVES and CUTTERS, manufactured for planing and groving wood, for cutting paper, iron, stone, leather, &c. made of any pattern or dimensions with the utmost exactness. Warranted to work with a harder and finer edge than any other mode of temper.

INVENTORS of CORE-ANNEALED CAST-STEEL for taper pistons, &c. &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST STEEL, &c.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.

Castings Warehouse removed from 81 to 68, Upper Thames-street.

JOHN SCOTT, ENGINEER, IRON-FOUNDER, and IRON SHIPBUILDER, 26, BUCKLERSBURY, London. Works at Inverkeithing, near Edinburgh. Engineers and Builders' Castings of all sorts. Steam-engines and Boilers. Plans and specifications prepared.—Removed from 38, Upper Thames-street.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporising) with all the improvements, under their Quadruple patents of 1841-51 and 1855, including their Gunpowder Proof Steel Lock and Door Bolt, which no safe is free of.

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX and SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47a, Moorgate-street, City.—Circulars free by post.

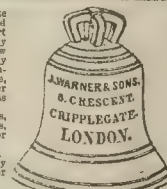
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.



OFFICES—Gateshead-on-Tyne.
19a, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

THOMAS EDINGTON, PURCHASER and INSPECTOR of CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article marked in plain figures. Patentees and manufacturers of the Meridian Gas Regulator. Complete pattern-book and price list, 16s. 55 and 56, High Holborn.

TO CARPENTERS, BUILDERS, AND OTHERS.

FOR SALE, a horse-power CIRCULAR-SAW-MILL, with circular saw-bench, saws, shafting driving bands &c all complete, and nearly new, price 50l. Also a hand-power CIRCULAR-SAW BENCH and SAWS, complete, price 5l. To be seen at work at No. 6, Tree's street, Lambeth.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.

CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

BRAMAH LOCKS, FIREPROOF IRON SAFES, WATER-CLOSETS, and PUMPS. BRAMAH and CO. have the honour to state that a new One Silver Medal has been awarded to them by the Jurors of the Paris Universal Exhibition. Manufactory, No. 124, Piccadilly, London.

Every article made by BRAMAH and CO. bears their address—124, Piccadilly.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails, wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furniture of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. each.

J. H. BOOBBYER (late SUTCH) and BOOBBYER, established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c., a door fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior axe fastenings, at moderate prices. Non-genuine unless marked "Charles Collinge, Patent, Lambeth." Park and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and Estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

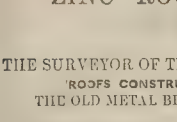
Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service Pipes, Lamp Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

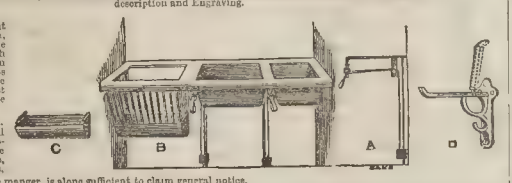
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description



DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide, and C the rein, the ball (which is taken to the back of the mangers works with freedom and can up or down the guide-bar, and is noiseless in its operation, and is a sure preventative against the most restive horse kicking out in the stall.

B. The Patent Portable Seed-box can be instantly detached from the Rack without disturbing the hay. Cleaning of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box (B), is made of galvanized sheet iron, light and durable.

D. The Patent Saddle and Harness Bracket combines great advantage in harness-room, where space is an object, as the long portion of the bracket can be turned in out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, or enamelled.

IMPROVED SURFACE-DRAIN, with safety-covers; Sanitary Traps; Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

WARMING LARGE BUILDINGS, &c.—CUTLER and SONS respectfully state that they are prepared to Contract for the Erection of their Improved Powerful Apparatus for effectually and economically Warming Churches, and all other public or private buildings, which they undertake in every instance to guarantee—It may be seen in constant use at their Premises, 16, Great Queen-street, Longacre London.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIESS'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire. Secondly, at the same time, perfect ventilation. To be seen in action at DEFRIESS'S Office, 145, Regent-street, London.

HEATING BY HOT WATER

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with a coil of iron can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 6s. 8d. This achievement in heating by hot water is unprecedented

BUILDINGS HEATED by HOT WATER. G. B. COOPER, IRONWORKS, 121, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Bells, &c. Ornamental and Constructive Ironwork

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their NEW ECONOMIC COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy in management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, forwarded free by post.—DEANE, DRAY, and CO., opening to the Monument, London-bridge. Established A.D. 1700

CUNDY'S PATENT PURE WARM-AIR STOVES, the only Pedestal Stove which gained a Prize Medal (Class 30), at the Great Exhibition in 1851, especially adapted for warming, with great economy, Churches, Chapels, School-rooms, Halls, Libraries, and Ware-rooms. CUTLER and SONS, Sole Licensees and Manufacturers, 16, Great Queen-street, Longacre, London

GAS STOVES. — TOZER'S PATENT VENTILATING GAS STOVES, for churches, halls, shops, offices, &c. to burn with or without a chimney. The following buildings are warmed by these stoves:—St. Paul's Old Church; St. Paul's, Covent-garden; St. Mark's, Hornsey; Moravian Chapel, Fetter-lane; St. Mark's, Regent-terrace, Westminster; St. Jude's, Mildmay-park; St. John's, Charlotte-street, Fitzroy-square; New Church, Chatham; and Christ Church, Worthing, and numerous other public institutions. Gas Stoves, from 18s. to £2. A prospectus, with drawing, will be forwarded on receipt of a post-office stamp, by THOMAS TOZER, Manufacturer, 55, Dean-street, Soho.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel. Prospectuses, with testimonials, sent on application.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain, supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and screw joints, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron Merchant, Wharf No. 6, Bankside, London, near the Southwark-iron bridge.

COMPACT SAW-MILL.—TO BE DISPOSED OF, the MACHINERY in POSSESSION of a compact SAW MILL in Southwark. The work may be quite new, and consists of a frame circular sawbench, shorse power, direct acting engine and boiler, shafting, driving gear, &c. The premises are situated near the Thames. To engineers will be sold the Lot, for removal, if required. For further particulars, apply to Messrs. FULLER and HORSEY, Bloomsbury, City

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

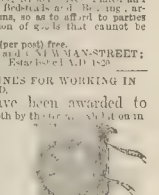
FENDERS, STOVES, and FIRE-IRONS. Buyers of the above are requested, before finally deciding, to VISIT WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE-IRONS and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or moderateness of price. Bright steel and ormolu fenders, with standards, from 7s. to 3l.; steel fenders, from 2l. 5s. to 16l.; fine fenders, with rich ormolu ornaments, from 2l. 15s. to 7l. 7s.; fire-irons, from 1s. 6d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth-plates. All which he is enabled to sell at these very reasonable prices.

Firstly—From the frequency and extent of his purchases, and

Secondly—From the purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS. The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers, in Manufactured Glass, all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to entrance passages, and dwelling-rooms, as well as to have some designed expressly for him. These are ON SHOW, in his SIX LARGE ROOMS, at prices quite as low as plain pendants and brackets can be usually purchased, viz. from 18s. 6d. (two-light) to 16l. 16s.

THE BEST SHOW of IRON BEDSTEADS in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads, from 16s.; Portable Lodging Bedsteads, from 15s. each. Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d.; and Cots, from 20s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.



The alterations and additions to these very extensive premises already by far the largest in Europe, which have occupied the whole year, are now nearly completed; they are of such a character that the entire of EIGHT HOUSES are entirely used for the display of the most magnificent Stock of GENERAL HOUSE FURNISHING IRONMONGERY ever submitted to the Public, and Japanned Wares, Iron and Brass Bedsteads, and Bedding, arranged in Sixteen Large Show-rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere

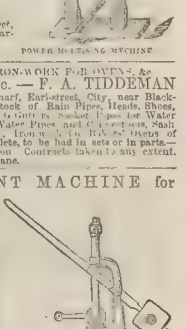
Catalogues, with engravings, sent (per post) free.

39, ORCHARD-STREET, 1, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established A.D. 1820

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines both by the Jurors who sat on it in London, and many scientific institutions. They are extensively used throughout the United Kingdom by carpenters, cabinet-makers, coach and wagon builders, wheelwrights, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing and turning.

POWER MORTISING MACHINE



Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

Sold only by WILLIAM PERNESS, at 46, No. 1 Lane-street, Pentonville-road, from whom full particulars may be obtained.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. 68, Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. suitable for Gutters to Sunken Pipes for Water or Gas, Syphon Pipes, Hot Water Pipes, and Cisterns, Sash Weights, and other castings, from 1 cwt. to 5 tons. Quotes of every description, fitted complete, to be had in sets or in parts.—Prepared to all competitive Contracts, taken to any extent. Goods landed. A powerful crane.

NEW PATENT MACHINE for MORTISING and PUNCHING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to come at their earliest convenience, to Messrs. JAMES, and CO., Wholesale Builders and Patent Machine Makers, Ironmongers, Establishment, No. 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out for performing those three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the other mortising machines. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO BUILDERS, CARPENTERS, PAINTERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No. 3	4	5	6
8s.	9s.	9s. 9d.	10s. per cross.

At JOHN YOUNGS, Birmingham, and 19, Bloomsbury-square, Agent, Factor, and General Ironmonger, &c. to Manufacturers, Manchester-terrace, Manchester-street, Manchester-square, and Baker-street, Portman-square. Every description of Patent Sash Line on sale.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"16, Hyde-park Gate, Kensington, February 24, 1854.

"My dear Sir,—The Air Warmer continues to work very satisfactorily indeed, with regard to the main body of the house, and during this weather is charming, even in the painting room. Mrs. Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"Mr. J. Jobson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield.

"Stanhope-lodge, St. John's-wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of colds on my residence in England, and this has increased with increasing years and decreasing strength; I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the hall and passages of my house; but I have never succeeded till now in producing an equal temperature over every part, and having that temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and have the climate of May within doors in the months of December and January. The servants learnt its proper management in a few days without difficulty, and its economy in fuel is so remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall lose no opportunity of heartily advising its adoption to all who desire to protect themselves against the changes of temperature in their dwellings.—I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Roscoe-place, Sheffield."

M. E. HADFIELD, Esq. Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855.

"My dear Sir,—We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable oppressive odour produced usually by Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective.—I am, my dear Sir, yours faithfully,

"Mr. J. Jobson Smith, Roscoe-place." "M. E. HADFIELD.

WILLIAM HUTSON, Esq.

"Newby Wiske, Thirsk, 15th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the disadvantages incident to an uninhabited and unfurnished house, with all the doors open into the adjacent rooms, it is keeping up a very genial influence over the temperature, even during this severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 16s. 6d. per ton, the rate at which it has been fired for the last two or three months, is 1d. per hour.

"I am, Sirs, yours truly, "WILLIAM HUTSON.

"Messrs. Stuart and Smith.

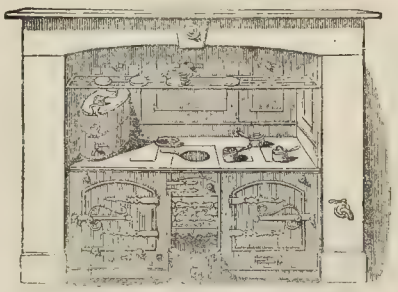
"P.S.—Mr. HUTSON, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3l. 6d. for coke—say about 5d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop-road, February 27th, 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the comfort has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase, and passages, being a reservoir of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have had the general run of the house without the fear of a relapse. To many invalids the invention will prove invaluable, giving them the freedom of their habitation instead of confining them prisoners to one apartment.—Believe me, my dear Sir, very truly yours, "EDWARD MARTIN.

"Mr. Jobson Smith."



E. F. SANDERSON, Esq.

"West-street, Sheffield, 27th March, 1855.

"Gentlemen,—The Gill Air Warmer you put up for me last year at Endcliffe, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country; but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling-houses most equably comfortable in point of temperature.—I am, yours very truly,

"Messrs. Stuart and Smith, Roscoe-place." "E. F. ANDERSON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,
19, WIGMORE-STREET, LONDON;
and at the Crystal Palace, Sydenham.

W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 3 lbs. to the foot; 3-16ths, or 5 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use

THE PATENT DRAUGHT and DUST EXCLUDER (BOURRELET'S COMPRESSIBLES) not apparent when fixed in the angles of doors, windows, and glass-cases, the cheapest and most effectual invention for the purpose.—At R. HELBRONNER'S, Sole Patentee, 265, Regent street, near the Circus, Oxford street. Depôt at BURGESS and KEY'S, 109, Newgate-street, City.

FOR SALE, a THREE-TON CRANE, nearly new. Also, a Pair of large Folding Gates, built of Teakwood, with all appendages, as now hung in the Royal Arsenal, Woolwich.—Apply to Mr. MURRAY, Contractor, Beresford-street, Woolwich.

TO MANUFACTURERS.

SKINNERBURN IRON-WORKS, Newcastle upon-Tyne, FOR SALE by PRIVATE CONTRACT. These works are situated on the west side of the Forth Banks, and contiguous to the River Tyne and the Railways as Newcastle. They consist of a commodious Foundry, an excellent and powerful forge-hammer, with arrangement for making almost every description of forged work for steam-engines, iron ship-building purposes, and machinery generally, with steam-engines, cupolas, furnaces, stoves, cranes, pattern and smiths' shops, &c. requisite for carrying on an extensive business in the founding and forge department. In addition to the above, there are so ne spacious open yards and other buildings, consisting of a five-stalled stable, with coach-house and harness-rooms adjoining, and two dwelling-rooms above, four tenement cottages, and a square of cottages, containing six rooms, counting-house, &c.; the whole of which, together with the works, is Freehold property. The works are in full operation, but the Term for which they have been leased is about expired. The property may be purchased with or without machinery.—For particulars, apply to Messrs. INGRAM and DAGGETT, Solicitors, Newcastle-upon-Tyne.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fireproof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a bed of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a flat or inclined surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 50 per cent. cheaper than the best India-rubber Pipe. Manufactured only by WAITHMAN & CO. Benham, Lancaster.

Insurances may be effected by the Agents of the PHŒNIX COMPANY in all parts of the kingdom, on every description of property, in every part of the world, on the most moderate terms.

Persons insuring their Plate in the Company are not liable to make good the loss of fashion, as in the case in some offices.

Insurances will cease upon expiration of premium, unless renewed within fifteen days thereafter, or they will become void.

Receipts may be had at the principal offices, Lombard street, and all the Agencies, and with the respective Agents throughout the United Kingdom.

LOMBARD ADVANCE FUND.—Incorporated by Act of Parliament, 1854.

Chief Office—1, Queen's-square, Bloomsbury, London.

Loans granted for a fixed period or repayable by instalments. Good and sufficient security on moderate terms. Money advanced on dock warrants, railway shares, and all kinds of tangible securities.

Deposits received at 4 per cent. per annum, subject to 3 months' notice of withdrawal, or at 3 per cent. per annum subject to fifteen days' notice of withdrawal.

Applications for the formation of Local Boards in populous districts will receive prompt attention.

Prospectuses and forms of application may be had on application to the Secretary, at the Chief Office, 1, Queen's-square, Bloomsbury, London.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.

Established 1831.

At 1st March, 1855, the amount of the accumulated Capital was £910,000

And the Annual Revenue exceeded £ 145,000

The steps taken by the Representatives of Deceased Members was upwards of 60,000

Amount of Existing Assurances 4,452,000

The valuable surplus, exclusive of the original property of the Institution, and of the immense benefit to the families of deceased members, etc.

The Profits are divided every Three Years, and wholly belong to the Members of the Society.

The next Division of Profits takes place at 1st March, 1858.

For prospectuses and all information, apply to

WILLIAM COOK, Agent.

126, Bishopsgate-street, London.

Head Office—2, St. Andrew's-square, Edinburgh.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,

14, Waterloo-place, London, and 30, Brown-street, Manchester

DIRECTORS.

THE CHAIRMAN, Chairman.

RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy Chairman.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy holders under their own immediate superintendence, and divided. The profits are divided annually, and applied in reduction of the current premiums. Policies holders participate in the profits after payment of five annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1855, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that during the two last years, inclusive of 1854, between 700 and 800 new Assurances had been effected, producing an increase of premium income amounting to 11,000 per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the last year in consequence of the visitation of cholera, it had not been found necessary to reduce, in the society, the allowance of 3½ per cent previously awarded to the Policy holders.

Credit is allowed for half the Annual Premiums for the first five years.

A. R. IRVINE, Managing Director.

14, Waterloo-place, London.

DRAWING CLASSES, 21, Guildford-street, Russell-square—terms, 1 guinea per quarter—which commences on Monday, January 7. Gentlemen who cannot attend at the establishment may be attended at their residence on moderate terms. Any part of town or country. Mr. SMITH or Mr. LEWIS.

ARCHITECTURAL PERSPECTIVES coloured in first-rate style, on moderate terms, by Mr. J. H. CONNOP, First Floor, 1, Robert-street, Adelphi. Specimens on view.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous that Architects, Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS, Exercises, Interiors, Geometrical Perspectives set up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Details, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition, drawings prove successful.

Address, 8, Rathbone-place

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth, begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c., at equally low prices. An illustrated price-list will be immediately forwarded, free on application.

N.B. A few New and Second-hand Levels and Theodolites always for sale.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES, Established by Messrs. HYDE, SMITH, and DAVIES, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing, Colouring, Shading and Tinting, Ornamental and Water-Colour Drawing, Perspective, Isometrical, and Inverted Drawing, Making, Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. These are extensive, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24 Guildford-street, Russell-square

PHOTOGRAPHIC APPARATUS and MATERIALS, cheapest and best, at HOUGHAFT'S, 410, Oxford-street. A complete apparatus for portraits, &c. 4½ inches, 21 10s warranted. Mahogany Stereoscopes, 4s. 6d. Lists of prices sent post-free. Lenses and apparatus made and repaired.

Third Edition.

THE BUILDER'S FRIEND, Price One Shilling.

Office of "The Builder," and of all Booksellers.

YE BOKD FOR CHRISTMAS TYDE.

Now ready, in a volume of 600 pages, with a Portrait, price 14s.

CURIOSITIES of LONDON: exhibiting the most rare and remarkable objects of interest in the Metropolis; with nearly fifty years' personal recollections

By JOHN TIMBS, F.S.A.

"A wonderful little dictionary of London. There is so much out-of-the-way reading in it, such apt illustration of personal experience, and such a quantity of agreeable information, drawn both from books and men."—*The Examiner.*

DAVID BOGUE, 86, Fleet-street.

NEW ILLUSTRATED EDITION OF MOORE'S IRISH MELODIES.

In One Volume, square 8vo, with 161 Designs, uniform with the edition of Moore's "Lalla Rookh," illustrated under the superintendence of the late Charles Heath, price 21s. cloth; or 31s. 6d. handsomely bound in morocco.

MOORE'S IRISH MELODIES, illustrated with Thirteen fine Steel Plates, engraved from original Designs by

C. W. Cope, R.A.	W. E. Frost, A.R.A.	W. Mulready, R.A.
T. Creswick, R.A.	J. C. Horsley,	J. Sant, A.R.A.
A. L. Egg, A.R.A.	D. Maclise, R.A.	F. Stone, and
W. P. Frith, R.A.	J. E. Millais, A.R.A.	E. M. Ward, R.A.

*** An edition of Moore's "Irish Melodies" illustrated by D. Maclise, R.A., with 161 Designs engraved on steel, by F. Stacpoole, engraver in ordinary to the queen, and printed in colours, with Vignette, price 5s. cloth, or 12s. 6d. bound in morocco by Hayday.

Diamond Edition, in 32mo. with Portrait, 2s. 6d.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo. with Six Plates price 8s. cloth,

ELEMENTS of PRACTICAL HYDRAULICS, for the Use of Students in Engineering.

By SAMUEL DOWNING, M.A.

Professor of Civil Engineering in the University of Dublin.

"A work which cannot fail to be of the greatest value to all who are concerned in the drainage of land, or the supply of towns with water, or the construction of canals, or the irrigation of tracts rendered barren by excess."—*Architect, &c. Journal.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A new edition, fcap. 8vo. price 10s in cloth; 12s. bound in embossed roan; or 12s. 6d. calf lettered.

MAUNDER'S BIOGRAPHICAL TREASURY. A comprehensive Dictionary of Universal Biography, Ancient and Modern, comprising above 12,000 Memoirs. The Ninth Edition, brought down to the close of 1854

Also, all uniform in size and price,

THE HISTORICAL TREASURY.

THE TREASURY OF KNOWLEDGE.

THE TREASURY OF NATURAL HISTORY.

THE SCIENTIFIC and LITERARY TREASURY.

LONDON: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published in 8vo. price 14s. cloth,

ANALYTICAL VIEW of SIR ISAAC NEWTON'S PRINCIPIA.

By HENRY LORD BROUGHAM, F.R.S.

Member of the National Institute of France, and of the Royal Academy of Naples; and

E. J. ROUTH, B.A. Fellow of St. Peter's College, Cambridge.

London: LONGMAN and CO.; and C. KNIGHT, Edinburgh: A. and C. BLACK, Glasgow: R. GRIFFIN and Co.

WILLIAM HOWITT'S NEW WORK ON AUSTRALIA.

Just published, in 2 vols. post 8vo price 21s.

LAND, LABOR, and GOLD; or, Two Years in Victoria. With Visits to Sydney and Van Diemen's Land.

By WILLIAM HOWITT,

Author of "Visits to Remarkable Places," &c.

"His book is a perfect mine of anecdote, and facts that illustrate the state of the country and society with great force. It faithfully reflects the public opinion of the colony on the policy of the Home Government." *The Times*, Dec. 13.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

HOUSEKEEPING, FURNISHING, COOKERY, &c. &c.

In One Volume, 8vo. with 1,000 Woodcuts, price 50s.

WEBSTER and PARKES'S ENCYCLOPÆDIA of DOMESTIC ECONOMY.

"There is to be found in this Encyclopædia information on every subject connected with the useful arts, embracing new facts, results of experiments, and more extended observations, professional papers, and official documents. The numerous "currents of industrial progress" will be turned into one stream, and in one periodical will be gathered together the scattered information pertaining to different departments of industry, thus concentrating that knowledge which, by exciting inquiry, promotes useful discussion, and limiting in the web less available and most valuable body of reference. It will be an object of the conductors of "The Engineer" to classify and discuss the materials obtained by, and supplied to them, to furnish systematic expositions of particular arts and branches of manufacture, showing their development, relations, and dependence, and suggesting the improvements and modifications to which they are still open, the obstacles by which they are obstructed, and the principles upon which their advancement depends. It is not considered advisable to encumber a preliminary announcement with matters of more detail; suffice it to add, that the following is but comprises a portion of the subject-matter to which the pages of "The Engineer" will be devoted.

Original articles upon mechanical and scientific subjects, contributed by writers especially conversant with the question discussed. Reports of industrial progress, at home as well as abroad, in all cases prepared by competent and reliable contributors. The latest discoveries in mechanics and science. Inventions of real merit or importance will be fully described, and when necessary, the fallacy and inutility of others will be exposed. The Iron manufacture. Iron, shipbuilding and steam navigation. Reports upon important works on railway engineering, hydraulics, and of public and sanitary improvements. Reports of the scientific and other societies. Weekly register of patents, and notices important to inventors; also carefully prepared abstracts of all specifications. Reviews of scientific and mechanical works, which will be written with fairness and independence. A portion of "The Engineer" will be open impartially to all for the record of useful suggestions, and for discussion or correspondence upon interesting or practical subjects, and for unfettered but friendly discussion "The Engineer" will be illustrated. As an advertising medium it will be unique. Price Fivepence. Stamped, Sixpence. Orders will be received by all News-agents and Booksellers in town and country; or, if preferred, it may be had direct from the Office, post-free, for 6s. 6d. per quarter. Post-office orders to be made payable to the publisher, Mr BERNARD LUXTON, Engineer Office, 301, Strand, London.—Letters to be addressed to the Editor.

Just published, in fcap. 8vo. price 6s. boards.

THE EXECUTOR'S GUIDE.

By J. C. HUDSON, Esq.

Late of the Legacy Duty Office, London.

A new and enlarged edition: with the addition of directions for paying succession duties on real property under wills and intestacies, and a table for finding the values of annuities, and the amount of legacy and succession duty thereon.

Also, in fcap. 8vo. price Half-a-Crown,

Mr. HUDSON'S PLAIN DIRECTIONS for MAKING WILLS in conformity with law.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

ILLUSTRATED EDITION OF MOORE'S "LALLA ROOKH,"

In square crown 8vo. price 15s. cloth; or morocco, 28s.

LALLA ROOKH: an Oriental Romance.

By THOMAS MOORE

With Thirteen fine Steel Plates, engraved under the superintendence of the late Charles Heath.

*** Also, an Edition of Moore's "Lalla Rookh," in 16mo. with Vignette, price 5s. cloth; or 12s. 6d. bound in morocco by Hayday. Diamond Edition, in 32mo. with Frontispiece, price 2s. 6d.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 8vo with woodcuts, price 60s.; or half-bound in russia, 65s.

BRANDE'S DICTIONARY of SCIENCE, LITERATURE, and ART. Second Edition, corrected; with a Supplement, which may be had separately, price 3s. 6d.

London: LONGMAN and CO.

COMPLETION OF PEOPLE'S EDITION.

ALISON'S HISTORY of EUROPE. The Twelfth Volume, completing the issue in Volumes of this edition, will be published on 31st December, price 4s.

W. BLACKWOOD and SONS, Edinburgh and London.

Neatly bound, price 4s.

A HANDBOOK of ARCHITECTURE for the UNLEARNED: in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.

By GEORGE GODWIN, F.R.S. &c.

With Illustrations.

By the same Author, price 1s.

LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.

Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

NEW SERIAL WORK BY MR CHARLES DICKENS, Uniform with "Dombey and Son" "David Copperfield," "Bleak House," &c. &c.

On the 31st of December will be published, to be completed in Twenty Monthly Parts, Price One Shilling each, Part II. of a New Work of Fiction, called

LITTLE DORRIT. By CHARLES DICKENS. With Illustrations by Hablot K. Browne.

BRADBURY and EVANS, 11, Bouverie-street.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six penny postage stamps, the cost of postage. No. XII. for December, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and 18, SPENCER, 314, High Holborn.

NEW ISSUE, 1856.

JOHNSTON'S NATIONAL ATLAS of HISTORICAL, COMMERCIAL, and POLITICAL GEOGRAPHY, with a complete Index, compiled from the Maps.

By ALEXANDER KEITH JOHNSTON, F.R.S.E.

Geographer to the Queen.

Price, half-bound in russia or morocco, with Plates and Notes on Physical Geography £8 8 0

With out the Plates and Notes on Physical Geography ... 4 14 0

"Truly a splendid publication, and fully deserving national patronage." *Literary Gazette.*

Just published, Part IV. containing Four large Plates, in a neat Wrapper, with Advertisements, price 2s. 6d. Also Division I. comprising the First Four Parts, or Sixteen Plates, price 10s.

EXAMPLES of BUILDING CONSTRUCTION, being a series of Working Drawings, to a large scale, of the Details of Public and Private Edifices.

By HENRY LAXTON,

Of the "Civil Engineer and Architect's Journal," author of "Laxton's Builders' Price Book," &c.

No. 19, Arundel-street, Strand; and of all Booksellers.

Just published for 1856, price 1s. the Forty-seventh Edition of

SKYRING'S BUILDERS' PRICES, Calculated from the Market Price of Materials and Labour; containing a diary or daily journal, ruled pages for weekly time account, the New Metropolitan Building Act, and a variety of useful information.

PIPER and CO. Paternoster-row, London; and may be had of all Booksellers.

NOTICE.—The New Volumes of

MACAULAY'S HISTORY of ENGLAND will be ready for distribution, at MUDIE'S SELECT LIBRARY, on MONDAY morning next, at NINE o'clock. The following Works in July also be obtained on application:—Lowth's Wanderings in Arabia; Belcher's Last of the Arctic Voyages; Lewes's Life of Goethe; Chippard's Travels in the Far West; Madame Pfeiffer's Second Voyage Round the World; Rachel Gray; Westward Ho!; Memoirs of James Montgomery, Sydney Smith, Lady Blessington, &c.; the Spanish Conquest in America; Dorans Queens of the House of Hanover, &c. &c.

CHARLES EDWARD MUDIE, 510, New Oxford-street, London, and 76, Cross-street, Manchester.

Now ready, postage free,

A LIST of the principal NEW and CHOICE BOOKS in circulation at MUDIE'S SELECT LIBRARY. Also, a List of Surplus Copies of Recent Works withdrawn from circulation, and offered at greatly reduced prices for cash.

CHARLES EDWARD MUDIE, 510, New Oxford-street, London; and 76, Cross-street, Manchester.

THE ENGINEER, and JOURNAL of MANUFACTURES and MACHINERY.—The first number of a weekly publication, bearing the above title, will appear on SATURDAY, the 5th of JANUARY, 1856. The necessity existing for the establishment of an efficient and thoroughly independent organ, in connexion with the particular sections of industrial manufacture to which this journal is devoted, is acknowledged. The title, "The Engineer," though apparently somewhat restrictive, has been adopted as one more fully indicating the general character of the matter which will be found in the publication, than as an intimation that it is projected solely for engineers recognizedly as a class. This journal will be conducted upon a broad but intelligible basis, and will be found of interest not to the engineer alone, but to all who are connected, directly or indirectly, with, or are interested in, the MANUFACTURE or APPLICATION of the Mechanic Arts. It is designed, in fact adequately to represent the industrial activity of the age in which we live. To carry out this intention, most valuable services have already been secured, and assistance and assistance from men of the most eminent men of the day, scientific and practical—have been received. In the columns of "The Engineer" will be found collected authoritative information on subjects connected with the useful arts, embracing new facts, results of experiments, and more extended observations, professional papers, and official documents. The numerous "currents of industrial progress" will be turned into one stream, and in one periodical will be gathered together the scattered information pertaining to different departments of industry, thus concentrating that knowledge which, by exciting inquiry, promotes useful discussion, and limiting in the web less available and most valuable body of reference. It will be an object of the conductors of "The Engineer" to classify and discuss the materials obtained by, and supplied to them, to furnish systematic expositions of particular arts and branches of manufacture, showing their development, relations, and dependence, and suggesting the improvements and modifications to which they are still open, the obstacles by which they are obstructed, and the principles upon which their advancement depends. It is not considered advisable to encumber a preliminary announcement with matters of more detail; suffice it to add, that the following is but comprises a portion of the subject-matter to which the pages of "The Engineer" will be devoted.

Original articles upon mechanical and scientific subjects, contributed by writers especially conversant with the question discussed. Reports of industrial progress, at home as well as abroad, in all cases prepared by competent and reliable contributors. The latest discoveries in mechanics and science. Inventions of real merit or importance will be fully described, and when necessary, the fallacy and inutility of others will be exposed. The Iron manufacture. Iron, shipbuilding and steam navigation. Reports upon important works on railway engineering, hydraulics, and of public and sanitary improvements. Reports of the scientific and other societies. Weekly register of patents, and notices important to inventors; also carefully prepared abstracts of all specifications. Reviews of scientific and mechanical works, which will be written with fairness and independence. A portion of "The Engineer" will be open impartially to all for the record of useful suggestions, and for discussion or correspondence upon interesting or practical subjects, and for unfettered but friendly discussion. "The Engineer" will be illustrated. As an advertising medium it will be unique. Price Fivepence. Stamped, Sixpence. Orders will be received by all News-agents and Booksellers in town and country; or, if preferred, it may be had direct from the Office, post-free, for 6s. 6d. per quarter. Post-office orders to be made payable to the publisher, Mr BERNARD LUXTON, Engineer Office, 301, Strand, London.—Letters to be addressed to the Editor.

SUMS of 500l. to 1,500l. are ready to be advanced immediately, on approved Freehold or Leasehold Securities of Reversions.—Particulars to be sent to Mr. SMITH, Land-agent, Edenbridge, Kent.

ROYAL POLYTECHNIC.—CHRISTMAS HOLIDAYS.—The Second Part of the Voyages of Sinbad the Sailor, with new and beautiful Dissolving Pictures, and description, with Songs, by G. L. Horne, esq. Laughable Phantasmagoria Effects, by Messrs Carpenter and Westley.—Series of astonishing Conjuring Tricks and Delusions by Mr Burrnain.—Brilliant Popular Lectures on Flame, Fire, and Combustion, by J. H. Pepper, esq. 50,000 Ornaments will be given away to the juvenile visitors from the Giant Christmas Tree during the holidays.

The Builder.

VOL. XIII.—No. 672.

THE opening *conversazione* of the Architectural Exhibition took place on the evening of Tuesday last, and was attended by about 700 persons, amongst whom were many ladies and some of the chief members of the profession. Sir Charles Barry, Professors Cockerell and Donaldson, Messrs. Scoles, C. C. Nelson, T. H. Wyatt, Poynter, Lamb, Papworth, and Kerr, were amongst those whom we happened to see. Professor Cockerell, on taking the chair, expressed the pleasure which, as a member of the Royal Academy, and a veteran professor of the art, he had in seeing so large an assemblage of persons interested in the subject of architecture. Such exhibitions as were here placed before them could not fail to have a very important effect upon general knowledge of the subject.

Mr. Ashpitel then gave a sketch of the objects and progress of the undertaking; in the course of which he excused the Academy for the inadequate attention paid by them to architecture, on the ground, as regards their exhibition, that the painter was an exhibitor for the direct object of selling his productions. In adverting to the works now displayed to the visitors, he spoke of the importance of the department of materials and manufactured articles; observing that the architect had a duty supplementary to his calling of artist,—that of preserving the purse of his client,—an object even more than usually important just now, by reason of the excessive dearness of labour in this country. He believed, however, that the promoters of the exhibition were at work towards the prevalence of a general good taste; and in seeking this, they consulted no *cliques* nor parties having peculiar views in reference to the art—confident that the ultimate result of discussion and popular interest, would be the attainment of the real object. He further made an appeal, not quite unneeded, to the representatives of the general press, believing that the objects of the undertaking had been somewhat misunderstood. After alluding to the pecuniary question, and the importance of taking the *balance* from the wrong side of the account—where it has hitherto been—he expressed the hope, that shortly a more suitable place of exhibition, and a more desirable period of the year might be open to selection,—although the requisite premises for the purposes of art should be provided by Government. Were that latter advantage gained, the architect would have a right to a chief place.

After some further remarks by the chairman, and a vote of thanks to the honorary secretaries and the committee, Mr. Godwin, at the request of the committee, moved a vote of thanks to Professor Cockerell, who, he said, was found always ready with his kindly feeling, and his matured experience and scholarship, to aid in promoting the advancement of the art, and there were many members of the profession who owed him much. The speaker said he would take the opportunity to ask for the attention of the public, through those who were present, to the works exhibited, and to the art which these works helped to illustrate. Till lately, indeed even yet, architecture as a study was, it might be said, wholly neglected,—so that people who would have been perhaps ashamed to confess ignorance of other extensive subjects, were not ashamed to plead entire ignorance of architecture,—though the practical architect was one of those who were writing, in enduring form, the history of their time. Hitherto, drawings, where buildings were represented, had required to be mere views, or something pictorially attractive; but it was very desirable that the public should understand and take interest in the architect's ordinary methods of representation, and for the perception of the true pictorial *result*. Information, also, it might be hoped, would become so far diffused, that it would be seen there had been many ways of reaching a beautiful whole, —whilst, as regards the future, our architecture might come to be—if not what was called by the name of this or that old style—at least the expression of original art, working upon all materials, new or accumulated,—whilst it might not be censured, should it perchance be different to all that had been done before.—Professor Cockerell, in conclusion, expressed his belief, formed after an experience of half a century, that our art was passing to an improved position. The productions of the architect had been under disadvantages—placed in conjunction with paintings, and the present Association would have the merit of originating a course of permanent improvement; and he wound up the more formal business of the evening by urging the necessity of full devotion to the art, in order to realize the hoped-for advancement in position.*

We spoke, in our last number, of the general character of the display, and gave the names of some of the exhibitors. We shall now be able to examine the principal drawings. In ecclesiastical architecture the number of works is considerable, by reason of the exhibition of many designs for cemetery chapels. In either these, or churches proper, we cannot say that progress has been made, such as we are glad to recognize in buildings of a different class. There is quite enough in the Exhibition -we may instance the extraordinary display of metal-work by Messrs. Hart—to show how much gain there has been to the general art, by the study of the Gothic principles. But churches continue to present themselves—with an odd exception or two, universally—not simply as "Gothic,"—which might be excusable, or some may say, commendable,—but under a constant *incubus*—as oppressive upon thought and progress, as any ever imposed by absolutism or priestcraft. There are many works exhibited marked by accurate knowledge of old buildings and details: there are those even which show skill in the arrangement of plan, and in grouping; but there are hardly any of the works where the *architect* has not been apparently deferring to some prejudice of his own, or on the part of an employer. Surely, if any fair effort is to be productive of a work of *art*, the mind of the artist must not be under the present trammels,—resulting, be it observed, not from some crotchet in taste, but rather from views originating altogether irrespectively of *art*. That there is the desire amongst architects to do something different from the old models is, indeed, shown by some of the works exhibited: these, however, seem to us to go not far enough: they depart from the beauty of the best old works, only to fall into somewhat of the uncouthness for which there may be also precedent; whilst it would be better just now to start from a different point, —though from one where constant reference should be made to the uses of the structure,—a point which, indeed, we are very doubtful about—as to its being fairly considered under the present system. This view has, however, been continually advanced, both in these pages and elsewhere, of late.

In spite of what we observe, there is still great merit in many respects in some of the designs for churches and chapels in the present exhibition. Messrs. Gabriel and Hirst's "View of proposed Church, Sneed Park, Durdham Down, Bristol" (18), shows a "Decorated" church, with tower and spire. The pinnacles are supported on corbels; and their great height, though required for one object, occasions a defective structural appearance—also not wanting in parts of the ornamentation of the spire. We once had occasion to advert to similar treatment in parts of a design for a more important public building. It may be not without precedent; but what may constitute part of general good effect in works tinged with the flattering hue of antiquity, should not necessarily be repeated. In speaking of ancient *models*, the artist should understand works valuable for the *lessons* which they can afford, and not things that are to stand instead of the results to which modern æsthetics point; and which modern elucidation has its own value, although one hitherto little wrought on. Notwithstanding the peculiarities referred to, however, the grouping of the tower and spire is very good.—— Mr. E. Christian's new church at Tiptree, Essex, shown by plan and views (24 and 55), is a plain, cheap-looking building, to seat 500 persons, at the cost of 1,897*l*. Red brick, with dark bands, and tiles for the roof, are the chief materials, the bell-turret being of wood. The interior has square piers, and a boarded ceiling, simply but tastefully decorated, the roof principals being merely tie-beam and posts,—and there is an octagon apse. The design exemplifies a change which is evidently taking place, in opinions as to the proper proportion of length and width. The plan here is square, as indeed are more of the old churches than some authorities once understood. Mr. Brakspear's "Bridgwater Church from the south-east, showing the recent Alterations, and their proposed Completion by the rebuilding of the Tower and Spire, and the addition of a new Vestry" (46), informs us that the last-named addition will take the octagonal plan, which is most characteristic of cathedral and collegiate churches. The flying buttresses against the *sides* of the spire, form an arrangement which it may have been right to restore; but which again, would be questionable in new works, on the score of structural propriety and beauty. Mr. E. B. Lamb, indeed, adopts the octagon vestry plan, and some of the more doubtful characteristics we are referring to, in his churches, which, however, are all marked by laudable endeavours to enter upon a new path. Some of his churches, amongst the subjects scattered on a sheet and photographed to a small scale by Mr. Bedford, from the Lithographs (312), illustrate our remarks. The design which more immediately attracted attention is (47) that of "All Saints Church, Thirkleby, York," recently erected as a monument to the lat. Sir Robert F. Russell, Bart. where the octagonal vestry roof is crocketted, and the pinnacles of the tower are set inward from the angles.—No. 45 is the "Interior View of St. Mary's Church, Lancaster." This church is remarkable for the beauty of its woodwork, casts of which are at the Architectural Museum. In the case of such exhibited drawings, some information should be given as to the alterations intended,—for, the title in this case is hardly correct in saying "showing the proposed restorations." Mr. E. S. Paley is the architect engaged. —— "The New Parish Church of Blaina, Aberystwith" (49), by Mr. J. Norton, is to accommodate 500 to 600 persons, and will cost about 3,000*l*. and is being built of stones of varied tints. It is in the Norman style.—— In Hatford Church, Berks, to be restored by Mr. J. Brookes, the interior view (58), shows a chancel arch, filled in with geometrical tracery, supported by shafts of red stone or marble.——

* The lighting on these occasions requires amendment. We would also suggest that if "the committee" again "request the honour of the company" of So and So, and *friends*," charges for refreshments should be avoided.

In the large drawing of numerous "works in hand, or recently completed," by Messrs. A. Ashpitel and J. Whichcord (60), there are several churches, chiefly of plain character. Considerable skill is required in combining so many buildings effectively in a drawing.——By Messrs. W. G. and E. Habershon, in "the Baptist Chapel now erecting at Hackney" (73), at a cost of 6,200*l.* the Italian style has been adopted, with a tetrastyle Roman Doric portico; and the interior (77) has an arched ceiling, and a semi-circular apse.——"A Design for a Church" (75), L. De Ville, deserves examination. It is a cross church, with aisles and central tower,—the details being exceedingly simple, and of Italian Romanesque character. There are square buttresses to the aisles and tower, and the latter has a sloping roofed set-off and diminished stage: this upper feature and all the pinnacles being terminated by lofty red-tiled cappings, also square on plan, and by iron crosses.——"St. Stephen's Church, Devonport, in course of erection," of which the south-east view is shown (84), by Mr. J. P. St. Aubyn, is in the Decorated style, with tower and spire; and like the majority of the works exhibited in the same class, is well studied from the old "models," and by no means wanting in effect,—yet withal not displaying much that we could single out as new.——The particulars which the authors of different designs supply in the catalogue, should be very useful to architects visiting the exhibition. We need not copy them all. Mr. R. J. Withers, who is rebuilding the church at Buttermere, diocese of Sarum, adding a chancel (93), informs us that the contract is 450*l.*; the number accommodated being eighty persons.——Of "St. Mark's Church, Albert-road, Regent's-park," Mr. T. Little exhibits an exterior and interior view (101 and 132). This building is one of the best of the architect's works, the site having led to some novelty of effect. The aisles are lighted by two ranges of windows; the upper range being spherical-triangular. The style is Early English. The boundary wall, with ironwork *chevaux-de-frise*, is well managed; but the entrance-gateway is heavy, and challenges inquiry whether it fulfils any use.——Although now confining our attention to new works, we will not pass by the "View of the Church of San Lorenzo, Florence" (105), by E. A. Gifford,—since it is one of the best drawings in the exhibition. It is accurately perspectived and carefully coloured.——Mr. C. Gray's "Church of St. Paul, Tottenham, about to be erected," is illustrated by an exterior and interior view (112 and 113). The design exemplifies the progressive spirit which is to be noticed—with whatever temporary effect—in the efforts of the rising talent of the day. The style, though allied to the Early English, is *founded upon* the Gothic, rather than precisely that which we have alluded to in former remarks as apparently reproduced from old models. The effort after novelty, however, is not carried to excess. The character is given mainly by the use of cusped arches throughout the interior as well as exterior, and of red brick in the window voussoirs. Twisted shafts are used in the windows and porch. There is a circular apse, and that slated spire rising from eaves, which, since Mr. Butterfield erected one in Margaret-street, or since the continental examples have become known, has been a favourite form of innovation upon the usual English character. Square "tabernacles," supported on shafts, are at the base of the spire. The nave arches, cusped, have a slight chamfer, with ornament therein. The roof is boarded and panelled.——In the "Competition Design for the New Church, Peterborough" (124), its authors, Messrs. W. W. Deane and T. Hill, have hardly done their best. The spire would look stumpy, and one buttress belongs to that class of architecture practised in old country churches, when "churchwardens" required "Hints."——We have been much pleased with Mr. S. S. Teulon's Design for the proposed Church of St. Luke, King's-cross (142). Red brick, with dark bands, and stone tracery are the materials employed,—the spire, however, consisting of "a framework of iron, roofed in with slate, having bands of rough plate-glass,—the spirelets of wrought iron, galvanized and enriched with gold." Both tower and spire are octagonal, the former having lofty transomed and traceried windows; the lower stage or base of the tower being of somewhat greater area of plan; and the several faces of the octagon there, being terminated by gables over windows, and pinnacles.——Another of the competition designs for the same building is exhibited by Mr. J. Clarke, F.S.A. (159). It is Early Decorated in style; and the novelty which we noticed, was the crocketting of the upper part only of an ogee-canopy; and that would rather illustrate the danger of pursuing novelty apart from other considerations which are equally important with it.——Mr. J. L. Pedley's exterior and interior views (151 and 153) of Messrs. Scott and Moffat's "St. Giles's Church, Camberwell," also deserve praise as drawings.——The designs for country churches (166 and 171) have surely got their present conspicuous position from other considerations than high merit as designs. We have received many complaints as to the hanging; and though few who make such statements are aware of the difficulty and trouble undertaken by those who kindly accept the duty, there is reason for one complaint, namely, as to the separation of different parts of the same design, in some instances.*——Mr. A. Bailey exhibits another of the designs for the church at Peterborough (176 and 208), and he also uses the slated spire, and the red brick voussoirs to arches,—the latter derived by him, perhaps, from his recollection of the Saracenic architecture of Sicily and Southern Italy. There is good proportion in the tower and spire,—albeit Mr. Bailey's fondness for blank space has a tendency to degenerate into the appearance of poverty.——Mr. Truefitt, in the "Church of St. John, about to be erected at Hulme, Manchester" (198), shows the prepossession for the slated, or lead-covered spire, with clustered lucarnes, and for the unbuttressed wall surface, which he also has. The design has a solidity of character which is highly effective; and which is partly derived from the use of tracery flush with the face of the wall,—but the windows have the appearance of giving too little light. The treatment of the tower and spire is novel and good. Amongst Mr. Truefitt's other works, is a design (197) for a church,—where, in place of ordinary piers for the support of nave arches, short coupled iron columns are used,—set transversely to the length of the building. We notice the influence of Mr. Truefitt's published designs and continental sketches, in many of the executed works of the day.——Mr. T. D. Barry's "Tulse Hill Church" (186), belongs to the other, or what some may call the purer school of Gothic, and we will not take any exception to its merit. That it has,—as in the grouping of the tower and spire.——Mr. R. Kerr, who seems to devote himself to brickwork as a material for the expression of design, has amongst some works which may deserve further notice, one or two ecclesiastical buildings. His "Design in Ornamental Brickwork" (229), shows a church with two western towers, terminating with octagons and tiled spires with eaves. The general subject of brick architecture is too important to be entered into at present; otherwise, Mr. Kerr's works would afford some points for discussion.——Some lithographic views (311-313-316), of St. Patrick's Cathedral, Dublin, show the works carried out by the late R. C. Carpenter, or projected by him for that interesting structure. The woodwork is later in character than the early Gothic of the building.——Rochdale Parish Church (327), one of the late Gothic buildings which are common in South Lancashire, is being restored under Mr. J. Clarke's direction, who exhibits a large drawing of it.——Mr. L. Stride's drawing (330), entitled "Decorative Brickwork applied to the Exterior of a Building without disturbing the Lines of Architectural Design," is a design for a cross church with octagonal tower and spire, with the plain wall surface in yellow and red brick, disposed in patterns. Though these last are excellent in themselves, and do not *constructively* disturb the "lines" of the main angles of the building, and those of gables and apertures, we fear this system of enrichment—expressed in striking colours—is precisely what does disturb the most desirable part of the effect.

We have not named the whole of the meritorious works in the class of churches; and there are several designs for cemetery and for Dissenters' chapels,—which, with such illustrations as there are of the really valuable part of the architecture of the day—the class of public buildings—with other portions of the exhibition—we must reserve for another opportunity.

* You have so worthily and with so much energy advocated with your accustomed zeal, the cause of the Architectural Exhibition, that I think it cannot be to you otherwise than to some of the exhibitors, a source of extreme regret to observe the great want of judgment discernible in the hanging of the various drawings sent for exhibition. Many designs of considerable merit are placed in positions almost inaccessible to the ordinary visitors to the rooms, while others of very inferior pretensions are hung in the most conspicuous positions. It is not my wish to ascribe to the hanging committee (whoever they may be) any personal or selfish motives, but their incapacity to fulfil the duties they undertook cannot fail of being observed by every person in the slightest degree conversant with the subject. Supposing the statement I have made to be correct, and I have no doubt whatever that it is so, it is so obvious that those persons (of whom there must be many) who feel themselves aggrieved, who would on future occasions exhibit, will shrink from supporting an undertaking from which they would expect to derive only infamy, if not absolute disgrace; and thence would follow the dissolution of a society which possesses within itself, if properly managed, all the requisites to establish a permanent and valuable annual exhibition, calculated to advance in a proper direction the public taste, and at the same time to be of advantage to those who would, in such circumstances, render most willing assistance to the excellent cause.—Yours, &c. Another correspondent complains with justice of the manner in which some sets of drawings are divided—"the elevations in one part, the plans and sections in others, instead of being so placed that the various component parts of a design can be seen and judged of *as a whole*. If it is not rectified, it is clear the character of the exhibition will alter, and take the *mere pretty drawing* form, so objectionable at the Academy and elsewhere."

FOREIGN INTELLIGENCE.

The German National Museum.—This recently-founded Museum, and which at present is established in Nuremberg, bids fair to become a sterling affair. By the exertion of meritorious men from all ranks of society, it now already counts 50,000 specimens. The last yearly meeting consisted of men perfectly capable of understanding the wide bearing of such educational establishments on a large scale, as are Messrs. Bergmann, Bluntschly, Förster, &c. The editing of works and engravings was added to the former sphere of activity, and a systematic arrangement of the society laid down. The geographical limits of its activity were fixed within the extent Germany had about the year 1200, the *chronological* epoch to comprise all the ante-Christian times, with the exclusion of the Roman era, except what especially referred to Germany. While last year the Museum had only an income of 2,000 florins, it now reaches already 6,000 florins; and it is hoped that thus the sum of 20,000 florins a year, which would be required to carry out this national undertaking in greatest perfection, will be forthcoming. It is only the four *free* towns of Germany (Hamburg, Bremen, Lübeck, and Frankfort) which have settled a funded revenue on this national school for the people.

Regensburg.—The Dome.—The Royal Villa.—The restoration of the dome of Regensburg is a work of King Ludwig, and it well deserves that attention. Whilst most other Gothic buildings are stretched upwards, which, although it may proceed from strictly scientific principles, creates a sense of limitation and narrowness; here, on the contrary, the proportions of breadth are so mighty, that they counterpoise the former anomaly without encroaching on the

VESTIGES OF THE GREY FRIARS', NEWGATE-STREET.

fundamental principle of Gothic architecture, which is that of an upward elevation. The sculptures of the dome, of the thirteenth and fourteenth centuries, belong to the finest of the period, and prove that domes had always been the nursery of extensive sculpture schools, in Suabia, on the Rhine, &c. If Regensberg presents still the image of a mediæval town, the building of the Villa of King Max will add novelty to its features. It will occupy a place close to the Danube, and is building under the direction of Architect M. Toltz. The plan exhibits a right angle, the sides of which are looking towards the city and the river. The corners of the building consist of turrets, and the fenestration has round arches, and an attic over the chief cornice. This, with one of the finest views, extending up to the heights of the Walhalla, imparts to the building a very serene, romantic character.

Vienna.—New Explosive Apparatus.—The Major of Engineers, M. Ebner, has laid a report before the Austrian Academy of Sciences. It relates to the solving of the question, "whether electricity or voltaism is preferable for the exploding of mines in quarries, &c." The report gives preference to the former, because the amount of effect of the voltaic battery depends on the quality of the conductor through which it has to act; and whenever a great effect (force) is required, the alternative presents itself either to use colossal batteries, or costly conductors, outrunning the usual dimensions.

Munich.—Celebration of Overbeck's Sojourn in Bavaria.—It was the corporation of the Bavarian capital which lately gave an entertainment to the veteran Overbeck. It was observed on that occasion that this great painter never enjoyed nor courted any official patronage, but merely relied on his sturdy talent. When he came as a young man to Vienna, the Academy expelled him as troublesome; and his first works, in the Casa Bertholdi, and the Villa Massimi, he had to make for nothing, thinking himself fortunate that even a bare wall was conceded to him. Now Overbeck is in the possession, not of an European, but of a world-fame.

Saxony.—The Werra Railway Line.—The railway activity in Germany, far from relaxing, increases, for which an ample territory affords a wide scope. There is sitting at Jena a committee on the project of a new line from Weimar through Jena, Gera, Chemnitz to Dresden, which would afford great facilities to the traffic of those lands. But it is the Werra line which has occupied for years the time of the legislatures and engineers. It would transect one of the very centres of German communication, and connect Paris, Basle, Breslau, &c. by the shortest cut.

REMAINS OF THE GREY FRIARS' MONASTERY, IN CHRIST-CHURCH YARD.

IT is to be regretted that so many remains of Old London which, after being buried for centuries, have been brought to light, from time to time, should have been in many instances either demolished, or again hidden from the view, without record. If the city authorities had only applied a moderate sum yearly towards the collection and preservation of metropolitan antiquities, and for the purpose of making drawings and plans of such as could not be preserved, we should, instead of the few fragments at present in the Guildhall library, have had a gallery of antiquities, of which any city in the world might have been proud. Although much has been lost by this neglect, which future historians and persons of taste will not fail to regret, it would be better to begin late than never: let the London corporation only show a little interest in the art-works of bygone days, and many objects of value will, before long, be in their hands.

All means failed to preserve the beautiful crypt of Gerrard's-hall. The materials were presented to the Crystal Palace Company, who, it appears, intended to have put them together again in some part of their grounds: the stones, however, have been lost, or otherwise appropriated. If the city authorities had put it together for themselves, it might have formed an apartment for the preservation of London antiquities. The corporation of Newcastle-upon-Tyne have, at a considerable cost, restored the old Norman castle, and placed it at the disposal of the Newcastle Society of Antiquaries, who have brought together from the adjoining counties, a most valuable collection of national antiquities. Small space is devoted to the British antiquities in the British Museum, and that seems to be too much. The want of a place of proper size and consequence in London for the reception of our antiquities in the metropolis is evident.

Enough, however, of complaint,—a complaint we have often made before. Let us rather continue our endeavours to illustrate and preserve the memory of such portions of underground London as fall before us. When the Grey Friars came to London in the thirteenth century, they established themselves on the north side of what we now call Newgate-street. Here, aided by the citizens, they built first a chapel, then a church, and then again a much larger church,—the latter between 1301 and 1327. In 1539 they surrendered to King Henry VIII. with an admission, willingly or unwillingly made, that their customs were not consistent with "the perfecion of Christian livyng." The house remained in the hands of the king for some time. Just before his death, he provided that the church of the Grey Friars should become the parish church of "Christ's Church within Newgate." Passing rapidly on,—when Edward VI. was moved by a sermon from Bishop Ridley to do something for the poor of the City, with the co-operation of the citizens the old conventual buildings of the Grey Friars were repaired and set apart to rescue, feed, clothe, and educate destitute children; and Christ's Hospital was founded. In 1553, the children, in a livery of russet, were received into the place.

The good example of Edward VI. was followed from time to time by his royal successors. King Charles II. founded a mathematical school and ward for the instruction of forty boys in mathematics, especially in that part of the science that respects navigation, and liberally endowed it with 1,000*l.* per annum, paid out of the Exchequer for seven years, for the founding thereof.

Sir William Chester, knight and alderman of London, and another citizen of the same city, at their own charge, made the brick walls and way on the back which leads from Christ's Hospital to St. Bartholomew's, and also covered and vaulted the town ditch from Aldersgate to Newgate, which was before very loathsome and infectious to the said hospital.

We must not neglect to mention, that when the hospital was erected and put into good order, there was one Richard Castel, *alias* Casteller, shoemaker, dwelling in Westminster, a man who was very assiduous in his craft with his own hands, and was called the Cock of Westminster, because both winter and summer he was at work by four o'clock in the morning. This man, thus steadily and honestly labouring for his living, purchased lands and tenements at Westminster, worth 4*l.* per annum; and having no child, with the consent of his wife, who survived him, gave the same lands wholly to Christ's Hospital, and for the "succour of the miserable sore and sick harboured in other hospitals about London."

Sir John Moore, in 1694, was also a benefactor to Christ Church: he built the writing-school at a cost of 5,000*l.* Wren being the architect. After the Fire, Sir John Frederick, alderman of London, built the great hall, at a cost of 5,000*l.*

Chamberlain says:—"On the north side of the cloisters are two doors: one opens into the town ditch, which is now a fine open area, with several good houses built and well inhabited: the other opens a way into St. Bartholomew's Hospital and Smithfield; and close to this door or gate, on the west side, is a burial-ground, where are interred such as die in Newgate, &c. The principal gate into this hospital is on the west, and almost at the south-west corner of

the old building, from the court which to this day is called the Grey-friars. In Queen Mary's days there was in this place a stinking, loathsome dungeon, where it was usual to confine and punish vagabonds; and in the Marian persecution, it served for the imprisonment of such as fell under the displeasure of the popish ministry, amongst whom we read of one Thomas Green, servant to John Wayland, a printer, who was confined and cruelly whipped in this dungeon, for being concerned in printing a book called 'Antichrist.'

Returning, however, to the present. On the north side of Newgate-street some new houses are being erected; and in the course of excavating for them, three arches, as shown in our engraving, were exposed under Christ-church Yard. They are 10 feet in span, and are covered with masses of chalk and concrete to within 3 feet of the surface, the rest being earth.*

We have here, of course, some vestiges of the old buildings of the Grey Friars', and, as such, have thought it desirable to preserve a record of their appearance and position.

THE LATE MR. ARTHUR JOHN GREEN.

We have to announce with great regret the very sudden and unexpected death of a most amiable man and very promising young architect, Mr. Arthur John Green. He was in his thirty-fifth year, and though he had complained of slight indisposition for a few days, there was nothing that gave his family or his physician the least uneasiness. He was looking extremely well, and was at a small family dinner-party on the evening of the 12th instant, when in a moment he was seized with hemorrhage of the lungs, and died instantly.

Mr. Green was articled to his maternal uncle, Mr. W. Tite, M.P.; and after completing his studies in London, travelled for some time in Italy and Greece. On his return home he was appointed to personally superintend the works of the new Royal Exchange, then building. In this and in the other extensive engagements of his near relation he was employed for some years, during which period he filled the office of honorary secretary to the Wykeham Society; and in that capacity made some communications, which were much admired at the time. Some of the illustrations in the "Architectural Dictionary" are from his drawings and sketches.

A few years since, Mr. Green commenced business on his own account, and soon obtained the appointment of architect to the East-India Company, and surveyor to the Globe Insurance. For the former he was engaged in considerable works at the time of his lamented death. Mr. Green was a good scholar and linguist, an amiable and excellent man, and a charming companion: his death will be deeply deplored by a large circle of friends and contemporaries. He was buried at the Norwood Cemetery, in a vault under the Episcopal Chapel, on the 19th inst. and his funeral was attended by many members of the profession.

THE LATE MR. J. W. GRIFFITH.

We mention, with great sorrow, the death of Mr. John William Griffith, of St. John's-square, which occurred on the 27th of November,—a worthy member of the architectural body, and a good man. Although in the profession for half a century, he was never led to place himself prominently before the public.

He was surveyor to the parish of Aldersgate for some years, during which period he added to and decorated the Church of St. Botolph. Amongst other competitions, he obtained the Islington parochial schools, which were designed and erected by him, and in that parish, in Hornsey, Highgate, Kentish-town, and in various parts of the country, he erected numerous villas and houses, from the year 1816 to the time of his decease.

He was for many years surveyor to the London estates belonging to St. John's College, Cambridge; but he will be better remembered for his benevolence and kind heart. His sons have made the name more widely known.

* For the particulars from which the sketch was made, we are indebted to a correspondent, "R. S. P."

ON FORM, LIGHT, AND SHADE IN ARCHITECTURAL FOLIAGE.

It is a mere truism for me to say that the formation of a collection such as is found in the Architectural Museum, cannot fail to be of great use to the art-workman; but there may be such a thing as his not knowing sufficiently well how to take advantage of it. He may continue studying and imitating the mere form, and acquire an aptitude in copying some of the most beautiful works which he may see around him, but without proceeding upon any other principle than that of simple imitation,—following merely that which has been done already.

But this is not the proper use to make of this collection. I conceive that it is altogether beyond this, for here we see around us beautiful examples of what has been done in ornamentation in times long passed away; and the use we should make of these is not simply to copy them, but to proceed onwards from the point at which they have arrived. To stand still as if we had reached perfection, and only to copy and rearrange old materials, no matter how beautiful, is to go back.

The object, then, I have in view is to endeavour, to the best of my ability, to point out the manner of studying and observing architectural carving, with reference to the principles of form, light, and shade. In order, however, to study for real improvement and advancement in his art, the carver must also at the same time study nature. For nature is the source of all beauty, and modern carving, carving of the nineteenth century, should not be a *literal* copying of any particular style or example. We may adopt the principles and conventional treatment of any, but it should be drawn fresh from nature. It may be rendered in a variety of ways; every artist may have his own particular style, or it may be rendered in the conventional manner of the early English period, or the Decorated, or it may be in the Greek or Roman manner. But whatever is done, in whatever style, it should partake of that life and beauty which we see in nature. But a person may say, "How am I to find this beauty in nature? You say I must not *copy* nature. What is the use of telling me to go into the fields, and into the woods? I can see nothing particular there,—in fact, I do not see of what use it is. Put a piece of carving before me, and I can understand that; I can admire it, and learn to copy it."

No doubt you can. But what is the value of a mere dead copy? We can admire the original, because we see the man's mind through his work; but in the copy we can only admire the original through the copy: the life of the original is vanished, and nothing belongs to the person who made the copy except his mere mechanical skill. But the copyist may say, "I do not see how to obtain assistance from nature: what is there in thistles, and docks, and buttercups? I can see nothing in them that is beautiful, and they are not very beautiful to the farmer, who would be glad to exterminate them all." What! Can you not see beauty in these lowly outcasts, nature's homely clothing? No beauty in the thistle, with its sturdy stem, its varying form of leaves, its beautiful variety of light and shade? Look at its flower, set like an amethyst among its green ray of spines. And the common creeping crowfoot, too, that pest of the farmer, that insinuates its roots unseen beneath the ground to throw up its elegantly formed leaves in every vacant space, to teach a simple lesson of beauty. We see not the elegance in these homely things, because we look at them as if we were blind. * * * *

Nature teaches us a useful lesson in decoration, for where she is not prevented by man, she enriches and decorates nearly every portion of the earth with beautiful foliage of some description or other, while we extend our miles of brickwork, covered with nothing but a monotonous coating of dingy-coloured cement, with nothing but long plain-run cornices, architraves, and facias, which we term decoration. Why do we not imitate nature in this, and cover some of our plain spaces with some species of design taken from the vegetation of nature? Instead of imitating colossal blocks of stone by scratching a few lines on the surface, how much more elegant it would be, and what an agreeable relief to the eye, if the plain surfaces were enriched by some simple flat application of natural foliage. In quoins of buildings, arch and keystones, instead of picking them out in careful and elaborate representations of rockwork, how many pleasing arrangements might be made in well-conceived foliated design.

In classic architecture, the artist, in designing foliage, seldom refers to nature. He looks upon Greek foliage as the perfection of architectural foliage, consequently he rests satisfied in taking it as he finds it,—merely copying, or at the most recombining and rearranging, until we see Greek honeysuckles in every possible situation, and the anthemion ornament made to answer every purpose, from a frieze to an iron railing,—enriched ogees, cymas, egg and tongue, and bead and button, used over and over again by the aid of the plaster caster, from one end of London to the other, without the remotest attempt at improvement.

They are looked upon as perfection, and any alteration would be considered as sacrilege. Cement has spread over the whole of our island like a plague, and the same plasterer's moulds appear to be used in every town in the kingdom.

There are but few rules which can be laid down for the treatment of foliage,—such as I know I will endeavour to explain,—but it is the beauty, the thought, the feeling which must be sought for—there are no rules for these; these must be brought out by study. The student must go forth, as the poet says, into—

> "The populous solitude of bees and birds,
> Those fairy fram'd and many colour'd things,
> Who worship Him with notes more sweet than words,
> And innocently open their glad wings,
> Fearless and full of life; the gush of springs,
> And fall of lofty fountains, and the bend
> Of stirring branches, and the bud that brings
> The swiftest thought of beauty."
>
> *Byron.*

Flowers and foliage are among the most beautiful objects in nature, and have all the requisites which pure and true, or perfect art should have, colour and form, with light and shade. Now, the carver has little to do with colour, except as it exists in the colour of the material itself, upon which he is working: his art, therefore, is so far simplified; he has, after form, which is of the greatest importance to him, merely to study light and shade.

Form is often made use of without light and shade, merely developed by the aid of two colours, as in flat painted diapers, encaustic tiles, and the like, and very beautiful combinations may be formed in this way. In a similar manner this is also carried out in carving, the form being developed simply by sinking the portions between the ornament, that is, the ground, below the surface of the stone. This mode of ornamentation is common in Romanesque work, and often the interstices are beautifully filled in with coloured marbles. The graceful wall diapers from the Alhambra, are carved in this manner, the surface ornament gilded, and the recessed portions filled in with colour. The Grecian fret is upon the same principle. This may be considered the most simple of all carving, as it depends entirely upon its form, the shadow being simply for the purpose of producing a different tone or colour to develope the form, in the same manner as in tiles one colour is used merely to develope the form in the other. Now, although great beauty may be produced by this simple mode of recessed surfaces, yet this cannot be called perfect carving, since it consists almost entirely of form, with very little assistance from light and shade. But it serves most particularly to show one thing, that there is great beauty in mere form.

But there is the opposite extreme; we may have carving which is nearly all nothing but light and shade, with scarcely any form. The most perfect carving is that which embraces and amalgamates both these extremes in the greatest degree, without destroying the good effect of either. The most perfect carving is that which developes the greatest amount of elegant form, with the most perfect light and shade. It shall not be so flat as to give only bright light, and deep shade, and not so enveloped in light and shade, as to lose

the beauty and simplicity of the forms and outlines of the foliage. There is such a thing as producing in carving, agreeable and disagreeable light and shade, that is, that the forms of the foliage may, although good, be so arranged as to produce a bad effect when viewed from the distance intended. The high lights may too much over-balance the shadows, or, as is more frequently the case, the shadows may be so numerous as to completely destroy the lights, and therefore producing nothing but blackness.

In modern carving the outline is often very slightly attended to, and the workman, in order to get boldness, thinks that he cannot cut up the surface of the leaves too much. This is a mistake that cannot be too strongly pointed out. In striving after effect, the modern carver fills his leaves with innumerable lines, and when he observes that they produce but little effect, he proceeds to cut some of them in much deeper, which, by destroying the lights, probably only makes the matter worse. This is a mistake, too, which is not confined to the workman of the present day. I was observing a short time since the carving in the interior of St. Paul's Cathedral. Some of the bosses there in the ceiling, are so cut away, and are so full of minute parts, that they look but masses of shadows. There is plenty of shade in them, but very little light.

The guilloche in the arch bands, which is in connection with the bosses, shows by contrast how well ornament looks when properly relieved by shadow; for here, simply by the ornament being surrounded by shade, it comes out boldly and effectively. The same fault may be observed in the acanthus-leaves of the Corinthian capitals; they are so full of lines that they are completely put in shade. It is a very beautiful leaf when seen on paper, and you have the advantage of seeing it as closely as you choose; but place it 30 or 40 feet high, and its effect is lost. The innumerable lines upon its surface produce, at the distance from which it is viewed, quite a dark tint, having anything but the effect intended. Thus, when the capital is made up of such leaves, you have a mass of intricate lines all in shade, with scarcely room left for the play of a single light broad enough to be seen from below.

In the architectural foliage of the best periods, the outline of the leaves and general or leading lines in the design were carefully attended to and studied, as in examples which may be seen from Southwell Chapter-house, the stalls at Winchester, &c. casts of many of which are in the Museum. The surface carving upon the leaves was made quite secondary, and never sufficient for the light and shade upon the surface to destroy the outlines. But in later and in modern work, things are completely reversed, the outline is lost in the depth of light and shade produced on the leaves themselves. Carving should always have a rich sparkling effect, and to produce this, you must have some sharp high lights. I would say, avoid lineyness or weediness. Remember that the high lights require a sufficient amount of breadth, regulated according to their position, to make them tell. It is of no use to get a great amount of depth and shadow without light. The light and shade should be studied in the same manner that a painter studies them in a picture. First, the broad masses; next, the breaking them up by secondary ones, but taking care not to interfere with the general breadth; and, finally, the minute picking out of the smaller parts, giving richness and finish to the detail and variety and tone to the whole. There must be harmony of form and harmony of light and shade, arranged with order without confusion, yet with negligent freedom and without stiffness. The carver should constantly keep in view the height at which his work is intended to be placed; it must necessarily follow, that an ornament, if intended to be placed 30 feet high, should have fewer lines than when placed near the eye; and also, if intended to be placed 70 or 80 feet high, it should have fewer lines still. The want of attending to the simplification of ornament when placed at a height, is one reason why the carving has so little effect in St. Paul's Cathedral. There is the same fault to be seen in many other modern buildings. And why is it? It is simple enough: for upon the most common law in optics, those things appear smaller the farther they are removed from us; and as all ornament in a building is designed to be seen from the ground the higher it is up, and the more it is removed from us the smaller it becomes, therefore the more it should be simplified, upon the same principle that we should leave out a great number of the lines if we were making a drawing of it upon a small scale.

The treatment will also require to be different for the interior of a building to what it is for the exterior, for the reason that we have less positive light in the interior of a building. Sometimes in vaulting and groining there is but a very feeble light. In such cases the ornament should be of the very simplest character; the foliage should be simple, but extremely bold, producing what would be in a strong light extreme suddenness, that is, plenty of relief and undercutting of the foliage, so as to gain, in the absence of a perfect light, as much contrast as possible.

When a carver places a piece of carving before you, he takes care to put it in as good a light as possible; but remember what light it is to receive, and the height at which it is to be placed when it is put in its position, and let it be designed to have the intended effect, when placed in its situation. This is one of the most important studies in the carver's art, and should never be lost sight of. The kind of foliage, too, which will suit one material will not suit another. For instance, if the stone be a very rough one, such as a coarse sandstone, the design must be very much simplified, and the light and shade be made more sudden; while in a fine material, as white marble or alabaster, if the same treatment were followed, the foliage would have a crude and unfinished look. In the rough stone minute shadows exist, from the inequalities of the material, even in the brightest lights, which considerably reduce the amount of contrast between the complete shade and the high lights; but in the fine material none of these exist; the high lights are therefore much brighter than in the coarse stone, consequently, an undulation and breaking up of the surface of the foliage is often necessary to soften the high lights, and to produce a more harmonious tone in combination with the shadows. A difference in the outline is also often necessary when without a background, as when placed against the sky. Small objects against the sky are usually seen dark, and their outline is most distinctly seen. This is also the case when only without a background, but of course in a lesser degree. The outer form will therefore require great care and study, while surface-carving will be scarcely at all required. Great distinctness and simplicity is indispensable to its good effect; it therefore becomes a matter of great importance to determine the exact size and form of crockets and finials, and the distance they should be placed apart; also the form and size of gable crosses, and what amount of carving should be introduced upon the surface.

Many of the old crosses are perfectly flat, and depend entirely upon their form for their effect. In some, carving is introduced upon the surface, but it is generally lost.

It should be remembered that the smaller an object is when opposed to the sky, the darker it appears; directly you increase its breadth you can begin to see light upon its surface. This may be seen in a spire very distinctly when it has a bright sky behind it. In the upper part it will be difficult to distinguish anything but the outline of the finial and upper crockets, while down below, near the base of the spire, everything upon the surface, with the foliage of the crockets, will be easily seen. Artists, in tinting views of churches, take advantage of this, and usually make the upper part of the spire darker than the lower. Small objects, being darker when opposed to the light, may be detected in another way: for instance, if you are in the interior of a building, and you catch a finial or other small object, having one of the openings of the windows for a background, it will look perfectly black, and you will distinguish nothing but the outline; but move your position, so as to bring the object against some of the dark shadows of the building, and the finial will become light, and you will see the light and shade of the carving upon it.

This, then, is a fact that should be remembered when engaged upon carving, which is to occupy such positions. This also applies to ironwork, such as crestings, vanes, and such like; work upon the surface of such portions being merely so much labour lost, as the piercings and general form are usually all that can be seen.

The form and arrangement of foliage, more especially in Gothic architecture, are often very skilfully based upon geometrical figures, as the circle, triangle, square, pentagon, or hexagon; the leaves themselves also are sometimes geometrical in form. The form is often suggested by the enclosing lines; for instance, in small spandrils, the space being triangular, nothing is more natural than to adopt a triple arrangement. The hollow of a moulding suggests a square flower or leaf.

The intersection of the ribs of panelling, as in ceilings, gives rise to the square boss or rose, so well known as belonging to the Perpendicular period. The Tudor rose also is a familiar example of the use of the pentagonal form. Nor is such treatment at all inconsistent with nature. Geometrical forms are constantly found in nature most surprisingly perfect. The artist, however, must beware of falling into this treatment to too great an extent. This was one of the great mistakes which the carvers of the fifteenth century fell into. They cut their carvings to the very lines, which gave a certain stiffness to most of their work; one may even call it primness—like persons when they are too particular in the arrangement of their dress: everything must be cut to the exact line—neither over nor under. This precision is one of the main causes of the loss of that beauty which they would otherwise most undoubtedly possess; for we have had some most masterly carving handed down to us by artists of this period, especially in woodwork, as may be seen by the many excellent casts of wooden panelling in the Museum. Foliage was constantly geometrical in arrangement during the previous periods, but it was more as in nature; it often overstepped the line, and purposely varied the form which obviated that prim effect, and prevented the geometrical lines from becoming too apparent. A beautiful mode of composition of ornament is by radiation, or the star form,—that is, radiating from a centre, as in flowers. The end of the lilac branch, when viewed upon the top, gives a very good natural composition in this manner of four leaves; very possibly this may be the natural type of the four-leaved flowers of the Decorated period.

This arrangement in the lilac arises from the plant bearing what is called opposite leaves, and may be seen again in the maple, and other plants which bear leaves in this manner. One of the most elegant arrangements, and which was at all times a favourite one in the Classic as well as in the Gothic, is that of arranging the stems of the foliage in graceful spiral lines. This was perhaps carried to the greatest perfection during the Early English period. In continuous mouldings in the Norman and Early English periods the zig-zag arrangement was a common one. In the later styles this was softened into the wave line, and double scroll or spiral, and gave scope for excellent varieties of arrangement, which was often beautifully carried out in the hollows of large mouldings. The foliage of capitals of the Early English period was arranged often in the zig-zag manner with good effect, that is, the bunches of foliage were arranged alternately up and down, although all spring alike from the necking. In selecting leaves from nature for the purpose of carving, the most simple of all leaves, the common heart shape may be often used most artistically, but usually those are best adapted which are compact and regular in their form, and are cut into deep bold lobes,—as the ivy, maple, vine, and such like. The triple leaves are also beautifully formed leaves for the carver's purpose, such as the clover, crowfoot, hepatica, and water avens: the last is said to be the type of the foliage of the thirteenth century, and was anciently called "herba benedicta," or holy herb. The triple principle is most beautifully seen in the common single parsley. It is a very compound leaf, but all the divisions are in

trees. Some leaves are perfectly irregular, as, for example, the oak and hawthorn, and are more difficult to arrange in an agreeable manner than those which are regular. I do not know any leaf which is more difficult in this respect than the oak. But in rendering foliage from nature, the carver must be very careful how he follows some of the intricacies which he finds in nature. It is perfectly legitimate to omit the more minute parts and cuttings,—leaves may be made more regular and uniform if it suit his purpose, or the position his work is intended to occupy.

For boldness of treatment and masterly effects of light and shade, perhaps no foliage has ever equalled that of the Early English period. The general lines are usually very good and full of elegant drawing,—but in the foliage, the leafage itself, there is a sameness, a want of that beauty and variety in the forms which we see so happily developed in the style which immediately followed it,—that is, the Early, or Geometrical Decorated. Here, although the leafage is beautiful, there is sometimes a neglect and a want of decision in the leading lines, and later in the style we lose nearly all the general or leading lines in the very abundance of the leafage. In short, in the Early English, much of the beauty was in the treatment of the stalks of the foliage, which were arranged in a graceful and elegant manner; in the Decorated, the stalks were partially lost, and the leaves became most marvellously developed. In the later Decorated there was a great richness and fulness—a bossiness—in the ornament; but frequently a neglect of outline. Some of the finest carving of this period is that from the Percy shrine, and the adjoining altar screen at Beverley Minster.

In conclusion, I would impress upon all the necessity there is for improvement and the cultivation of a better taste in carving and decoration generally; for is it not lamentable when we look around us and observe the gaudy patterns of our carpets and room papers,—the miserable carving on our furniture and picture-frames? What can possibly be in worse taste than some of the elaborately gilded frames of our showy looking-glasses? yet these things all find ready purchasers, plainly indicating that the public, even among the humbler classes, have a decided taste for carving and decoration; it only requires correcting and educating in a proper manner.*

James K. Colling.

PROVINCIAL NEWS.

Winchester.—The additions to the barracks here are progressing. With regard to the new hospital, a Hampshire paper states that it is the intention of the Board of Ordnance to purchase a piece of land in St. James's-lane, whereon to erect it. The contract for the building of it has been taken by Mr. Bull, the builder of the new gaol at Southampton. The whole of the alterations will not be completed under two years and a half.

Tunstall.—The authorities here have authorised the preparation of drawings and estimates for alterations to the town-hall, on a plan proposed by Mr. Robinson, the architect of Burslem new town-hall, according to which almost the whole of the present outer walls will be removed, and various other works done, and the exterior rendered more architectural in appearance by the use of cement; the whole cost to be 300*l.* to 350*l.* The architect does not think it advisable to expend a larger sum on the present building.

Pembroke.—It is rumoured that permanent barracks for 5,000 men are to be erected here. The ground, it is said, has been purchased.

North Shields.—At a recent meeting of the town council of Tynemouth, it was unanimously resolved to forward memorials to the Lords of the Admiralty and the River Tyne Commissioners, in favour of the proposed North Shields and Tynemouth Dock. The proposed dock will now, instead of running from a south-east angle from Clifford's Fort to the Black Middens, commence at the north-east end of the fort, thereby, it is contended, removing all possible danger to the shipping in harbour.

Edinburgh.—Various improvements in Holyrood Park, according to the *Scotsman*, are about to be carried out, comprising,—in addition to the new approach from Abbeyhill to the palace and park, for which 1,000*l.* were voted last session of Parliament,—a great extension of the palace garden-ground, the formation of a small loch or serpentine in the low marshy ground below the ruins of St. Anthony's Chapel, the erection of two lodges of stone at the park entrances, and other improvements. A carriage-drive is also to be formed through the park to Duddingstone and Portobello.

NEW MUSIC-HALL, COVENT-GARDEN.

Our engraving represents the singing-room of a tavern, neither more nor less,—the singing-room attached to what is widely-known as "Evans's Hotel," though now in the hands of Mr. Green,—and is surely an evidence of progress. It has been built from the designs of Mr. William Finch Hill. It is 72 feet long, forming, with the old room, through which it is approached, a music-hall 113 feet in length, and 56 feet in width. The new room is formed into three divisions by columns and arches: the clear width of the central compartment is 33 feet: the height from the floor to the ceiling is also 33 feet. One of the side aisles has a gallery, under which are arranged some of the necessary offices. The columns between the nave and aisles, let it be noted, are of Bath stone, fluted, with wreathed Ionic caps and Bath stone entablature. Over each of the eight pilasters there are figures modelled in plaster, representing Poetry, Drama, Music, &c. The ceiling is executed in plaster, with octagonal coffers within square compartments, the four centre octagons being perforated for ventilation. The columns upon the orchestra (which is formed at the end of the room), as well as the moulding round the various arched recesses, are to be executed in scagliola. Colour on the whole of the ceiling and walls is to be brought to aid the effect, in connection with which several surfaces are left plain for arabesque ornaments. The coved octagonal coffers of ceiling are to be painted to appear as those perforated for ventilation in the centre. The lighting is effected by ten cut glass gaseliers, with 120 lights, and a range of jets running round the main cornice for ventilation. The cold air is admitted from a series of descending shafts to a channel under the floor running all round the hall, containing four hot-water pipes, and thus passes into the room, warmed; the vitiated air passing off through the apertures in the ceiling into the roof, which has open louvres, round the entire length upon each side. The total cost of these works, including certain alterations in the hotel, will be nearly 7,000*l.* This hall, which may fairly be called a very handsome one, was opened to the public, upon Monday, the 10th instant, having been completed through the exertion of the contractor, Mr. W. Jackson, within four months from the date of the contract, notwithstanding many difficulties to be contended with, amongst which may be mentioned the excavation; and the necessity for underpinning the adjoining properties; the floor line of the new hall being about 14 feet below the old surface level.

The object was to open the room during the week of the Cattle Show, when a large proportion of the provincial visitors think it necessary to go to "Evans's." On the present occasion, the number of visitors averaged, we are told, about one thousand a night.

Messrs. Hood and Son put up the hot-water apparatus; Messrs. Defries and Son, the glass gaseliers; Mr. Jeakes provided the cooking apparatus; Mr. Bentley the pewterer's work; and Mr. Remmington the gas fittings.

The house was originally built for Russell, Earl of Orford, who, as Admiral Russell, defeated the French fleet off Cape La Hogue, in 1692. The staircase, a fine one, is formed of part of the vessel Russell commanded, and exhibits in the carvings anchors, ropes, and the initial letters of Lord Orford. James West, the great collector of books and prints, lived here. At his death, the collection was sold, and occupied the auctioneers six weeks. The sale commenced, March 29th, 1773. After the sale, the house was used as an hotel, when the first family hotel in London was established in Covent-garden, in 1773, by a person of the name of David Low.

About 1790, Mrs. Hudson became proprietor, and advertised "stabling for one hundred noble-men and horses." Mr. Richardson succeeded the above. Mr. Joy followed; and the late Mr. W. C. Evans, of Covent-garden Theatre (who died in September, 1854), resigned it into the hands of the present proprietor in 1844.

Several actors have been inhabitants of this house. Amongst others, "Little Knight," as he was called, and Mr. Charles Kemble: it is even asserted that Mrs. Fanny Kemble was born in the room which forms the gallery to the new Music-hall.

We may add to these memoranda concerning Evans's Hotel, that the Institute of British Architects held their meetings here when first established: here the first medal awarded by them was presented by the president, Earl de Grey, to the successful candidate in 1836.

THE DIPLOMA QUESTION.

In your last number you have inserted two very able letters on this subject, the arguments in which seem to me to fail, from the very cause suggested by Mr. Tite during the recent discussion, namely, "ignorance of the kind of diploma sought for." Messrs. Kerr and Tarbuck, without absolutely stating it, evidently imply that the object desired is a *compulsory* examination, and this impression seems to be shared by Messrs. Pocock, I'Anson, and Burnell. I have also heard it stated, that the present agitation for a *voluntary* examination is nothing more than a preliminary to an agitation for a compulsory one, for which the voluntary system will be taken as an instalment. I am not now raising a giant for the purpose of slaying it, because I am quite certain that this monster exists, invisible perhaps to mortal eyes, but with a presence and club very perceptible. To make therefore the diploma a matter of legal enactment, a sort of bill of pains and penalties for protection to British architects would obviously defeat its own object, besides being unjust and tyrannical towards the public. On this very important starting-point, I am quite sure Mr. Tite, Mr. Papworth, and the young memorialists, agree. Then I have often heard it argued, that a voluntary examination may become so general, so popularly received a method of testing an architect's qualifications, that this examination will become a professional necessity, and therefore a moral tyranny, if not a legal one. I hope it may be so, with all my heart. A tyranny of knowledge and capacity, progressing and developing itself only by its own justly appreciated value, and totally unaided by any compulsory enactments, would be a great and glorious thing of which any profession might reasonably boast. When Mr. Tarbuck complains of "special pleading," I cannot help referring to some of his own. As is useful in such cases, he defends the present system by referring to the great men who have flourished in spite of the system; but even these he refers to times not in the least analogous to our own. His illustrations are singularly unfortunate. When Giotto, "raised that fair tower," he was the great painter of his age, and the *only* Florentine architect, Arnolfo, was in his grave; Orcagna, Taddeo Gaddi, and Niccolo di Pisa, unborn, or in their infancy. He therefore required no diploma to make his genius recognised. William of Wykeham held a confidential position near his sovereign. Could he fail in finding employment for his talents? Had "the stern and lofty Angelo" lived in these days, neither "pontiff nor prince would have stood uncovered;" but he might have been considerably bullied by an English House of Commons. It is worse than idle to measure the wants and opportunities of the present day by a mediæval standard.

The Brandenburgh Gate, "the pride and boast of Berlin," (?) was erected before the present Prussian diploma system was established. That argument, therefore, falls to the ground. "The Berlin programme," says Mr. Kerr, "scarcely deserves to be carefully perused." I fancy he forgets that the Berlin examination is part of that very collegiate system of education which is his own dear hobby. Nay more, his own programme of "a little practical science easily taught," does betray a most singular resemblance in its requirements to the Prussian one. Talk of German mystification! the English *Ego* and *Non Ego* have a strong family likeness. The great blot in the Prussian examination seems to be the fallacy of connecting a diploma with any particular system of study. Hence the objection of "tyranny of schools," which has been so often thrown in our

* Read at the Architectural Museum, Cannon-row, Westminster.

NEW MUSIC-HALL, COVENT-GARDEN.—Mr. W. Finch Hill, Architect.

teeth; but this very tyranny forms a prominent part of Mr. Kerr's system. For the establishment of an extensive system of architectural collegiate education I am as great an advocate as Mr. Kerr. This, if combined in due proportion with the present office system, would prevent practice from degenerating into English "rule of thumb," and theory from mounting into German transcendentalism. To establish a system of education is, as Mr. Kerr well knows, no easy task. He has been labouring at it for years; but, as yet, with no results. To set on foot a voluntary examination is a comparatively easy matter. "But," says Mr. Kerr, "you begin at the wrong end. Qualify your candidates first; then get them an examination." Now, if the present body of candidates for examination be not sufficiently qualified (and that is more than possible), what will exhibit the fact better than the proposed examination? and then Mr. Kerr has a stronger argument than ever in favour of a more extended system of education.

There appear to me to be many and grave reasons why a diploma examination should be totally independent of any educational system. That a college should grant certificates, prizes, or honours is undoubtedly right, but these are simply incentives to study: they are the "little goes" preparatory to the great one; but to no college would I give the power of granting a diploma. An independent examination would be most valuable as a test of educational systems. The upholders of the present office pupil system are both numerous and respectable: an independent examination would show if the views of these gentlemen be right or wrong.

Another reason for entirely disconnecting the diploma and the college is this: the former would act as a most salutary check on the latter. In all educational establishments abuses continually creep in: the diploma would tend to expose these. Again, experience has told us that there are many men

educated on a bad system who have attained great knowledge in spite of it, and, as Mr. I'Anson observed, there are even instances of men who have obtained their knowledge heaven knows where, but who undoubtedly possess it. To neither of these classes should a diploma be refused: to neither could it be given if it were connected with any educational system.

In the true spirit of "special pleading," both Mr. Tarbuck and Mr. Kerr have insinuated that a diploma is by its advocates set forward as a remedy for every evil of the present system; in fact, that a diploma will make an architect. I need only refer to Mr. Papworth's recent remarks to settle that matter.

A very grave impression seems to have gone abroad that the Architectural Association have undervalued the qualification of professional experience. I am very anxious to remove this idea. The practice which experience alone can teach, no diploma can touch, but the theory, without which experience is only a mockery, may form a fitting subject for an examination.

With these views alone, the memorialists have, I think, not inopportunely, and I hope not disrespectfully, presented their petition to the Institute.

Alfred Bailey,
President of the Architectural Association.

Suppose it settled that we are to have a diploma (which, by the bye, we shall not have, or anything so useless), how are *we* to be dealt with? One of us is a first-rate hand (excuse vanity) at the artistic part of the profession, but knows *nothing* of the practical part: the other is a capital practical man,—in fact, once a bricklayer, then a clerk of works, a builder, and now "architect," but cannot even handle a pencil. The former is certain of passing one half of the examination, the latter of getting through the other half. We can point to works executed, well carried out, and of good design, so of course we shall each be entitled to *half a diploma*. What say you, Mr. Editor?

Yours, &c. Jones and Jones.

P.S. By the bye, if the members of the Architectural Association were individually asked to agree to be examined, we wonder how many would become candidates for the diploma? About six or eight, we should think; and they would probably be turned back, unless they "crammed" well first.

J. and J.

THE HISTORY OF THE ORGAN.

Intimately connected with the study and practice of architecture, especially that important section of its extent and influence included under the comprehensive term "ecclesiastical," are the history and design of an instrument, which, for extent of power, elaboration of construction, capacity as a vehicle for architectural effect, and volume and variety of tone, of quality peculiarly adapted for sacred music, is justly entitled to rank as the monarch of musical instruments, and demands more consideration and study on the part of architects than has yet been extended to it.

We hail with pleasure an elaborate work upon the organ just now published, as a service to the architect as well as the musician, as supplying an acknowledged deficiency in music history by affording valuable facts and data in connection with the subject, and in opening a wide field for further investigation and advancement in knowledge upon one or two important particulars connected with church construction.*

We purpose offering, principally from the volume before us, a brief disquisition upon the subject in question, divided into two leading heads, viz.—the history of the organ, and its position in churches; and for a more elaborate and detailed account, will refer our readers to the work itself, and the authorities that have been consulted in its compilation.

Dr. Rimbault divides the history of the organ into four grand epochs: first, before the invention of the key-board; second, after the invention of the key-board; third, the first appearance of organ-builders by profession; fourth, the founders of modern organ-building.

The Greek ὄργανον—Latin *organum*—were the origin of the scriptural term "organ," but by no means indicated the existence of the noble instrument that now bears the name. The Greeks applied the term generally to an instrument or a machine, whether musical or other, and thus *organic* became a term applied to music when *instrumental*. Vitruvius, in his tenth book, describes the difference of the words *machina* and *organum* as applied to machinery. The organ (*ougab*) is first mentioned in Genesis, where Jubal is described as the father of all such as handle the harp and organ. The type of the latter instrument was doubtless here furnished, and was probably nothing more than the rude syrinx or pipe of the god Pan:—

"Pan primus calamos cerâ conjungere plures
Instituit."—Virg. Buc.

Which, with the lyre, are alike the acknowledged instruments of heathen mythology and holy writ. Indeed, the well-known representation of a series of gilt tubes of progressive lengths upon the front of a modern organ recalls so forcibly and immediately the form of the humble invention of the Sylvan deity, that it is impossible to avoid recognizing whence originated the first thought.

But perhaps no better argument can be adduced of the worthlessness of interpretations of ancient terms, where the equivalent is only surmise, than the rendering by different nations of the Hebrew *nablion* and *ougab* in the above passage. The Septuagint has it ψαλτηριον και κιθαρα; the Syriac, *cithara et fides;* the Chaldean, *cithara et organum;* the Arabic, *tympanum et cithara;* the English, harp and organ; and the French, *le violon et les orgues!*

To improve upon this rude and imperfect instrument was the labour of centuries. Inserted into the top of a wooden chest—the *wind-chest*—the pipes were now placed; into this they blew through a reed—the *wind trunk*—but as all the pipes now spoke simultaneously, they were forced to stop with the fingers the tops of those pipes intended to be silent,—which by the increase of the number of pipes soon became impossible. The *valve* was now placed under each pipe either to admit or exclude the wind. Kircher, in his "Musurgia," gives a drawing to illustrate the instrument at this stage. The valves were in an inclined position, and to open them, levers were added, connected with them by cords,—whence the modern *pull-downs*. A further increase of pipes caused an enlargement of the pipe-chest, and a better contrivance for the production of wind was devised. Thus arose a new class of instrument, called by the Greeks ὄργανον πνευματικόν.

The lines commencing—

"Et cum multifori Tonius cui tibia buxo
Tandem post epulas, et pocula, multicolorem
Ventriculum sumpsit," &c.

and quoted by two or three authors, as well as Dr. Rimbault, as from Virgil (but that is an error), describe the performance upon the πιθαυλη, or *tibia utricularis*,—an instrument closely allied, as justly argued by M. Fetis, to the modern bag-pipe, but, as *we* consider, quite distinct from the *organum pneumaticum*, which doubtless is a term applying only to the early development of the instrument known to us as the organ, and not to the mere *tibia*, or *fistula*, or *calamus*, played upon by the ancient shepherds.

The enlargement of the pipes and wind-chest demanded an increase in the wind-tube; and the want of more wind occasioned the invention of bellows; and in the "Musurgia" is a drawing of an instrument thus advanced. Many portions of the modern organ being thus established, "we may," says Dr. Rimbault, "justly assign the invention of the organ to this period, and though no precise date can be given, thus much may be stated with certainty, that all these inventions date from a period before the birth of Christ."

A new power was now put in use to remedy the unsteadiness in the wind, and consequent inequality of tone caused by the smallness of the bellows, and this was the *organum hydraulicum*, or water-organ.

The account Vitruvius (lib. x.) gives of this invention, though highly interesting, leaves the subject enveloped in mystery. From the description it would seem that the water which forced the air into the pipes was pumped by men; and many argued, that as *fingers* are alluded to, *keys* must have been used. The description of Claudianus, some think, hints at the same conclusion, where he says,—

"Intonat errante digito;"

but keys were not invented for ages afterwards. The "Musurgia" contains a long description of this instrument, according to the account of Vitruvius, and is accompanied by a drawing explanatory of same. Probably the most authentic account of this instrument is by Athenæus, who ascribes its invention to Ctesibius, of Alexandria (B.C. 200). A Contorniate medal of Valentinian, in the Vatican, bearing the head of Nero, shows, on the reverse, one of these instruments: no performer appears, but two men are engaged pumping the water by which it is worked. These contorniates were struck only from the age of Constantine to that of Valentinian, so that a higher antiquity is not thereby proved.

The mechanical operation of the water-organ is unintelligible, but that it was provided with pipes and wind-chest, and registered like the wind-organ, is certain. The water was not supposed to have produced the wind, but merely to have given it equality and power by means of counter-pressure. Burney doubts if these water-organs were any better than the remains of the invention still existing in the grottos of vineyards in Italy; but Dr. Rimbault considers they in no ways resembled each other.

To return to the pneumatic organ, M. Fetis denies its claim to extreme antiquity, proving that the early instrument to which that high-sounding title was given was nothing more than a bagpipe! nor does he discover anything to the contrary in the epigram of Julian the Apostate, in the "Anthologia Græca." The scant antiques that show this rude instrument, are but four in number, viz.: a fawn with bagpipe on an engraved cornelian, shown in Ficcaroni; a *bas relief* in Palazzo Santa-croce; a bronze in the Villa Albani; and a small statue of a shepherd in museum of the Marchese Venuti. Scaliger's derivation of πιθαυλη is not quite satisfactory; that of ασκαυλης is perfectly so; ασκος—*uter*, αυλος—*tibia*. It is worthy of remark that the sculptures upon the Arch of Titus, representing, as is supposed, the various musical instruments found in Jerusalem at its siege, do not contain among them that of the organ, which some think conclusive that they had it not.

It was probably in the fourth century that the keyboard was invented; but the early history of the organ, like that of the violin, is shrouded in uncertainty, the bow of the one and the keyboard of the other being the starting points of their after perfection; and from their invention may be traced the progress of both instruments.

At the beginning of the eighth century, the organs of the Anglo-Saxons appear to have resembled those now in use. The organ was early used in the public service of the church. Platina says Pope Vitalian first used it in 666; but Julianus says it was in use 200 years earlier. It was some time before they became common in the churches of Europe. Pepin, father of Charlemagne, first introduced singing and church ceremonies into France, and finding the want of an organ, asked one of the Byzantine emperor Constantine Copronymus, who sent him a large one, with leaden pipes, which was erected in the church of Compeigne. Soon afterwards we find them common in England. Saint Dunstan, in the reign of Edgar, erected one, described by William of Malmesbury.

Four chapters upon the construction of organs, from a treatise on "Divers Arts," by the monk Theophilus, ascribed to about the eleventh or twelfth century, and hitherto unknown to musical writers, are here given, with a translation by Mr. Hendrie; and from this account one important fact is deduced, namely, the organ described *had no keyboard*.

The first keys were few in number, and very wide,—6 or 7 inches,—and were struck down by the fist. Years of labour and patience were devoted to their improvement, and that of the bellows; and manuscripts and drawings of the period are interesting to a high degree. The first conventual and monastic organs were very small, and used only for simple melody (not harmonised), and were called "regals," from *rigabello*, and even at close of last century an officer of the Chapel Royal was termed "tuner of the regalls." Another term for it was the "portative," from its lightness; in contradis-

* "The Organ: its History and Construction." By Edward J. Hopkins, Organist of the Temple Church. preceded by a "New History of the organ." by Edward F. Rimbault, LL.D. London: Cocks and Co. New Burlington street. 1855.

tinction to which was the "positive," from its weight. This latter had a keyboard of full compass.

The expression, "a pair of organs," has taxed the ingenuity of many to explain, and amongst them Mr. Ashpitel, the architect, who makes it consist of "two organs conjoined with two sets of keys, one above the other: one small and called the 'choir,' the other the 'great' organ," &c. The doctor conceives Mr. Ashpitel's explanation to be the most erroneous yet given, yet, strange to say, he himself unwittingly gives weight to this explanation of the term when he speaks of "the 'small' organ which is placed before the 'great' organ in all churches where there is an organ sufficiently large to be divided into two parts," &c. This custom, then, of having *two* organs of different uses and effects would seem to be the most likely origin of a term which long prevailed after the use of the actual pair was abolished by improved construction: whence the terms, "pair of regals," "pair of virginals," &c.

Before the end of the fourteenth century all our churches and chapels were supplied with organs. The keyboard was now extended to nearly three octaves, the keys being played by the fingers, and the pedal was invented or greatly improved.

An elaborate account of native and foreign builders, instruments and improvements will be found in the history, and, amongst many "curiosities," an amusing account of the absurdities perpetrated on the exteriors, and a lament for the want of good designs.

One era in organ history must not be forgotten, — the great rebellion. An ordinance having passed in 1644 that no music but plain psalm-singing should be allowed in divine worship, and the cathedral service in short utterly abolished, the collegiate and parochial churches were stripped of their organs and ornaments: some were sold to private persons, who preserved them, some were partially, some totally destroyed, some secreted by the clergy, and a few suffered to remain!

So complete was the devastation caused by this fanaticism, that it took half a century to supply our parish churches with organs after the restoration, and but very few of the old English organs escaped the universal destruction.

A sufficient number of workmen to supply the demand for fresh organs not being obtainable in the country, it was thought expedient to invite foreign builders to settle amongst us; and the two celebrated workmen, Smith and Harris, were induced by the premiums offered to come over from Germany, and their establishment in this country commences epoch the fourth, in Doctor Rimbault's History.

Bernard Smith, commonly known as "Father Smith," brought with him from Germany two assistants, Gerard and Bernard, his nephews, and to distinguish him from them, he received the name of "Father." His first organ here was for the Chapel Royal, Whitehall, which, being hurried in the construction, was a partial failure. He afterwards made a vow never to accept work at short notice, or under price! The excellence of his organs is attested by their long duration and sweet tone. Burney, who supplies the foregoing, says nothing about his birth, parentage, and apprenticeship; nor the exact date of his arrival.

Smith was certainly in England the first year of the Restoration, and his works included some of the finest organs in the kingdom. He held the appointment of "organ-maker in ordinary" to the king, and had apartments assigned him in Whitehall, called in consequence "the Organ builder's Workhouse." He had, however, a formidable rival to oppose in Renatus Harris, who arrived from France soon after his own settlement here. His reputation appears to have been almost as great as that of Smith; and in their famous competition for the Temple organ—the decision in which case occupied nearly a twelvemonth, party feeling was carried to the extremest lengths.

Burney must be consulted for the details of the occurrence.

Smith's success in this competition procured him the order for the organ for St. Paul's Cathedral. The work was long delayed, owing to a contention between Sir Christopher Wren and the Dean and Chapter; the former wishing the organ to be placed on one side the choir, so as not to impede the view of the building; the latter insisting on its being put up at the west end of the choir, where it was ultimately placed, Sir Christopher declaring the beauty of his building spoilt by "the d—d box of whistles!"

A list of the most important works of Smith, Harris, and the other great organ-builders of the time, both English and German, concludes Dr. Rimbault's introductory essay. We have not quoted many passages from it, as we do not observe any observations absolutely new; but we can recommend it as a useful historical sketch forming a guide to a more elaborate study of the subject.

The treatise of Mr. Hopkins is essentially a practical work, the details of which it would be impossible to enter into here.

The four great divisions, or *departments*, of the instrument, namely, the great organ, the pedal organ, the choir organ, and the swell organ, are separately and distinctly considered; and the three great divisions in which the structural portions are classed, namely,—first, the machine for the collection of the wind, and the channels for its conducting and distribution; second, the mechanism, by which the several departments are brought into use, and their stops brought under perfect control; and, third, the sound-producing parts, namely, the pipe-work, are elaborately and fully described.

We purpose in a future number to speak more particularly as to the position of organs.

A LAYMAN ON ARCHITECTURE.

ARCHITECTURAL INSTITUTE OF SCOTLAND.

At the annual meeting of the Architectural Institute of Scotland, held on the 29th ult. the report of the council showed that the number of members now amounts to 481. It concluded by referring to the death of their late secretary in Glasgow, Mr. William Guthrie, the duties of whose office have been efficiently discharged by Mr. James Salmon, architect, Glasgow, and to the resignation of Mr. J. J. Parker, secretary in Edinburgh. The council have appointed Mr. William Miller as Interim Honorary Secretary.

The Right Rev. Bishop Terrot then delivered an interesting introductory address, of considerable length and scope.

Speaking of the hesitation with which he addressed them, the speaker said:—

"I have, however, in some degree quieted my misgivings by the consideration that, as there exists a common sense by which thousands who know nothing of formal logic do contrive, in a rough way, to arrive at true conclusion, so there may be, and I think there is, a common taste, whereby the minds of educated and thinking men do generally agree in approving or condemning any architectural work to which their attention is directed, though they may be all ignorant of the mechanical laws or the æsthetic principles which guided the architect. The existence and the workings of this common taste, the architect is bound to take into consideration, both for the sake of the public and for his own; and it is in the belief that I possess just my individual share of this common quality, and nothing more, that I now attempt to comply with the wishes of your council. I have just mentioned two points which the professional architect must have studied carefully,—1st. The necessary laws of matter; and, 2nd, Æsthetics, or the principles of the beauty of form. Of the first of these, as applied to architecture, the class of which I profess myself to be a member, is confessedly very ignorant. We do not, for example, know the strength of the various materials employed in a building, nor consequently can we say what width may safely be given to an aperture surmounted by a horizontal lintel of sandstone, of marble, of wood, or of iron. We do not know what lateral pressure a flattened or segmental arch impresses upon its abutments; and, consequently, are ignorant what force of counter-pressure, what width and solidity of buttress, is requisite for the security of the arch. But, then, it ought to be remembered by the architect that though very ignorant, we are not entirely ignorant. We know that there is a limit beyond which a horizontal beam, even of the strongest material, cannot support even itself; and, therefore, we feel a painful sense of insecurity when we have any suspicion that this limit has been approached. We know that a flattened arch of heavy materials could not be supported but by a sufficient counter-pressure; and, therefore, we feel uncomfortable under such an arch, unless we see that the means of counterpressure have been provided. Such architectural discomforts I have myself experienced. I recollect being many years ago in a concert-room at York, then newly erected, the ceiling of which was horizontal, and ostensibly composed of slabs of various richly-coloured marbles. These, if they had been what they pretended to be, could have been kept in their place only by some very powerful mechanism, of whose existence no sign appeared; and thus the effect was a painful feeling of incongruity and insecurity, while if the ceiling had really been what it assumed to be, and had been transferred to the floor, the effect might have been rich and pleasing."

As to the forms of buildings, he considered that if an architect be called upon to produce a plan for a church to contain, say a thousand sitters, and in the Pointed style, he is not confined by the rules of his art to any one form—nay, he may produce a form absolutely new, provided it be consistent with the principles of the style adopted. With reference to this point the reader continued,—

"In Blackfriars-road, London, there stands a large octagonal brick chapel, once celebrated as the station of the eccentric Rowland Hill. No one in search of the picturesque would look at it twice, for it is certainly very ugly; but then, on a comparatively small area, it is seated, I have been told, to accommodate four thousand persons, and a voice of ordinary strength is audible throughout the whole of it. Now, might not the style of the ancient chapter-house be adapted to produce all this convenience without any of this deformity? I suppose one difficulty would be the necessary expanse of roof, but what is there which cannot be effected by the judicious use of iron? If, again, the Greek or Roman style should be adopted, and I see no reason why they should be proscribed, it has struck me that the Greek cross, whether with or without a dome at the intersection, is a form well suited for our purposes, capable of much external and internal beauty, in harmony the one with the other. If built without side arches, and consequently without pier or pillars, all the congregation, in three at least of the arms, would see and hear the preacher without obstruction. As employed by the Episcopal Church, the fourth arm would be devoted to the purpose of a chancel. I know no instance of such a church in this country, but you have all seen drawings of the Isaac's Church at St. Petersburgh—that is the form to which I am now alluding; and it does appear to me that something of the kind, though, of course, on a very reduced scale, would suit our purposes in the erection of our larger city churches."

The shops in Glasgow, he thought, showed that the architects employed there must have been dealing with much more wealthy clients than the architects of most of the modern works in Edinburgh.

"Upon the whole, the effect is striking; but there appears to me some want of completeness and congruity—first, between the ostensible purpose of the building and its elaborate decoration; and next, between the nakedness of the mere shop-front, and with the plain fenestration of the intermediate parts, and the profuse richness of the upper portion. They are much superior to the variety of plaster trifles exhibited in Regent-street, London, but inferior in dignity to the mercantile buildings in New Cannon-street. These are of well-coloured brick, with white stone-facings, of good design, to the doorways and windows. This variety of material and colour, where there is a necessary and manifest break of continuity in the structure, is both reasonable and pleasing; and, upon the whole, I know not that I have seen any new range of street architecture which I prefer to New Cannon-street, between London-bridge and St. Paul's. My holiday leisure is generally spent in London, with a few visits in the country coming or going; and after inquiries after old friends, and visits to such picture galleries as are accessible, my next inquiry is for anything new in the way of architecture. And here there is something which I have in vain studied to account for—namely, that while private individuals, or commercial companies, or parochial committees, can generally get a good design for their money, Government, with the collective wealth of the country at its command, appears almost always to fail."

Speaking of the architecture of London, the Right Rev. gentleman observed:—

"Two of the largest clubs—the Carlton and the Naval and Military—suggested to me some considerations not foreign I hope to the purpose of this

address. In the Carlton there is a very striking variety of colour in the materials. The wall-face is of the ordinary building-stone, while the ornamental columns are of red granite. This appears to me a case in which variety of colour is not merely allowable, but commendable. There is here a structural discontinuity, a sudden passing of the eye from one structural form to another, and in such cases there is nothing objectionable when the change in form is accompanied by a change of colour. The effect is very different when, as in Mr. Hope's new house in Piccadilly, the red granite is introduced in unnecessary and unmeaning patches upon the flat wall. The Military and Naval presents two very extensive and richly-ornamented fronts—one towards Pall-Mall, and the other towards St. James's-square. In the elevation, we have first a rusticated basement story rising from the level of the street; then an *entresol*; and above that, a Corinthian colonnade, with a very rich frieze and cornice. But the basement and *entresol* being all above the level of the spectator, occupy one-half of the whole elevation of the building; and this, I feel assured, is far too large a portion to devote to such purposes. The effect produced is that of one complete edifice placed upon the top of another. Though I thus conclude my remarks upon the new street architecture of London with an adverse criticism on a particular case, I feel, and all must feel, that art is advancing; and that, looking only to the productions of the Georgian and Victorian ages, the architects and the public of the present day have no reason to be ashamed. And if in this department the appearance of improvement is undeniable, much more have we reason to rejoice at the still more marked advance in ecclesiastical architecture. And in reference to this, the hope for the future rests not more upon the skill and feeling exhibited by our architects, not in London only, but in every province of Great Britain, than upon the attention which is paid to the subject by all classes of the community, and the large amount even of technical knowledge possessed by many who are actively employed, but not absorbed, in other professions."

At the conclusion of his address, the Bishop urged the importance of forming an Architectural Library, containing those works which a young architect would require to consult, but which from their price he could not at the commencement of his career purchase without inconvenience and imprudence, and especially foreign works of merit, particularly of the French and German schools.

THE GLASGOW ARCHITECTURAL ASSOCIATION.

A LECTURE on the "Preparatory Training of an Architect" was delivered on the 14th ult. to the members of this association by Mr. C. H. Wilson, in which the lecturer dwelt on the necessity of education in the sister arts to all destined for or following out the architectural profession, more especially in skilful drawing, and on the advantage, indeed, of education generally, in all such branches of science as those of geology, ethnology, chemistry, and natural history. The study of landscape gardening was also pressed upon the attention of architects, and such excuses for bad or vulgar forms in architecture as the parsimony of employers was very properly reprobated.

The annual *conversazione* had been previously held on the 2nd of the month, when the retiring president, Mr. Hamilton, made the opening address, in which he directed attention to the advances in architecture effected even since the last annual meeting of the same kind. One great disadvantage under which the profession labours was dwelt on, namely, imperfect art-education amongst the people. The local Architectural Exhibition was pointed to as one of the most effectual agencies at work in the removal of this obstacle. Some strictures, however, were passed on the objects in that exhibition; but the lowering of the price of admission to the general public was approved of.*

The report was then read by the secretary, and the meeting was afterwards addressed at some length by Mr. Gildard, who, while bringing under notice the uses of glass and iron in the art, expressed a doubt that architecture is not legitimately meeting the exigencies of the age.

* Mr. Hamilton is reported to have made the following remark in allusion to the *Builder*, as one of the chief means of advancing a knowledge of architecture:—"The *Builder*, on the other hand, treated any notices of our meetings, &c. we sent, with silent contempt, not deigning to give any reason for its conduct, in its notices to correspondents or otherwise." Now there must be something incorrect in this: we do not neglect such notice when really sent to us. If it be simply meant that a newspaper containing a report was posted to us, it may have either been overlooked in the midst of the never-ending flood of newspapers which do reach us, or may not have reached us at all. Our Scottish brethren may be assured that we have the advancement of architecture and the profession too much at heart, ever willingly to neglect communications from them of public interest.

BOARD OF EXAMINERS FOR DISTRICT SURVEYORS.

SECTION 33 of the new Building Act, sets forth that

"The Institute of British Architects may from time to time cause to be examined, by such persons and in such manner as they think fit, all candidates presenting themselves for the purpose of being examined as to their competency to perform the duties of district surveyor, and shall grant certificates of competency to the candidates found deserving of the same; and no person who has not already filled the office of district surveyor, or has not already obtained a certificate of competency in pursuance of the said Act of the eighth year of the reign of Her present Majesty, chapter eighty-four, shall be qualified to be appointed to that office, unless he has received a certificate of competency from the said Institute of British Architects, or has been examined in such other manner as the said Metropolitan Board may direct, and been found competent in such examination."

At a special general meeting of the Institute of architects, held on Monday evening, the 17th, the following gentlemen, on the recommendation of the Council, were appointed to be the Board of Examiners for 1856,—the vice-presidents, the honorary secretaries, and Mr. C. Fowler, Mr. Godwin, Mr. Hesketh, Mr. Inman, Mr. Pennethorne, Mr. Pownall, and Mr. Sydney Smirke.

THE METROPOLITAN BOARD OF WORKS.

THE first sitting of the Metropolitan Parliament was held on the 19th, at Burlington House, Piccadilly, when it was resolved that the salary of the chairman should be fixed at 1,500*l.* a-year, and that he be required to devote the whole of his time to the duties of the office. The names of gentlemen desirous of becoming candidates for the office were to be received until Saturday, the 22nd inst. at twelve o'clock. The following is understood to be a list of the members of the Board:—

Edward Harrison, 82, Cornhill.
H. L. Taylor, 10, Queen-street, Cheapside.
T. H. Hall, 48, Finsbury-square.
J. A. Nicholay, 82, Oxford-street.
Thomas D'Ifanger, jun. 5, Melina-place, St. John's-wood.
William Corrie (police magistrate), 10, Gloucester-terrace, Regent's-park.
Josiah Wilkinson, 2, Paper-buildings, Temple.
F. Doulton, High-street, Lambeth.
Robert Taylor, 3, Lambeth-terrace.
H. A. Hunt, 57, Eccleston-square.
Major William Lyon, 22, Park-lane.
John Savage, 54, Thornhill-square, Islington.
W. Dennis, Twyford-villa, Caledonian-road.
W. A. H. Hows, 99, Kingsland-road.
John Ware, 2, Trafalgar-place West, Hackney-road.
Henry Burslem, 14, Kensington-gardens-terrace.
T. H. Bevan, 5, Elizabeth-terrace, Hackney-road.
Ambrose Boyson, 28, Newington-place, Kennington.
A. L. Irvine, Smyrren-lodge, Park-road, Old Kent-road.
Sir John V. Shelley, M.P. 25, Park-lane.
James Pascall, 1, Queen's-row, Pentonville.
F. Chalmers, Cheyne-row, Chelsea.
W. Hawkes, 21, High-street, Kensington.
Joseph Moreland, 18, Old-street, St. Luke's.
Edward Collinson, 95, Blackman-street.
Bernah Drew, Bermondsey-street.
Phillip Crellin, 198, Ratcliff-highway.
W. H. Dalton, 28, Cockspur-street.
W. E. Snow, 28, Tredeger-square, Mile-end.
Lewis Davis, Plumstead.
Thomas Turner, Hampstead.
G. S. Wallis, 16, Mansell-street, Goodman's-fields.
A. Wright, 55, Milbank-street, Westminster.
John Thwaites, 61, High-street, Southwark.
W. Carpmael, Streatham-hill.
George Offor, Grove-street, Hackney.
Captain Barnett, R.N. 14, Woburn-square.
R. B. Seeley, 54, Fleet-street.
Charles Few, 5, Henrietta-street, Covent-garden.
Valentine Stevens, 26, Bell-yard, Temple-bar.
Benjamin Dixon, 3, Norway-place, Commercial-road East.
Simon Knight, Blackwall.
Charles Atkins, Rushey-green, Lewisham.
William Miskin, Lower-road, Rotherhithe.

WOOLWICH ROYAL ARSENAL.

SEVERAL extensive works are being carried on here. Among them may be noticed those contracted for by Messrs. Lucas, Brothers, including the new paper factory; but what attracts most especial notice at this moment is the rapidity with which the octangular chimney-shaft has been carried up.

The bottom diameter of the shaft, which is carried up with picked stocks, and the splayed angles, with cutters, is 10 feet 9 inches from out to out: the top diameter is 4 feet 9 inches.

The shaft is surmounted with a moulded massive stone capping, 3 feet 9 inches high, worked from the Hare-hill Quarries. The batter of the shaft is 1 inch in every 3 feet 2 inches. The height from the top of the die to the summit of the shaft is 104 feet 6 inches;—making a total height from the ground line of 121 feet, and from the bottom of footings, 126 feet 6 inches. The first 25 feet 3 inches of shaft is 1 foot 10½ inches thick in mortar: the second 25 feet 3 inches of shaft is 1 foot 6 inches thick in mortar: the third 25 feet 3 inches of shaft is 1 foot 2 inches thick in mortar: the remainder is carried up in one brick, in cement.

The work was commenced on the 24th of October, and completed on the 11th of December, on which day the scaffolding was commenced to be struck. The scaffold was erected independently of the shaft, and without a putlog hole. The actual number of working days, allowing for bad weather and Sundays, was thirty-nine. The work is said to be unprecedented in the Royal arsenal, and entitles Jacobs, the foreman of the bricklayers (amongst others), to a word of praise.

THE TEMPLE GARDENS.

"A TEMPLAR" writes us that he is not so well satisfied with the treatment of the floral kingdom here as we were led to be. He says,—"Notwithstanding the smoke from the river boats, I have had an existence in the Temple for the last dozen and more years, and I have witnessed the hawthorn, the lily of the valley, and other odoriferous flowers enjoying the same privilege, and blooming much more abundantly than in the present year. I have also seen the laurus, in former years, flourishing "like a green bay-tree;" but, alas! its verdure has now faded. It is true, the rose in question (which, by the way, is a *red* one) has had to struggle for life in a confused forest of Chinese weeds with very heathenish names, supported by timber sufficient to fit out a Baltic fleet, and annexed to the said timber with strips of Joseph's coat, or other rags, the colours being so various that a casual observer might have taken the whole for an encampment *en masse* of the allied army, under a canopy of chimney-sweepers' bags;—yet, with all these disadvantages, "the red rose has not ceased to blow." If, however, they are to continue under the treatment they have hitherto received, I will not answer for their well-being. I fear they will very much resemble the old sycamore-tree, under which, it is said, was plucked the York and Lancaster, which rose, although striving for a miserable existence among a group of alien exotics, may yet be seen blooming annually in the garden of the Middle Temple. The beautiful moss-rose also is there, and, with all the *barbarous* treatment it receives, it still asserts that "England triumphant will display her proud rose," even among a host of Chinese mandarins. Now that the foreigners are cut down, I venture to say that the Christmas rose—the *helebora negra*—will be in flower in the Middle Temple Garden by the 25th instant."

MANAGEMENT OF THE INSTITUTION OF CIVIL ENGINEERS.

SIR,—Will you allow me a small space, in order to draw the attention of the members and associates of the Institution of Civil Engineers to the admirable manner in which the papers read at the Royal Institute of British Architects are published. Every member of the Institute of Architects receives, a few days after each meeting, a copy of the paper which has been read, and the discussion thereon, with the names of the speakers. The report of one evening's meeting of this session consisted of twenty-two quarto pages. At the end of each session these papers are reprinted and delivered to the members in one volume. The volume for the last session comprised 124 pages, and was illustrated with several lithographic plates. The two last reports of the Institute of Architects show a total expenditure of 700*l.* per annum, and that of the Institution of Civil Engineers amounts to upwards of 2,000*l.*; and with this expenditure the engineers have had no minutes of the proceedings of their institution for four years. I have been induced to address you on this subject in consequence of having yesterday received from the secretary of the Institution of Civil Engineers a list of the subscriptions to a Publication Fund, raised pursuant to the resolution of a meeting in December, 1853; and although by this list it appears that more than 1,300*l.* have been subscribed, no publication has yet been

issued, and the secretary now impresses upon those who have not hitherto contributed, the necessity of doing so, in order to provide funds for completing the publications now in arrear!

It appears to me that, as the architects are able to carry on their institute and publish their proceedings with an expenditure of 700*l.* per annum, the Institution of Civil Engineers might well publish their proceedings out of an expenditure of three times that sum; and you, Sir, will, I think, be conferring a great benefit on the country members of the Institution of Engineers by showing them, through your valuable publication, what is now being done by the Institute of British Architects.

ONE OF THE INSTITUTION OF CIVIL ENGINEERS.

THE FOUNTAIN FOR BATH.

VERILY there is need of some alteration in the present position of architects, for at present there is enough to keep a man of education from choosing a profession which can give him no protection against quacks and pretenders. Among the many instances which one constantly meets with which show this grievance, I would state that an application was made some months since to architects and "others," *i. e.* "men of taste," to submit designs for a fountain in Bath. About twenty-eight were sent in, principally, I conceive from amateurs, which might have been expected, as every one who can hold a pencil, thinks he can draw dolphins, tazzas, and sea gods, in endless variety. One was decided on, sent in by a cabinet-maker. I have not seen it, but of course it combines high classic feeling, with economy of outlay, and is marked with that genius which requires no education to refine or labour to develop. After some alterations and improvements have been made to it, the committee, composed as usual of those so well qualified to decide on the æsthetics of architecture, have decided, I see by a paragraph in the paper, to employ an architect "to make the working drawings and specifications, at 2½ per cent. upon the ultimate outlay, with a view to advertising for tenders," and the other 2½ is to be allowed to the author of the design; or in other words, they want an architect so far to forget himself as to do what they, with their chosen adviser, are unable to do. And so, a man who has qualified himself by study and years of labour, to practise a profession, is to be solicited to carry out the design of a tradesman, and share with him the direction and superintendence. Yet there are men "calling themselves" architects, who for the sake of a paltry 6*l.* or 7*l.* will degrade their profession, and encourage committees and others in such a shameful and unsatisfactory mode of proceeding, by undertaking the business. It remains to be seen in this case whether any man of character and respectability will be willing to place himself in such a position. A.

ACTION FOR OBSTRUCTION OF LIGHT AND AIR IN LONDON.

MERCHANT TAILORS' COMPANY *v.* TRUSCOTT.

THIS action, tried in the Court of Exchequer on the 10th, was to determine the question, whether a stack of warehouses built by the defendant opposite to the Merchant Tailors' School, in Suffolk-lane, Upper Thames-street, materially and sensibly interfered with and obstructed and diminished the light and air of the school and the residence of the head master, so as to render those premises more gloomy, less airy, and less enjoyable than previously. That all these effects had resulted from the erection in question, was established by the testimony of the masters and late masters of the school.

On the part of the defendant it was urged, that he was perfectly justified in erecting this building, which was 97 feet high, whilst that of the school was not more than 37 feet, under an ancient custom and right conferred upon all citizens building in the City of London, under a certificate from the Recorder, such custom authorising the owners of land in the City to build to any height they might think fit, with a due regard to safety.

The Lord Chief Baron told the jury that they had but one question to try, namely, did this building of the defendant's obstruct and diminish the light and air of the school? All the evidence was one way, and in the affirmative, too; therefore, upon that point, they would have no difficulty. Whether the defence as to the ancient right and custom would avail the defendant, it would be for another tribunal to determine; and, in all probability, in the end, the question would be carried up to the House of Lords, who would have to decide whether such ancient right and custom was set aside and abrogated by a recent Act.

The jury at once returned a verdict for the plaintiffs. Damages, 40*s*.

UNITED OPERATIONS FOR ENGLAND.

SIR,—I once before suggested the idea of improvements in each county, by operations for that purpose, the population of the country being so unequally distributed, some parts being almost stationary in improvement. The county of Rutland, although half the size of Middlesex, has only two small towns, and so little is its importance, that it has scarcely an event to record, the population being only equal to a large market-town. Huntingdonshire, the third in size, having 50,000 more acres than Middlesex, has a population only equal to Brighton; and so seldom do events of interest occur, that it does not require a local journal. It is not necessary that all the towns should be as large as London, or those in the manufacturing districts; but if the capital of each county was made capable of accommodating not less than 10,000 inhabitants,—care being taken to provide them with suitable residences, and a proportionate number of those institutions which conduce to the welfare of society, with other improvements in the county, the effects would probably be apparent in the improved habits of the people, and would add to the general interests of the neighbourhood and the country, by making better markets for the sale of agricultural produce, and the trade and manufactures of the country. County societies might do much that individuals cannot or will not attempt; and were they only to improve one town occasionally, or add a public building annually, it would in time produce an effect, and bring out of the present obscurity such counties as Rutland and Huntingdon. H.

Notices of Books.

VARIORUM.

Mr. LOWER has published "A Supplement" to his edition of the new "Metropolitan Building Act," containing first a series of notes on the provisions relating to party structures, dangerous structures, chimneys, &c.; and, secondly, a large portion of the City of London Sewers Acts, 1848 and 1851.*. We shall find an opportunity hereafter to refer to some of the opinions expressed: in the meanwhile let us say that all who desire to master the new Act will find Mr. Lower's supplement an assistance. ——"Ships' Compasses" is a contribution by Mr. Thomas Allan, C.E. of Edinburgh, towards arriving at the best mode of preventing the disturbance of the compass by the iron in the ship, and other causes.——Mr. Gilbert French, of Bolton, known to many of our readers, has published, in the shape of a pamphlet, "Parallel Passages from Two Tales, elucidating the Origin of the Plot of Guy Mannering." The passages (which were first made public by Mr. French so long ago as 1840, in the *Gentleman's Magazine*), show that the outline of the story was taken from a novel called "The Memoirs of an Unfortunate Young Nobleman."——Gutch's "Literary and Scientific Register for 1856" (Bogue), contains a large amount of condensed information about everything in the world, and something more.

* London: Waterlow and Sons, Parliament-street. 1855.

Miscellanea.

FALL OF A WALL, AT BOSTON. — On Thursday week, the gable end of a house — the sole remains of a block of six tenements, in Innocent-street, which have long been suffering under what may be called the Chancery blight, suddenly fell to the ground. Next evening, some men employed in removing the *débris*, unexpectedly discovered under them the mangled body of a little boy, whose mother resides in the same street. The houses in question had long been a nuisance. The dilapidated state of the buildings had been represented to the Court of Chancery, and an estimate forwarded; but nothing whatever had been done, beyond intimation that the Court had no means of procuring the required outlay.

FALL OF PART OF A MILL, AT OLDHAM. — On Monday before last, the end of a new mill at present in course of erection in New Radcliffe-street, off Henshaw-street, Oldham, fell down. The building was originally a hat manufactory, but was being converted into a cotton manufactory, and enlarged. The old foundations and part of the walls were allowed to remain, and at the end facing Radcliffe-street a new front was run up, and it is supposed to have been too slight to support the weight of the cornice and roof, for on the beams of the latter being attached, it gave way and fell into the street. The workmen got clear of the building without injury. The damage done is estimated at about 60*l.* or 70*l.*

CONTAMINATION OF WATER BY LEAD.—A Manchester correspondent informs us that he has just had a serious case of illness in his family, arising, medical men say, from the water used in the house being impregnated with lead. He has had the water tested since by analytical chemists, and the fact is thus confirmed. Our correspondent is anxious to know what to do to prevent such contamination. At present his family use rain water, collected in a large leaden cistern at the top of the house, and conveyed thence to a boiler at the back of the kitchen grate and up to another leaden cistern called a hot-watern cistern, from which it is conveyed to all parts of the house. He is recommended to have slate cisterns built within the leaden ones; but he does not know how he can avoid the use of lead pipes to convey the water to where it is required. Were it not that hot water is conducted through a portion of the pipes, leaden pipes lined with gutta percha, such as we lately noticed, might have done, and indeed, with this exception, would obviate the risk so far as regards all but the hot-water pipes. Slate cisterns within the leaden ones are unobjectionable, but the roof also must be looked to, if the rain water runs along leaden gutters; and perhaps some such coating as that invented by Mr. Wentworth Scott, and described by him lately in our columns, would do both for the cisterns and the gutters. In respect to the hot water, unless our correspondent can obtain some of those leaden pipes lined with tin, of which we also lately gave some account, we know not what he can substitute for the lead unless it be iron or tin tubes. This case, we may here note, is just another of those various instances which militate against the idea of some chemists, and in favour of that of others, and particularly of Dr. Christison, in respect to the relative danger apt to be incurred by the contact of soft water and of hard with lead.

FIRES AT ALDERSHOTT. — As was distinctly anticipated in our columns on 19th May last, where even the want of water was foretold, as well as other aggravating circumstances, such as the pitch on the roofs of the otherwise but too combustible huts pointed out,—a serious fire broke out at the Aldershott Camp, on 8th inst. when one whole block was speedily destroyed, and no water supply whatever being at hand, nor other preparations made against so imminent and perpetual a risk to wooden huts from overheated stoves, &c. sparks from the burning block set the pitched roofs of another block on fire, and the whole was also shortly in a blaze. The mischief originated in a lieutenant colonel's hut, where the stove had been overheated. It is to be feared this is not the only conflagration of the kind we are fated to hear of. One cannot but anxiously trust that better arrangements exist in the Crimea, for which Aldershott should be the teacher and exemplar.

THE WALWORTH WORKING MEN'S LECTURE AND READING ROOMS will have been in existence twelve months on the 2nd of January (Wednesday), when it is proposed to hold the annual and general meeting at the Clayton Schools, York-street. The president, Mr. W. A. Wilkinson, M.P. will take the chair. This institution has been opened to provide intellectual resources and educational aids for the adult working-classes, by means of a comfortable reading-room, open every evening (except Sunday), supplied with newspapers and periodicals; also by the delivery of lectures, on subjects of interest and utility, weekly. Classes for the study of various branches of useful knowledge are to be established. Upwards of 160 working men have become members, and the reading-room is attended by a large number of persons every evening.

A STONE COFFIN.—The sexton of the parish of Govan, near Glasgow, while digging a grave lately, came in contact with a stone coffin of large dimensions, 3 feet beneath the surface, but in a part of the churchyard not used for interment. It is about 7 feet long, the length of the cavity being 6 feet, and the width 16¼ inches, depth nearly 2 feet. The exterior has been decorated with elaborate sculpture, divided into different compartments. The figures of a horseman, as if hunting, and of large quadrupeds in singular attitudes, have been traced. Some people think that this coffin may have once enclosed the remains of Constantine, King of Cornwall, who is represented in the ancient chronicles of Scotland to have been buried, in the sixth century, in a monastery built by himself at Govan!

PHOTOGRAPHIC PICTURES TAKEN AFTER THE FALL OF SEBASTOPOL.—Mr. Kilburn is exhibiting, at his gallery, in Regent-street, a number of deeply interesting photographs made by Mr. Jas. Robertson, of Constantinople, at Sebastopol, immediately after its fall. We see, for example, the interior of the Malakoff Battery, the interior of the Redan, and other of the hotly-contested points, and get clear views of the expedients to which the Russians resorted in their desperate defence. There is an interesting series of sun pictures in India, too, by Mr. Fiebig.

Railway Matters.—Several experiments have been lately tried on the Northern Railway of France, in suddenly stopping trains. One of the plans consists of a break acting by means of a heavy weight falling when a certain spring is touched, and instantly impending the progress of all the wheels. When the train has to resume its course, the weight is immediately raised by a simple piece of machinery, and the apparatus is again in a position to act. No decision had as yet been come to as to the superiority of any of these various modifications of the principle tried. ——A second experiment to test Chevalier Bonelli's apparatus for establishing a telegraphic communication between trains in motion, took place on the 7th, on the Paris and St. Cloud section of the Western Railway of France. M. Bonelli's system consists of a thin iron bar running parallel to the rails, and fixed edgeways upon insulators of earthenware, which raise it about three inches above the surface. A combination of springs establishes a communication between this bar (which the inventor calls a *line-bar*) and a telegraphic apparatus fitted to one of the waggons. In the present instance, says *Galignani*, telegraphic communications were exchanged with perfect success, and the experiment was considered to have been successful.

Stained Glass.—The following on a brass tablet, is about being put up on the east wall of St. Michael's Church, Coventry, according to the local *Standard*:—"The three easternmost windows of this apse have been filled with stained glass, to the glory of Almighty God and in memory of Adelaide, Queen Dowager, widow of his Majesty King William the Fourth. The centre window was the gift of the Right Hon. E. Ellice, M.P. as a memorial of his long connection with the city of Coventry, as one of its representatives in Parliament."——A memorial window, in St. Michael's Church, in the same city, is decided on as a mark of respect to the late Colonel Hood, who fell in the trenches before Sebastopol.——There has just been placed in the collegiate church at Wolverhampton, a memorial stained glass window to the late Duke of Wellington. The window is about 11 feet wide, and 18 feet high from the sill to the point. It is placed over the western entrance, and there are four lights. The principal portion of each is filled respectively by full-length figures of Moses, Joshua, Gideon, and David. Below the figures a leading event in the life of each is delineated. The bottom of the window presents, in mediæval letters, the inscription, together with such passages of Scripture, as "He raised up a deliverer;" "The land had rest forty years;" "He died in a good old age, full of days, riches, and honour." The window was designed and constructed by Messrs. Wailes, of Newcastle-upon-Tyne, and has been erected by subscription made in Wolverhampton.

Metropolitan Commission of Sewers.—A special court of the Metropolitan Commissioners of Sewers was held on 11th inst. on the subject of the Metropolis Local Management Act, when a deputation from the vestry of St. Pancras waited upon the commissioners, to consult them relative to arrangements for carrying on works, the management of which would in a short time be transferred from the Commissioners of Sewers to the vestry. It was the opinion of Mr. Chalmers that the district authorities could limit their own duties to the house drainage, leaving the sewerage to the Central Commissioners, but the chairman of the commission appeared to doubt this interpretation of the Acts (the Sewers Act and Metropolis Management Act), which, Mr. Garvey, one of the deputation, observed, were awkwardly dovetailed together. Mr. Sayer pointed out that while the staff required for each of the thirty-eight district localities would not fall short of 1,000*l.* the maximum expense of any central commission had never been more than 25,000*l.* instead of 38,000*l.* per annum. Ultimately, the commission resolved to instruct their officers to render any information to any committee appointed by the district boards of works under the new Act as to carrying on drainage without public injury.

A Swindling "Contractor."—At the Town-hall, Little Bolton, says the *Manchester Courier*, a fellow, named Charles Collins, supposed to have recently come from the neighbourhood of Coventry, has been brought up on a charge of obtaining 22*l.* 5*s.* from Mr. Henry Edge, of Blackrod, under false pretences. He appeared at the tunnel at Blackrod as a person of consequence, one about to supply bricks for the undertaking, and on the 22nd of November made a contract with a farmer in the neighbourhood for the carting of bricks, from New Springs to the tunnel of the Liverpool Waterworks, at Blackrod, for 9*s.* per 1,000; the contractor guaranteeing to convey not less than 2,000 per day. Mr. Edge, an innkeeper, who was patronised by the "great contractor," was thus deceived, and induced on a false pretence to lend the money alluded to. The prisoner was remanded.

Another Submarine Channel Railway Project.—Mr. R. Turner, of Dublin, and Mr. T. Turner, of London, propose to cross the Channel between England and France by a tube, laid on a level bed, 96 feet under low-water, in continuation of existing lines of railway; the level bed to be made by excavating the shallows adjoining the shores, and filling in the deepest portions with the ballast found on the coasts; the tube to be secured by gravitation, and covered by a mound of ballast, after being made in docks on land, in lengths from 10 to 1,500 feet, with temporary stopped ends, and on wheeled carriages, and each rolled forward successively to its destination along the level surface, prepared for its reception. The tube is to be semi-circular, of cast and wrought iron plates, and to have a double roadway having an exterior and interior shell or case of iron, the intermediate space between being cellular, filled with a flexible bituminous substance, and the interior of the roadways to be lined with brick-work, thoroughly lighted, ventilated, and drained. The projectors are making models and plans to develope their views more fully and explain the details of their scheme.

Statue of James Watt, at Manchester.—A meeting was held at the Town-hall, Manchester, on Tuesday in last week, to originate a subscription to erect a statue to James Watt, the inventor of the steam-engine. The statue is to be a copy of the one by Chantrey, in Westminster Abbey, and is to be placed in the large area in front of the Infirmary, in company with the statues of Wellington, Peel, and Dalton. Most of the leading men of Manchester were present, and appeared to enter most heartily into the project, which originated in a suggestion from the Manchester Literary and Philosophical Society. The mayor presided. The subscriptions announced at the meeting were nineteen of 10*l.* and ten of 5*l.* each.

Monument to the late Mr. Alderman Thompson.—A monument has been erected in the parish church, Kirkby Lonsdale, to the late Mr. William Thompson, M.P. of Underley Hall. It is the work of Mr. B. Jennings, sculptor, London. The design is Grecian, and consists of a tablet supported by two brackets carved in imitation of acanthus-leaves.

The Under Drainage of Land.—The paper read at the Society of Arts on 14th inst. was "On the progress and Results of the Under Drainage of Land in Great Britain," by Mr. J. B. Denton. After the reading of the paper, some considerable discussion took place on its very important subject, and the chairman, in summing up, said that it might be considered as established that under-draining a wet soil gave a rapid descent to the water, and secured the dryness of the subsoil. No one, he thought, would deny that although shallow drainage might answer locally, the operation of deep drains had been uniformly successful; and that, although shallow drains were often taken up, there was no instance of deep ones being disturbed. No doubt there were peculiar geological formations that enabled the drainer to accomplish his object at a less expense. He trusted the subject would be taken up on another evening, and that as many would attend as possibly could, as the question would bear much further discussion. Mr. Denton, in acknowledging a vote of thanks, said that as he did not wish them to separate with an impression that he was an advocate of one universal system of draining for all soils, and under all circumstances, he must take that opportunity of repeating that he only acknowledged *one* fixed rule, and that was the *principle of depth*.

Stoves.—R. J. Stainton and E. C. Davey, of Holland-street, Blackfriars-road, have recently patented a stove, said to economise the combustion of coke, coal, or other combustible material, including inflammable gas. Excepting in the stove referred to for the combustion of gas, a fuel chamber is immediately above the grate firepan or basket, which can be charged with fuel to last a given time, according to the capacity of the stove.

Kensington Conversazioni.—We are glad to hear that these meetings are to be resumed. The directors of the proprietary school in Kensington-square having placed their large room at the disposal of the council of the society, and the latter having satisfied themselves of the fitness of the room for the effective exhibition of pictures and other works of art entrusted to their care, have determined to hold four *conversazioni*, namely, on the 10th January and 27th March, 1856, and the 8th January and 16th April, 1857. The only objection to this is the long period over which the meetings are spread. Members are now being looked for. The council list contains some excellent names.

Delaroche's Painting at the School of the Fine Arts, Paris.—It is said that the fine painting of the hemi-cycle, by M. Delaroche, has been greatly injured by a fire caused by the overheating of one of the pipes of the *calorifère*.

Cardiff Exhibition of Fine Arts, &c.—The opening of this exhibition took place on Monday week, in presence of about 300 persons. The bishop of Llandaff took the chair, and Mr. Bruce, M.P. delivered the first or introductory discourse of a series, to be given in course of the exhibition.

"Curiosities of London."—An advertisement points out Mr. Timbs's "Curiosities of London," as "ye boke for Christmas Tyde," and we take the opportunity of saying that lengthened examination of this book, so far from lessening the good opinion we first formed of it, has shown us even more forcibly the value of the immense amount of information concerning the metropolis, its buildings, antiquities, customs, and past inhabitants, which it contains. It is put together in an agreeable as well as a scholarly manner, and forms a volume of never-ending interest.

The Trade Unions, we much fear, have done great mischief, and, conducted as they now are, will do more. Hundreds of thousands of pounds have been injuriously squandered, trade has been diverted to other countries, and the advance of the working-ing classes has been retarded. They would even prevent men from working as long as they please. Take, for example, the following notice lately received, according to a local journal, by a mason in Leicester, because, being employed upon work where he had the advantage of light during only a few hours in the day, he committed the very heinous offence of filling up his time by working in his employers' yard at other times:—"This his to inform you that if you, Insisting of going to Work Gaslight after you have been working out all day, you will be consider no longer a member of the Mason Society, but buide by the consequenc.—We remain yours, In the Bond of Uneon, the Masons of Leicester."

Institution of Civil Engineers.—On the 11th inst. Mr. James Simpson, president, in the chair, the evening was occupied by a discussion upon Mr. Evan Hopkins's Paper, "On the Vertical Structure of the Primary Rocks, and the General Character of their Gold-bearing varieties."

Self-contained Houses.—A man's house should be his castle, but this will never be the case until *self-contained* houses are the order of the day. There can be no proper pride, self-respect, and cleanliness among the industrious classes, till each head of a family has a "castle" of his own. Houses can be built having two, three, four, and more rooms each. The thing is quite possible. A society must build the houses in the first place, but the industrious classes must give a hearty support. It is seldom that any of these classes possess the means of buying or building a snug house of their own, so they knock about from one street to another, and this is no good habit to acquire. If you want to make a good citizen of a man, give him a piece of land or house of his own, and you "fix" him, as the Americans say; he must become settled and respectable, whether he will or no. One of the greatest evils in London is the same as that which prevailed to such an extent in the Crimea lately. Good wages are earned, but there is a difficulty as to the mode of disposing them. A trifle might be saved weekly, but it is troublesome to put it in a savings' bank, and the interest is very small at the best. Instead, therefore, of accumulating their savings, the industrious classes too often squander them. On the contrary, give a motive; give an opportunity to save money; put a self-contained house before the eye, and you will soon find the number of thrifty citizens increasing. There is room for a grand social reform in London, and I hope to see the same begun in earnest ere long.—J. M.

The Torbanehill Mineral.—The Queen's palace, says the *Border Advertiser*, has been for some time lighted by means of this valuable substance, gas from the Torbanehill mineral being destitute of sulphur. Last year 10,000 tons of the mineral were sent to London alone. Not long ago the French Government published a report regarding this substance, which had previously lighted up the whole of the Hôtel des Invalides. This Torbanehill mineral, adds our authority, is the means now resorted to for illuminating many foreign capitals, and it is sent to the most distant parts of the globe. A ship loaded with blocks of this mineral conveys an enormous quantity of a peculiar oil, the source of the illuminating power, in the smallest possible bulk; 75 per cent. or three-fourths of the substance being latent oil, and the rest pure clay.

A new Air-pump.—An air-pump of great simplicity has just been invented and constructed by Mr. James Laing, draughtsman, Dundee. The material of which the pump is composed is cast-iron, and it dispenses with valves.

Brunetti's Model of Ancient Rome.—The Liverpool corporation have agreed to take possession of this model, which for some time past has been lying unclaimed, though the owners were advertised for both in England and America.

A BLIND MASON, JOINER, AND MECHANICIAN.—The *Journal de Chartres* gives an account of a water-mill, near Chartres, built entirely by a blind man, without either assistance or advice from any one. The masonry, carpenter's work, roofing, stairs, paddle-wheels, cogs,—in a word, all the machinery pertaining to the mill has been made, put up, and set in motion by him alone. He has also, the above journal asserts, made his own furniture. When the mill does not work, the blind miller becomes a joiner, and also a turner, on a lathe of his own invention. In 1852, this blind genius was awarded a medal by the agricultural society of the arrondissement, for a machine serving the double purpose of winnowing corn and separating the best grains from the common sort.

THE MEASURE OF CEMENT-CASKS. — I have recently completed some works in which a large quantity of Roman cement was used, and on looking through my prime cost was surprised at the number of bushels of cement which had been consumed. This led me to measure several casks, which had been charged as five-bushel casks, and I find less than four bushels will fill any of them. I then tried the sacks, and I find that two and a quarter bushels will fill a "three-bushel sack." The manufacturer's answer is, "that it is compressed." I, however, venture to trespass on your valuable space, and hope to elicit the opinions of my brother builders as to how many bushels of saud a "five-bushel" cement-cask should be capable of containing.—J. M. M.

FONT AT KEYMER.—It is not always the church-wardens, or low church party, who destroy the body or ornaments of the churches. At Keymer, near Brighton, the old Norman font, a very peculiar, and, therefore, valuable one, has been taken down, and is now lying amid the rubbish and coals in the belfry, and a new font erected *under the chancel arch*, which resembles nothing so much as that agaric called *Phallus impudicus*. This was done about six or seven years ago, by the Venerable Archdeacon Garbett. I call the old font Norman from its being in a church with a circular east-end.—AN ARCHÆOLOGIST.

TENDERS

For house and offices, for J. W. Freshfield, Esq. M.P at Leigh, Surrey; Mr H. Currey, Architect. Quantities supplied by Mr J. Welch: –

Bothwell	£9,050	0	0
Cubitt and Co.	8,588	0	0
Sherbourn	8,213	0	0
Hayward and Nixon	8,047	0	0
Piper	7,984	0	0

ADVERTISEMENTS.

A SOLICITOR, in extensive practice in an active and improving town in the Midland Counties, has a Vacancy for a well-educated Youth, as an ARTICLED PUPIL.–Address, K. L. M. "Advertiser" Office, Warwick.

TO PARENTS AND GUARDIANS.

AN ARCHITECT, in practice at the West-end, has a VACANCY in his Office for a well-educated Youth, with a natural taste for drawing.–Address, DELTA, Office of "The Builder."

CLERK of WORKS.—Wanted immediately, in an office, a CLERK. A middle-aged man would be preferred. The situation is first-class and will be a comfortable and permanent one. Wages to commence at 25s per week. Application to be made in writing, stating how employed. Address, C. H. 29, St. John-square, Clerkenwell.

CEMENT TRADE.—WANTED, a TOWN-TRAVELLER, who has a connexion among buyers and a knowledge of the trade. Applications, by letter only, to be addressed to A. Z. V. care of Messrs. Pottle and Son, 14, Royal Exchange.

TO PARENTS AND GUARDIANS.

THE ARCHITECT and SURVEYOR to two first-class Building Estates in the suburbs of London, has a VACANCY in his Office for a well educated, gentlemanly Youth as PUPIL; one of sufficient ability to be able, after a few years, to become associated in the business, will be preferred. Address, S. K. Estate Office, Prince Albert's New road, Kensington-gore.

TO PARENTS AND GUARDIANS.

MR. JAMES SOPPITT, Architect and Surveyor, Shaftesbury, Dorset, has an opportunity to receive into his office, a respectable, well educated YOUTH, as IN DOOR PUPIL, for such a term, to be agreed upon for a Loudon office, in order to give to one having some theoretical knowledge, a more intimate experience of practical surveying, valuing, and estimating. Detailed particulars of building trades and construction, the preparation of round sections, working drawings, specifications, and a methodical system of conducting the Clerk-part of office Facilities would be afforded for private study, and for visiting, and sketching from objects of architectural interest in the neighbourhood.—Premium moderate.

WANTED, for the Stockport Borough Gas-works, a MANAGER, whose age shall not exceed fifty years. He will be required to devote the whole of his time to the duties of his office, and enter thereon on the 1st January, 1856. Sealed applications, with testimonials and such references as to present occupation, to be addressed to the Chairman of the Gas Committee, Millgate Works, Stockport, on or before WEDNESDAY, the 26th DECEMBER instant, endorsed, "Application for Gas Manager." Salary, 250l per annum.

JOHN VAUGHAN, Town-clerk.

Stockport, December 8, 1855.

WANTED, a CLERK of the WORKS, to superintend the completion of a STONE RESERVOIR, at Llanelly.—Applications, with testimonials, may be addressed to J. H. TAUNTON, Esq. C.E. Brunswome House, Stroud, Gloucestershire.

WANTED, a respectable Young Man as FOREMAN, to take the management and keep the accounts of a Building Business and Timber Yard. Reference required for the last two or three years.—Apply to Mr. J. SUDBURY, Jun. Walstead, Essex.

WANTED, by the Woolwich Equitable Gas Company, a SUPERINTENDENT. He must be thoroughly qualified to take charge of the works, and superintend the laying of mains and services, and to inspect gas fittings; he will also be required to take the meters. Salary, 180l, with residence, coals and gas. Applications, with testimonials, to be sent on or before the 22nd JANUARY next, to the Secretary of the Company, Mr. G. HUDSON, Brewer-street, Woolwich.

WANTED, by an ARCHITECT and SURVEYOR in the City, holding appointments, an OUT DOOR PUPIL, to whom will be afforded practical advantages for learning the profession.—Address, S. E. Office of "The Builder."

TO BUILDERS AND OTHERS

A PRACTICAL SURVEYOR offers his ASSISTANCE in measuring, estimating, or the making up of bills or accounts. Terms moderate and per agreement Address, X. Y. Office of "The Builder."

WANTED, a SITUATION as BENCHMAN, by a good tradesman, in town or country. Address, J. B. 48, Newington causeway

WANTED, by an experienced Carpenter, who has just completed some large work on an estate a SITUATION as FOREMAN. Has the first of references and is a good writer, &c. and thoroughly understands his business in every department; is competent to undertake job work, and can have the highest testimonials and only leaves his present situation through the retirement from business of his employer Would not object to take charge of a master's business Address, J. E Heath Cottage, Cambridge-heath, Hackney.

A GENTLEMAN, who has been two years out of his articles, engages as an Assistant, is anxious to enter the office of an Architect and Surveyor, having a good practice, where he could extend his knowledge of the professsion Good references given as to ability, &c.—Address, D C L. 20, Bouverie street Fleet street.

TO BUILDERS AND OTHERS

WANTED, by a practical and experienced Man a SITUATION, as GENERAL or SHOP FOREMAN. No objection to the country.–Address, R. J. Office of "The Builder"

TO ARCHITECTS.

WANTED, by the Advertiser, a SITUATION as DRAUGHTSMAN.–Address by letter, prepaid, W. S. 10, Belgrave-street, Argyle square, King's-cross.

TO SURVEYORS AND CIVIL ENGINEERS.

A YOUNG GENTLEMAN of first-rate ability and practical knowledge, desirous of an ENGAGEMENT after Christmas, in London or the provinces. He is thoroughly efficient as a surveyor, and well acquainted with civil engineering in its general application, is a superior surveyor, leveller, and segmental draftsman. Highly satisfactory references can be given. As employment in a good office is an object, a salary of four guineas per month will be accepted.—Address to Mr. FRIEND'S, Hambledon, Hampshire.

A FIRST-RATE ARCHITECTURAL DRAUGHTSMAN and SURVEYOR will shortly terminate his present engagement, and would be glad to meet with a gentleman requiring efficient assistance, or to take the active management of an office with a view to a partnership. The advertiser is excellent in design, perspective, and detail; practically conversant with the manipulation of wood, iron, and stone work; is a capital artist; thoroughly efficient in land and building surveys, taking off quantities, &c. and is a good accountant. Address, X. Y. P. No. 2, Bouverie street, Fleet-street

TO BUILDERS AND OTHERS

WANTED, by the Advertiser, an ENGAGEMENT as FOREMAN, by one who thoroughly understands the carpenters' and joiners' business. He can find the whole charge of building a large house in the country for a gentleman, which he has just completed. Good references given from his last and previous engagements.—Address, A Y. Office of "The Builder."

A CLERK of WORKS, well experienced in all the branches of building, and practically acquainted with the construction of reservoirs and waterworks, is now open to an ENGAGEMENT either in town or country. Unexceptionable references from his late employers.—Address, C. C. C. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

A PERSON who has had great practical experience in setting out, levelling, and the construction of railways church building as clerk of works, as well as prison, infirmary, and other public buildings, will be disengaged in a week, and will be glad to serve any of the above gentlemen in the same profession.—Address, E. F. G. Office of "The Builder."

AS SURVEYOR'S, ENGINEER'S, OR AUCTIONEER'S ASSISTANT.

A GENTLEMAN, aged 27, a good land surveyor and valuer, accountant and correspondent, with a good knowledge of farming, is now OPEN to an ENGAGEMENT. Reference to last employer (a nobleman's agent). Liberal salary expected. Address, W. B 96, Hatton-garden.

A YOUNG MAN who has served his articles in London, and can be well recommended, is desirous of EMPLOYMENT in an Office where Gothic is principally practised. Salary no object.–Address, A. B. Staunton's, Stationers, 9, Strand.

TO CARPENTERS, JOINERS, &c.

A YOUNG MAN of steady habits, aged 21, WANTS EMPLOYMENT. Would have no objection to commence at 8s. per week.–Address, Y Mrs. Wright's, Beehive Coffee-house, Cumberland place, Newington, Surrey.

TO DECORATING PLUMBERS, &c.

THE Advertiser desires temporary EMPLOYMENT in town or country, in making up books and accounts, estimating, &c. Not averse to assisting in decoration, or the painting of glass. References as to capacity and character, if required.—Address, B. Mr. Peerman's, Hermitage, Emsworth, Hants.

TO ARCHITECTS AND SURVEYORS.

A GENTLEMAN, who has recently completed his articles in the office of a London architect of good standing, is desirous of a SITUATION as CLERK.–Address, E. D. P. 3, Camden-street, Camden-town.

TO BUILDERS, SURVEYORS, AND CIVIL ENGINEERS.

THE Advertiser, aged 22, is open to an ENGAGEMENT, as a neat draughtsman, accustomed to assist in preparing parliamentary working drawings, taking out quantities, and the ordinary routine of an office, and has a knowledge of surveying and levelling. A moderate salary only expected, if in an office where opportunities of improvement would be afforded.–Address, E. S. City News-room, Cheapside.

A PRACTICAL MAN, who is an accurate DRAUGHTSMAN, accustomed to the management of workmen will be shortly disengaged and requires a SITUATION as GENERAL FOREMAN to a BUILDER, or Clerk of Works, or General Superintendent on an Estate.–Address, A. Z. 4, Carthus-street, Charter House square, City No objection to a country town, or to go abroad

N B Good testimonials.

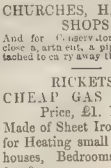
TO SUB-CONTRACTORS or OTHERS possessed of a small capital.—A person who has an extensive sub-contract in the country, comprising earthwork, masonry, brickwork, &c. is wishful for some one to join him as partner or otherwise who can advance for instance the sum of three hundred pounds or upwards. Respectable references will be given and required.—Address to G. R. care of Mr. HARRISON, 32, Clifton-crescent, Asylum road, Old Kent-road, London

HANDS'S PATENT ECONOMISING KILN is the only simple and efficient mode to use the Lead, for drying moist moulded clays, sound in any season, in time of burning and cooling the kiln, with perfect ventilation — Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE; it has combined, where necessary, the advantages of a drying process and perfect combustion without a particle of complicated machinery. Address to Mr JOHNSON HANDS, Brick and Tile Works, Epsom.

IMPROVED CONSTRUCTION, and SMOKY CHIMNEYS PREVENTED.



The Chimney Contractor, with Perpetual Register made of Iron, to be used for the formation at the commencement of Chimney. Made for Flues 9 inches by 9 inches, 14 inches by 9 inches, and 14 inches by 14 inches.

The UNIQUE CHIMNEY-POT (Multum in Parvo), a Remedy against Smoky Chimneys, unsightly, and danger in Contrivances. Is inclosed at the top, has a division and double outlet, preserves the flue dry, and will not clog with the soot.

Sold at No. 8, Princes-street, Bedford-row.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD. This Guard allows a free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

NO CHIMNEY WANTED for RICKETS'S PATENT CALORIFERE GAS STOVES in CHURCHES, HALLS, or SHOPS;

And for Nurseries, or any close apartment, a pipe can be attached to carry away the burnt air

RICKETS'S CHEAP GAS STOVE, Price, £1. 15s. Made of Sheet Iron, suitable for Heating small Countinghouses, Bedrooms, Cellars, &c. &c.

MANUFACTORY.

AGAR-STREET, STRAND, LONDON.

Liberal Discount to Builders.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 3s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. This Powdered White Zinc may be had for grinding in Oil; also for Plaster fine rations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK, LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the British and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vecetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, Wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied on shipment, on advantageous terms.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BREESE, and TREE, Manufacturers of Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, M.I.C.E., and CO. beg to inform the public and trade generally, that they have completed their new feature for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask.—Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c. IN EVERY VARIETY.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Zastic Cements, English and French Plaster, &c.

BATH, PORTLAND, and ROMAN CEMENTS, GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by RICHARD WINTER (Manager to the Company), Cement Works, Dunball Bridgewater.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, Kings-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester. March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'s BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON,
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in barge loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

31, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers.—Office, 4, George yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PRIZE BRICK-MAKING MACHINE.—CHAMBERLAIN'S PATENT.—This portable machine will make 20,000 solid bricks per day, with 3 horse power. One man to feed the machine with clay, and boys to remove the bricks. Was awarded a silver medal by the Liverpool and Manchester Agricultural Society, at St. Helens, September 6th; a silver medal by the Staffordshire Society at Leek, September 27th; and a prize at Worcester, October 5th, 1855.—Apply for particulars to Mr. HUMPHREY CHAMBERLAIN, Kempsey, Worcester.

THE PATENT BRICK-MACHINE COMPANY invite ORDERS for their improved machines, the only ones that manufacture solid bricks equal to hand-made. A machine, and bricks made by it, may be seen in a field near London.

H. C. MOUNT, Secretary.

37, King William-street, City.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 23s. per thousand; Grizzles, 26s. per thousand; Rough Stocks, 30s. Place, 15s.—Terms, cash on delivery. Apply to Mr. G. SMEED, Sittingbourne, Kent.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS;
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and FACINGS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS,
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 8, ADELAIDE-PLACE, London-bridge.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet-pans, Furnace-blocks, Fire-bricks, Gas-retorts, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the pipes are made by the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

Lists of price and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.

London Agent: J. COX, 2 and 3, High street, Lambeth.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, entrance-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKFIELDS, in good working order, TO BE LET, about half a mile from the Forest-hill Station, Sydenham.—Apply to Mr. C. PERCEVAL TITT, Solicitor, 1, Angel-court, Throgmorton-street, London.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks, fire goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 52s. 6d per 1,000; floor bricks and 6 inch pavings, at 37s 6d. per 1,000; 8-inch pavings, at 37s 6d, per 1,000; plain tiles, at 35s. per 1,000, delivered Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Also that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, runs for Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriarsbridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

THE RAILWAY SWITCH and CROSSING COMPANY.—Directors of Railways, Engineers, and Manufacturers, are informed that the Offices of the Company are removed to 101, St. Martin's-lane, Charing cross, where, on application, every information will be afforded respecting their Patented Improvements in Switches and Crossings, now so universally adopted.
WILLIAM DEMPSEY, Manager.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster.
The Second Edition of this Company's Circular, just published, is now being forwarded, post free, to Directors, Engineers, Managers, and others interested in Railways.
The Circular contains Engravings, detailed Estimates of cost of construction, and descriptions of many valuable Patents, with the latest results of experience in the working of the various patented systems of Permanent Way, either the property of, or worked by the Permanent Way Company.
These patented systems are now adopted by Companies owning several thousand miles of Railway, are approved of by most of the eminent Railway Engineers, in this country and abroad, and the system of Fish jointing is in particular, is now nearly the only sanctioned approval of H. M. Commissioners of the Board of Trade and their Inspecting Officers.
The Permanent Way Company are prepared to grant licenses on liberal terms, to Railway Companies and Manufacturers for the use of all or any of the Patented Inventions, which have for their object the safety and comfort of the travelling public, and economy in construction of the Road and Rolling Stock.
That the objects are accomplished, the following extracts will confirm:—
"There can be no doubt that the practice of Fishing the Rails, which is found to answer so well, is a great addition to safety; the principle cannot be too much encouraged."—Extract from Report of Colonel Wynne, R.E. Chief Inspector of Railways to H. M.'s Commissioners of the Board of Trade, dated April 27th, 1854.
"My Lords direct me to observe, that they trust that the remarks of the Inspecting Captain Galton, R.E., Secretary to the Railway Department of the Board of Trade, in reference to the foregoing Report.
"Dear Sir,—In reply to your favour of the 1st instant, I beg to say that I experience no difficulty whatever in keeping the nuts of the bolts tight."—Extract from a letter by Mr. A. Wood-house, Engineer, of the London and North Western Railway.
"I would, however, beg to state that, in point of safety, the first and most essential element of Railway working, Fish Joints, on your system, is in my opinion *indispensable*.—Extract from letter of Mr. J. E. M'Connell, Locomotive Engineer of the London and North-Western Railway.
"On a district of about thirty miles, where the greatest length has been Fished, the saving in labour of maintenance amounts fully to thirty per cent."—Extract from Mr. R. Sinclair Hood, Engineer to the London, Brighton, and South-Coast Railway.
Among others, the Company call attention to the following Patents recently placed under its management:—Mr. William Pole's important Improvement in Fish Joints, and Mr. Paul Prince's Improvements in moulding Railway Chairs.
Licenses, and every information, may be obtained upon application to CHARLES MAY, F.R.S, Managing Director of the Company, 26, Great George-street, Westminster; or to WILLIAM HOWDEN, Secretary.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS OF WATERPROOF, AIR, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term Macintosh Depôt, Macintosh Warehouse, &c is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO.—Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TIMBER.—TO BE SOLD, 3,000 cubic feet of ELM, of large scantling and good quality; also 2,000 cut in feet of LARCH, of large dimensions. Carriage by rail very convenient; water carriage close at hand. Apply to Mr. LANGFORD, Mapledurham, Reading

NOTICE.—WILLIAM MARSHALL solicits the attention of Pianoforte, Cabinet Manufacturers, and the Trade generally to inspect his fine and well-selected STOCK of WALNUT, R. SEWOOD, and MAHOGANY VENEERS, and SOLID WOOD, at his Timber-yard, Vincent-street, Old-street-road, London.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY begs to inform the Trade, that he has REDUCED the PRICE of YELLOW DEALS 3/. p. 120, and solicits their attention to the following low prices:—

ditto 18s.	"	ditto 20s.	"

Laths, 3/6 per load.
Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.
Address, E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
King's-road, Chelsea, and Wilton-road, Pimlico.

EDWARD SIMMS begs to inform builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from 5-inch to 14 inches thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Double Lids, One Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

A CORN TIMBER WHARF.—AT RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Kingsland-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floor boards, mouldings, pine and fir cut deals, slating battens, laths English oak plank, and sash sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble imitation for chimney-pieces, tombs, and every description of marble and stone work also manufactured by patent machinery. NEW WORKS, No. 26, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, near the 100 yards from the Great Western Railway Bridge. TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852

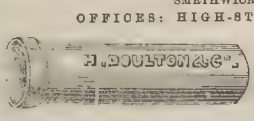
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.



MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly seven years, and having from this period supplied DRAIN PIPES, &c. to some of the largest Works in, and around London, viz.—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dock yard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

HENRY DOULTON AND CO. MANUFACTURERS OF GLAZED STONE-WARE DRAIN-PIPES.

TO BUILDERS.—TO BE DISPOSED OF, a well-established, steady, and flourishing BUILDING BUSINESS, in the south of Hampshire, which has been successfully carried on by the proprietor for fifteen years. The annual returns are about £4000. The premises, including workshops, yards, saw houses, sheds, and foremen's houses, will be let at a moderate rent. A genteel Dwelling-House may be rented near, the stock-in-trade and the building plant to be taken at a valuation, in the usual way, but the amount of stock will in that present considerably may be reduced to suit the convenience of the purchaser. Possession may be had on Christmas-day or Lady-day next. A foreman of bricklayers, and a foreman of carpenters, both of whom have been in the proprietor's employ from twelve to fifteen years each, together with a capital staff of experienced, steady, sober workmen, may be secured, as the business is in full work, the present dwelling-house portion of the business in consequence of extensive personal duties in which he is engaged. No one need apply who cannot furnish unexceptionable references. The whole of the books will be open for the inspection and examination of a party whose references are approved.—All communications to be addressed to Mr. CHARLES PINK, Surveyor, Wooldens, near Fareham, Hants.

CROYDON, SURREY.—To BUILDERS and OTHERS.—TO BE DISPOSED OF, by order of the Trustees, the G. ODWELL of the extensive BUILDING BUSINESS, for many years carried on by the late Mr. Henry Bance: together with possession of the commodious premises, which are eligibly situate in the heart of the town, and comprise a two-story joiner's shop, counting-house, deal and timber sheds, saw pits, stabling, yard, and other conveniences, held at the low rent of £6 per annum. The stock and trade implements may be taken at a valuation.—For terms apply to Messrs. BLAKE, Croydon.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Space as Dry and Drawing Docks, 30 and 10-ton Cranes, Sawpits for converting Timber, &c. Freights paid on delivery. Apply to G. NOKES and Co. as above.

HOMERTON-ROW.—Within Three Minutes' Walk of the Hackney Station, North London Railway, within 3 Free Miles of the Bank, with Omnibus communication.—TO BE LET, BUILDING FRONTAGES, suitable for Shops or Private Houses, of First-rate Character, not less than 2 or 4 each. The present opportunity is well worthy of attention by Builders, as there will be a sale (immediately) contiguous to the property, of Materials, well adapted for building purposes.—For further particulars apply to Mr. FRANCIS CROSS, Architect, 53, Moorgate-street, City.

WANTED, a superior FAMILY RESIDENCE, to rent or purchase. The west end of London preferred. The principal reception and bed rooms must be spacious, and the locality decidedly healthy and respectable. If with stabling preferred. Rent or purchase not to exceed £80 per annum.—Address, full particulars, to A. M. D. Post-office, Hampstead.

PADDINGTON ESTATE.—TO BE SOLD, together or separate, at a remarkably low price, THREE second-rate CARCASES, of handsome elevation, and situate in one of the most improving parts of the Bishop of London's estate. Any portion of the purchase money may remain on mortgage, if required.—Apply to Mr. P. WILKINSON, Architect and Surveyor, 7, Dudley-place, Harrow-road.

TO SCULPTORS, BUILDERS, MASONS, &c.

B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, sculpturing, veined, and gold, dove, Bardilla, Siena, and Breccia, in blocks, and particularly calls their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.

Monuments, vases, and statues, finely executed in Italy.

Carrara Wharf, Thames-bank, Pimlico.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Macclesfield-street North, City-road, for the sale of CHIMNEY PIECES, and other articles, useful architectural ornamental, for Architects, Builders, and the trade generally, to inspect the same. A large assortment of slab, article, and slabs always on sale at the Company's Stall in the Natural Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.

July 28, 1855. C. ADENEY, Secretary.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake contracts for any quantity of Statuary, Veined, Sculptural, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at their depôt, Union-road, Order for Paving slabs, Garden and Hall Seats, Sinks, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates. For further particulars apply at the Offices of the Company, 15, Cornwall-street, Lisson-grove, London.

WILLIAM W. BONNIN, London Secretary.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Siena, Sicilian, Sienna, statuary, serpentine, verd antique, &c. Portland, Hardhill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods will be packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing Mills, Commercial-road, Pimlico, London.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, contract to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices. N.B. A good stock of Statuary Slab on hand, suitable for shelves.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tenfield-place, Leeds.—To Builders and Buyers of the Best Quality. Direct from the Quarries in truck-loads of five tons. Paving, Landings cut out to sizes, Steps, Copings &c. &c supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

JOHN BAZLEY WHITE and BROTHERS MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER. Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE, Caen Lizard, Basilhara, and Coal Caen-wharf, Rotherhithe, Lepelle Portland Stone Merchants and Quarrymen, continued supply from their Wharf as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices far exceeding the ordinary cements. Full particulars, &c. furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the Kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, fire lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

PIMLICO MARBLE WORKS, BELGRAVE-WHARF, LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

GUERNSEY GRANITE.—Contractors and Others supplied, from a single cargo upwards. Apply to C. D. BENNETT, Quarry Proprietor and Granite Merchant, St. Sampson's, Guernsey; or 84, Lower Thames-street, London.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace, Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—REGNOLDS and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.

This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Derbyshire, Hare-hill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also Guernsey, Guernsey, and Haytor Granite Curbs and Pitching, all at the very lowest prices.

N.B. Good 2-inch Tooled Paving, at 40s. per 100 feet, cash.

GREEN SLATE.—For SALE, about 200 tons of WELSH GREEN SLATE, the produce of a late discovery. This slate is well adapted to church and public buildings. For colour, grain, and capability of splitting, it is superior to any hitherto obtained. Terms, at the quarry, 80s. per ton.—Apply to Mr. OGILVIE, 1, Cushion-court, Old Broad-street; or to Mr. W. G. JENNINGS, Pen-y-Groes, near Carnarvon.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST CLASS MEDALS: Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1854. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the higher class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of looking-glass tables, consoles, &c.; baths, lavatories, mineral cisterns, columns, vase pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and lower-class of public buildings, as well as for

ARCHITECTURAL EXHIBITION and COLLECTION of PATENTS and MANUFACTURES connected with BUILDING, NOW OPEN at the Galleries, 4, Suffolk-street, Pall-mall East, from 10 till dusk. Admission One Shilling; or at all times to the Galleries, and to all the Lectures by season-tickets, Half-a-crown each.

First Lecture at Eight o'clock, on Tuesday Evening, January 8, "Ancient Assyrian Architecture," by Jas Fergusson, esq. F.R.A.S.

Lists of Lectures, tickets, and all particulars, to be had at the Galleries.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL MALL, LONDON.

Art-Superintendent, RICHARD REDGRAVE, Esq. R.A

Head-Master, R. R. TIETJEN.

The Course of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of Design, and the principles of its scientific principles with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects: Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of still life, &c, the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. Evening Classes, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. Mann. Fees per session,—Advanced Class, 3l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

COMPETITIONS.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD for the PARISH of LOUGHBOROUGH, in the county of Leicester, is desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground-plans, sections, and elevations, for laying out a new BURIAL-GROUND, of about 7 acres, planting and draining the ground, building a reception-house, curator's lodge, with entrance-gates and two suitable chapels, the expense of the buildings not to exceed 1,500l. The party whose plans, designs, and estimates may be approved, will be paid 10l. for the same, which will become the property of the Board; and all designs not approved will be returned. All plans, &c. must be delivered at the Offices of Messrs. H. and W. H. TOONE, in Loughborough aforesaid, free of expense, without the author's name, but with a motto, on or before the 10th day of JANUARY next addressed to me, and endorsed, "Designs, &c. for Loughborough Burial-ground." A sealed letter, containing real name and address, should accompany each design. The Board do not bind themselves to accept any design. A plan of the ground can be seen, the depth of draining required ascertained, and any further information may be had on application at the said Offices of Messrs. H. and W. H. TOONE. By order,

W. H. TOONE, Clerk to the Board.

Loughborough, December 13, 1855.

RUGBY TOWN-HALL COMPANY.—The Directors are prepared to receive DESIGNS and ESTIMATES for a TOWN-HALL and Public Building, at Rugby, and hereby offer a premium of 50l. for the best set of plans, elevations, and specifications; and a further sum of 10l. for the second best. The selected designs to become the sole property of the directors; and the successful competitor will, if duly qualified to the entire satisfaction of the directors, be entrusted with the carrying out of the design at the usual commission, which on the first-mentioned premium will merge in the commission. All the drawings to be on a scale of one-eighth of an inch to a foot. The drawings and estimates must be delivered at the Offices of Messrs. WRATISLAW and FULLER, Solicitors, Rugby, on or before TEN o'clock a.m. on the 31st day of JANUARY next, addressed to the Secretary, from whom particulars, together with a lithographed plan of the proposed site, can be obtained on payment of 2s. 6d. The designs not accepted will be returned, but beyond the above-mentioned premiums no allowance will be made to any other competitor.

Rugby, December 6, 1855.

THE LUTON LOCAL BOARD of HEALTH, in the County of Beds, are desirous of receiving PLANS, PARTICULARS, and ESTIMATES, for INTERCEPTING from the River LEA, and for DEODORIZING, FILTERING, or otherwise DISPOSING OF the SEWERAGE of the TOWNSHIP, and hereby offer a premium of 30l. for the most approved set of plans, &c. for such purpose, and a further sum of 10l. for the second best, all plans to be delivered, free of expense, addressed to the Chairman, on or before FRIDAY, the 1st day of FEBRUARY next, with a motto accompanied by a sealed envelope containing the name and address of the author. All plans not approved will be returned.—Printed particulars and information, with a plan, showing the course of the river and adjoining land, may be had on application to the Surveyor, but each party will have to take their own section, as the Board leave the site for the works to the judgment of the competitors.

T. L. EVANS, Surveyor.

Luton, December 26th, 1855.

CONTRACTS.

TO BUILDERS.—KNIGHT'S BRIDGE.—The Magistrates of the counties of Berks and Hants, are desirous of receiving TENDERS for REBUILDING KNIGHT'S BRIDGE, over the River Lambourne, on the road from Kingsclere to Newbury. Persons desirous of contracting for the same, may see the plan, specification, and particulars, at the Town Hall, County Surveyors, Mr. J. B. CLACY, 99, Broad-street, Reading; or Mr. T. STOPHER, 38 Saint-Swithin-street, Winchester, on and after WEDNESDAY next, between the hours of TEN and FOUR. Sealed Tenders, endorsed "Tenders for Knight's Bridge," to be sent to me at Reading or Winchester, on or before THURSDAY, JANUARY 7, 1856. The lowest Tender will not necessarily be accepted.—By order of the Committee of Management

J. B. CLACY, } County Surveyors for Berks and
T. STOPHER, } Hants.

99, Broad-street, Reading; 38, Saint-Swithin-street, Winchester,
December 15, 1855.

TO BUILDERS. — The ERECTION of a NEW UNION WORKHOUSE. — Persons desirous of CONTRACTING with the Guardians of the Poor, of the West Bromwich Union, in the counties of Stafford and Worcester, for the ERECTION of a NEW UNION WORKHOUSE, capable of affording accommodation for 600 inmates, together with the several buildings and offices, proposed to be connected therewith, at Lyndon, in the parish of West Bromwich, may inspect the drawings and specifications thereof, at the offices of Messrs. BRIGGS and EYRALD, Architects, No. 328, Bradford-street, Birmingham, on and after the 31th day of DECEMBER inst. until the 31st day of JANUARY next, where full particulars required therewith may be obtained. Sealed Tenders, endorsed "Tender for Workhouse Building Contract," must be sent in, addressed to me through the Post-office, on or before the 1st day of FEBRUARY next. The contractor or contractors will be required to give such security, as the Board may require for the due performance of the works according to the plans, and the Tender can be obtained upon application to me here, where the Tender, sealed and addressed to the Commissioners, are to be delivered at TWO o'clock precisely, on WEDNESDAY, the 9th day of JANUARY, 1856.

By order of the Board,

FRANCIS ADAMS, Clerk to the Commissioners.

1, Whitehall place, Dec. 22, 1855.

TO SCAVENGERS, DUSTMEN, &c.—The Crown Estate Paving Commissioners hereby give Notice, that they will be ready to receive TENDERS from persons willing to enter into a CONTRACT for the REMOVAL of DEBRIS, DIRT, ASHES, CINDERS, &c. from the several houses, &c within the district under their jurisdiction for a period of one year, from the 16th day of JANUARY, 1856. Specifications and Forms of Tender can be obtained upon application to me here, where the Tenders, sealed and addressed to the Commissioners, are to be delivered at TWO o'clock precisely, on WEDNESDAY, the 9th day of JANUARY, 1856.

FRANCIS ADAMS, Clerk to the Commissioners.

1, Whitehall place, Dec. 22, 1855.

GRAVESEND.—CLEANSING STREETS. The Commissioners for the town of Gravesend are ready to receive TENDERS from persons willing to CONTRACT for TAKING UP and CARRYING AWAY the DIRT and REFUSE swept up in the various streets and public places in the town; and also the dust, ashes, dirt, and filth, from the houses and premises in the town, for three years from JANUARY next. The dust, ashes, dirt, and filth will be the property of the contractor. A copy of the contract and particulars of the works to be performed may be seen at my Office, King-street, Gravesend, where TENDERS are to be delivered on or before the 31st day of DECEMBER inst. The Commissioners do not bind themselves to accept the lowest Tender. The contractor must give security by the bond of a surety or sureties in 50l. for the due performance of the contract. By order of the Commissioners,

FRANCIS SOUTHGATE, Clerk.

Gravesend, Dec. 13, 1855.

CONTRACTS.

NOTICE to EXCAVATORS and CONTRACTORS for EARTHWORKS, ORDNANCE WORKS. The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall Mall, London, before TUESDAY, the 1st day of JANUARY, 1856, from persons desirous of CONTRACTING for EXCAVATING and REMOVING GROUND at DOVER CASTLE, before a Site for the Erection at a future time of an Officers' Barrack, also Sites for the Artillerists' Terraces, Yards, an Road of Approach to the same. A plan sections and specification of the Excavations to be executed, may be seen, by persons fully competent to undertake the work (none others need apply), at the Office of Tenders obtained at the Royal Engineer Office, Dover Castle, between the hours of TEN and FOUR o'clock, from MONDAY, the 17th of DECEMBER, to MONDAY, the 31st of DECEMBER, 1855, Sundays and Christmas Day excepted. A person belonging to the Royal Engineer Department will attend each day, from Ten to Twelve o'clock, to point out the ground to be excavated. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 1,000l. for the due performance of the Contract. Tenders for the above work to be addressed to the Director-General of Contracts, Pall-Mall, London, and endorsed "Tender for Excavations at Dover Castle."

N.B. The War Department reserve to themselves the right of reducing the whole or any of the Tenders.

Royal Engineer Office, Dover, December 8th, 1855.

TO BUILDERS and OTHERS. — Sealed TENDERS for the following SERVICES on the coast of Cornwall, viz.—

No. 1. At Fowey.—Construction of a 9-gun Battery and Side-arm Shed, as well as an extension of the present Magazine, &c.

No. 2. At Padstow.—Construction of a 2-gun Battery, Magazine, Side-arm Shed, &c.

No. 3. At Penzance.—Ditto, ditto, ditto

No. 4. At St. Ives.—Construction of a 3-gun Battery and Side-arm Shed, as well as Repairs and Alterations of the old Magazine, &c.

for specific sums, will be received by the War Department, Pall-mall, London, on or before 10th JANUARY, 1856, at noon. Detailed specifications of services Nos. 1 and 2, may be seen at Trouble's Hotel, Hayle, on the 26th instant; and Nos. 3 and 4, at Trouble's Hotel, Hayle, on the 28th, between the hours of TEN and FOUR at each place. An officer will attend on the day preceding that of the above dates, to deliver specifications to such persons as may appear to be competent, and will leave the whole of the two days specified for inquiry and explanation.

Royal Engineer Office, Devonport, 14th December, 1855.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office, Dublin, 21st DECEMBER, 1855.—The Commanding Royal Engineer in Ireland hereby gives Notice, that he will receive Proposals for the following CONTRACT, viz.:—For the WORKS required in the ERECTION of BRICK BUILDINGS with other Fire-places, to the Officers' Huts, &c. at the Temporary Barracks, Curragh of Kildare, in the Dublin District. Persons desirous of tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle yard, Dublin; or at the Royal Engineer Office, at the Curragh, where they may see the Drawings, Plans, and Specifications, with the terms of contract. One half of the work to be completed within three months, and the whole within six months of the date of acceptance of the Tender. The letters of Tender to be sealed and transmitted under cover to "The Commanding Royal Engineer in Ireland, Lower Castle yard, Dublin," so as to be delivered on or before the 8th day of January, 1856, and to be marked on the outside, "Tender for Work at the Curragh of Kildare." Parties may Tender for the whole (about 8 Officers' Barracks, or for those in the Right or Left Division, or for the total number in detached departmental blocks, with Artillery Stores, &c.

TO BUILDERS.

SEALED TENDERS for BUILDING BARRACKS, at Bull Point, near Devonport, for a SPECIFIED SUM, will be received by the Director-General of Contracts, War Department, Pall Mall, London, on or before 12 o'clock, on SATURDAY, 12th January, 1856, at Noon. Detailed drawings and specifications of the above, with every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 14th to the 21st JANUARY, 1856, inclusive.

Royal Engineer Office, Devonport, 27th Dec. 1855.

SALISBURY CEMETERY.—To BUILDERS and CONTRACTORS. The Burial Board for the parishes of St. Thomas, St. Edmund, and St. Martin, Salisbury, are desirous to receive TENDERS for the several WORKS required to be done in ERECTING a PORTER'S LODGE and ENTRANCE, BUILDINGS, the BOUNDARY ENCLOSURES, and TWO CHAPELS, and in LAYING OUT and FORMING the ROADS and FOOTPATHS of the new cemetery, on the London road. The plans and specification of the works may be seen at the office of Mr. HENRY E. POE, Architect, No. 9, Ashfield-place, London-bridge, or at the office of the undersigned, any day between the hours of TEN a.m. and FOUR p.m. until the 8th JANUARY next. The Burial Board will not obliged to accept Tenders for the separate portions of the works; but they do not bind themselves to accept the lowest or any Tender. A separate Tender for laying out and forming the roads and footpaths will be required. The Tenders are to be forwarded to me on or before the 8th day of JANUARY next, and marked on the outside "Tender for Salisbury Cemetery," and for either of the trades, stating which. The contractor or contractors will be required to give such security as the Board may require for the due performance of the works, according to the plans, general conditions, and specifications. Such security to be prepared at his or their expense.

G. SMITH, Clerk to the said Board.

Salisbury, December 19, 1855.

[For remainder of Contracts see next page.

CONTRACTS.

TO NURSERYMEN AND OTHERS.

PARTIES willing to CONTRACT for PLANTING, MAKING WALKS, and SETTING OUT as PLEASURE-GROUNDS and SHRUBBERIES, certain Plots of Land, as marked out on the "White Cross Estate," Weston super-Mare, comprising about Seventeen Acres, are requested to send in PLANS and ESTIMATES on or before the 7th day of JANUARY, 1856, to the Public Library, Weston-super-Mare. The Advertisers do not bind themselves to accept the lowest Tender.—Specifications may be seen, and all particulars obtained, on application to W. B. MOFFATT, Esq. Architect and Surveyor, 3, Adelaide-place, London-bridge, London; HENRY DAVIES, Esq. Solicitor; or to J. WHEREAT, Public Library, Weston-super Mare

MIDDLESEX and ESSEX TURNPIKE-ROADS.—To ROAD CONTRACTORS and OTHERS.—The Trustees of these Turnpike-roads will meet at this Office on FRIDAY, JANUARY 11th next, at TEN o'clock in the morning precisely, to receive TENDERS, in writing, for the PURCHASE of 5,000 YARDS of GRAVEL BALLAST, to be used in the repairing of that part of these roads which lies between North-street, Whitechapel-road, and Bow-bridge. The Trustees require that such gravel ballast be conveniently situated for resifting and carting; also a portion of the line of road and to once sifted through a sieve 2½ inches diameter in the clear, and containing thirty-nine wires. The Trustees to be at liberty at their own expense to resift such gravel ballast through sieves of 2½ inches diameter, having forty-one wires, and to pay only for such quantity when resifted and carted away by the Trustees, who are to have the use of the land whereon the said resifted gravel ballast is stacked, until the 25th of MARCH, 1857. Payment will be made within three months after each stack of such gravel ballast is carted away. The Trustees do not bind themselves to accept the lowest or any specific Tender. GEORGE DACRE,

Clerk and Solicitor to the Trustees.

Turnpike Office, Bow, Middlesex, December 11th, 1855

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

The Lord Viscount Ranelagh.
The Hon. Col Lowther, M.P.
Right Hon R. Chris Nisbet Hamilton, M.P.
J. C. Colquhoun, esq. M.P.

To ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for COMPLETING the ROADS, DRAINS, GARDEN, FENCES, &c. on the Cedars Estate, Putney. The drawings and specification may be seen at the Offices of the Surveyor, on and after WEDNESDAY, DECEMBER 26, between the hours of ELEVEN and TWO. Tenders to be delivered on or before TWELVE o'clock, on FRIDAY, JANUARY 4, 1856, addressed to the Surveyor, and endorsed "Tenders for Completion of Roads, Putney Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, Norfolk-street, Strand, December 8, 1855.

THE TOTTENHAM LOCAL BOARD of HEALTH are prepared to receive TENDERS from persons willing to execute either of the following CONTRACTS, being a portion of the Works necessary for the "Waterworks Extension" in their district, viz.

CONTRACT No. 20.—For CAST-IRON PIPES and CASTINGS.
CONTRACT No. 20.—For WELL BORING, &c.
CONTRACT No. 21.—For LAYING the IRON PIPES, CONSTRUCTING a BRICK CULVERT, &c.

Specifications and conditions of contract can be obtained on payment of 5s. each, by application to J. PILBROW, Esq. C.E. Engineer to the Board, at the Board Room Offices, Tottenham, where also further particulars may be had and drawings inspected. Sealed Tenders, properly endorsed, must be sent in on or before FRIDAY morning, the 11th of JANUARY next, addressed to the Local Board of Health, Tottenham.

By order of the Board, WM. HEATH, Clerk.

Tottenham, Dec 21, 1855

TO CONTRACTORS.

THE LOCAL BOARD of HEALTH for the District of DEWSBURY, are prepared to receive TENDERS for the EXCAVATING and LAYING DOWN, about 19,263 yards of water-tight CONDUIT, between the termination of Contract No. 4, in the Township of SHELLY, in the parish of Kirkburton, in the county of York and the BOUNDARY FENCE, between the Townships of WHITLEY LOWER and THORNHILL, both in the county of York. Plans and sections of the above works may be seen at the Offices of Messrs. MORGAN and HORN, C.E. Westgate, Huddersfield, on and after the 20th instant, and copies of the specification and conditions may be obtained there, or at my Office, on payment of five shillings each, on and after the above date. Tenders sealed and endorsed, "Tenders for Conduit, &c." to be sent under cover to me, on or before the 8th day of JANUARY next. The Board does not bind itself to accept the lowest, or any Tender, nor will any allowance be made for estimates.

ICHAS. OLDROYD, Clerk to the said Local Board of Health.

Dewsbury, December 24, 1855.

CONTRACT for BUILDINGS for LOCOMOTIVE DEPOT.—MONMOUTHSHIRE RAILWAY and CANAL COMPANY. The Directors of the above Company invite TENDERS for the ERECTION, on the town of Newport of STABLES, FITTING SHOPS, OFFICES, SMITHY, COKE-SHED, WATER-TANK, &c. &c. adapted for twenty-two engines. Drawings and specifications may be seen at the Engineer's Office, Dock-street, Newport, and after the 31st DECEMBER instant. The quantities will have to be taken out by the parties Tendering. Sealed Tenders, properly endorsed, and addressed to the Directors, are to be sent to the undersigned not later than the 19th day of FEBRUARY next, and the parties tendering are to be in attendance at the Office in the afternoon of the following day, when the Tenders will be opened. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

GEORGE HARRISON, Secretary.

Newport, Monmouth, December 21, 1855.

AMBER GATE, NOTTINGHAM, and BOSTON and EASTERN JUNCTION RAILWAY and CANAL.—CONTRACTS for WORKS.—Notice is hereby given, that the Directors of the above Company will meet at the Offices, SAINT PETER'S GATE Nottingham, on TUESDAY, the 15th day of JANUARY next, to receive TENDERS for the ERECTION of a BRIDGE, from the Nottingham Flood-road, opposite Station-street, over the Nottingham Canal, into the Easterolt Meadow, with a retaining Wall by the side of such canal. Also for the Earthwork and other Works required in the formation of the New Station on part of the said Easteroft Meadow, with Approach Road to the Station, and to the Hermitage-road at Sneipton.—Plans and specifications may be seen, and further particulars obtained, with forms of Tender, on application to Mr. UNDERWOOD, the Engineer, at the Offices of the said Company, on and after the 5th day of January next. All Tenders must be sealed and addressed to the Secretary. No Tender will be received after TWELVE o'clock at noon on the said 15th day of January.

By order, JNO. GOUGH, Secretary.

Company's Offices, Nottingham, 27th Dec. 1855.

Laths, 3s. per load.

Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.

ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

MOULDINGS by MACHINERY, to any Design, carefully packed and sent to all parts of the country.

Address, E. SIMMS,

SAWING, PLANING, AND MOULDING MILLS, King's-road, Chelsea, and 1 Wilton-road, Pimlico.

EDWARD SIMMS begs to inform builders and the trade, that he has now on hand at his manufactory (the first of its kind ever established), a large assortment of PREPARED FLOORINGS and MATCH BOARDING, seasoned, and ready for use, from 4-inch to 1½-inches thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses. Pitched Battens, Pantile Laths, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, sliding battens, laths, English oak plank, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

NOTICE.—IMPROVED WOOD MOULDING MILLS and MARBLE WORKS.—J. SIMMONS begs to acquaint his customers and friends that in consequence of the increased trade and patronage he is continually receiving, he has found it necessary to have larger premises for the manufacture of his IMPROVED WOOD MOULDINGS, which are acknowledged by the principal large firms, architects, and others, who have used them, to be the best ever produced by machinery. J. S. in returning thanks for the liberal patronage already bestowed upon him, begs to call attention to his large stock of mouldings now on hand. Marble chimney-pieces, monuments tombs, and every description of Stone Work also manufactured by patent machinery. NEW WORKS, No. 20, BRIDGE-TERRACE, HARROW-ROAD, PADDINGTON, about 100 yards from the Great Western Railway Bridge. New Price Lists will shortly be ready; to be had on application, or if forwarded, by enclosing six postage-stamps. Please note the address 20, BRIDGE-TERRACE, HARROW-ROAD, Paddington, near the Great Western Railway Bridge.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s. per foot super together with every part cular of its cost and adoptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO 89, New Bond-street.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished up on application.

FOREIGN PARQUET FLOORS.—Handsome and thoroughly seasoned floors, of one-inch wainscot, in pattern, one shilling per foot.—HIGGS and CULLINGFORD, 29 Davies-street, Berkeley-square.

Methylat d Finish	6s. 6d.	"

By JAMES SLIPPER, 97, Leather-lane, and 14 and 15, Dorrington-street, Holborn, London.

STAINING DEAL TO IMITATE ALL KINDS of WOODS (it requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes

VENTILATION.—PURE AIR.

With single pulley, from 6s each; with leading pulley, from 6s 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 186, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

TO IRONMONGERS AND THE TRADE GENERALLY.

DE. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—35 and 36, High Holborn.

COMPACT SAW-MILL.—TO BE DISPOSED OF, the MACHINERY and POSSESSION of a compact SAW-MILL, in Southwark. The machinery is quite new, and includes one deal frame circular saw-bench, 8-horse power, direct acting engine and boiler, shafting, driving gear, &c. The premises are held at 28l. per annum. The machinery will be sold in one lot, for removal, if desired.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

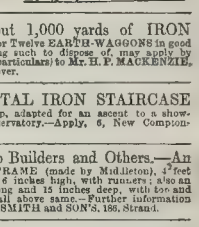
5 AND 6, BROAD-STREET, BLOOMSBURY.

FENDERS, STOVES, and FIRE-IRONS. Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW-ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, FIRE IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 14s. to 8l. 10s.; ditto with ormolu ornaments and two sets of bars, 5l. 15s. to 12l. 12s.; bronzed fenders, complete, with standards, from 7s. to 3l.; steel fenders, from 2l. 15s. to 6l.; ditto, with rich ormolu ornaments, from 3l. 15s. to 7l. 7s.; fire-irons, from 1s. 9d. the set to 4l. 4s. Sylvester and all other patent stoves, with radiating hearth-plates. All which he is enabled to sell at these very reduced charges

Firstly. From the frequency and extent of his purchases; and

Secondly. From those purchases being made exclusively for cash.

GAS CHANDELIERS and BRACKETS. The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers, in Metal and Glass, all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices passages, and dwelling-rooms, as well as to have some designed expressly for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his ironmongery establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. two-light; to 16l. 16s.



THE BEST SHOW of IRON BEDSTEADS is in the KINGDOM is WILLIAM S BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads, from 16s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d.; and Cots, from 30s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.

The alterations and additions to these very extensive premises (already by far the largest in Europe), which have occupied the whole year, are now nearly completed; they are of such a character that the suite of EIGHT HOUSES is now devoted to the display of the most magnificent Stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated and Japanned Wares, Iron and Brass Bedsteads and Bedding), arranged in Sixteen Large Show-rooms, so as to afford to parties furnishing facilities in the selection of goods that cannot be duplicated for elsewhere.

Catalogues, with engravings, sent (per post) free.

39, OXFORD-STREET; 1, 1A, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established A.D. 1820.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentee's, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

WANTED, about 1,000 yards of IRON RAILS and Ten or Twelve EARTH-WAGGONS in good condition. Any one having such to dispose of, may apply by letter (stating price and all particulars) to Mr. H. P. MACKENZIE, Contractor, Higher-street, Dover.

AN ORNAMENTAL IRON STAIRCASE TO BE SOLD, cheap, adapted for an ascent to a show-room, warehouse, or conservatory.—Apply, 6, New Compton-street, Soho.

FOR SALE.—To Builders and Others.—An IRON DOOR and FRAME (made by Middleton), 4 feet 2 inches wide, and 8 feet 6 inches high, with runners; also an IRON GIRDER, 6 feet long and 15 inches deep, with top and bottom flange to carry wall above same.—Further information may be obtained at Messrs. SMITH and SON'S, 188, Strand.

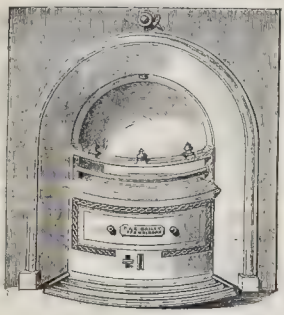
IMPORTANT IMPROVEMENTS in HEATING.—MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, for warming churches, public buildings, entrance halls, shops, conservatories, manufactories, drying rooms, &c. In churches, will burn from Saturday to Sunday evening, without attention during the hours of worship. In halls, will remain burning day and night for weeks, with little attention. Capable of warming a large apartment for twenty-four hours, at a cost of 3d. and deserving of special attention, because of its safety, healthfulness, durability, and extreme simplicity. An illustrated prospectus to be had of all respectable ironmongers, or of the inventors, MUSGRAVE (Brothers), Belfast.—This stove is the nearest approach to warming by hot water, and will repay inquiry, before adopting any other plan of heating.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to



THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

DR. ARNOTT'S SMOKELESS GRATES,

For the manufacture of which D. and E. BAILEY obtained the SILVER MEDAL at the PARIS EXHIBITION. The above excellent invention has been carefully modelled and manufactured by D. and E. BAILEY, 272, Holborn, who having experienced great difficulty in keeping pace with the increased demand for the above Stoves, have now made such arrangements as will enable them to supply their customers with the Smokeless Grates, of ordinary dimensions, from their stock on hand, which consists of various designs in black, bright, and polished steel, richly decorated with ormolu ornaments.

The great advantages of these Stoves over all others are—

1st. The entire absence of smoke.

2nd. An immense saving in fuel.

3rd. A cheerful fire, with simple means for regulating the heat.

4th. Will burn night and day, requiring only to be supplied with fuel twice in twenty-four hours.

For invalids' bed-rooms, these stoves will be found invaluable.

Prices and Prospectuses may be obtained on application, where the Smokeless Grates may be seen in daily use.

D. & E. BAILEY, IRONMONGERS,

272, HOLBORN, LONDON.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles. Castings of every description in Loam or Sand.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 6d. per foot, shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

LOWEST BIRMINGHAM PRICES

a complete LIST of which will be forwarded upon application.

FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

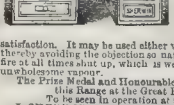
BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THIS IS THE ORIGINAL PATENT

for important improvements in stable-fittings, hay-box, manger, and water trough, as one fixture, including a metallic division, and all others for conveying the straps and halter-weights to the back of the fitting, to prevent the horse being cast in the stall. Stable Fittings of every description, plain, enamelled, or galvanized. Also the newly-invented Loose Box Fittings. Surface Gutters with movable cover-plates, Stable Posts, Ramps, Sills, and all kinds of Stable Furniture in Stock.

JAMES BARTON, IRON FOUNDER, &c. 370, OXFORD-STREET, London.

MANUFACTURER of KITE'S PATENT VENTILATING and SMOKE CURING CHIMNEY CAPS, patronized by her Most Gracious Majesty—as in Buckingham Palace. In use also on St. James's Palace, Windsor Castle, Government Offices, &c. Wrought iron, 25s.; zinc, 3 6.; cast iron, 35s. each, the latter as durable as the building itself.



Drawings and Price-lists forwarded on receipt of two postage stamps.

Address, BARTON'S Iron Works, 370, Oxford-street, London.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's. JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

IMPERIAL IRON FOUNDRY, and ECONOMIC RANGE MANUFACTORY.

Three ft. wide	£6 10
Three ft. three in.	7 0
Three ft. six in.	7 15
Three ft. nine in.	9 0
Four ft.	10 10
Four ft. six in.	12 12
Five ft.	14 14

Cowings, 5s. per foot.

Fixing, 8s. per foot.

This valuable KITCHEN RANGE, the Manufacturer has much gratification in stating, has been in use several years, and given the utmost satisfaction. It may be used either with the fire open or closed, thereby avoiding the objection so naturally felt against having the fire at all times shut up, which is well known to generate a close unwholesome vapour.

The Prize Medal and Honourable Mention was awarded to this Range at the Great Exhibition of 1851.

To be seen in operation at the Manufactory's,

J. SHERWIN, 62, TABERNACLE-WALK, FINSBURY.

Castings of every description in Loam or Sand.

FOUNDRY AND IRON WORKS,

68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

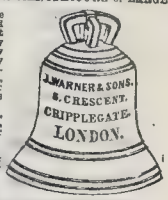
Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and Ogee Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.



Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes and Strong Rooms, Tanks and Boilers, and every description of iron work to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS.

68, DRURY-LANE, and CHARLES-STREET.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Cappers, and pegged on a new system, which gives a superior tone and facility for ringing.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES (non-conducting and vaporizing) with all the improvements, under their Quadruple patents of 1838 51 54 and 1855 including their Gunpowder Proof Solid Lock and Door (without which no safe is secure).

THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX (REGD.) SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47a, Moorgate-street, City.—Circulars free by post.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c. The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Curtain-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

THE PATENT DRAUGHT and DUST EXCLUDER (BOURRELET'S COMPRESSIBLES) not apparent when fixed in the angles of doors, windows, and glass-cases, the cheapest and most effectual invention for the purpose.—A. R. HELBRONNER'S, Sole Patentee, 265, Regent-street, near the Circus, Oxford-street. Depôt at BURGESS and KEY'S, 103, Newgate-street, City.

THOMAS EDINGTON, PURCHASER and INSPECTOR OF CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimension, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Rails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 6d. This achievement in heating by hot water is unprecedented.

BUILDINGS HEATED by HOT WATER. G. R. COOPER, IRONWORKS, 121, DRURY-LANE. Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the store and feeding department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

GAS STOVES.—TOZER'S PATENT VENTILATING GAS STOVES, for churches, halls, shops, offices, &c. to burn with or without a chimney. The following churches are warmed by these stoves:—St. Pancras Old Church; St. Paul's, Covent-garden; St. Mark's, Hornsey; Moravian Chapel, Fetter-lane; St. Mary's, Romney-terrace, Westminster; St. Jude's, Mildmay-park; St. John's, Charlotte-street, Fitzroy-square; New Church, Chatham; and Christ Church, Worthing; and numerous other public institutions. Gas stoves, from 18s. to 6l. A prospectus, with drawing, will be forwarded on receipt of a postage stamp, by THOMAS TOZER, Manufacturer, 55, Dean-street, Soho.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.

Second Testimonial.—"March 15th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER, in all degrees of elasticity, recommend this material as capable of resisting the action of hot or cold water, gas, steam or oil. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, &c. for boring, also for gas-holders, &c. for chemical cisterns, &c. for vats, moulded to any required form, and any size or thickness. Warehouse, Cannon-street West, London, and Cambridge-street, Manchester.

Manufacturers, and Railway Engine-makers and Contractors, supplied with the best Bituminous Composition for covering Bridges and Arches.

PAPIER MACHE, COMPOSITION, CARTON PIERRE, AND CEMENT WORKS.

WHITE AND PARLBY

Beg respectfully to inform Architects, Builders, and Decorators, that they are prepared to execute in the above materials, all internal or external decorations, at exceedingly moderate prices They solicit attention to their varied ENRICHMENTS of the highest class, and in every style of ornament, as suitable for the above purposes, comprising Ceiling, Panel, and Pilaster Decorations; enriched Mouldings, Bosses, ornamental Cornices, Trusses, Caps, and every other requisite for the decoration (either simple or elaborate) of all classes of Public or Private Buildings; also to their Stock of Glass Frames, Pier and Console Tables, Girandolles, Wind w Cornices, Candelabra, and other Articles of DECORATIVE FURNITURE for GILDING, of which they have an extensive assortment executed in the highest style. They also invite attention to their Designs for DECORATIVE SHOW-CASES, and other ornamental Shop Fittings.

CEILING FLOWERS in great variety, ready for immediate use, always on hand, at prices lower than any hitherto offered.

ARCHITECTS' DESIGNS CAREFULLY EXECUTED, AND ORNAMENTS EXPRESSLY MODELLED (IF REQUIRED).

SPECIAL DESIGNS MADE FREE OF EXTRA CHARGE.

WHITE AND PARLBY, 4, RATHBONE-PLACE, LONDON.

Third Edition.

THE BUILDER'S FRIEND,
Price One Shilling
Office of "The Builder," and of all Booksellers.

Neatly bound, price 4s.

A HANDBOOK of ARCHITECTURE for the UNLEARNED: in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.
By GEORGE GODWIN, F.R.S. &c.
With Illustrations.
By the same Author, price 1s.
LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.
Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller

Just published, Part IV. containing Four large Plates, in a neat Wrapper, with Advertisements, price 2s. 6d. Also Division I. comprising the First Four Parts, or Sixteen Plates, price 10s.

EXAMPLES of BUILDING CONSTRUCTION, being a series of Working Drawings, to a large scale, of the Details of Public and Private Edifices
By HENRY LAXTON,
Of the "Civil Engineer and Architect's Journal," author of "Laxton's Builders' Price Book," &c.
No. 19, Arundel-street, Strand; and of all Booksellers.

Just published for 1856, price 1s. the Forty-sixth Edition of SKIRING'S BUILDERS' PRICES, Calculated from the Market Price of Materials and Labour; containing a diary or daily journal, ruled pages for weekly time account, the New Metropolitan Buildings Act, and a variety of useful information.
PIPER and CO. Paternoster-row, London; and may be had of all Booksellers.

Now ready, postage free.

A LIST of the principal NEW and CHOICE BOOKS in circulation at MUDIE'S SELECT LIBRARY. Also, a List of Surplus Copies of Recent Works withdrawn from circulation, and offered for sale with the utmost prices for cash.
CHARLES EDWARD MUDIE, 510, New Oxford-street, London; and 76, Cross-street, Manchester.

NEW ILLUSTRATED EDITION OF MOORE'S IRISH MELODIES.

In One Volume, square crown 8vo. uniform with the edition of Moore's "Lalla Rookh," illustrated under the superintendence of the late Charles Heath, price 31s. cloth; or 31s. 6d. handsomely bound in morocco.

MOORE'S IRISH MELODIES, illustrated with Thirteen fine Steel Plates, engraved from original Designs by

C. W. Cope, R.A.	W. E. Frost, A.R.A.	W. Mulready, R.A.
T. Creswick, R.A.	J. C. Horsley.	J. Sant, A.R.A.
A. L. Egg, A.R.A.	D. Maclise, R.A.	F. Stone, and
W. P. Frith, R.A.	E. Millais, A.R.A.	H. Ward, R.A.

*** An edition of Moore's "Irish Melodies" illustrated by D. Maclise, R.A. with 161 Designs and the whole of the text engraved, in super-royal 8vo. price 31s. 6d. cloth, or 52s. 6d. bound in morocco by Hayday. An edition in 18mo, with Vignette, price 5s. cloth, or 12s. 6d. bound in morocco by Hayday.
Diamond Edition, in 32mo. with Portrait, 2s. 6d.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo. with Six Plates, price 15s. cloth,

ELEMENTS of PRACTICAL HYDRAULICS, for the Use of Students in Engineering.
By SAMUEL DOWNING, M.A.
Professor of Civil Engineering in the University of Dublin.
"A work which cannot fail to be of the greatest value to all who are concerned in the design and construction of the supply of towns with water, or the construction of canals, or the irrigation of tracts rendered barren by drains."—*Gardener's Journal*.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published in 8vo. price 14s. cloth,

ANALYTICAL VIEW of SIR ISAAC NEWTON'S PRINCIPIA.
By HENRY LORD BROUGHAM, F.R.S.
Member of the National Institute of France, and of the Royal Academy of Naples; and
E. J. ROUTH, B.A. Fellow of St. Peter's College, Cambridge.
London: LONGMAN and CO.; and C. KNIGHT. Edinburgh: A. and C. BLACK. Glasgow: R. GRIFFIN and CO.

YE BOKE FOR CHRISTMAS TYDE.
Now ready, in a volume of 800 pages, with a Portrait, price 14s.

CURIOSITIES of LONDON: exhibiting the most rare and remarkable objects of interest in the Metropolis; with nearly fifty years' personal recollections.
By JOHN TIMBS, F.S.A.
"We have been surprised at the amount and variety, as well as the accuracy, of the information."—*Literary Gazette*.
DAVID BOGUE, 86, Fleet-street.

On the 5th of January will be published, No. 1, price 6d. of the

CYCLOPÆDIA of BIOGRAPHY; being the commencement of the THIRD DIVISION of the "English Cyclopædia,"
Conducted by CHARLES KNIGHT.
The publication will continue in weekly numbers and monthly parts, and the Division will be complete in four volumes, early in 1857.
BRADBURY and EVANS, 11, Bouverie-street.

This day is published, No. I. price 1s. of

THE POPULAR HISTORY of ENGLAND; an Illustrated History of Society and Government from the earliest period to our own times.
By CHARLES KNIGHT.
The Popular History of England will be beautifully printed in medium octavo, illustrated with about 1,000 Wood Engravings; and will be divided into thirty-six monthly parts.
London: BRADBURY and EVANS, 11, Bouverie-street.

In 8vo. with woodcuts, price 60s.; or half-bound in russia, 65s.

BRANDE'S DICTIONARY of SCIENCE, LITERATURE, and ART. Second Edition, corrected; with a Supplement, which may be had separately, price 3s. 6d.
London: LONGMAN and CO.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES, CASH, DESPATCH, and WRITING BOXES with their sizes, fittings, and prices, will be sent by post on receipt of six stamps.—Apply to CHUBB and SON, 57, St. Paul's-churchyard, London.

ORR'S "CIRCLE OF THE SCIENCES."

This day is published, price 5s. 6d. cloth,

THE NATURAL HISTORY of VERTEBRATED ANIMALS;

Being the Second and concluding volume of a SYSTEM of NATURAL HISTORY of PLANTS and ANIMALS. By EDWARD SMITH, M.D. and W. S. DALLAS, F.L.S. With several Hundred Wood Engravings, by Harrison Weir, and other Artists.

Also, recently published, price 5s. 6d. cloth.

1.—GEOLOGY, CRYSTALLOGRAPHY, and MINERALOGY. By Professor ANSTED, M.A. F.R.S.; Professor TENNANT, King's Coll. Lon.; and the Rev. WALTER MITCHELL, M.A. King's Coll. Camb.

Price 4s. 6d. cloth lettered.

2.—PHYSIOLOGY of ANIMAL and VEGETABLE LIFE, Structure of the Skeleton and Teeth, and Varieties of the Human Race. With numerous Illustrations. By Professor OWEN, Dr. LATHAM, and Dr BUSHMAN.

Price 4s. 6d. cloth, lettered,

3.—THE MATHEMATICAL SCIENCES; including Arithmetic, Algebra, and Euclid; with Solutions to the Questions in Algebra, Trigonometry Series and Logarithms, Mensuration, and Practical Geometry By Professor YOUNG, late Belfast Coll.; Rev. Professor TWISDEN, M.A. Sandhurst; and ALEXANDER JARDINE, Esq.

London: HOULSTON and STONEMAN, 65, Paternoster-row; and W. S. ORR and CO. Amen-corner.

THE ENGINEER, and JOURNAL of MANUFACTURES and MACHINERY.—The first number of a weekly publication, bearing the above title, will appear on SATURDAY, the 5th of JANUARY, 1856. The necessity existing for the establishment of an efficient and thoroughly independent organ, in connection with the particular sections of industrial manufacture to which this journal appeals for support, is acknowledged. The title "The Engineer," though apparently somewhat restrictive, has been adopted as more readily indicating the general character of the matter which will be found in the publication, than as an intimation that it is projected solely for engineers recognized as a class. This journal will be conducted upon a broad but intelligible basis, and will be found of interest not to the engineer alone, but to all who are connected, directly or indirectly, with, or are interested in, the MANUFACTURE or APPLICATION of the METALS. It is designed, in fact, adequately to represent the industrial activity of the age in which we live. To carry out this intention, most valuable services have already been secured, and assurances of assistance from many of the most eminent men of the day—scientific and practical—have been received In the columns of "The Engineer" will be found collected authoritative information on subjects connected with the useful arts, embracing new facts, results of experiments, and more extended observations, professional papers, and official documents. The numerous "currents of industrial progress" will be turned into one stream, and in one periodical will be gathered together the scattered information pertaining to each great department of industry, thus constituting intelligence facilitating inquiry, promoting useful discussion, and forming, in the whole, a readable and most valuable body of references. It will be an object of the conductors of "The Engineer" to classify and discuss the materials obtained by, and supplied to them, to furnish systematic expositions of particular arts and branches of manufacture, showing their development, relation, and dependence, and suggesting the improvements and modifications to which they are still open, the obstacles by which they are obstructed, and the means by which they may be removed. Correspondence facilitates progress, and to this end the assistance of intelligent readers is earnestly solicited. It is not considered advisable to enumber a preliminary announcement with matters of mere detail; suffice it to add, that the following list comprises a portion of the subject-matter to which the pages of "The Engineer" will be devoted.

Original articles upon mechanical and scientific subjects, contributed by writers specially conversant with the questions discussed. Reports of industrial progress, at home as well as abroad, in all cases prepared by competent and reliable contributors. The latest discoveries in mechanics and science. Investigations of merit or importance will be fully described, and when necessary, the fallacy and inutility of others will be exposed. The Iron manufacture. Iron shipbuilding and Steam navigation. Reports upon important works on railway engineering, hydraulics, and of public and sanitary improvements. Reports of the scientific and other societies. Weekly epitome of the progress of inventions, as to patentees, also carefully prepared abstracts of all specifications. Reviews of scientific and mechanical works, which will be written with fairness and independence, by parties "in the trade." "The Engineer" will be open impartially to all for the record of useful suggestions, and the insertion of correspondence upon interesting or practical subjects, and for unfettered but friendly discussion. "The Engineer" will be illustrated. As an advertising medium it will be unique Price Fivepence. Stamped, Sixpence. Orders will be received by all News-agents and Booksellers in town and country; or, if preferred, it may be had direct from the Office, post-free, for 6s. 6d. per quarter Post-office orders to be made payable to the publisher, Mr. BERNARD LUXTON, Engineer Office, 301, Strand, London.—Letters to be addressed to the Editor.

THE ENGINEER.—ADVERTISEMENTS for the first number of this Journal will be received at the Office, 301, Strand, up to Eight o'clock on Thursday evening, the 3rd of January.

BERNARD LUXTON, Publisher.

THE ENGINEERING JOURNAL, a Weekly Record of Science, Arts, Manufactures, and Commerce; Illustrated Register of Home and Foreign Patented Inventions; Scientific Reporter and Review. On Saturday, the 5th of January, will be published the first Number of the ENGINEERING JOURNAL, a Weekly Newspaper, projected and conducted by practical engineers. It will comprise an accurate summary of the leading Political and General Events of the week; original Essays on Constructions on Works projected, in Progress, or Completed, on New Discoveries, New Manufactures, or Improved Processes; Practical Papers for Practical Men, illustrated in a superior style; Monthly General Meetings of the various Scientific Institutions and Learned Societies held during the current week; also of Legislative Measures and Debates calculated to affect the interests with which the Journal represents; and of Trials in the Courts of Law concerning Patent and other cases important to Engineers and Men of Science generally; Vacancies, Appointments, and Promotions, in the Naval and Mercantile Engineering Services, and similar notices in connection with Railway and other public companies; a complete Register of Contracts; a Programme of the Scientific Meetings of the following week; the List of Bankrupts, the Metal and other Trade Markets, &c. &c. Also, an accurate List of American and other Foreign Patent Claims, the most important of which will be fully reported and appropriately illustrated. The Engineering Journal will likewise give a correct List of all Inventions which shall have been provisionally protected in the United Kingdom in the course of the current week, as well as a complete Abstract of every British Patent specified and published during the week preceding.

The Illustrations in the Engineering Journal will be ample, and the best of their kind, but always bearing on some practical and useful object The Conductors of the Paper promise on their part that no necessary capital, and, certainly, no exertion or command of available talent shall be spared or left unfired in order to make the Engineering Journal the leading Class Newspaper of the Kingdom.

Published every Saturday morning, in time for the first post, at the office, 293, Strand (OPPOSITE NORFOLK-STREET). Price 5d.; stamped, 6d.

All communications on the business matters of the Journal are to be addressed to Mr. EDWD. JONES, at the Office of Publication, 293, Strand. Order the paper through your regular Newsvendor.

Just published,

A POPULAR TREATISE on the WARMING and VENTILATION of BUILDINGS; showing the advantage of the improved system of heated water circulation,
By CHARLES JAMES RICHARDSON,
Fellow of the Royal Institute of British Architects, Consulting Engineer for Warming and Ventilating Buildings.
Illustrated with Seventeen Plates. Third Edition.
London: JOHN WEALE, Architectural Library, 59, High Holborn.
Price 7s. 6d.

Now ready, price One Shilling, or sent for 13 stamps post free,

THE SCHEDULES of the NEW BUILDING ACT, 1855), re-arranged and engraved on one sheet, with all their rules and constructive clauses, giving dimensions of footings, heights of stories, &c. calculated for each wall.
By WILLIAM YOUNG, Architect.
To be had of the Author, 5, Chancery-lane.

Just published, 3rd edition, price 4s.

LAXTON'S BUILDER'S PRICE-BOOK, for 1856; with the Metropolitan Buildings' Act, and Notes of Cases; List of District Surveyors, &c.
Published at the Civil Engineer and Architect's Journal Office, 19, Arundel-street, Strand.

TO BUILDERS.—TO BE LET, on a rebuilding Lease for ninety-nine years, FIVE HOUSES in Meller-street, Weston-street, Borough. They form one corner of the street, with two frontages about 60 feet each. Land tax redeemed, with a new sewer within ten years. The ground-rent 40l. per annum.—Apply to Mr. BUCKLEY, No. 5, Guildford-street East, Wilmington-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

CROYDON, SURREY.—To BUILDERS and OTHERS. TO BE DISPOSED OF, by order of the Trustees, the GOODWILL of the extensive BUILDING BUSINESS, for many years carried on by the late Mr Henry Bance; together with possession of the commodious premises, which are eligibly situate in the best part of the town, and comprise a two-story joiner's shop, counting house, deal and store sheds, saw pits, stabling, yard, and other conveniences, held at the low rent of 50l. per annum. The stock and trade implements may be taken at a valuation.—For terms apply to Messrs. BLAKE, Croydon.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of English Timber, &c. Spacious Dry and Drawing Docks, 30 and 10 ton Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

HOMERTON-ROW.—Within Three Minutes' Walk of the Hackney Station, North London Railway, within Three Miles of the Bank, with Omnibus communication.—TO BE LET, BUILDING FRONTAGES, suitable either for Fourth-rate Shops, or Private Houses, of not less value than 20 l. each The present opportunity is well worthy of attention by Builders, as there will be a sale (immediately) contiguous to the property of Old Materials, well adapted for building purposes.—For further particulars apply to Mr. FRANCIS CROSS, Architect, 54, Moorgate-street, City.

CARCASES for intended SHOPS.—TO BE DISPOSED OF, in a good situation and an improving neighbourhood at Kentish-town, SIX CARCASES, intended for Shops, which are held for long terms at low ground rents.—For particulars, apply to Messrs. CHARLTON and WALKER, 18, Southampton-street, Fitzroy-square.
N.B. The freehold may be purchased.

WANTED, on LEASE, in the City, PREMISES, suitable for a Builder, with sufficient working room for twelve or fourteen joiners. Address to A. B. 27, Weymouth-terrace, Hackney-road, stating terms, &c.

HOUSE PROPERTY.—WANTED to PURCHASE, for occupation, a modern-built RESIDENCE, with garden, suitable for a small family of respectability. Must not exceed ten miles from the City. Freehold preferred.—Apply to Mr. JOHN TOZER, Auctioneer, 18, Walbrook, London.

ROYAL POLYTECHNIC.—CHRISTMAS HOLIDAYS. The Second Part of the Voyages of Sinbad the Sailor, with new and beautiful Dissolving Pictures, and description, with Songs, by G. L. Horne, esq.—Laughable Phantasmagoria Effects, by Messrs. Carpenter and Westley.—Series of astonishing Conjuring Tricks and Delusions by Mr. Burnman.—Brilliant Popular Lectures on Flame, Fire, and Combustion, by J. H. Pepper, esq.—10,000 Ornaments will be given away to the juvenile Visitors from the Great Christmas Tree during the holidays.

The Builder.

VOL. XIII.—No. 673.

THE importance of placing architectural competitions on a proper footing, of making clear what are the rights of architects in such cases, and of obtaining a proper recognition of them on the part of the public, is so great that we deem it right to give all the publicity in our power to the particulars of a case which was tried before the Lord Chief Justice Campbell, on Friday, the 14th instant, in the Court of Queen's Bench, at Guildhall. It was an action brought by Messrs. Weightman, Hadfield, and Goldie, of Sheffield, against the Rev. Evan Lewis, a clergyman residing near Bangor, under the following circumstances:—In June, 1853, Mr. Lewis applied by letter to the firm above named, to inquire if they would consent to be one of three competitors to send plans for a church to be built near the Penrhyn slate quarries, on the stipulation that the successful party only should be remunerated. The other competitors, he stated, were Mr. Street, of Oxford, and Mr. Kennedy, of Bangor. The plaintiffs consented; one of their firm visited the place; designs were prepared and were sent in on the 27th of August, 1853. On the 19th of November, the plaintiffs not having heard anything of the progress of the affair, wrote to Mr. Lewis to know how matters stood, and received a reply a few days after from that gentleman to the effect, that a fourth candidate, Mr. T. H. Wyatt, who, in passing through the town, had been informed of the competition by a friend of his connected with an important subscriber to the funds, had been allowed, *without any communication being made to the plaintiffs*, to send a design, and that he was the successful competitor.

Under these circumstances the plaintiffs wrote to Mr. Lewis, protesting that as the agreement had been broken by the admission of a fourth competitor, they should expect, unless the committee reconsidered their decision, to be paid for their services. After some further correspondence, wherein the plaintiffs had offered to accept a nominal sum, but of which no notice was taken, their plans were returned. They then sent in their claim,—45*l.* odd, and after repeated applications for payment, commenced the action. The charge made, it is not uninteresting to notice, was 1¼ per cent. on the estimated cost of the church, 3,200*l.* and the expenses of the journey to the site. The plaintiffs were represented by Mr. Overend, Q.C. and Mr. Quain; the defendants by Mr. Bramwell, Q.C. and Mr. Prentice. The case for the plaintiffs was established by the evidence of Mr. Hadfield, and the production of the correspondence. The conductor of this Journal was called to confirm Mr. Hadfield's evidence as to the practice of the profession regarding competition; but in consequence of an intimation from the judge, to the effect that a *contract* had been established, and that the question of practice was superseded, the plaintiffs' counsel did not deem it necessary to take his evidence.

The defendant was called as a witness on his own behalf, but failed to establish any answer to the case; and, Lord Campbell having summed up, the jury almost immediately gave "*a verdict for the plaintiffs for the full amount claimed.*"

We have reason to believe that the plaintiffs in this case were mainly actuated in their proceedings by desire to assert the rights of the profession, and that they are entitled to the thanks of all architects. If they had failed to obtain a verdict through any of the hundred chances which beset such a case, the loss to them would have been very considerable. One difficulty arose during the progress of the cause: the contract was made out, the judge said, by the correspondence, but no one of the letters was stamped, and he ruled that the penalty must be paid,—a hard case, surely, since the contract was only conditional, and might have been worth nothing. Mr. Bramwell, the counsel for the defendant, showed either reprehensible ignorance of the position of an architect, or something worse, when he talked of "the custom of the *trade*," by his insinuations as to the value of the time employed upon the drawings, and his supposition that when the architect was applied to for a design he had merely to go to "a pigeon-hole," and take one out cut and dried.

Let architects learn from this case the necessity for having a clear engagement on the part of committees and others seeking competition designs. If architects are wise they will never compete, unless it be agreed, amongst other things, that at any rate *one* of the competitors shall be fairly remunerated for his skill and labour: the remainder of the competitors will afford quite sufficient evidence in aid of the popular belief that an architect's designs are worth nothing.

We are glad to be able to close our volume for 1855 with the record of such a case as the above, so decided. We sincerely hope that it may have the effect of making clearer to committees and others seeking designs the rights of competitors, and further lead architects to insist on having a clear understanding—a specific contract, in fact—with those who seek to benefit by the exercise of their skill and knowledge, laboriously and expensively gained. In the coming year no effort shall be wanting on our part to aid in placing competitions on a proper footing, as desirable for the interests of the art as for the sake of the artists, and to advance otherwise the interests of the architectural profession, of the building trades, and of the public. There will be much to demand our attention. The Metropolitan Board of Works is an experiment of no common character, involving an enormous expenditure, and results of the gravest kind. We shall watch with the greatest solicitude the proceedings of the Board. Much will depend on the choice of proper officers.

The new Metropolitan Building Act will, we fear, raise many questions. It will be our duty to assist in solving these, and to aid in obtaining such an acceptance of its clauses as may meet the requirements of the Legislature, conduce to the safety of the public, and prevent litigation. Art, in its widest sense, constructive science, and archæology, will have full attention; and we shall seek, as we have always done, to interest the general public in our specialty, and so to gain for architects a larger and more discriminating audience than might otherwise be the case. We hope, however, it is now scarcely necessary to make promises for the future. Suffice it to say we shall meet our readers in the new year with a determination to leave no means unattempted to render our Journal more and more useful—more and more worthy the confidence the public are good enough to place in it.

"ARCHITECT AND HAULIER."—What can the public think of the profession, after reading such an advertisement as this?—Q. "T. J. Jack-ass, general haulier, Cardiff. Every description of goods, &c. hauled to any part of the town and country at moderate terms. N.B. Architect and Builder.—J. Sin Hairy, Manager."

THE LATE MR. THOMAS CUBITT.

WE record with sincerest sorrow the loss of a great builder and a good man,—Mr. Thomas Cubitt, late of Thames Bank and of Belgravia. Mr. Cubitt was born at Buxton, near Norwich, on the 25th of February, 1788, and died at his house, Denbies, Dorking, on the 20th instant, so that he had not completed his sixty-eighth year. At an early age he was thrown upon his own resources, and early learnt to have trust in them. His great success through life may be traced to the possession of a clear mind, untiring energy, and unswerving integrity.

At the death of his father, when he was in his nineteenth year, he was working as a journeyman at the business of a carpenter. The uncertainty attending such a position made a deep and lasting impression on his mind, and stimulated him to unceasing exertion, in order to obtain a more independent position. He shortly afterwards, with a view to improve his circumstances, took one voyage to India and back as captain's joiner. On his return to London, then about twenty-one years of age, with the savings he had put by, he commenced a small business in the metropolis as a carpenter. After about six years, appearances of success manifesting themselves, he took a tract of ground from Lord Calthorpe in Gray's-inn-road, upon which he erected large workshops, and carried on a very considerable business. This establishment was afterwards relinquished to his brother, now Mr. Alderman Cubitt, who had been for many years associated with him. One of his earlier works, while there, was the London Institution, in Moorfields, where he met and overcame great difficulties.

About the year 1824 he entered into engagements with the Duke of Bedford and Lord Southampton for tracts of ground, on which Tavistock-square and Gordon-square, with Woburn-place and other streets around, now stand. Towards the close of the same year and the beginning of 1825 he engaged with the late Marquis of Westminster and Mr. Lowndes to cover large portions of the "Five-fields," and grounds adjacent. Of this engagement, Belgrave-square, Lowndes-square, Chesham-place, and other ranges of houses, are the results.

He subsequently further engaged to cover the vast open district lying between Eaton-square and the Thames, now known as South Belgravia. He has also carried out similar extensive operations in Clapham, Kemp-town, Brighton, and other places. Shortly after the commencement of these great undertakings, a monetary panic occurred which caused much general ruin, but his undaunted courage and perseverance carried him through the difficulties which arose from it.

One of the first plans for a general drainage of London was published by him in the shape of a pamphlet for private circulation many years ago, and afterwards, when the subject began to attract general attention, it was embodied in a letter to the *Times*, the principle advocated being that now at last conceded of carrying all the sewage-matter some distance below London before it is allowed to mix with the river water. He was a warm advocate for the appropriation of large spaces, in the environs of London, as parks for the recreation of the public, before the increase of building should make the land of too great value. In the Smoke Bill also he took a great interest, and before the new law passed, had already made successful endeavours to prevent the escape of smoke at his own factory at Thames-bank.

At a late period Mr. Cubitt had the honour of being sent for by her Majesty (entirely without solicitation), to advise upon the reconstruction of Osborne, in the Isle of Wight; and the new palace which has grown up there has been erected and designed by him. He has also been employed as builder in other works of great magnitude connected with the Crown. And if it were not delicate ground, we could mention more than one incident affording evidence of the consideration in which the subject of this memoir was held by her Majesty and Prince Albert.

Mr. Cubitt had the honorary appointment, under the Buildings Act, as the examiner of candidates for district surveyors. In the Exhi-

bition of 1851 he naturally felt much interest, but, from the great attention required by his own business, he declined taking an active part in the management, though, when the pecuniary prospects of the undertaking became uncertain, he was one of those who guaranteed a sum of money to enable it to proceed; and when the commission for appropriating the surplus remaining in its hands assumed a permanent shape, he undertook gratuitously, at a considerable sacrifice of time, to assist in negotiating for the purchase of the land from the different owners at Kensington-gore, for which he was particularly well qualified, by his great experience. He continued to the last to feel a deep interest in the success of the scheme.

The works and establishment where Mr. Cubitt's business was carried on at Thames-bank, Pimlico, displayed, as our readers know, many admirable arrangements, and were visited by many persons.

Through life he has been the real friend of the working man; and among his own people he did much to promote their social, intellectual, and moral progress. He established a workman's library; school-room for workmen's children; and by an arrangement to supply generally to his workmen soup and cocoa at the smallest rate at which these could be produced,—assisted in establishing a habit of temperance, and superseding, to a great extent, the dram-drinking which previously existed among them. Although his kindness was appreciated by many, yet at times his motives have been misconstrued, and unkind remarks have been made. In alluding to these, he has often said to one who was about him and possessed his confidence, "If you wait till people thank you for doing anything for them, you will never do anything: it is right for me to do it, whether they are thankful for it or not." To those under him, and holding responsible situations, he was most liberal and kind. His position as master (we have it from the parties themselves) seemed to be blended and lost in that of a friend. His kind inquiries and the interest which he manifested in everything connected with their comfort, with his many acts of kindness, trivial in themselves, yet valuable for the manner in which they were performed, will endear his memory to them. He was a liberal benefactor at all times to churches, schools, and charities, in those places with which he was connected, and always valued in a peculiar degree the advantages resulting to the poor from the London hospitals.

Mr. Cubitt was much respected by the builders of London, and for a short time was president of the Builders' Society. A large number of the builders, in the year 1845, subscribed to have his portrait painted, which they presented to his family,—first distributing an engraving of it. He was a man of unassuming demeanour, and bore his great prosperity with becoming modesty. One instance of his equanimity occurred when his premises were unfortunately burnt down last year. He was in the country at the time, and was immediately telegraphed for to town. The shock to most minds on seeing the great destruction which occurred, attended with pecuniary loss to the amount of 30,000*l.* would have been overpowering: Mr. Cubitt's first words on entering the premises, however, were, "Tell the men they shall be at work within a week, and I will subscribe 600*l.* towards buying them new tools."

There are few men, perhaps, having so large an intercourse with the world who have made so few enemies, and who may be said to be so generally respected. Mr. Cubitt leaves a widow and a large family, and had the consolation in his last trying illness of being surrounded by all his children and grand-children, to whom he was deeply attached. He has two brothers surviving,—Mr. Alderman Cubitt, M.P. for Andover, and Mr. Lewis Cubitt, the architect of the Great-Northern Railway Terminus. Sir William Cubitt, the eminent engineer, though a native of the same county, is not related.

It may be worthy of remark that the large engagements as to Belgrave-square, begun in 1825, have been completed in the present year, and Mr. Cubitt's own dwelling-house on his estate at Denbies, in which he died, is only just finished, as the future residence of his family. As an illustration of the uncertainty of life, it may be usefully mentioned that at one of the last meetings on the Embankment of the Thames, there were present, Mr. Cubitt, Sir Robert Inglis, Sir William Molesworth, and Mr. Philipps, of the Office of Works; and in the brief space which has since elapsed, these four men have all been removed by death!

As we said at starting, we have lost a great builder and a good man. He will be lamented by all who knew him, and most by those who knew him best.

WINDOWS FROM ASSISI.

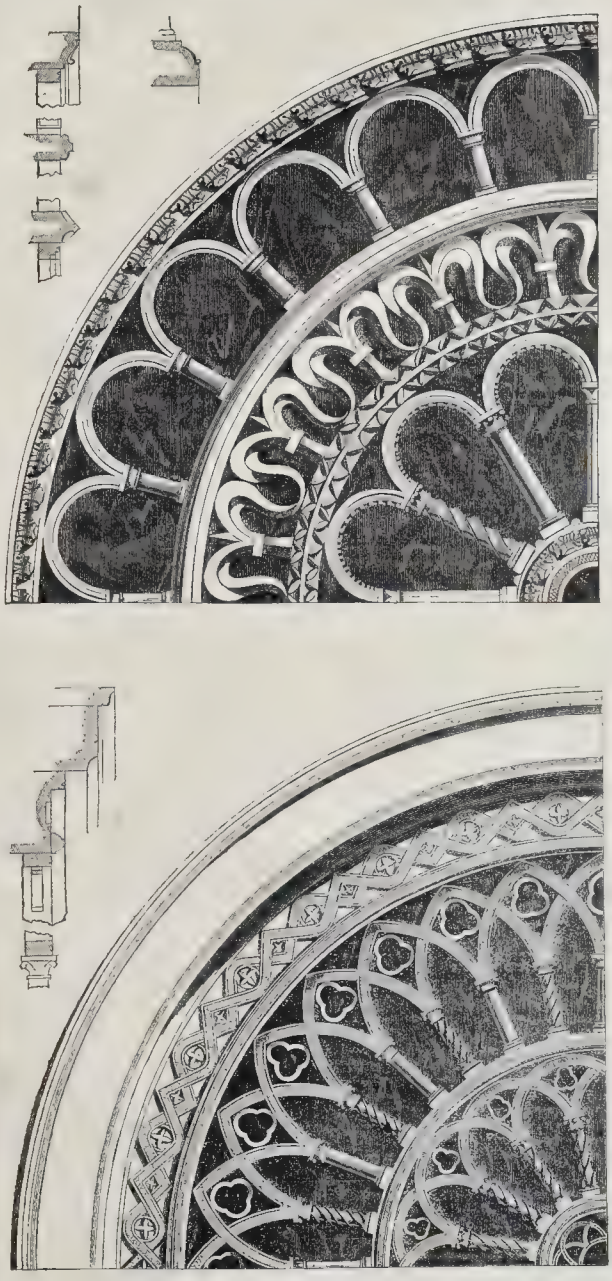
The first sketch is the central rose window of the façade, at San Rufino, and is of the same character and detail generally as the side windows.* It is considerably larger, however, and, from comparison, I should judge it (not having been able to measure it) to be about 12 feet 6 inches to 13 feet in diameter. The perforated pattern, in pleasing flowing lines, which separates the concentric rings of arches, is very happy in effect, and contrasts well with the more open parts. The moulded rib on which this pattern or tracery rests is also carved with a four-leaved flower, very similar to that so commonly employed in Late Norman and Early English periods. The leaves are separated by a small angular moulding, however, and the section is the reverse to that used in England in the styles before named.

The inner circle of arches only has dentils, and the central stone ring, or eye, is ornamented with a band of mosaic.

The second sketch is from the west façade of the church at Assisi, dedicated to Santa Chiara, and has a great mixture of the Gothic character, whilst it retains the olden Romanesque forms, and may be regarded as a transitional specimen. It is highly enriched with mosaic (or rather was, for scarcely any now remains to give an idea of its appearance as finished), of which a narrow strip or band was inserted round all the arches, rings, and raised pattern on jamb, and extended even to the small circles in the centre. It is also to be noted that the arched shafts, &c. are doubled in the thickness of the wall,—in fact, being as two windows, one behind the other, and the glass inserted on the inner surface of the wall. From the confusion and complexity occasioned thereby it does not look so well as the more simple windows of the Duomo. This is the only window in the façade, and is placed over a central doorway, and on a string course of purely Romanesque character, and would seem to be an insertion. The church was built in 1253, but this west doorway is certainly of older date.

The façade is faced with bands of marble, unequal in height, alternately red and white, which stop against outer moulding; and on the inside of it the plain outer rim is of red marble, and the rest of the window of white. F.

WORKS AT THE ARCHITECTURAL EXHIBITION.†



We all know now, that it is no easy matter to set down, in words, the items of a recipe for an architectural design. Of whatever class of building be the *project* to be concocted, some very knotty questions there are to be unravelled, if we would hope to settle affairs of *art* by prescribed line and written rule. Parenthetically, indeed, we may throw out the doubt whether anything of this mechanical prescription be either fully possible, or to be desired,—though much seems to have been at times attempted. The upshot of all that has been written, or attempted, explanatory of certain questions in the useful science of æsthetics, is that old phraseology is inadequate to express the nice shades of thought which occupy the artist-mind, —whilst new phrases—if they have sometimes been introduced with advantage—where they are such as some writers feel themselves called upon to employ, it is seen, are not necessarily better adapted to generals or particulars, and if adopted, might increase confusion of ideas.

But, such ought to be the position of advancing *art*,—perhaps, indeed, should be ever characteristic of the "march of intellect." The pursuit and practice of *art* involves a process of reasoning,—although the artist, like every searcher into the infinite world of ideas — like every worker with its materials — can perfect the very nomenclature which might have aided induction, only *after* the ideas shall have taken defined shape.

It is, therefore, not in our power to settle exactly what should be done to remedy all the defects which are admitted, in the existing practice of art—as applied to designs for particular classes of buildings,—to say to what extent the uses of a structure can be expressed in the architectural design,—with what limitations any old style should be imposed;—or, in the case of churches, what form should result from consideration of existing ritual, or otherwise what is the exact value of traditional dictation. Could the points last named be settled by those who, more than architects, might be looked to for a decision on those particular points, the structural arrangements of churches would be easy and straightforward, compared with those of any other class of buildings. For, comparing the plan of a house with that of a church, there can be no question as to which of the buildings involves the largest amount of skill.

The history of the production of all great works of art shows again and again, that it is quite possible for the true artist to go through some process which is essentially an operation of logic, but which it may be wholly beyond his power to describe to others, by understood words. Some such process, however, there always should be. Give to him whom we refer to, paper and pencil; and with these, his proper organs, he should speak the results of his thought. Mr. J. Murray, by his power of drawing, and skill in perspective, is just one of those who are qualified for the expression of ideas, by possessing what corresponds with knowledge of language and aptitude for the construction of sentences. It is possible, however, to mistake means,—which after all stand somewhat in the same relation to thought as does skill in penmanship,—for the chief end. Similarly, the knowledge of languages or styles—or even the ability to penetrate sources of expression in the thoughts of others—is but the apparatus of the artist for the production or evolution of original art. Those, therefore, who possess the instruments of success, must not mistake the admired facility in their use, for the whole of what is demanded from them as artists. Mr. Murray's designs for churches, however, whilst they have not the novelty, or perhaps eccentricity, which may be found in some cases, and whilst they are consistent with the expression of old styles, are not wanting in freshness and in certain valuable results of thought. Unity of character and grouping are studied with success, and there is considerable variety in the several designs. We may instance (451) another of the designs for the church at Peterborough, and (475) "Church intended to be erected in Worcestershire." The design by another architect, entitled, "Study for a Church" (533), illustrates the different manner to which we alluded in our last. The truth is, that the separate items for attention in the production of a design for a church *are* to be found in works exhibited, — but scattered about designs of somewhat different schools. We have the design where precedent and propriety of *style*, according to the views of archæological societies, are paramount,—though some higher qualities of art may be not wanting. We have the design which tries to emancipate itself from this *servility*, as it is, perhaps, considered,—which sometimes succeeds in attaining the beautiful, and sometimes sets too high value on the merely singular. We have designs for Dissenters' chapels; and in these alone the particular ritual seems to receive something like independent judgment. It is to be regretted that the different essential points for attention are not more frequently found combined in one work. In looking at former exhibitions, we have referred to the growth of a distinct school of chapel architecture—as giving what we thought was some hope of a result higher in the scale of art, than that to which Gothic church architec-

WINDOWS FROM ASSISI.

ture appeared to be tending. Whilst, however, we recognise independence of opinion, and some regard for uses of the structure, it is too frequently apparent that the architects in the same cases, have not paid such attention,—as should be never lost sight of, to the old models. Could the appearance of old style be at once wholly forsaken, deficiencies might, perhaps, not be discovered; but as it is hardly within the power of individual architects to accomplish this, we are offended by the obvious want of knowledge which there is of recognised beauties. Still, there are many recent designs for such buildings which deserve unprejudiced examination, and which would be found both clever and instructive,—even those which may be faulty in mouldings and detail.

Amongst the class of Dissenters' chapels, Messrs. Lander and Bedells exhibit (8 and 10) an exterior and an interior view of "The Independent Chapel at Islington, shortly to be erected." It is to hold 950 persons, and the same general building provides school-rooms for 650 children,—the estimated cost being 2,890*l*. An octagon is the main feature in the plan, and it is lighted from the centre,—the half trusses appearing in the view, and being connected at the lantern, by strutting in iron, which also supports a *corona*, or chandelier. The exterior has two spirelets over the side doorways.——The "Congregational Chapel about to be erected at Folkestone" (15), by Mr. J. Messenger, is of very simple character, with the tower and spirelet at the angle, and has greater resemblance to a church; whilst Messrs. Foster and Wood, in "Arley Chapel, Bristol, erected 1854-5" (96), have adopted the Italian style,—though their "Independent Chapel, in course of erection at Clevedon, Somerset" (102), follows the character of "Decorated" Gothic. The former building (96) has a semi-circular porch at the end, formed by arches and three-quarter columns,—beyond which appears the end of the main roof, whereon is a well-designed turret. The angles of the building at the same end are quadrant-shaped: this lessens the effect. The designers being anxious to avoid internal columns, arranged the roof trusses (which are open-timbered), with cantilever brackets, which last were retained in position by iron bolts passing to the base of the wall. It would be well to know, in the course of some years hence, whether this plan has succeeded. We have heard of a few failures in attempts with similar means. A range of small circular apertures appears in the roof, in the position of a clerestory, externally. The cost was 3,500*l*.; and the sittings provided were 750. In the other chapel (102), where the contract sum is 1,200*l*. for 500 sittings, the cruciform plan is adopted, with deeply-recessed traceried windows, and a turret.——Messrs. Wetten and Harris exhibit some views of the "Free Christian Church, Clarence-road, Kentish-town" (141), erected by them for 500 persons, at a cost of 4,000*l*. Red brick is employed externally. A good stone pulpit is shown. "The chief peculiarities of the structure" are said to be "its loftiness, the facing of the walls internally with white bricks, tuck pointed," &c.; "the open moveable benches," &c. Some of these are pleasing evidences that the lessons which will be derived from the Gothic style, have extended to buildings of a class where they have been considered as much needed. The height of the building, in proportion to the width, is perhaps excessive in the exterior. We may take this opportunity to drop a word of caution (required, indeed, in the case of most recent designs for churches) against the use of collar-beam roofs, without very careful consideration. The force of the wind in some situations, we have found far too great to be resisted by roofs such as in many cases lately, have been erected. There are other causes of failure, also.——The "Design for a Baptist Chapel" (305), of which a west elevation is shown by the same architects—to accommodate 700 persons—is more satisfactory, and manages the difficulty of stories, and the materials, red brick and stone, with good result. The style is Early English.——There are some good parts in Mr. T. D. Barry's "Design for a Baptist Chapel, London" (433), as in the arcade, but the turrets are less pleasing.——We mentioned in our last, a Baptist chapel where a portico of the Roman Doric order was adopted. A design by Mr. W. Mumford (213), apparently for the same building (at Hackney), also uses a Roman Doric portico, which here has the appearance of being attached to a three-story building.——Mr. H. Hodge exhibits (271) his "Congregational Chapel, Kentish-town," a building in the Perpendicular style, with angle turrets, and of somewhat more than average merit.——The same architect's "Welch Chapel, Islington" (455), in the Norman style, is very inferior.——Mr. G. J. Wigley has adopted the Italian-Gothic style in his "Church of the Most Holy

Redeemer, Rome; now in course of erection for the Redemptorist Fathers, in the Villa Caserta, Via di San Vito, near Sta. Maria Maggiore and the Arch of Gallienus" (367). Externally, the end of the building has a circular window beneath a low-pitched roof, and has a projecting porch. The interior has plain square piers; but is made effective in the drawing. The same architect, in a photograph (483), gives his "Design for the Façade of the Church of St. Mary, in Ara Cœli, Rome; as a Monument in honour of the Immaculate Conception: presented to his Holiness Pope Pius IX." and also shows the present state of the building. The style—Romanesque—is of very singular character.——We should not omit to mention the collection of clever sketches (528) by Mr. T. W. Goodman,—showing a design for a cross church, with the interior and the principal fittings.——The late Mr. R. C. Carpenter's works, executed and proposed, at Sherborne Abbey Church, are shown in 389 and 390; and Mr. E. Ashworth has lately rebuilt and enlarged Dulverton Church, Somerset, and erected a workhouse and register office (400); and has also in hand, works at the interesting church at Tiverton, Devonshire (399).

The designs for cemetery buildings are numerous. The chapels in course of erection at the Deal Cemetery, by Mr. J. Messenger (16), show two gable ends in the Decorated style, with an arcade in woodwork connecting them with a central arch. One of the buildings has a square turret, with louvre and square capping. ——Mr. E. B. Lamb's "Design for a Cemetery Chapel" (36), is commendable for the study, which it displays. Its main features consist in the roofing of the main portion of the plan (which there, may be described as square with the angles cut off)—the roof being hipped all ways and supporting a louvre turret—and in the porch, or archway, which forms the end of the oblong portion of the plan. The head of the main arch is filled with tracery, and there is a picturesque turret at the angle, corbelled out and supported by a buttress. The details have both novelty and beauty of effect.—— Mr. Lamb's design for "Entrance-gateway and Lodge, for a Cemetery" (333), is treated as a gate-house, with room over, and has a massive character.——Messrs. Gabriel and Hirst have a clever sketch (215) of their proposed Chapels at the Chepstow Cemetery, with other buildings, in which the picturesque decorated Gothic manner is followed, the chapels being placed in corresponding positions,—one having a square tower and square shingled capping. In No. 310, the same architects exhibit what seems to be a different design for the same buildings. Here the buildings are grouped together on an irregular plan (that is, L shaped), with an archway between. ——In Messrs. Walter and Blackett's "Design for Marylebone Cemetery" (227), otherwise not inferior, the spire strikes us as having somewhat too much importance,—even allowing for its use as a landmark. In the "Design sent in competition for an Episcopal and Dissenters' Cemetery,—Chapel attached" (241), by Mr. J. L. Pedley, there is what looks like an Early English cross church,—with a western turret, and a building attached in the position of a district chancel or eastern chapel, and of a different style; and the result is not quite satisfactory.——Mr. R. R. Rowe, in his Designs for the Ely Burial-ground Chapels (238, 248, 258, and 267), has tried different arrangements for connecting the buildings with the entrance-way,—some of which seem to us to bring the chapels too close together for convenience.—— Mr. A. Billing's "Design for the Tottenham Cemetery Buildings" (174), has a central arch and bell-turrets, with the chapels one on each side; whilst Mr. R. W. Wright's design for the same buildings (296) has two nearly similar octagons, similarly joined by a corridor; an entrance-archway also occupying the centre. ——Mr. T. Little's "Chapels for the Parish of Paddington" (308) have been engraved in the *Builder*; and in 309 he shows the Entrance Lodges.——Mr. S. W. Tracy has some good views (346) showing the buildings which he has erected at the Margate Cemetery.——Mr. C. Baily's designs for the Cemetery Buildings at Newark-on-Trent (412—417 and 418), are good and novel in character. One of the buildings is a gate-house with lofty hipped roof and bold buttresses, and has a picturesque spire-capped turret.——Mr. G. W. Lloyd's design for the Tottenham Cemetery Chapels (476) has a central gate-house structure, with hipped roof terminated by a bell-turret.——Messrs. Lufkin and Irvine's designs for the Colchester Buildings (523 and 525) may be mentioned; but, with some few exceptions, the designs in this class—all in the Gothic style—display no very marked advance in our art from the opportunities afforded—such as they are,—and certain drawings (some of them in prominent positions) the committee would have exercised a wise discretion to reject.*

LODGING-HOUSES FOR OPERATIVES.

In the improvements now rapidly progressing and transforming the whole metropolis, how little thought has been expended on a provision of suitable abodes for those who toil, and are dependent upon their earnings for their support.

The cry is, make wide your ways, aggrandise your structures, imitate the magnificence of Paris, reform and blot out for ever the slums of filth, the dwellings of poverty,—and but few are the instances of model lodging-houses, or other structures being erected in substitution for the demolished lairs. One thousand tottering and festering dens are removed: these have accommodated (no, hived) 10,000 settlers, and one single foundation is projected to shelter four or five hundreds! Where then are the extra 9,500 souls to find a refuge? Why in slums more distant. These must be obtained one or more miles farther off, at a dearer rate, perhaps, and certainly at the expense of increased labour and loss of time.

Recent experiments have made it manifest that investments in communist dwellings, on the lodging-house plan, are amply remunerative; that they pay, in fact, little under 10 per cent: but that is, as yet, the result only of the humbler class of models: those built on the Scotch plan, or rather somewhat assimilating to it, as exemplified in Victoria-street, have been to this time a failure. They are too magnificent, too expensive, for they range from 80*l.* to 160*l.* a year; but nothing has been attempted to house the middling classes,—the officials, clerks, and other tributaries to business or commerce: there is nothing to meet the requirements of men earning incomes of from 70*l.* to 150*l.* a year.

If houses were subdivided in adaptation to the wants of families dependent on the latter class of operatives, they would be eagerly sought after: in point of fact, the model lodging-house near King's-cross harbours many of them, and were smaller houses, even of an ancient description, new modelled (as before expressed in the *Builder*), and divided into flats, containing three, four, or five rooms, none of them would, at a moderate rent, remain one fortnight untenanted.

Let us point out to the experimentalist, or cobbler in old buildings, that there are very numerous central localities, most suitable for the purpose, where old and moderately substantial houses, now and for a long time vacant, might with great advantage be thus converted. In Great Newport-street, at the end of Long-acre, there are several; but in any of the bye-streets, where two houses may be had together, there the facility exists by cutting away one staircase and connecting the houses, by utilising the basement for general purposes of kitchen, laundry, and offices only; then every floor of the united houses might lodge two families.

To the poor, however (and every family is poor that expends the weekly wages or earnings, weekly), the grand desideratum is to obtain their provisions and essentials at the cheapest possible rate. That they cannot so obtain them by retail purchase (that is, every parent or manager purchasing for their charge only), is but too evident. No, the pay received late on Saturday, and spent in a crowded market, cannot be so economically laid out by each purveyor individually, as if the whole community of a house were to combine for their collective suttling.

The principle of feeding numbers by the agency of one who caters for all, must assure not only a serious reduction of cost, but a correspondent improvement in the quality of the viands. It is owing to such a system that whole regiments of soldiers can be, and are, well fed, at a cost much lower, and in a style much more tolerable than the scanty, ill cooked, and worse assorted meal of the isolated room-keeping family.

To repeat the fact is almost unnecessary, yet it cannot be too prominently urged, that the poor pay dearly for their poverty — 2s. 6d. and 3s. a room, according to the size — say 10 by 12 feet, or 12 by 16 feet—that is the rent ordinarily charged for the most questionable apartments; dirty, ill ventilated, except at the gaping joints of doors, open chimneys, and shaky (if not broken) windows: these are the homes of metropolitan industry — the resting-places to recruit the wasted sinew and muscle of London operatives. How many cower together in each room? On an average four persons. It needs truly, that the clime be tempered to the shorn lambs; the infancy of London!

Again, let us say, 1s. per week for each room is quite sufficient to requite the builder in a lodging-house speculation: two rooms and small adjuncts for 2s. 6d. would give 10s. or 12s. a week, or 26*l.* or 31*l.* 12s. per annum for every story of only four or five rooms: this for a house of only four stories, would therefore pay 126*l.* 8s. a-year, and that, too, for a house but *plainly finished*, containing only twenty rooms, with the adjuncts necessary for chambers.

Now, it is notorious that highly finished residences of the same capacity may be rented, in *good situations*, at an equal rate. Why not then build also for the poor, and give them the softening influences, as well as the comforts of civilized life, as the community now exists, in advanced and advancing improvement?

Well, it would appear that if the poor are to profit by advances in luxury, which are the result of *their* labour, they themselves must combine for the attainment—they must communise and club together, even as to their *hearths* and *homes*.

But for provisions,—to live well and cheaply, there is no other mode of compressing that, than for the families resident in a house, or neighbouring houses, to combine and collectively to contribute, not only for the purchase of meat and vegetables, and of bread, but more especially to have joint-stock kitchens; and as the *Times* advised recently, to buy their flour and to bake it, to lay in their coals, and cook their own meat.

If the editor of the *Builder* will permit, I will give a plan of a lodging-house, to be built in a substantial and plain, although not wholly inornate style, calculated to afford a good English house (it might be now fair to call it Scotch, from their earlier adoption of the plan) for 500 or 1,000 souls.

The evidence that such an object could be carried out might influence benevolent and wealthy men to invest in sure foundations, without the incentive of a name to be transmitted to posterity on *stone tablets*, as the founders of this or that almshouse: every county and parish, and town in England, testifies the boundless extent of British charity: our magnificent institutions of London, dedicated to God and the poor (*but too many of them now appropriated by and for*

* Sir,—As being officially connected with the Architectural Exhibition, I should feel it very bad taste not to leave the defence of the committee, or of any else connected with them, to other hands than mine, or to the general verdict of the public; but I think there can be nothing wrong in mentioning facts which must be unknown to "Veritas," whose allegations are not quite so moderate as to give him a perfect right to the title he assumes. I was present at the Galleries almost constantly during the ten days consumed in the "hanging," and I observed that the "hanging committee" had their labours very much complicated and increased by exhibitors themselves, and it is a fact that most of the best drawings came many days after the proper time, so that continual alterations and changes were necessary, and the labour of all concerned was much prolonged and increased; while some good things came even so late that they could not be hung at all (Mr Owen Jones's, for example). A knowledge of all this would perhaps have given "Veritas" reasons apart from the one which he suggests, and have saved the "hanging committee" a little rigour in the exhibition he administers. I know of one very unfortunate instance where "drawings are divided," and I will urge no reasons in defence; still exhibitors will do well to avoid *large scale* plans and sections to illustrate their views, since a set of competition drawings of this class, all shown together, would occupy more than a fair allowance of space; and a dozen such would half fill our large room. For instances where exhibitors have so managed as to enable the various parts of a design to be seen "as a whole," I would mention Nos. 50, 76, 81, 83, 97, 116 117, 141, 185 241, 245, 248, 258, 337, 341, 340, 375, 377, 379, 429, 430, 512.—Jas. Edmeston, Jun.

the rich and their offspring), testify it. The spirit is alive and active as ever: wealth abounds still more: poverty, too, is more extensive, and more desolate.

A conviction overrules many minds of the danger imminent upon the state, arising from the extravagant disparity in the condition of men: enlightenment cannot be restricted to the rich only, nor can education. Some power from within, or from without, must come to the rescue; for if *municipal care* does not interpose to elevate the physical as well as the moral state of the poorer classes, they must *see* and *feel* that their condition is unequal to our age, and that the world and its law takes no account of them.

There remains still to be elicited from establishments of the kind set forth, an effect not as yet developed in London, namely, a social regeneration of the inmates classified therein. Already in some instances they have been housed in a state befitting humanity; and in one case (the single men's lodging-house, Bloomsbury), a room has been set apart for a reading or club room; but the saloon, or social assembly-room, has been nowhere provided: without that, any material advance in the amenities of life, as regards intercommunion, can hardly be expected. Such an apartment need not be of dimensions to increase much the cost of the institution: it must, however, be proportioned to the numbers accommodated; as, for instance, in a building calculated for 100 families (or 500 souls), then it should be adequate to the easy reception of 200.

In this, school might be held during the day, and being duly warmed by fire and lighted with gas in the evenings, it should always be open without restriction to the whole *resident* community; being furnished with papers, a few periodicals, and some well-chosen books. There are few men who, having such an opportunity for domestic comfort, but would frequent it in preference to the public-house,—it being always understood that the renters or subscribers, here, as in a club, might order their refreshment (under limitation) from their common cellar.

On occasions, lectures ought to be given on useful knowledge and practical subjects; so that, as a *place of instruction*, that respect not ordinarily shown to a tap-room should invest the saloon with regard and deference which could not fail to engender feelings of mutual respect; while such habitudes would elevate the nature and soften the manners of multitudes now left to the unbiassed riot of rude nature. This is the innovation most to be desired, and so much needed by those who, under its benign influence, could not much longer be called *the lower classes*.

QUONDAM.

"ON THE FUTURE RENAISSANCE."

THIS was the title of a paper read by Mr. J. M. Hay, at a meeting of the Liverpool Architectural Society, on the 28th ultimo. In the course of it he said,—Some forty or fifty years ago, Britton, struck with the beauty of the old examples of Gothic art so bountifully scattered over this country, set himself to investigate their merits, and published them to the world. But during this same period of fifty years, as if to exhibit the undecided mind of the nineteenth century, we have buildings erected in every known and unknown style of architecture. Is an architecture of this kind the legitimate exponent of the nineteenth century? Does it adequately express the requirements, the scientific attainments, of the present age? It does not. It indicates an uncertainty of thought and unsettledness of opinion. We are mere copyists: what has been done before we reproduce. If science discovers something new for us, we cannot give it architectural form: ventilation, for example, is universally a bungle. If chimneys are to be provided for a house in the Greek style, we try every method to conceal them, because, forsooth, the Parthenon and Erectheum have them not. And these are your gods, O Grecians! These temples are the patterns by which ye would clip out the mansions of modern times! If we require a Protestant or Dissenter's church, we copy a Roman Catholic one. Our invention seems to be solely occupied in pinching and paring down our wants to suit old architecture, and not in making architecture the artistic and intelligent embodiment of present wants and necessities. Were it possible to obtain the unanimous consent of the profession to the adoption of one style to the exclusion of all others, I believe it would be a step in the right direction, and would tend to the ultimate prosperity of architecture. Were this style not too rigidly confined within the boundaries circumscribed by precedent; were it permitted and encouraged to expand and develope itself; were the forms, features, and details of other styles carefully examined and judiciously incorporated with it—modified, of course, according to the principles of art and the genius of the style adopted—we should speedily arrive at a style of architecture that would be essentially national. But this unanimity does not exist; this universal consent is not to be expected. Every past style arrived at perfection from a congregation of minds all working in one direction. *Sed tempora mutantur*, and an Act of Parliament itself could not confirm the present age to one only style. Where formerly the clergy were the great patrons of art, we have now that patronage shared in by the people. Each individual considers he has a right to build as he likes: the architect indulges the whim; and hence the multiplicity of styles: and from the growing importance of the people, they will still maintain this right. The highest art was formerly consummated on temples and ecclesiastical structures: and these gave the key-note to other contemporary buildings. The attention of the architect now is not engrossed with such structures; the greatest wealth is not now expended on temples, churches, and cathedrals. We have, instead, municipal buildings, institutions of various kinds, and villas by the million. These are erected by private enterprise, by companies and corporations,—by the people, in fact. This is a peculiar feature in the present question, and, coupled with the fact that architects themselves cannot agree as to the best style for modern adoption, has no small influence in the continuance of a number of styles: divided in opinion, it is not likely that the *vox populi* should be the *vox Dei*. The decisions arrived at by committees are not always the best. Each member has some whimsical notion, and the most ignorant not unfrequently outvote the more intelligent. The language of dictation, and not that of suggestion, is that in which the architect is sometimes addressed. I readily admit that valuable suggestions have often been made by non-professional men, and all the more valuable as occurring to those unbiassed by professional routine; but sometimes the greatest absurdities have been enforced upon him, and he must either withdraw his services in disgust, or linger them out to an unsatisfactory termination. It is a lamentable fact that architects must often ignore their better judgment and pander to a corrupt taste, or, like that eminent historical painter, the high-minded but unfortunate Barry, live in poverty, and die in neglect. Under such circumstances the architect is bound to be intimately acquainted with every style, and competent to practise them. Where, then, is the prospect of a national character being imparted to architecture?

* * * * *

The Gothic architect should closely study Italian design, for it contains numerous features translatable into that style, and suggestions for its improvement. The Greek architect ought to do likewise. Italian stands midway between these two opposite styles: while one is the type and perfection of the arcuated, and the other of the trabeated system, Italian partakes of both.

It is a charming idea that the good, the true, and the beautiful never die; though they disappear for a time, it is only to rise again in greater freshness and beauty. This is a ray of light which, flashing across the desponding mind of the artist, kindles within him new hope, and urges him on to renewed exertion. Why should not all the beauties of past styles reappear in harmonious union—not a heterogeneous mixture of old lifeless forms, but fused and melted down as it were in the crucible of the artist's brain, filtered from the grosser particles with which they were formerly combined, endowed with all the comeliness and bloom of youth, and worthily blended with new beauties which the exigencies of the time will call forth?

THE METROPOLITAN BOARD OF WORKS.

THE Board met on Saturday, the 22nd, in Burlington House, and proceeded to the election of a chairman. Each candidate having been proposed and seconded, the Board determined to abide by the resolution passed at their former meeting, namely, to put the whole of the candidates to a show of hands, then striking off the list the man who had the least number of votes, and so repeating that process until the list was reduced to two, when, on a final show of hands, the candidate having the highest number of votes was to be elected. A show of hands was taken seven different times, and the following was the result:—

	1st show.	2d.	3d.	4th.	5th.	6th.	7th.	Final
Mr. John Thwaites	26	25	26	23	26	21	26	30
Mr. Deputy Harrison...	17	15	16	16	16	16	13	
Mr. J. Roebuck, M.P.	17	19	18	17	17	13		
Mr. Thomas Turner ...	14	13	12	12	11			
Mr. Richard Jebb	14	11	13	11				
Mr. William Corrie.....	12	13	11					
Mr. T. Hawes	9	8						
Hon. J. Percy, M.P. ...	4							
Mr. G. F. Carden.....	0							
Mr. Arthur Rose	0							

The election of chairman therefore fell upon Mr. Thwaites.

At the chairman's suggestion, a committee, consisting of Mr. Nicholay, Mr. Offor, Mr. Collinson, Mr. H. L. Taylor, Mr. Wilkinson, Mr. Hows, Mr. Corrie, and Mr. Deputy Harrison, was appointed to make certain preliminary arrangements.

Sir John Shelley, M.P. gave notice that he should place his resignation, as a member of the Board, in the hands of the chairman, at the first sitting of the Board in January. The worthy baronet's proceedings in this matter have not advanced his position in the eyes of the Westminster electors.

ART AND INDUSTRY.

ON the 18th, 19th, 20th, and 21st of the present month, Mr. Digby Wyatt delivered an interesting course of lectures in the Theatre of the Literary and Philosophical Society, in the Hull Royal Institution.* In these the subjects of art and industry, both ancient and modern, were treated in their co-relation to one another, and the co-extension of fine-art principles with the development of technical dexterity was succinctly traced. In the first of the series Mr. Wyatt considered successively the peculiarities of the principal monuments of Egypt, Assyria, Persia, Asia Minor, Greece, Rome, Byzantium, Mediæval Europe, and the ultimate Italian revival of the antique, elucidating the correctness of the axiom with which he commenced his observations, "That the noblest effects which have ever been attained in each style have only been achieved when the sister arts have been united to assist one another in winning the eye of the observer, and in adding the greatest intensity to his pleasurable emotions." This theme in the second lecture was amplified and analyzed in its relation to the condition and prospects of contemporary art. The ill consequences which have invariably attended efforts made for the revival of any one branch of art by isolation from its fellows, and special cultivation, were traced in a lucid review of the vicissitudes of all the great modern schools, from the days of Raffaelle to the present. Italy, France, Germany, and England were in turn cited, as illustrating, in the works of their greatest men, the absolute necessity for an independent recognition of first principles. The nature of those original views which have breathed new life into the expiring art of the

* The Hull Society now meet in the new buildings, which have lately been erected for its use, at a cost of between 7,000*l.* and 8,000*l.* The theatre will hold upwards of 700 persons; and the museum, which is an extremely valuable one, is about to receive considerable additions, through donations from Prince Albert the patron of the society; Sir Roderick Murchison, Sir Wm. Jardine, Mr Gould (the ornithologist) and others. The buildings were erected at the same time with those of the excellent Hull Library, founded in 1775, and consisting of 500 proprietor members. The facade Corinthian, and not inelegant, is in common to the two societies. The Literary and Philosophical Society's half is on the left hand, and that of the Library, whose buildings have cost upwards of 6,000*l.* on the right. In the reading-room there is a full-length portrait of Mr. Charles Frost, the president of the institution, which was painted by subscription, and presented to that gentleman at a public breakfast, on the laying of the foundation-stones of the two buildings, by the Earl of Carlisle as to the Library, and Lord Londesborough as to the Literary and Philosophical Society. The joint buildings have, since the Queen's visit to this town, been called, by her command, the *Hull Royal Institution*.

south, through the great artists of the north; through sculptors, such as Carstens, Thorwaldsen, Rauch, Swanthaler, and Rietschel; through architects, such as Schinkel, Ziebland, Gärtner, and Von Klenze; through painters, such as Overbeck, Cornelius, Schnorr, Lessing, and Kaulbach, was earnestly pointed out, and their leading works were described. Numerous illustrations of progress, and auguries of a most hopeful character, were derived from observations made on the tendencies manifested by the principal nations of Europe, as represented in the Paris "Exposition des Beaux Arts." In the third lecture, the close connection between the best art and the best industry was insisted on, as consequent upon elements inherent in the nature of each, and, therefore, common to both. By the division of his illustrations of the industry of the past, into sections corresponding with those through which he had traced the leading features of the history of ancient fine art, the lecturer was enabled to draw an interesting parallel between the progress of technical and æsthetical tendencies, amongst all the great nations of antiquity. In his last address, the present of industry was contrasted with its past, and the moral of the Paris Exhibition was drawn, so far as modern manufactures of all kinds were concerned. The social and national importance of a conscientious study of the precise condition and prospects of both our staple and decorative trades was warmly dwelt on; and the principal features of each, their fine art affinities, and their technical necessities, were elaborately pointed out. The lecturer concluded his course by urging the conviction upon his hearers, that the worthiest effort of industry should be to emulate that exquisite adaptation of means to ends which characterizes every manfestation of the Creator's skill, while the true artist and student of art should be led to a recognition of the identity of the loftiest conceivable beauty with the attributes of divinity itself.

FOREIGN INTELLIGENCE.

Architectural Documents.—A collection of architectural drawings has been made in the town-hall of Brünn, in Moravia, which deserves extensive imitation. For years past, whenever any old building, or one otherwise characteristic, came to be demolished, an accurate and fine sketch was made thereof to be deposited in the above collection. The Museum of Cologne possesses a similar collection of drawings, bequeathed by the late art-amateur M. de Noel,—but an exhibition in a town-hall seems preferable.

Old Germanic Tombs.—There have been found near Wefelsburg, in the circle of Büren, Prussia, some old tombs. One of them measured 25 paces in length, and 15 paces in breadth, and was formed by about a dozen slabs, each 12 feet long and 3 or 4 feet broad. They were disposed in parallel rows, with an interstice of about 2 feet. Bones and skulls were also found. This locality seems particularly rich in these old Teutonic remnants, as, one mile further, at Kirchborken and Brenken, similar gigantic tombs have been found.

Restoration of Luther's Wartburg.—This old restored German castle promises to become one of the art-jewels of modern times. The medallions, which adorn the gallery leading from the chapel to the main building of the castle, form a cycle of paintings executed by Moritz Schwind, and contain the works of piety of St. Elizabeth, the once owner of this castle. The figures of the relievo-medallions are of the greatest simplicity, and possess much quiet feeling. They have been lately engraved by Julius Thäter. The church built over the grave of the saint is also to be restored.

Rome.—M. Antonio Bianchini, one of the best artists in the mediæval style, has completed the restoration of the old frescoes which adorn the church of St. Benedict and its vault at Subiaco. He has been now called by the municipality of Orvieto to restore the paintings of Luca Signorelli, and other old masters, in the famous Dome of that city. The commissioners of the Papal palaces spend considerable sums in the cleaning and refreshing (!) of the brescoes in the Raffaellian Loggie of the Vatican. M. Bianchini has already restored the paintings and the geographical maps; and M. Montovani, a superior artist in perspective and decoration, is engaged in the restoration of the ornaments. The *ambulacri* of the above palace, which have hitherto open towards the court, are now protected by large curtains.—Antonio Cappi, the continuator of the annals of Muratori, has published a new history of the house of Colonna, which contains many new documents relating to history.—The great bulk of the new five Bajochi copper pieces are generally complained of: they resemble some of the Spartan coins, in a time very little Spartan.

The Last Supper.—That famous fresco, by Leonardo da Vinci, in the refectory of Santa Maria delle Gracia, has been undergoing for the last three years a process, the success of which becomes now pretty palpable. It had been neglected for centuries past, and especially during the French occupation of Lombardy, the former dining-hall of the friars had been used as a cavalry stable. Thus the saltpetre entered the already damp walls on which the fresco is painted, and much impaired its condition. The plaster on which the oil painting had been made, and afterwards repeatedly retouched, was nearly converted into powder, and even entire pieces had fallen off. This partial destruction of the colours and its substratum made it impossible to take the painting off, and transfer it to another ground, a process of which many samples are to be seen in the peristyle of the Brera galleries. Nothing, therefore, remained but to try the fixing of the shaky pieces on the wall by a new connecting medium,—certainly a most hazardous procedure. Now the result may be pretty nearly guessed, as the whole picture, from the figure of Judas to the right, has been already uncovered. The operation has so far succeeded, that one may rub the picture with his hand, all being firmly fixed.

CRIMEAN HUTS.

The timber huts sent out to the Crimea are much complained of. The roofs are not water-tight, the sides are not wind-tight, and the stoves do not give heat enough. At Aldershott there have been two fires in these timber huts. As this is a model camp, we presume the fires were model fires also: a warm look out this cold weather for our men in the Crimea.

The huts in use at Aldershott and in the Crimea have many faults. The framing is clumsy, the boarding is faulty, and when once put up the whole must become mere firewood if removed, as rusty nails cannot be drawn out of thin boards, twisted and warped by sun, rain, and wind. Crimean weather deals with the boarding on the huts as a warm fire deals with parchment if placed near to it: this ought not to be. The uses of a hut are to afford shelter and protection to the men. There should be means of warmth, means of ventilation, and easy means of removal without destruction. Let government advertise for a model hut, having these arrangements:—

1st. All the parts shall be duplicates.

2nd. The parts must be arranged for easy packing and carriage.

3rd. The roof, sides, &c. shall be double, and may be of boards, or light frames covered with prepared canvas, felt, or other material.

4th. Sides and roof shall fit and be secured in place without nails: screws, pins, or hinges may be used.

5th. There shall be bed-floors raised from the ground.

6th. There shall be doors and windows, as also means for ridge ventilation.

7th. The parts shall be capable of making huts of any required length, and be complete for the least.

8th. The eaves shall project to give shade to the sides, from ten to four o'clock, midday.

9th. Portions of sides and ends should be removable, so as to form open verandahs in hot weather.

10th. Means of warmth should not endanger fire.

11th. The colour of the materials should be light.

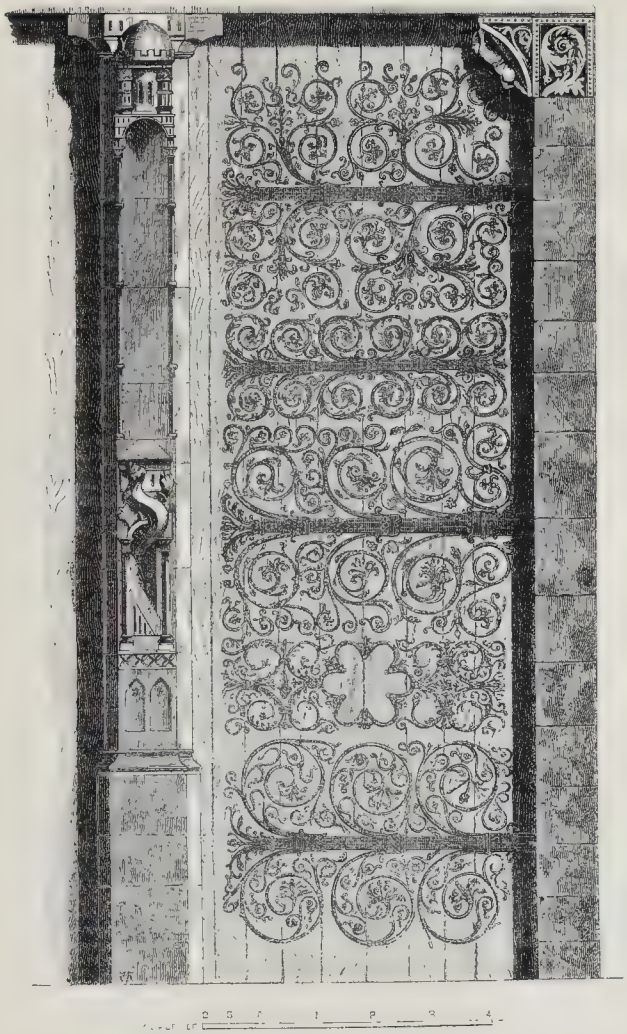
12th. Seats, tables, and shelves, should pack with the huts.

Huts having these or analogous means of arrangement may be portable and enduring: ordinary soldiers may put them up or take them down: they should be warm and healthy in winter, and cool and healthy in summer. The huts, as first sent out, proved mere fever-traps: the huts as now in use are either cold or fire-traps. They are neither handy nor useful, portable nor durable. A nation which can make metal tubes of any form, rolling shutters of any dimensions, cloths and felts of any strength or consistency, ought not to make and send out wretched pine-timber huts, to be blown through by the wind, rained through by the rain, and burned by the fire necessary to existence. We recommend government to try again: something better may be done.

WROUGHT-IRON HINGES, NOTRE DAME, PARIS.

In a recent notice of the cathedral of Notre Dame, some account was given of the ironwork on the two doors in the west front of the south tower,—the doorway of St. Anne (see p. 537); and we promised to add an illustration of one of them. This we now supply, in order that it may be in the same volume as the description.

We have engraved it from Didron's "Annales Archéologiques." Some writers, as we have already said, attribute this ironwork to the thirteenth century; others to Biscornette, a famous smith of the sixteenth century. We are disposed to think that the doors include work of both these periods; Biscornette having apparently reinstated such of the hinges as were missing or damaged with work of his own.



CHURCH RESTORATION IN SUSSEX.

Your correspondent, "An Archæologist," very justly calls your attention to the want of care and proper feeling in the preservation of our ancient and time-honoured fabrics, alluding to the font of Keymer Church, near Brighton. It is much to be regretted that the noble examples of fervour and piety which we have left us should be sacrificed to the feeling for effect almost selfish, and to which many of our clergy and architects of the present day are too much addicted.

An antiquarian feeling should be natural, pure, and earnest, zealous for the integrity of the past; and those entrusted with the care and restoration of our churches would do well to learn the alphabet (if I may be allowed to use the expression) before attempting to work out a subject, as nearly every building of merit has one more or less complete in spirit and detail. I have myself at different times visited many of the churches on the coast of Sussex, and it was with a great deal of pleasure I found the work of preservation and restoration had commenced; for, beautiful as many of them are, they had been much neglected. I have within the last few months again visited some of them. Old Shoreham has for many years been under the hands of various workmen; but as the "higher cast," as it has been termed, than that which I can subscribe to has worked here, I am content to admire it, as I feel fully persuaded that it gave the impetus from which many others have benefitted.

Augmering, a few miles westward, has been enlarged and beautified, at the cost of one of the parishioners, and a noble work it is to leave as a monument. I honour the feeling that has accomplished it; but, as a village church, it is too much decorated, and I fear the moral effect is greatly lost in the effort. The old sexton who shows you the church shows it you as he would a drawing-room, and the lessons the subjects on the beautiful windows should teach are in a great measure lost upon him, and I dare say most of his fellow-parishioners, by a feeling of worldly pride, inconsistent with what it should be. The texts and lettering round the arches are not easily read; but, on the whole, these faults lean to virtue's side, and it is a work of merit nobly accomplished.

Between Shoreham and this lie the parishes of West Tarring, Sompting, and Broadwater. The two former churches have been very

ANCIENT IRONWORK, NOTRE DAME, PARIS.

recently restored. West Tarring is a truly noble church, and the restoration has been completed with much feeling and good taste. In the large space within its walls the font and reredos form prominent features, as they should do, and are both works of merit. Sompting Church, which is well known from its interesting Saxon tower, has also been very carefully restored, and the church, though irregular, is well arranged. The old font is well placed in a baptistery as you enter. The roof is primitive, but a good effect is produced by the largeness of the timbers. These two churches are of a tone and character well suited to the villages, and are what parish churches should be, fitted to the solemnity of our beautiful service. The chancel of Broadwater Church has been much altered, which we have much to regret. A great deal of money appears to have been spent, which in better hands might have been beneficially employed. The new reredos and works round the altar are elaborate, but impure, and appear the work of a house-decorator rather than an architect. The centre is raised abruptly, shortening the east window, which has a very unpleasing effect. This chancel was one of the finest in the county,—and how much better the public would have been served and the time spent in studying and giving the truth of those perishing remnants of majestic thought, than in perpetuating the ill-digested fancies of the hour! The chancel itself is late Norman. The east window has rich Perpendicular work over the subject, which is "The Ascension:" a side window, however, is a very good one.

An old Gothic church, it has been said, is the petrifaction of our religion. They are our standard works and the landmarks of our history, hallowed by the veneration of ages, endeared by the tribute of our forefathers. All that in this world enlarges the sphere of our affections and inspirations is to be reverenced; and those circumstances enlarge it most which quicken our perception of the past. A due contemplation of the past best fits us for the due consideration of the future; and those historic types from which we have learnt so much should be preserved for those who may follow us. It is no light thing to destroy anything that is historically old. If novelty be required, there is space enough to commence anew, and scope enough for the imagination of all; but I would rather witness our consecrated piles moulder under the hand of time and tempest than their vitality destroyed by the renovator.

A BROTHER ARCHÆOLOGIST.

CHURCH-BUILDING AND PROVINCIAL NEWS.

East Retford.—Gamston Church has been restored by Mr. Scott, architect. The restoration originated with the Duke of Newcastle, the owner of the parish. The duke has contributed two-thirds to the restoration of the nave, aisle, and tower, and the rebuilding of the porch; the parishioners one-third. The chancel has been restored by the rector, the Rev. John Twells. The whole building has had new roofs, and the walls have been put into thorough repair, and renewed in many places. The windows have been new glazed by Welch, of Retford; the nave and aisle repaved with small black and red tiles, and the chancel floored with decorated tiles from Minton's manufactory. The sittings are open and plain, composed of oak. The pulpit is of oak, on a stone basement, and placed at the north-east corner of the nave. The chancel-seats are placed stall-wise. The altar-rails were executed by Mr. Skidmore, of Coventry, who has also supplied the chancel corner for nine lights, and the standards for the nave, each containing three lights. The edifice has been warmed with hot air by Mr. Haden, of Trowbridge, at the joint expense of the parish and the rector. The two tables of the Commandments have been placed on a large space of wall above the chancel arch, in old English characters, by Mr. Cassells, of London. The restoration has been conducted under the superintendence of Mr. J. M. Johnston. Messrs. Lee and Webster were the contractors for the restoration. The whole expenses have been about 1,200*l.* for the restoration of the church; 400*l.* for the chancel: in all, about 2,050*l.*

Gravesend.—A new infirmary is being added to the Union-house, from the plans of Mr. John Gould, of which the Poor-Law Inspector speaks well.

Lymington.—On Thursday before last, says the *Hampshire Independent*, the singular and almost unique old church at Boldre—a rude, massive, and irregular structure—erected shortly after the Conquest, in the anglo-Norman style of architecture, having undergone a thorough repair, was re-opened for public worship. It is generally believed that this remarkable old church was built at different periods, the western end appearing to claim the highest antiquity, and the northern portion being stated to bear marks of having been added in the reign of King John. Situated on the summit of a hill at the entrance of the forest, and concealed by a belt of ancient trees, Boldre Church has escaped the ravages so prevalent among the British ecclesiastical edifices during the more unsettled and turbulent periods of our eventful history, and thus remains intact.

Salisbury.—A monumental brass is about to be placed in Salisbury Cathedral, in memory of Lieut. Greathed, one of the Crimean heroes. The inscription on it has been engraved by Mr. Bennett, of Southampton.

Aberavon.—The new church at Cwmavon proceeds towards completion. The contractors, Messrs. James and Price, Cardiff, have obtained the contract for two dissenting chapels which are to be built in the same valley.

Bridge-end (Wales).—On Sunday before last, the new Roman Catholic Chapel was opened for celebrating mass. It is built in the Italian style. The builder is Mr. John Jenkins, of Bridgend. It is said the chapel will not be consecrated before the chancel is built and the altar added to the building—the altar-piece fitted up now being only temporary: the sittings also are not yet fixed. The flooring is made of bricks, and laid herring-bone wise. The whole undertaking has been done at the expense of Mr. Illtyd Nicholl and Misses Nicholl, of Merthyrmawr.

Weymouth.—The local Burial Board held a meeting on Monday before last, when Messrs. Crickmay and Thomas's contracts for building the cloister and wall in the cemetery were signed. It is understood that the cemetery will be consecrated early in the spring.

Boston.—The restorations of Sibsey Church approach towards completion. New roofs have been put upon the nave and aisles, the north aisle has been entirely rebuilt, the plaster and whitewash stripped from the walls, and, generally, the decayed places of the church have been restored. The lay rector, Mr. Gape, rebuilt the chancel on the old foundations, and in it Messrs. Waite and Saul, the churchwardens, have each erected a memorial window of stained glass; while a third window has been placed at the west end of the church by the Rev. T. L. Edwards, curate. All three windows are by Mr. Ward, of London. A further subscription has been entered into, and aid obtained from the Society for Building and Enlarging Churches, to reseat the whole of the interior with open benches, and considerably to enlarge the accommodation for public worship. The work has been done under the superintendence of Messrs. Parry and Kirk, of Sleaford, by Mr. Whitworth, of Boston, and Mr. Webster, of Wyberton; the former having executed the chancel, and the latter all the rest of the work. A view of the church, from the south-east corner of the churchyard, has been published to commemorate these restorations; the profits of its publication to be devoted to the restoration-funds.

Rotherham.—At a recent meeting of the feoffees of the common lands of Rotherham, they resolved upon the erection of a new and more commodious grammar-school, with schoolmaster's house attached. The new school is to be adequate to the accommodation of 100 pupils, and a plot of land adjoining the lower part of Moorgate-road has been selected for the site. The building is to front towards Moorgate, but to be placed sufficiently backwards to admit of lawn and flower-garden intervening. The style of architecture has not yet been decided upon, but it is believed that the Gothic style will be preferred. The buildings are expected to cost somewhat more than 1,000*l.* The feoffees are already in communication with architects on the subject.

Burnley.—The intended new cemetery for this town comprises an area of 18 acres: 12 acres only are fenced in at present: the remainder is so arranged as to be readily added when required. The works are making progress. There are three chapels, entrance-lodge, &c. being erected from designs furnished by Mr. Worthington, architect, Manchester. The cemetery is to be opened on the 1st of April next.——The company of proprietors of the existing market-place having advertised for designs for a new market, have awarded the first premium of fifteen guineas to Mr. G. T. Robinson, architect, Leamington; and the second premium of ten guineas to Messrs. Davies and Tow, architects, Chesterfield. There were nine competitors. The contemplated outlay is 2,500*l.* or 3,000*l.*; the old materials in the existing market-place being used as far as practicable.

Masbro'.—It is proposed to erect a large school-room in Masbro', for behoof of the operatives and labouring classes in that locality.

Durham.—From plans deposited in the public offices of the county of Durham, it appears to be in contemplation to apply to Parliament, in the coming session, for further powers for acquiring lands, over which runs a portion of the Stockton and Darlington Railway, and extending that line a further distance to the east, in the township of Middridge, St. Andrew's Auckland, Heighington, Witton-le-Wear, Newlandside, and Shildon.

Glasgow.—The accommodation in the Upper Court-house, Jail-square, in this city, having been long complained of by the Lords Justiciary as quite unsuitable in respect both of accommodation and ventilation, the Lanarkshire Prison Board have inspected plans for a new hall. The plans were approved, and directions given that the work should be proceeded with. According to the plans, the portion of the Justiciary-buildings facing the Clyde, formerly occupied by debtors, but at present out of use, is to be gutted, and reconstructed much on the same plan as the lower court-house.

Dundee.—St. Paul's Episcopal Church was opened on Thursday before last by the Bishop of Brechin, assisted by the Bishop of Moray, and a large assemblage of episcopal clergymen. The form of opening was not that of consecration, in consequence of the edifice not yet being fully made over to the Episcopacy. The foundation-stone of the chapel, which stands on the site of the old Castle of Dundee, was laid on the 23rd July, 1853. The design was furnished by Mr. Scott. The spire is 210 feet in height, and like the whole building, has been executed in the Middle Pointed style of architecture. The building itself is cruciform; the length of the nave 84 feet, and its width 24 feet; the width of each of the side-aisles, 10½ feet. The length of chancel is 35 feet, and its width 24 feet. The height from floor to apex of roof of nave is 67 feet. The building is seated for 600 persons, and will cost, exclusive of site, about 11,000*l.* There are seven stained-glass memorial windows, illustrative of scriptural subjects, presented by Sir John Ogilvie, the family of Dean Horsley, the relations of the late Rev. J. Hetherington, the Misses Clayhills of Invergowrie, Miss Guthrie of Taybank, and the Misses Guthrie of Guthrie. The pulpit, an octagonal work of Caen stone and granite, was presented by Mr. Clayhills of Invergowrie; and the centre-block of the front, presented to the bishop by the Rev. Dr. Anderson of Newburgh, is believed to have belonged to the old Abbacy of Lindores. The brass lectern was presented by the Dowager Duchess of Argyle. The Castle-hill rising abruptly from the north and west, the foundation of the church approaches the tops of some of the neighbouring houses; and the height of the edifice itself—thrown up on such an elevation—renders it conspicuous in every distant view of the town. The tower is the chief feature of the exterior of the building. It is said to have been imitated, with some modifications, from the old steeple of the town's churches, with the addition of a spire, making the church, it is believed, the highest in Scotland. At the north-west corner there is a semi-octagonal turret, capped with a pinnacle, and forming one of the characteristics of the tower. There are two adjacent belfry-windows under the transome: they are each of a single light, above which there are in each two trefoil-lights, with a foliated circle in the head. In the lower stage of the tower there is properly but one window on the western side: it is two-lighted, and with two more trefoils in the head. The style in the interior is modified by some peculiarities of the ancient architecture of Scotland. The plan comprises a nave and two side-aisles, north and south transepts, chancel, and chancel-aisles, the chancel being terminated by an octagonal apse. The great height of the transept is one of the most striking features inside the building. The windows, north and south, are of four lights, in two divisions. One of the chief features in the church is the belfry-arch. Itself of three orders, it carries half-way up its height a projecting balustrade of quatrefoils for a kind of gallery, above which, from the interior, the west window is visible. To the south of this belfry is the vestry, lighted by a skylight, with wooden mullions.——The Panmure-street Congregational Chapel was opened on Friday in week before last. The church, says the *Northern Warder*, is in a style in keeping with the New Exchange in the neighbourhood, and is from a design by Mr. David Bryce, of Edinburgh, and has been erected under the superintendence of Mr. Scott, the town architect. It is seated for 600.

Arbroath.—On Wednesday morning, says last week's *Arbroath Guide*, one of the turrets on the south side of our steeple was seriously injured by the gale. The top part was blown down, injuring in its descent the roof of the Old Church. The turret itself continued to oscillate so much, that it was deemed necessary to stop all communication through the Kirk Wynd.

Middlesex Archæological Society.—On Friday, the 14th instant, the inaugural meeting of this new society was held at Crosby Hall, in the City. Indisposition having prevented the attendance of Lord Londesborough, the president of the society, the chair was taken by the Rev. Thomas Hugo. The Marquis of Salisbury, K.G., Lord-Lieutenant of Middlesex, was elected patron. The Lord Mayor, Lord Robert Grosvenor, M.P., Mr. A. B. Beresford Hope, and several other gentlemen were elected vice-presidents; and with these twenty other gentlemen were associated to form the "council" by whom the affairs of the society should be conducted. The society purposes to devote its energies to the investigation of the history and antiquities of the metropolis and metropolitan county.

ILLUSTRATED BOOKS.

Maclise, Mulready, E. M. Ward, Cope, Creswick, Horsley, Millais, Egg, Stone, Creswick, Frost, Frith (misprinted Forth in the list), and Sant,—mostly well engraved by W. Holl, F. Holl, Wallis, L. Stocks, and others,—have been called in to illustrate Moore's Irish Melodies,"* and have aided in producing a volume which must have place amongst the most elegant gift-books of the season. Maclise's frontispiece, Frith's "Love's Young Dream," Creswick's "Vale of Avoca," and Ward's illustration of the lines beginning "One fatal remembrance," may be especially mentioned. Mr. Sant's contribution is not a fair specimen of the artist's skill.

Mr. Simpson's truthful drawings at the Seat of War, of which we have already spoken more than once, have been reduced in size to form an illustrated volume called "The Campaign in the Crimea," and have descriptive letterpress and an historical sketch by Mr. George Brackenbury. It forms a charming drawing-room book, and a deeply interesting record.

The first series of the views at large is now completed, and comprises forty subjects. A second series is to be commenced forthwith.

The new edition of Otto Speckter's illustrated "Puss in Boots" (Murray, 1856), was bought largely at the publishers' trade sale, and the juvenile public will doubtless ratify the opinion of the booksellers. The illustrations are varied, characterful, and funny: the expression of the cat throughout admirable. Long may it be, ere Puss in Boots, Jack the Giant-killer, the Seven Champions of Christendom, and the other mythic heroes of early days, be deprived of their dominion in the nursery of babyhood and the memory of old age!

AMERICAN PATENTS.

The following are selected from a list of recent patents published in the *Journal of the Franklin Institute of Philadelphia*:—For an Improvement in Brick Machines: G. W. B. Gedney, City of New York. Claim.—"The off-bearing boards as applied. Also, the fingers for placing the board from the mould on to the endless apron."——For an Improved Sawing-mill: Dean S. Howard, Lyonsdale, New York. Claim.—"The method of setting the log forward after each board is severed, by mechanical devices operated by the weight of the log. 2. The method of cutting from either end of the log with a circular saw, by hanging the saw in a vibrating frame, or its equivalent, so that the axis of the saw may be above the log when cutting from one end, and beneath it when cutting from the other end, so as to cut either way against the grain of the wood. Also, the self-setting arrangement, whether in connection with the circular saw or the single or double-edged reciprocating saw, as equally applicable to either."——For a Dovetail Key Cutter: Amos P. Hughes, Philadelphia, Pennsylvania. Claim.—"The combination of two angular V shaped and adjustable cutters with the guiding tube, or its equivalent."——For an Improved Plane Bit: Horace Harris, Gorham, New York. Claim.—"The adjustment of the cap and bit with the grooves at each side, and of the thumb-screw at the top of the cap and bit for the regulation of the cut of the bit, while the iron is held fast in the stock by the wedge fastening."——For a Dovetailing Machine: John J. Haley, Philadelphia, Pennsylvania. Claim.—"The forming of a dovetail either as a mortise or a tenon at a single operation, by angularly-placed reciprocating chisels, in combination with horizontally placed chisels, arranged substantially as set forth. I claim giving a reciprocating motion to the chisels, by the snail cam or shaft, in combination with chisels, gear, and pitman rods, for the purpose of actuating the chisels in unison with each other, in the manner described. Also, the arrangement of the angular guides, in combination with the guide, for the purpose of effecting the undercut or sides of the dovetail. Also, the arrangement and combination of the angular guides and chisels on stocks, with the horizontal chisels and guides and snail on shaft for producing the dovetail and completing the mortise in the manner set forth."——For an Improved Farm-gate: Smith A. Skinner, Derby, Vermont. Claim.—"The manner of making the gate, viz. of a series of bars or chains, and upright chains, connected and arranged so as to fold into, and unfold out of, a recess below the sill. Also, the combination and arrangement of the latch bar and the cords, the same being constructed and applied to the windlass."

* Longman, Brown, Green, and Longmans. 1856.

THE PRACTICAL OPERATION OF THE "NUISANCES REMOVAL AND DISEASES PREVENTION ACT."

This Act empowers the various sanitary committees appointed under it to inspect existing houses, and to summon the owners, so as to compel them to make such alterations in the construction and ventilation of the houses, sewerage, &c. as shall induce proper sanitary arrangements. If need be, in extreme cases, magistrates are empowered absolutely to close, as dwelling-houses, such tenements as, owing to dilapidated condition or fault of original construction, cannot be rendered habitable within the meaning of the Act. The first instance in which the recent Act has been brought into forcible operation is in the borough of Salford, where attention has been drawn to a block of buildings in Jackson's-square, Greengate, Salford. The tenements in question consist of nine double-roomed houses, and twenty-two single. It almost seems as if every possible provision had been made to render them uncomfortable and unhealthy. Some of the houses are built on the ground: others are built on raised platforms, and have at various times had sheds attached to them for the reception of horses, donkeys, and cattle. Twenty-seven of these hovels were inhabited up to the time of proceedings being taken,—twenty of the single-roomed and seven of the double-roomed, making in all thirty-four rooms. The population numbered ninety-six. The owner was summoned before the Salford magistrates to show cause why the houses should not be rendered fit for human habitation. The owner did not appear, but Mr. Newton, the mortgagee, set up as a defence that the magistrate had no jurisdiction. Several adjournments were taken, and recently an order was made that the tenements should be forthwith vacated by the occupiers, which order is now in process of being carried out. The practical effect of the order will be to lead to the absolute demolition of the whole.

ARCHITECTURE OF PARIS.

ARCHITECTURAL INSTITUTE OF SCOTLAND.

At a meeting of the Architectural Institute of Scotland, held on the 17th inst. Mr. David Cousin, city architect, read a paper on "the Domestic Architecture of Paris," in the course of which, after describing Paris houses, he said, the French deal greatly less in dinner-parties than the people of the same class in this country, and, as a rule, they sit a much shorter time at the dinner-table. The dining-room, therefore, in the middle-class houses, is a less important room than it is with us. The saloon or drawing-room is the living room of the family, where they receive their evening social parties. The floor of the dining-room, often without a carpet, is either glazed tiles or polished oak boarding. The kitchen is generally a very small apartment as compared with those of our own houses, and but sparingly supplied with closets or scullery accommodation. From the peculiar construction of the kitchen-range, little heat, dust, or smell is created in cooking. The cooking apparatus of ordinary houses consists of a series of small choffers, heated by charcoal, raised on a platform about the height of an ordinary table, on which kettles or pots of various sizes are placed for boiling or stewing meat. They have besides a small portable fireplace and oven, so light as to be easily lifted about, for roasting meat, which is placed on the same platform when in use. A projecting hood envelops the whole platform, and carries off all vapour or smoke into the chimney. Charcoal is always used in the kitchen, and generally wood for the room fires, though coal is now getting more into use than formerly. The elegance of the interior decoration of the cafés and restaurants of Paris must have struck every one who has visited that tasteful capital. The same quality of decoration pervades the private dwellings, varying in extent according to the means of the occupants. The wood-work of the drawing-room is generally painted in a light shade, nearly white — the smaller members of the mouldings being gilded. Oil paint is seldom used for the walls: when it is so, the shades of colour are generally light, of a grey drab, or green hue, formed into panels, and ornamented with stencilling in a light shade. More frequently the walls are papered, which is generally of a low tone; the ornaments flat, of the same shade as the ground. Green, grey, or French white are the prevailing colours, finished with an ornamental gold border. We rarely find those gaudy papers, with garlands of roses and other imitations of natural flowers, which pass here for French papers. These gaudy designs are, I fear, prepared by the manufacturers to meet the demands of their customers on this side of the Channel. The ceilings are generally white, the plaster ornaments hatched with gold, the smaller members of the enrichments being done in solid gilding, which is distributed with great judgment, so as to bring out the detail of the ornament, rather than to obscure it by a dazzling display of gold on the prominent features. Mirrors are introduced in great profusion. Mr. Cousin alluded to the multiplicity of royal palaces in and around Paris. These stupendous architectural works, he said, all serve as the repositories of the kindred arts of sculpture and painting; and all are freely thrown open to the people. The gilded halls and corridors of these imperial mansions are crowded with the artisan and the peasant, on their oft-recurring holidays, enjoying the highest works of the chisel or the pencil. There is no crowding, no jostling or elbowing past each other. The greatest politeness prevails. The art education thus afforded to the masses has done its work effectually in refining the manners, and inducing that outward decorum which in this country is looked upon as the characteristic of the upper classes only. The amount of rational and elevating enjoyment thus afforded to the great bulk of the people by these places of public recreation is cheaply purchased if they have in any degree aided in leading to those habits of politeness and sobriety which form such a marked characteristic of the French people. In comparison of the treasures of art everywhere displayed in and around Paris, nothing whatever has been done by the Government of this country for the encouragement of rational amusement, or the refinement of taste in the great body of the people.

BRIGHTON.

The works of the old Water Company being inadequate for the supply of Brighton, a new company was brought into operation at the commencement of the present year, and has extended the works very considerably. The editor of the *Brighton Gazette* gives an account of a visit to them, from which we learn that the new engine, by Messrs. Easton and Amos, is of 100-horse power, working two pumps, each capable of throwing 1,000 gallons a minute. The engine presents a combination of the high-pressure and the condensing engine. The two cylinders adapted to these objects are connected on the same end of the beam by a parallel motion. The steam, of the force of 30 or 35 lbs. to the square inch, having passed through the high-pressure cylinder, enters, at a temperature reduced to 14lbs., the condensing cylinder nearer the fulcrum of the beam. It is well known that a large quantity of cold water is rendered hot in the process of condensation. This water, as well as that for the supply of the town, which it is the special object of the works to provide, has to be raised by machinery. Instead, then, of allowing this heated water to run to waste, it is thrown by the successive strokes of the engine into a trough, whence by a plane gently inclined it finds its way into what we may call a cooling reservoir, so that the water is continually worked over and over again.

Descending a shaft 130 feet deep, the scene and the sounds which there met the eye and the ear were of the strangest kind. On either hand was an irregular excavation in the chalk rock, extending, horizontally, beyond the reach of the eye, lighted as it was with here and there an excavator's candle, vertically, some 30 feet or more, the roof being only here and there visible by its more prominent irregularities. The old works had consisted of a tunnel or driftway, some 200 feet in length, in width 6 feet, occasionally bulging into larger dimensions, of depth varying from 16 feet upwards, and ending in a well. The dip of the strata is in Brighton towards the sea; but the strata are broken into masses approaching the irregular cubic in form by fissures. The rain which falls on the surface is absorbed by the chalk, and gradually percolates or infiltrates downward till it meets fissures, in which it collects in larger or smaller quantities, and thus proceeds more rapidly in its downward and southerly course. The object of driving these driftways is to intercept these fissures, and thus divert the water which they contain from their natural into an artificial channel leading to a well, whence it can be lifted and disposed of by machinery.

The old works have been lowered some twenty feet; and, from the descent-shaft, the new Company have carried similar tunnelling westward at a depth of some 150 feet, to near the Lewes Railway. It was intended to extend the excavation to the boundary; but the water has lately been met in such abundance as to necessitate an abandonment of further progress.

The total length of the tunnelling is 900 feet; and the area will, it is estimated, contain upwards of a million gallons of water.

The competition for the proposed workhouse at Brighton has led to much trouble and useless expenditure. We have at different times received communications on the subject, but did not see our way to a useful interference.

Mr. Collins, the successful competitor, brought an action against the Board of Guardians for the recovery of 309*l.*, the amount of his charge for making out the working drawings, &c., after the design had

been approved by the Poor-Law Board. According to the local *Herald*, the cause was defended on the ground that the charge was exorbitant, and the trial was to come off at the Court of Common Pleas on Tuesday, but the matter was compromised by Messrs. Edwin James, Creasy, and Johnson, defendant's counsel, agreeing to pay the sum of 50*l.*, which sum the plaintiff agreed to take in full of all demands. When the decision was laid before the Board of Guardians last week, the manner in which the compromise had been entered into, without any member of the Board being present, was condemned by various members.

ALNWICK CASTLE.

Works of architectural improvement and interior decoration are in progress at Alnwick Castle. The absence of a great central keep has been regretted. This desideratum the new "Prudhoe Tower" will supply, and it will form a culminating point to the architectural and picturesque grouping of the whole, corresponding in this respect to the Round Tower of Windsor Castle. This new tower is already raised about 20 feet above the surrounding building, and it forms a prominent object from whichever side the castle is viewed. Its exterior foundations project considerably into the outer ward, and its junction with the main body of the castle, through which it entirely passes, is formed by the removal of one of the semicircular towers. Its style of architecture is Edwardian.

With the erection of the Prudhoe Tower, the principal part of the interior is undergoing a rearrangement and restoration. The new buildings occupy the site of the old staircase tower, and project into the inner court, where space has been found for the erection of a groined carriage-porch, leading into a spacious entrance-hall, out of which rises the grand staircase (which is new), commencing at a width of more than 20 feet, and continuing to the principal place at a width of 12 feet. At the head of the staircase is a large vestibule, out of which visitors will pass into an ante-room, from which leads the great new library in the Prudhoe Tower on the one hand, and the saloon, drawing-room, and dining-room on the other. These three last rooms will still retain nearly their former position, but will be materially altered and improved in size, form, and ornamentation. Another improvement obtained by the architect, Mr. Salvin, in the new arrangement, is a corridor or gallery, skirting these rooms, giving a separate entrance to each. In the decoration of the new library and state-rooms, Italian artists are engaged. The roofs and walls are to be decorated with wood carvings, which are now in progress under the eye of the Duke himself.

Nearly 250 men are constantly engaged in different parts of the work. The general superintendence is under the direction of Mr. F. R. Wilson, the resident architect, who, at the request of the Duke, in addition to his other duties, instructs a large class of skilled workmen and senior scholars in the practical elements of scientific drawing in his Grace's school.

WATERWORKS.

Chester.—The works approaching completion by the canal side, Boughton, render a greater main than the present one of eight inches necessary; and accordingly one of twelve inches is being laid down in Boughton. This main will be brought to the Cross, and from it all the branches will be supplied, except that to Newtown. For this suburb the present 8-inch pipe will be used.

Cambridge.—The new works are now in full operation, and the water has already been introduced into many houses and several colleges. A house under 5*l.* a year, including a water-closet, will be supplied for 1s. 1d. per quarter; one not exceeding 8*l.*, for 2s.; not exceeding 10*l.*, for 2s. 6d.; not exceeding 15*l.*, for 3s. 9d. per quarter: and if there be a private bath, 1s. extra; and so on in proportion. The supply will be constant: no cisterns will, therefore, be necessary for domestic use, except for supplies of a peculiar kind. With large consumers special agreements will be made; and the company engage to fix and maintain, at their own cost, water-meters at a certain rate of charges. In case of fire, they will furnish an abundant supply without charge.

Bradford.—Preparations are being made for carrying out the proposed new works. The project comprises, in addition to a small extension of the present works, a comprehensive scheme for bringing a large supply of pure water from the neighbourhoods of Bolton, Bardon, and Burnsall, in Wharfedale. The quantity estimated is eight millions of gallons per day, yielded by springs and streams, none exceeding three degrees in hardness. It is also proposed to intercept the waters of several streams in Airedale, at points where the aqueduct from Wharfedale to Bradford crosses them. These sources, with the present works, will supply about two millions of gallons per day more, making a total of ten millions of gallons per day. The Wharfe millowners agreed to leave the question of compensation to some eminent engineer; and Sir William Cubitt was selected, his duty being to fix what should be the capacity of a compensation-reservoir. The 27th ult., at chambers in Westminster, was fixed by the referee to commence his hearing. Besides counsel, &c., there appeared for the Wharfe millowners Mr. J. McLandsborough, civil engineer, Bradford; and for the corporation, Mr. J. W. Leather, civil engineer, Leeds. In addition to these gentlemen, the following witnesses were examined:—Mr. Simpson, president of the Institution of Civil Engineers; Mr. Hawksley, C.E.; Mr. Bateman, C.E.; and Mr. Glaisher, of the Greenwich Observatory. The inquiry terminated on 1st December, when the referee adjourned to make his award.

Glasgow.—For the Glasgow water supply, a dam is to be constructed at the outlet of Loch Katrine, at its east end, so as to raise the water of the loch four feet. Power is also taken to lower the present level three feet. There will thus be a depth of seven feet of water over the whole surface, available for the supply of the city. As a compensation to millowners for the water abstracted from Loch Katrine, two lochs are to be raised by dams—Loch Venacher 5 feet 9 inches, and the small Loch Drunkie 25 feet up its precipitous sides. From Loch Katrine the water for Glasgow is to be led in a covered aqueduct, by a tolerably direct route, to near Mugdock Castle, in the neighbourhood of Glasgow, where a great reservoir is to be constructed, from which the city will be supplied by means of iron pipes. The great aqueduct is to be eight feet wide and eight feet high to the centre of the arched roof, and covered throughout. On starting, the aqueduct will be 350 feet above the high-water level of the Clyde at Glasgow. The descent of the conduit is only to be at the rate of 1 in 6,336, or 10 inches per mile. The surface of the Mugdock reservoir will be 312 feet above that of the Clyde at high water. A pressure will thus be afforded, on the gravitation principle, sufficient to send the water to the highest floors of the highest houses in Glasgow. To Glasgow Bridge the total length from Loch Katrine is 34¼ miles. Heavy engineering-works will be required in the formation of the Loch Katrine aqueduct. In many parts even roads will have to be constructed for the conveyance of material.

Notices of Books.

TRAVELS IN THE EAST.

Himalayan Journals: Notes of a Naturalist in Bengal, the Sikkim and Nepal Himalayas, the Khasia Mountains, &c. By Joseph D. Hooker, F.R.S. A new edition, in two volumes. Murray, London. 1855.

A Lady's Second Journey round the World: from London to Cape of Good Hope, Borneo, Java, Sumatra, Celebes, Ceram, the Moluccas, &c.; California, Panama, Peru, Ecuador, and the United States. By Ida Pfeiffer. In two volumes. Longman and Co. London. 1855.

The great "plateau," as it has been called, of Tibet, rising 9,000 to 12,000 feet above the sea, with its still more elevated Himalayan, mountainous, and precipitous border, southward and seaward, rising to a towering height, as some of its mountains do, even to the extent of 28,000 feet, and far beyond the level of all other earthly footing,—seeming, in its linear range, as if it were the geological remains of some tremendous sea-coast cliffs, protective of an ancient table-land of Titans, rising, all alone, above what was once an almost universal ocean, —constitutes, in all, a district of the globe replete with geological, ethnological, and general interest; and it is a district almost as new to us western nations, as it is thus, naturally or physically, wonderful; although its inhabitants, according to such recent travellers as Messrs. Huc and Gabet, and Dr. Hooker, exhibit but as it were the wreck of ancient grandeur, and, as it appears to us at least, of almost antidiluvial civilization. That the extreme east, comprising Tibet as its ethnological fountain-head, and spreading still farther eastward, down into the rich and fruitful territories of the Chinese, and southward into Cochin China, Burmah, and India, and even westward through the gates of the Hindoo Koosh into the Plateau of Iran or Persia, and as far even as Arabia and Egypt, constituted a vast region of civilized human life at a period when we, in the far west, were still in a comparatively wild and barbarous state, or at least but as the rude and sturdy emigrants, backwoodsmen, and outposts, of this very human family,—there seems to be very good reason to believe; although, in the course of time, the more enterprising western emigrants (if such they were) got so far "ahead" of their more stagnant forefathers, that the "old fogies" of the far east at length began to be regarded as the true barbarians, and became ultimately almost all confounded under the vague, general, and ignorant denomination of Scythians, Tartars, Goths, and other disreputable cognomens. Ethnological progress now appears to point to the high land of Tibet as the fountain-head even of eastern emigration, as into China, Cochin China, and Burmah. There is a complete radiation of important rivers, which arise from the eastern portion of the Tibetan high land, and which all spread eastward and southward, down into "the flowery lands" of China, Cochin China, and Burmah; and it is an interesting circumstance, that ethnological progress in the east appears to have pursued the very same course along these rivers, so that the less ancient eastern forms of human language are found downwards near their efflux, and the more ancient upwards near their source. However, it is not our purpose here to enter on any learned discussion on the origin and routes of human language or progress: we merely wished to indicate the great and special interest of the general field of Dr. Hooker's researches, though these were mainly as a naturalist. What we desire more particularly to do in this article is to glean a few architectural and other details from his very pleasant volumes, in connection with others, of a kindred order, from the new work by that extraordinary lady, Mrs. Ida Pfeiffer.

While engaged in his researches on a spur from a fir-clad shoulder of the great and "holy" Kinchinjinga, the monarch of mountains, which towers to a height of 28,174 feet above our present sea level, Dr. Hooker stumbled on a flat covered with temples, chaits (or regular old-fashioned but tasteful churchyard monuments, shaded by the beautiful funeral cypress), and other buildings connected with an establishment of those singular archetypes, or precursors, as we may call them, of the Popish priesthood, the *Lamas* of "the holy land" of Tibet, or Bhot,—the contemplative devotees of Boodh, Bhud, or Phut. Illustrations of these temples are given by the author. The temples, three in number, stand about fifty yards apart, but are not parallel to one another, although their general direction is east and west. Each is oblong, and narrowed upwards, with the door at one end. The middle (and smallest) faces the west, the others the east: the doorways are all broad, low, and deep, protected by a projecting carved portico. The walls are immensely thick, of well-masoned slaty stones: the outer surface of each slopes upwards and inwards: the inner is perpendicular. The roofs are low and thickly thatched, and project from 8 to 10 feet all round, to keep off the rain, being sometimes supported by long poles. There is a very low upper story, inhabited by the attendant monks and servants, accessible by a ladder at one end of the building. The main body of the temple is one large apartment, entered through a small transverse vestibule, the breadth of the temple, in which are tall cylindrical praying-machines.

The carvings round the doors of the temples described are said to be very beautiful, though, to Dr. Hooker's taste, gaudily painted and gilded. The northern temple is quite plain. The middle one is simply painted red, and encircled with a row of black heads, with goggle eyes and numerous teeth, on a white ground. It is said to have been originally dedicated to the evil spirits of the Lepcha creed,—a sort of heathen engrafture on the more orthodox and intellectual Lama or Bhoodist creed, that also reminds one forcibly of Romish practices. The southern, which contains the library, is the largest and best, and is of an irregular square shape. The inside walls and floors are plastered with clay, and painted with allegorical representations of Boodh, &c. From the vestibule the principal apartment is entered by broad folding-doors, studded with circular copper

bosses, and turning on iron hinges. It is lighted by latticed windows, sometimes protected outside by a bamboo screen. Owing to the great thickness of the walls (3 or 4 feet), a very feeble light is admitted. In the principal temple, called 'Dugang,' six hexagonal wooden columns, narrowed above, with peculiar broad transverse capitals, exquisitely gilded and painted, support the cross-beams of the roof, which are likewise beautifully ornamented. Sometimes a curly-maned gilt lion is placed over a column, and it is always furnished with a black bushy tail: squares, diamonds, dragons, and groups of flowers, vermilion, green, gold, azure, and white, are dispersed with great artistic taste over all the beams; the heavier masses of colour being separated by fine white lines. The altars and idols are placed at the opposite end; and two long parallel benches, like cathedral stalls, run down the centre of the building: on these the monks sit at prayer and contemplation, the head Lama occupying a stall (often of very tasteful design) near the altar. The principal Boodh, or image, is placed behind the altar) under a canopy like a Moorish arch, or behind a silk screen: gaily dressed and painted effigies of sainted male and female persons are ranged on either side, or placed in niches around the apartment, sometimes with separate altars before them; whilst the walls are more or less covered with paintings of monks in prayer or contemplation. All are placed on rude pediments, so painted as to convey the idea of their rising out of the petals of the pink, purple, or white lotus. None are in any way disagreeable: on the contrary most have a calm and pleasing expression, suggestive of contemplation. The great or south temple contained a side altar of very elegant shape, placed before an image encircled by a glory. Flowers, juniper, peacock's feathers, pastiles, and brass cups of water were the chief ornaments of the altars. In this temple was the library, containing several hundred books, in pigeon-holes, placed in recesses.

"The effect on entering these cold and gloomy temples," says Dr. Hooker, "is very impressive: the Dugang in particular was exquisitely ornamented with painting, and the vista from the vestibule to the principal idol, of carved and coloured pillars and beams, was very picturesque. Within, the general arrangement of the colours and gilding is felt to be harmonious and pleasing, especially from the introduction of slender white streaks between the contrasting masses of colour, in the same manner as was adopted in the Great Exhibition building of 1851. It is also worthy of remark that the brightest colours are often used in broad masses, and when so, are always arranged in the sequence of the rainbow's hues, and are hence never displeasing to the eye. The hues, though bright, are subdued by the imperfect light. The countenances of the images are all calm, and their expression solemn. Whichever way you turn, the eye is met by some beautiful specimen of colouring or carving, or some object of veneration. The effect is much heightened by the incense of juniper and sweet-smelling herbs which the priests burn on entering,—by their grave and decorous conduct,—and by the feeling of respect demanded by a religion which inculcates and adores virtue in the abstract, and those only amongst men who practise virtue. To the idol itself the Boodhist attaches no importance: it is an object of reverence, not of worship, and no virtue or attribute belongs to it *per se*: it is a symbol of the creed, and the adoration is paid to the abstraction which it represents."

The temples and convents of this establishment were founded upwards of 300 years since, by Lamas, who emigrated from Tibet to Sikkim.

Various other temples, and many chaits, &c. are described by the author in the course of his excursion, but what we have already said affords a fair idea of the whole. There are indications, in some of the engravings which illustrate Dr. Hooker's very interesting volumes, of a curious similitude in symbolical forms between the figures of some Lama priests and sculptured figures of the god-priests of Assyria, as discovered by Mr. Layard, at Nineveh. Thus, one Lama priest wears a mitre with something very like the shape of the scrolls, or "horns," as they have been (erroneously, we think) called, on the sides of the head-dress of the Assyrian priest, and he holds a trident in his hand, which was also a distinguished Assyrian symbol. What is very notable, too, in reference to the mitre just referred to, is the fact that in a prominent position on its frontal part, there is a cross and also a crescent! Some of the Lama priests wear complete cardinals' hats, bands and all, and of scarlet colour too. In another engraving, an exact similitude of the ring-glory round the heads of saints in stained-glass windows, and other ecclesiastical depictures amongst Christians, appears in the form of the ordinary head-dress of the Lepcha or Sikkim young women. The glory, as it is called, is made of plaited hair, and rises from the back of the head into a wide and open ring clear above the head. How curiously this reminds one of a rather obscure passage in the New Testament, where St. Paul speaks of a woman's hair being her glory, "because of the angels!" Dr. Hooker remarks, in respect to some of the national games and amusements of children in Sikkim, that they strangely reminded him of his own early associations, and in a way that convinced him the coincidence was not merely accidental.

At Nurtiung, in the Jyntea hills, Dr. Hooker came upon a very striking kind of Stonehenge, with "head-stones," some of them no less than 30 feet high, 6 feet broad, and 2 feet thick, standing erect, and sunk probably 5 or 6 feet more in the ground, beside others of a circular form, like seats or chairs, to which the head-stones are the backs. These seat-slabs are 10 to 20 feet broad, and supported, 5 feet from the ground, upon other blocks. They are now mostly buried in brushwood and nettles, and all stand within the shade of a fine grove of fig and banyan trees still existing. One of the banyan-trees has a trunk 5 feet in diameter clear of buttresses, and numerous small trees of celtis grow out of it.

We must now turn to Mrs. Pfeiffer's new work. This lady, as every one knows, has travelled amongst all sorts of nations and tribes of men, from the most civilized and moralized to the most savage and ferocious,—and it is a sad corollary which she draws from all her vast experience,—that some of the worst sort of people she was ever amongst were called "Christians,"—and she had just before been on the point of being eaten up by cannibals on an East-Indian island, only she was rather old and tough, as she herself suggested, to their astonishment, in their own native language, thus securing a brief interval of good-humoured hilarity, before the subsidence of which she made her escape.

At Kotto Godong, in the interior of Sumatra, Mrs. Pfeiffer saw towns with houses rather original and curious in style. They are of wood, painted in bright colours, and very much longer than they are broad; and each end runs together into a peak, which rises above the central part, so as to give them more the appearance of ships than of houses. The roofs are sometimes made in two or three slopes, each slope being provided with two peaks, and looking very much like a Turkish saddle. The front and side walls are decorated—often quite covered—with finely and elaborately carved arabesques. The houses stand upon piles; but these are invisible, being covered with bamboos or boards, and the whole effect is very peculiar and pretty.

The interior of these ornamental-looking houses consists of one large apartment, which takes in the whole length and three-quarters of the breadth of the house; and at the extremity of it is a small raised compartment that looks as if it had been added after the house was built, which is furnished with mats, carpets, cushions, &c. and is intended as a place of honour for the most distinguished woman present. The back of the house is divided into little rooms for the fires and sleeping-places, but these are pitch dark, as the back wall of the house has no windows.

At Magelang, in Java, she met with a countryman of her own, Mr. Wilsen, of Austria, who had been engaged by the Dutch Government to take drawings of the innumerable arabesques, statues, &c. of the Bhoodist temple, of Boro-Budoo, a work which occupied him for four years. How greatly photography might have facilitated such labours! In the architecture of the temple of Boro-Budoo there appears to be nothing very remarkable. It rises in four terraces, on the highest of which are three more, the whole crowned by something like a great bell, with a Buddha beneath, left unfinished "because the Holy one cannot be completed by human hands." The height of the whole is 120 feet.

On the highest terrace stand twenty-four bells of stone filigree work; on the second, twenty-eight; on the third, thirty-two; and each has a sitting image of Buddha. In the entire temple are 505 great statues of Buddha, and 4,000 bas-reliefs cut on the internal and external surfaces of the galleries. Not a single vacant spot is to be seen on the walls, which are entirely covered with human figures or arabesques.

To draw this enormous number of statues, reliefs, arabesques, &c. as noted, Mr. Wilsen only took four years. The entire temple, with all its details, he has drawn with a pen upon 400 sheets of vellum. On the bas-reliefs may be found the entire Hindoo history of the creation; the formation of the first man, the progressive sanctification of Buddha, &c. In many points, the history strikingly resembles our own.

The sculptures here, both figures and bas-reliefs, are described as being much more accurate and tasteful in their execution than those at the temples of Elora, Adjunta, and others in British India; but the arabesques, bells, &c. are finer there, as well as more colossal in size. The architecture of the building itself, can certainly not be compared with that of the grander specimens in Hindostan. In the mode of building without mortar, and the formation of a kind of arch by the projection of one stone beyond another, they appear to be the same.

From the extreme east Mrs. Pfeiffer crossed the Pacific to the extreme west, and visited California, Oregon, and many other parts of America. While in Lima and Peru she examined the ruins of a great temple of the sun at Pachacamac, of which and of others she gives some brief particulars. This journal of a remarkable woman will be read with interest.

VARIORUM.

MR. C. REED, F.S.A. has had issued by Messrs. Walton and Maberly, of Upper Gower-street, a sixpenny pamphlet, titled, "Why not? A Plea for a Free Public Library and Museum in the City of London, established Without Taxation." The "plea" is addressed to the Lord Mayor, and the author advocates the establishment of a free library and museum in the City by voluntary contributions, as at Manchester, where the thing was done at once by twenty-six merchants subscribing as many hundred pounds for the purpose, and 20,000 working-class subscribers also lending a hand towards its accomplishment. Manchester thus raised 12,000*l.* and Mr. Reed proposes that 20,000*l.* should be aimed at for the London library and museum, or more if need be, and "*why not?*"——The "Third Annual Report to the Council of the City of Manchester on the Working of the Manchester Free Library," has been printed. From this document it appears that this excellent institution is making steady progress. The issues in the lending department have increased since the first year from 77,232 to 81,321, and those in the reference department from 61,080 to 66,261. A very important addition has been made to, or rather a new foundation established in, this popular institution, by the librarian, Mr. Edwards,—namely, a library of publications having reference to the history and local affairs of the Manchester district,—an idea which it would be well for other towns to adopt.——The seventh annual report on the Salford or Peel-park Museum and Library has also been issued, but of this we have already spoken, and we only recur to it to notice the scheme of a statistical chart of the monthly fluctuations or rise and fall of the demands on the library and attendance at the museum, prepared by Mr. J. Plant, the curator. ——A tract by Mr. H. Whitehead, M.A. curate of St. Luke's, Berwick-street,—and an active philanthropist in his own district, as those acquainted with the history of the cholera at Golden-square may remember—has been published by Hatchard, of Piccadilly, "On the Position and Prospects of the London Reformatory Institutions." It comprises a sermon on

behalf of the Belvedere-crescent Reformatory, Hungerford-bridge, Lambeth, and which was preached, without collection, at All Saints' Church, Lambeth.——"A Manual of the Domestic Practice of Medicine," by Mr. W. B. Kesteven, a Fellow of the Royal College of Surgeons of England, has been issued by Messrs. Longman and Co. For emigrants, pastors, missionaries, ship captains, and intelligent and discreet heads of families, this volume, so far as we can judge, will be a valuable acquisition where no skilful physician is at hand, or towards the furtherance of measures which such a physician may adopt when his services do become available. At the same time, systematic private dabbling in drugs is by no means advisable, but there are many heads of families who have really far too little knowledge of medicine, even though within reach of the best of medical advice. Their ignorance is frequently an annoyance and a hindrance to physicians themselves, and to such persons, where there is general intelligence and discretion, the present appears to be a good substitute for the now somewhat antiquated "Buchan's Domestic Medicine." The arrangement of the volume is excellent, and renders the whole easily accessible, either with or without the index which accompanies it.——Mr. C. P. Smyth, the Astronomer-Royal for Scotland, has published a pamphlet containing a "Description of new or improved Instruments for Navigation and Astronomy," such as were exhibited by him at the Paris Exposition of 1855. Some of the instruments referred to must be useful to engineers, as in measuring the rapidity of the flow of streams, and their depth, &c.——Adcock's "Engineer's Pocket-Book for 1856" (Simpkin and Marshall), is addressed specially to a class, as its title shows, and contains information, tables, and formulæ with reference to mensuration, strength, and weight of materials, machinery, mechanics, hydraulics, chemistry, &c. It comprises, further, a memoir of Brigadier-General Sir Samuel Bentham, written by an accomplished lady, who appears to devote her life to making known the abilities and good works of Sir Samuel,—and these were not few.

Miscellanea.

The Inventor of Iron Puddling and Grooved Rolling.—The iron trade of this country received its grand development upwards of half a century since from the puddling process and the invention of grooved rollers, both due to the ingenuity of one man,—the late Mr. Henry Cort; who, in return for this immense good done to his countrymen, millions of whom may be said to have since earned a livelihood through these inventions, had his patents and his business, almost at the outset of his prospects of remuneration through his own industry, locked up and annihilated at the instance of the Government for the time being, for a debt due by a partner rather than by himself, so that he died in poverty, in place of making an immense fortune, as he well deserved to have done, and as so many others, by means of these very inventions of Mr. Cort's, have since done. The only fortune, inherited, therefore, by his son, Mr. Richard Cort, was his father's misfortune, and his title to the gratitude and the recompense of his countrymen, and, indeed, of his fellow men of almost every nation, although one or two miserable pensions were given to his sisters, thus acknowledging the father's merits and his rights, while in reality denying them a fitting recompense. It is satisfactory to find, however, that now an effort is being made to remedy this great grievance and this still greater wrong, and we trust that the result will be in some degree commensurate with the merits of the case, although the heir of Mr. Cort will never receive what his father was prevented from himself earning by the working of his own inventions, far less what he was entitled to for the benefit done to his country. It is Mr. David Mushet's opinion that 300,000,000*l.* have been saved to this nation alone by the working and the use of Mr. Cort's inventions. The iron-masters themselves are believed to have profited by them during the last sixty-six years to the extent of no less than twenty-five millions. Surely, then, these masters, above all others, will now show some gratitude to the giver of such benefits, by subscribing largely to the "Cort National Annuity Fund," set agoing by an honorary committee, which already contains some names of eminence in this and other branches of science. Subscriptions, we observe, are received at the office of the *Mining Journal* of London in the meantime.

Berlin Waterworks, says the *Times*, are the largest ever erected at once, if they are not actually larger than the largest existing in London. The following particulars will show their magnitude:—Twelve boilers under one roof, and in one row, feed eight engines of 1,280 total horse-power, driving sixteen pumps: these latter engines and pumps are contained in one building, the engine-room immediately abutting on the boiler-room. In addition to a large reservoir, about 80 feet deep, on a hill called Windmill-hill, outside the town, these engines fill four filtering-basins, each 382 feet long by 88 feet broad, and 4 feet deep, and a reserve or storage reservoir connected with them, 352 feet long by 142 feet broad, and 8 feet deep. From the works, which lie outside the town, on the banks of the Spree, the water is forced along a main of 3 feet 6 inches diameter to a point in the town where it branches off into two mains of 2 feet 6 inches in diameter each, and these are further ramified into branch pipes, extending over 107 miles of ground. Of the engineering difficulties to be overcome, perhaps the greatest was conveying the water across the Spree: this was accomplished by laying a main down below the bed of the river 300 feet long in one firm length, *i. e.* composed of a number of lengths of pipe firmly jointed together and floated, from the factory up to the spot required, on pontoons, and then sunk to the necessary depth.

Victory's Machinery for Marking Out, Boring, and Sawing Hand-rails, &c.—Mr. J. J. Victory, carpenter, of Henrietta-street, London, patented, on 25th April last, according to the *Mechanics' Magazine*, apparatus for marking out curved lines upon wood and stone, specially adapted to the marking out of hand-railings, together with improved machinery for boring and sawing wood. The invention consists, firstly, of an apparatus for marking out upon the wood for forming "wreaths" for handrails such cylindrical forms and delineations as the wood has afterwards to be cut or reduced to by the ordinary methods now practised. The piece of wood when marked out is cut either by hand or by a saw frame described, after which it is fixed at the required angle in the bench, and the marking apparatus applied for delineating the cylindrical curve or form, both concave and convex, to which the wood has now to be reduced for completing the wreath. After the wood has been cut to the curves delineated, it is brought back to the bench, and a rod or rods passed through the sockets of both the arms, whereby the correctness of the work is proved. When the pieces have been shaped and proved, it is necessary for forming the wreath that they should be accurately fitted together. This is accomplished by a centre screw and a couple of dowels, one on each side of the screw. Mr. Victory has invented a machine, which forms the second part of his invention, and consists of an improved clamp and guide both for holding the wood firmly in its place, and for accurately directing the bit into the end of the wood. The invention has reference, thirdly, to an improved saw-frame, for squaring or cutting out the hand-rail wreaths and other forms in wood.

German Lutheran Church, Champion Park.—The members of the German community resident in Camberwell and its vicinity have erected a church for the celebration of their services, which have hitherto been performed in a school-room in the neighbourhood. The church, which was dedicated on the 16th inst. is capable of containing about 200 worshippers, and consists of a nave 43 feet by 28, with an apsidal chancel, attached vestry, with an organ-loft, which also affords accommodation for a choir. The nave is divided into five bays, and is lighted by eight double lancet-lights with quatrefoil heads, under hoodmoulds with carved bosses. The centre bay contains an engaged doorway on the south side, and the north side has an arched organ-loft with wood screen under, from which access is obtained to loft and vestry. The western front has a bell-cot formed in the thickness of the wall, and a large window filled with three sexfoil lights. The chancel has three narrow tracery-headed windows filled with stained glass, by Ward. The roof to nave, which is of sharp pitch, is constructed with collars and curbed ribs under pitching on to hammer beams and curved braces on stone shafts with carved corbelled terminations. The roof to chancel consists of carved ribs resting on shafts similar to those in nave. The roofs throughout are of deal, lightly stained. The benches, which are entirely open, are of deal, lightly stained and varnished. The font is of stone, by Cundy, and is situate near the south entrance. The church is of Early Decorated date, and is built of Kentish rag and Bath stone quoins and dressings. Mr. George Myers is the builder. The gas-fittings are by Skidmore. The pulpit, altar-table, and altar-rail are of oak, by Rattee. The entire cost is nearly 2,000*l.* Mr. George Low is the architect.

The Paris Exhibition Medals.—It appears that, by the original Imperial decree, the value of high prizes to be awarded at the French Universal Exhibition, was fixed at a certain sum. As the great gold medals of honour fell short in intrinsic value of that amount, a supplementary remittance has been forwarded to the parties, to whom the medals, which are of handsome size, and already worth about twenty guineas each, had been awarded. Sir Charles Barry has received the difference between it and 5,000 francs: bonds for 200 francs have been remitted to Messrs. Cockerell, Donaldson, and Owen Jones, of the first class; and to Mr. Hamilton, of Glasgow, and other second-class medallists, 100 francs. The first and second class medals are precisely the same, and have no other distinctive difference than the words *1re* and *2de classe* respectively inscribed on them.

General Art Studio at Birmingham.—A meeting was held at Mr. Underwood's Fine Art Repository, Union Passage, Birmingham, on Wednesday before last, in connection with this project, when there was a good attendance; Mr. W. C. Aitken presiding. The main object of the meeting was to decide upon a set of rules for the government of the studio. The object of the institution was stated to be simply to provide for astists, artisans, and others employed in manufactures, the means of improving themselves in art, and the members would be those who had studied art previously. Casts would be provided for modellers, and those who drew from the round; pictures and drawings for artists; and an art library for all belonging to the society. The 2nd of January was fixed for the opening of the studio.

Water and Lead.—The paragraph on the subject of the "Contamination of Water by Lead," in the last number of the *Builder*, has just caught my eye. As you justly remark, my "coating for lead" would be quite applicable in this case. The addition of small quantities of pure sulphuric acid from time to time, would also prove beneficial; but a plan superior to all I have yet proposed has just struck me. I have not tried its operation, but am morally certain of successful applicability to cases like the present. To every 100 square feet of lead surface let there be firmly attached 1 square foot of sheet zinc, cut up into about sixteen or twenty pieces, and disposed equally over the "flat," or superficies of the cistern, gutter, &c.; or let the lead be studded with broad-headed zinc nails, say eight for a square foot. Where "pipes" have to be dealt with, zinc wire or thin strips of the metal should be inserted a little way, having a perfect contact with the lead at some part. The efficacy of this suggestion depends upon the fact, that zinc is always electro-positive to lead when these metals are brought together in the presence of moisture; consequently the lead could never be dissolved, its office being to conduct away the electricity developed by the slow action of water upon zinc. Both metals should be kept tolerably clean, by washing them three or four times a year with weak brine. To prevent the ill effects of water impregnated with lead upon the animal economy, four or five drops of sulphuric acid in half a pint of *aqua pura* may be taken now and then. White of egg (*not* boiled, but) mixed with warm water, is the best antidote in severe cases of lead poisoning.—W. L. S.

Northwood Burial-Ground Competition.—Twenty-six designs were sent in for the above. The committee selected one bearing the motto "Cavendo tutus," 1,427*l.* According to the *Hampshire Advertiser*, the authors of it are Messrs. Manning and Mew, architects, London.

Adams's Suspended Girder Rail.—Experiments have recently been made with a new system of permanent way, invented by Mr. W. B. Adams. It was laid down under the direction of Mr. Joseph Cubitt, C.E. on part of the up-line of the Great Northern Railway, over which the heavy coal traffic passes to the goods station at Maiden-lane. The whole of the new way is constructed of wrought iron, and it consists of four parts—viz. the rails, brackets, bolts, and tie-bars. The rails were made at the Ebbw Vale Works, and are 18 feet in length, and the angle brackets are 9 feet in length. The various parts are said to be so contrived that no mistake can occur in putting them together, and they can also be laid down with great facility. By this plan of rail the bearing surface is brought within about 2½ inches of the tread of the wheels, and the consequence is, that the rail is prevented from rocking, the lower part of the rail forming a kind of keel; and the brackets constitute bearers on each side, which impart a steadiness to the rail and a smoothness in passing over it. The rails and bearers form one continuous piece from end to end of the line. The portion of the Great Northern line upon which the new way is laid has a gradient of 1 in 110, and the coal-trains and the heaviest engines pass over it about sixty times a day. It has been laid down about a month, and is reported to have appeared in excellent condition.

THE FOUNTAIN FOR BATH.—Being the architect employed by the Fountain Committee to carry out the accepted design, I feel called upon to reply to your correspondent "A.'s" most personal letter on the subject. Such a letter could only be written by a disappointed competitor, and such can be the only excuse for a letter so full of personalities. His remark of a divided superintendence is decidedly false: such an arrangement was never thought of. I was asked by the committee to make the working drawings and superintend the work, to which I assented, conceiving that it was not for me, a young and humble member of the profession, to refuse their offer, with the example before me of architects, men of respectability and character, scrambling for small competitions, and submitting to all sorts of conditions rather than lose a chance of success. I think it is most unjustifiable and unfair that my conduct should be attacked in such a manner by a correspondent whose malicious style of writing shows his want of the common courtesies of society. Should he again appear in your columns, I hope he will drop the initial, and append his name.—H. HICKES.

PATENT FOR STONE-CUTTING MACHINERY.—Messrs. J. and G. Hunter, of Leysmill, Forfar, patented, on 24th April last, an arrangement of stone-cutting machinery which comprises certain improved tools, and an improved table for carrying the stone to be cut. The tools consist of a saw, or circular disc of iron, fitted on its periphery with holders for the reception of teeth, in such manner that the teeth, or any of them, may be turned or removed, and fresh teeth substituted for them during the working of the machinery. The teeth are circular (or of such other form as will permit of their being turned round), at their cutting edge, and hollow for some distance up their stem. They fit into holders, and are prevented from falling out by a spring, or other suitable contrivance. When the under edges of large blocks are to be preserved, a similarly constructed and smaller tool is caused to cut an inch or two in advance of the main tool, but below the stone. Rotary motion is communicated to the tools from any prime mover. The table is furnished with brackets for fixing the stone, and with bars for steadying its motion, and connected to it is a hand or foot-wheel for drawing it back. It is also provided with rollers to travel upon.—*Mechanics' Magazine.*

THE BELLE ISLE NUISANCES.—In the case of the varnish manufacturers of Belle Isle, Islington, summoned at the instance of the Secretary of State for the Home Department, Mr. Corrie, the magistrate, gave the following judgment:—"These cases are of very great importance to all persons interested. On the one hand the inhabitants of Islington, the population of which has within the last ten years nearly doubled, having increased from about 50,000 to 90,000, complain that their lives are rendered miserable by the nuisances in Belle-isle, while, on the other hand, the numerous manufacturers—the varnish-makers alone being eleven in number—say that it will be ruin to them if they are not allowed to continue their business. There are various degrees of offensive effluvia. Mr. Bodkin does not put this forward as a noxious effluvium, but he says that he has clearly proved that it is offensive; and the defendants' own witnesses admit that, though it is not what they call offensive in a manufacturing sense, yet that it would be so if the effluvia were to enter their houses. Now, that is the question which I have to decide. That the nuisance complained of can be prevented has been proved to me at the manufactory of Messrs. Noble and Hoare, near the Victoria Theatre. No doubt the question of expense is a very important consideration. There must be a formal conviction, and I will direct the judgment to stand over to make the Crown proceed against these nuisances, which are both noxious and offensive; and the varnish-makers must, in the meantime, call in the assistance of their men of science, who, I doubt not, can suggest arrangements that will very much mitigate the evils complained of, so as to render it unnecessary for the inhabitants of the neighbourhood to take any further proceedings against these particular defendants."

TO CORRESPONDENTS.

"*Steel Bells.*"—Can any of your readers inform me how the experiments succeeded on these bells; and whether there is any manufactory of them at present in England? A. A.

"New Buildings Act."—"A. F."—"T. M. P."—"J. E. Jun."—"L. V."—"W. L. S." (next week). "C. F." (ditto). —"W. W."—"W. S."—"G. T."—"Architect," (Islington.)—"Fair Play."—"J. W."—"C. V."—"O. R. S."—"T. S. R."—"G. C."—"L. P."—"J. S. S."—"N. W. L."—"J. T."—"W. P. G."—"G. T. R."—"G. L."—"J. D. P."—"S. E. M."—"W. R." (we should measure the centre square first, and the four semi-circles as parallelograms).—"G. D."—"T. L. D."—"W. M. F."—"T. E. W. K."—"T. S. C. R." (it is not usual.)—"T. G." "S. W."—"C. F. R."

"*Merchant Tailors' Company* v. *Truscott.*"—We are asked to mention that the height of Mr Truscott's new building in Suffolk-lane is 63 feet 6 inches, and not 97 feet, as reported.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

INSTITUTED 1837.

INCORPORATED BY ROYAL CHARTER, 10TH VICTORIA, 1846.

ART-UNION OF LONDON,

444, WEST STRAND.

President.

THE RIGHT HON. THE LORD MONTEAGLE.

Vice-Presidents.

HIS GRACE THE DUKE OF NORTHUMBERLAND,

HON. MR. JUSTICE VAUGHAN WILLIAMS
SAMUEL WILSON, ESQ. ALDERMAN.

PLAN FOR THE CURRENT YEAR.

THE LIST IS NOW OPEN, AND EVERY SUBSCRIBER OF ONE GUINEA WILL BE ENTITLED TO—

I. An Impression of a Plate, by J. T. WILLMORE, A.R.A. from the original important and well-known picture by Sir EDWIN LANDSEER, R.A. and Sir AUGUSTUS CALLCOTT, R.A. "HARVEST IN THE HIGHLANDS;" and

II. The chance of obtaining one of the Prizes to be allotted at the general meeting in April, which will include—

THE RIGHT TO SELECT FOR HIMSELF A VALUABLE WORK OF ART FROM ONE OF THE PUBLIC EXHIBITIONS.
STATUETTES IN BRONZE OF HER MAJESTY ON HORSEBACK, by T. THORNEYCROFT.
COPIES IN BRONZE, from an original Model in relief by J. JEFFERSON, of "The Entry of the Duke of Wellington into Madrid."
STATUETTES IN PORCELAIN OR PARIAN.
PROOF IMPRESSIONS OF A LARGE LITHOGRAPH, by T. H. MAGUIRE, after the original Picture by W. P. FRITH, R.A. "The Supper Scene," from Molière's "*Bourgeois Gentilhomme.*"

The Prints of "Harvest in the Highlands" will be ready in February next. A subscription of Ten Guineas entitles to a Proof of the Plate, before letters, on India paper, and Ten Shares in the distribution of Prizes. A subscription of Five Guineas, to a lettered Proof on India paper, and Five Shares.

The Prizes consist of the right to select, by the Prizeholder himself, a Work of Art of the value of Ten Pounds to Two Hundred Pounds or more, from the Public Exhibitions of the current year, under certain regulations; also of Statuettes and other Works in Bronze, Iron, and Porcelain, produced expressly for the Society, and of Impressions of Fine Works engraved or lithographed solely for distribution as prizes. A General Meeting of the Members is held on the last Tuesday in April, at which the Prizes are publicly distributed by lot, by two ladies then chosen, and each Member who gains a Prize receives intimation of it by the same night's post. The Council select Works of Art for such Prizeholders as desire it, and for all those residing in distant parts of the world who may not have delegated the selection to friends in this country.

GEORGE GODWIN, } *Honorary*
LEWIS POCOCK, } *Secretaries.*

444, West Strand, Nov. 1, 1855.

ADVERTISEMENTS.

METROPOLIS LOCAL MANAGEMENT ACT. APPOINTMENT of OFFICERS.—The Lewisham District Board of Works hereby give Notice that they will meet at the Vestry room of Lewisham Parish Church on THURSDAY, the 3rd of JANUARY, 1856, at SIX o'clock p.m. to consider APPLICATIONS for the following APPOINTMENTS under the above Act, namely:—

Clerk.—Salary, 200l. a year. Duties as prescribed in the Act.

Treasurer.

Surveyor.—Salary, 200l. a year. To devote his whole time to the duties of the office

Medical Officer of Health. To receive a fee of 5 guineas for each report. To report on the sanitary condition of the district monthly, or oftener, if required by the Board.

Two Inspectors of Nuisances.—Salary, each 80l. a year. Duties as prescribed by the Act, and to be likewise Assistant Surveyors, devoting their whole time to the office, and residing in the district.

Scavengers.—Duties as prescribed in Act; to be Dustmen also.

Applications in writing to be addressed to Mr. O. C. T. EAGLETON, Vestry Clerk, Lewisham, on or before the 1st of JANUARY next.

Dated this 21st December, 1855.

BUILDER'S CLERK WANTED.—A young man acquainted with the routine of the office, and capable of making simple drawings and tracings. A good testimonial will be required.—Apply by letter, prepaid, stating terms, to G. W. Messrs. Waterlow and Sons, Parliament-street, Westminster.

TO PARENTS AND GUARDIANS.

THE ARCHITECT and SURVEYOR to two first-class Building Estates in the suburbs of London, has a VACANCY in his Office for a well educated, gentlemanly Youth as PUPIL; one of sufficient ability to be able, after a few years, to become assistant in the business, would be preferred.—Address, S. R. care of Mr. Walls, Estate Office, Prince Albert's New-road, Kensington-gore

TO GRAINERS.

WANTED, a first-rate GRAINER. Persons applying will be required to produce specimens of their own work. Liberal wages will be given, and none but superior workmen need apply.—HUMMERSTON, Brothers, 68, Albion-street, Leeds.

TO GAS FITTERS.

WANTED, a thoroughly clever Workman in the above line, who must also be able to do brass finishing and lacquering. No one need apply who cannot be recommended by his former employers for honesty, ability, and attention to his duties.—Apply by letter, pre-paid, to J. B. care of Mr. Simpson, 84, London-road, Southwark.

TO ARCHITECTURAL DRAUGHTSMEN.

WANTED, in a Provincial Office, a competent and experienced CLERK, in getting up Italian and Gothic designs, and working plans.—Address, INDIGO, 89, High Holborn, London.

WANTED, by a Statuary Mason, with good reference in town and country, of many years' experience, a SITUATION as FOREMAN, or to take the management of a Statuary Mason's Jobbing Business, who well understands it in every branch, and would do all he could to the interest of his employer.—Direct, M. J. 41, Basing-place, Waterloo-road, London.

TO ARCHITECTS, BUILDERS, AND SURVEYORS.

WANTED, by the Advertiser, aged 25, an ENGAGEMENT, in either of the above Offices. He is a good draughtsman, capable of making out detail or highly-finished drawings, in colour or sepia, competent to take out quantities, or keep builders' books, is a first-class land surveyor, by chain or instrument. Salary not so much an object as a permanent engagement.—Address, A. B. Mr. Pettifer's, Post-Office, Southgate-road, Kingsland

TO ARCHITECTS.

WANTED, by a Young Gentleman, who has had six years' experience, principally in London offices, a SITUATION with an Architect. He could take charge of an office, if required, and execute all drawings, and can work up designs in any style. Can direct works. Understands land surveying. Salary moderate.—Address, A. W. Office of "The Builder."

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION as PLUMBER, or will have no objection to turn his hand to any other part of the business. Good reference.—Direct A. M. C. 27 Lowndale-road, Ledbury-road, Bayswater.

TO BUILDERS, SURVEYORS, AND CIVIL ENGINEERS.

WANTED, by the Advertiser, aged 22, an ENGAGEMENT as JUNIOR ASSISTANT. Is a good draughtsman, and can assist in taking out quantities, preparing working and finished drawings, and the usual routine of an office, and has a knowledge of surveying and levelling. Six years' reference to late employer.—Address, E. S. City News-room, Cheapside.

TO BUILDERS, PAINTERS AND OTHERS.

WANTED, a SITUATION as FOREMAN, by a respectable, active, middle-aged Man, one who is qualified to take charge of the painting and decorating business. Respectable reference can be given. All letters must be post-paid, and addressed to W. H. W. 37, Great George-street, Euston-square. The country would not be objected to.

WANTED, by a Middle-aged Man, a SITUATION as COLLECTOR, TIME-KEEPER, or FOREMAN; is acquainted generally with smiths' work, and can give good reference. Salary required, 25s. per week.—Address, S. S. Office of "The Builder."

WANTED, a SITUATION as CLERK of WORKS, or GENERAL FOREMAN, by a middle-aged Man, well qualified by practical experience in the above duties. Well recommended.—Address, A. R. 37, East-street, Walworth.

TO BUILDERS.

WANTED, a SITUATION as FOREMAN, by a Young Man of considerable experience, in the most eminent firms in London, capable of keeping books, making working drawings, setting out work, or superintending a building or joiner's shop. No objection to being employed by a country master, or going to a country job. Satisfactory testimonials as to ability, sobriety, &c. can be given.—Address, O. A. K. Mr. Jones, Stationer, Leather-lane, Holborn.

TO BUILDERS AND PLUMBERS.

WANTED, by a Young Man, aged 28, a SITUATION as PLUMBER, PAINTER, and GLAZIER. Address T. T., Mr Elkins', 26, Gray-street, Weber-street, Blackfriars-road.

TO BUILDERS AND OTHERS.

WANTED, by a respectable Young Man, a SITUATION as Plumber, Painter, and Glazier. A respectable reference can be given, if required.—Address, R. M. Office of "The Builder."

TO ARCHITECTS, &c.

THE Advertiser, who has been four years in an Architect's office, and can produce satisfactory testimonials as to character and ability, is desirous of an ENGAGEMENT.—Address, A. B. 8, Thornhill-crescent, Islington.

TO ARCHITECTS.

THE Advertiser, who has just completed an engagement in a first-class office, is desirous of a SITUATION. Can make out working, detail, and perspective drawings, and is well acquainted with Gothic.—Address, K. 17, Hill-street, Knightsbridge.

THE Advertiser, aged 24, who has been brought up on railways, town drainage, and public works generally, and has lately been engaged on works under the Commissioners of Sewers, is desirous of an ENGAGEMENT. Thoroughly understands levelling, setting out, and measuring up works, and the entire duties of a practical assistant engineer; could take the management of a job, if required. Unexceptionable references.—Address, P. W. 33, Luard street, Caledonian-road, London.

TO BUILDERS AND OTHERS.

A PRACTICAL SURVEYOR offers his ASSISTANCE in measuring, estimating, or the making up of builders' accounts. Terms moderate and per agreement.—Address, X. Y. Office of "The Builder."

TO ARCHITECTS.

A NEAT and expeditious DRAUGHTSMAN is desirous of a RE-ENGAGEMENT in town; accustomed to the getting out of perspective, finished, working, and detail drawing, &c. Salary, moderate.—Address, A. B. No. 9, Elizabeth-street South, Pimlico.

A CLERK of WORKS, who has first-rate testimonials from London Architects, and who has had the superintendence of extensive works for many years past, is DISENGAGED.—Address, ALPHA, care of Mr. Andrews, 61, St. George's-road, Southwark.

TO BUILDERS.

A YOUNG MAN, aged 21, is in want of EMPLOYMENT in a CARPENTER'S and JOINER'S SHOP, where he would have an opportunity of improving himself. Has been at the trade seven years.—Address, H. J. 18, Upper Boston-place, Dorset square.

TO BUILDERS, PLUMBERS, PAINTERS, &c.

AS FOREMAN.—The Advertiser, aged 33, practically acquainted with Plumbing, Painting, &c. wishes for an ENGAGEMENT; is capable of measuring, taking out quantities, keeping accounts, &c. either in town or country.—Address, S. R. M Post-office, Farringdon-street.

AN ARCHITECT'S ASSISTANT, of fifteen years' experience in the profession, is also an artist, possesses a thorough knowledge of construction, details, and perspective, accustomed to assist in competitions, designing ornamental details, and having the highest testimonials, is desirous of a RE-ENGAGEMENT, permanent or otherwise remunerative.—Address, A. Architect, Office of "The Builder."

TO BUILDERS.

A BUILDER'S CLERK, aged 26, is open to an ENGAGEMENT. Good references. Salary moderate. Address, C. J. W. care of Mrs. Oldershaw, Bricklayer, 30, Brunswick-street, Dover-road.

TO ARCHITECTS, &c.

AN Assistant, accustomed to prepare finished and working drawings, and superintending works, making surveys of dilapidations, &c. wishes for an ENGAGEMENT either temporary or permanent.—Address, A. B. care of Mr. Butcher, 278, High Holborn.

TO ARCHITECTS, SURVEYORS, &c.

AN Architectictural Draughtsman, accustomed to prepare finished, working, and detail drawings, measure architectural work, take out quantities, &c. is desirous of a RE-ENGAGEMENT. London preferred. Salary moderate. Good testimonials.—Address, A. B. 3, Harvey-square, Folkestone.

TO ARCHITECTS.

A SURVEYOR at the West-end, having a mixed practice, is desirous of meeting a gentleman who would be willing to EXCHANGE SURVEYING for ARCHITECTURE, on terms to be agreed upon. The Advertiser wishes to continue the former profession only, but would not object to join an Architect (without partnership) on mutually advantageous terms.—Address, A. B. 27, Manchester-street, Manchester-square.

TO BUILDERS AND OTHERS.

A YOUNG MAN is desirous of a RE-ENGAGEMENT in a Builder's Office, who has need a similar situation with London Builders for seven years. References unexceptionable.—Address, R. R. 47, Essex-street, Strand.

A YOUNG MAN, aged 21, is in want of a SITUATION; he has been upwards of four years in the office of a builder of eminence, and has had experience at the bench; is a good draughtsman, and has been accustomed to prepare detail and working drawings, and to assist in the usual office business. Terms moderate.—Address, A. A. Post-office, Vauxhall-bridge-road.

TO AUCTIONEERS, SURVEYORS, AND ESTATE AGENTS

A GENTLEMAN (a good Surveyor), of industrious, persevering habits, is now prepared to accept of a CLERKSHIP, or would treat for a share in a thriving business, as JUNIOR WORKING PARTNER. Unexceptionable references.—Address, W. B. 96, Hatton-garden.

A PRIVATE GENTLEMAN is anxious to meet with some practical Mechanical Draughtsman, competent to take down from description, both roughly, and to scale his ideas of machinery, and if able to instruct him verbally in the mixed and applied sciences during the term of his engagement, it would be a strong recommendation. But should he be asking for a *rara avis*, he would content himself with either, although he is sceptical of the existence of the one without the other. The advertiser would offer the comforts of a home, to a moral, social companion, a middle-aged one preferred. All applicants to state reference and terms, and must be willing to dwell with a stranger for from one to three months, and if he is anxious, much longer. The advertiser would prefer paying either for complete design, or in any way but by time, and will promise to keep the fullest hand fully employed.—Address, X. Y. Z. Post-office, Ripon.

GORE-HOUSE, KENSINGTON. — The ANNUAL EXHIBITION of STUDENTS' DRAWINGS from the Metropolitan and Provincial Schools, in connection with the Department of Science and Art, will be OPENED to the Public on and after Monday, the 31st December, between Ten and Four. Admission free. A private view, to which the students of the Normal and District Schools will be admitted, on showing their tickets, on Saturday, the 29th.

CHEMICAL and METALLURGICAL LABORATORIES.—The Royal College of Chemistry (the Laboratory of the Metropolitan School of Science, applied to Mining and the Arts) is open under the direction of Dr. HOFMANN, F.R.S. and the Metallurgical Laboratory under the direction of Dr. PERCY, F.R.S. At both these Laboratories, there are three terms annually of twelve weeks each. Students for working every day in the week is 5l. per term. The next term will commence on TUESDAY next, the 1st day of JANUARY, 1856, when pupils may be entered. For further particulars apply at the Museum of Practical Geology, Jermyn-street, or at the Royal College of Chemistry, Oxford-street.

TRENHAM REEKS, Registrar.

DRAWING CLASSES.—The Architects, Builders, Civil Engineers, and Machinists' Drawing Class set, conducted by THOMAS J. HILL, Architect. Offices, 15, Old-street, City-road. Subjects taught—Architectural, Mechanical, Ornamental, and Perspective Drawing; Taking out Quantities, Abstracting and Valuing the same, Preparing Finished Drawings in Water Colour, &c. &c. Detail prospectuses to be had at the Offices. The Classes re-open on Tuesday, 1st of January, 1856.

MECHANICAL and ENGINEERING DRAWING CLASSES, conducted by Mr FREDERICK WOODALL, at 26, Wardour-street, Oxford-street, and 126, Clarence-road, Kentish-town. Evening instruction in model, mechanical, and outline drawing, given in a course of Class Lectures upon Orthographic Projection. Fee for the term, one guinea, commencing first Monday in January, terminating third Monday in March. Prospectuses to be obtained at either address.

TO ARCHITECTS.

EXHIBITION and COMPETITION DRAWINGS, coloured or tinted, and superior LITHOGRAPHY in its various branches, executed by Mr. T. J. RAWLINS (Author of Elementary Drawing Classes, adopted at Marlborough House, Outlines of Sculpture, Modern Architecture, &c.), 38, University-street, University College, London.

DRAWING CLASSES, 24, Guildford-street, Russell-square—terms, 1 guinea per quarter—which commences on Monday, January 7. Gentlemen who cannot attend at the establishment may be attended at their residence on moderate terms, in any part of town or country, by Mr. SMITH or Mr. LEWIS.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth near Astley's Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen. The parcel will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing, Colouring, Shading and Tinting, Ornamental and Water-Colour Drawing, Perspective, Isometrical, and Geometrical Drawing, Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, Measuring and Valuing Builders' Work, &c. &c. Terms:—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans, Drawings, Models, &c. Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

NORWICH UNION FIRE INSURANCE SOCIETY. (Established 1797.) Total Amount Insured 63,000,000l

Insurances may be effected with this Company upon more favourable terms than with other Offices.

For prospectuses apply at the Society's Offices, Surrey-street, Norwich; and 6, Crescent, New Bridge-street, Blackfriars, London.

AUDITORS.

A. W. Robarts, esq.	Henry Sykes Thornton, esq.
Lewis Loyd, jun. esq.	John Henry Smith, esq.

SECRETARY—Geo. Keys, esq.
ACTUARY.—Samuel Brown, esq.

LIFE DEPARTMENT.—Under the Provisions of an Act of Parliament, this Company now offers to future insurers Four-fifths of the Profits, with Quinquennial Division, or a low rate of premium, without participation of profits.

The next division of profits will be declared in June, 1860, when all Participating Policies which shall have subsisted at least one year at Christmas, 1859, will be allowed to share in the profits.

At the five divisions of profits made by this Company, the total reversionary bonuses added to the policies have exceeded 91l. 0s. of. At Christmas last the Assurances in force amounted to upwards of 4,234,000l. the income from the Life Branch in 1854 was more than 200,000l. and the Life Assurance Fund independent of the Guarantee Capital exceeded 1,700,000l.

FOREIGN RISKS.—The extra premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.

INVALID LIVES. Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have their lives insured at extra premiums.

LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50l.

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

MEDICAL FEES paid by the Company, and no charge will be made for Policy Stamps.

Notice is hereby given, That Fire Policies which expire at Christmas must be renewed within fifteen days at this Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the Kingdom, otherwise they become void.

Losses caused by Explosion of Gas are admitted by this Company.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the present increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—THE FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and Co. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgwater, July 30th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for their home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise. London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, and to be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied or shipment, on advantageous terms.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Blocking-tiles, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

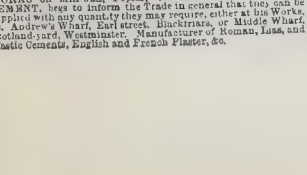
NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester. T. H BOORMAN, WILD, and CO beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their connexion to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be afford to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.



Agents in London:—Messrs. GEORGE POTTER and CO, Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Plastic Cements, English and French Plaster.

BATH, PORTLAND, and ROMAN CEMENTS, GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

THE LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to a l parts —Agents required, and a liberal discount allowed. Orders received by RICHARD WINTER (Manager to the Company), Cement Works, Dunball, Bridgewater.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to ensure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, Kingscross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto, ditto, 3d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 29, 1855. CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'S FIRE VERIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON,

BRICK, LIME, and CEMENT MERCHANTS.

SOUTHAM BLUE LIAS LIME DEPOT

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lea, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

11, George-yard, Lombard street, City

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cements and Stucco Paint. CLARK and BENGOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 5d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

THE PATENT BRICK-MACHINE COMPANY invite ORDERS for their improved machines, the only ones that manufacture solid bricks equal to hand-made. A machine, and bricks made by it, may be seen in a field near London.

H. C. MOUNT, Secretary.
37, King William-street, City.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 26s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s.; Place, 18s.—Terms, cash on delivery.—Apply to Mr G. SMEED, Sittingbourne, Kent.

MILLS and PRICE, 8, ADELAIDE-PLACE, London-bridge.

THE KINSON CLAY-WORKS, POTTERIES, and FIRE-BRICK ESTABLISHMENT, near Poole, Dorset, Manufacturers of every description of Sanitary Glazed Sewage-pipes, Closet-pans, Furnace blocks, Fire-bricks, Gas-retorts, Crucibles, &c. &c.—The completion of the Kinson Pottery places the Proprietors in a position to supply Builders and the Trade generally with any quantities of the above description of Articles at moderate prices. The pottery is situate about a mile and a half from the town and port of Poole. It is worked by steam-power, and the clay is prepared by one of the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-clay is also been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clays and materials found on the estate. There is an inexhaustible quantity of all descriptions of Dorsetshire Clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London potters, upon favourable terms.

Lists of prices and all other information will be furnished, upon application to Mr. T. W. GREEN, at the Works.
London Agent: J. COX, 2 and 3, High-street, Lambeth.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—[illegible] and Co. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

Depôt, Agar Wharf, Hope's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent — Mr. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brick-fields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c &c. Whiting of the best quality, lime, both white and flare, bricks, fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf situs at Bow bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 32s. 6d. per 1,000; floor bricks and 6 inch pavings, at 37s 6d. per 1,000; 9-inch pavings, at 57s 6d. per 1,000; plain tiles, at 35s. per 1,000, delivered Cash prices. Delivered on trucks in London on Eastern Counties Railway.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactories known as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

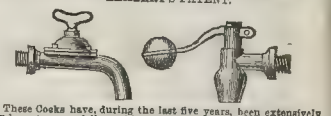
Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.
HIGH-PRESSURE VALVE COCKS,—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 330 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

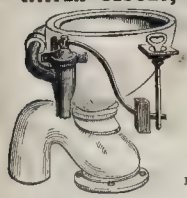
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; and by the Manufacturing and Painting Agent, Mr. FREDK. BRABY, Fitzroy Works, New-road. In Manchester and Liverpool by R CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-merchants and in Southampton, by Mr. H J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21 and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.



For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP to TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals, Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas relievi, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

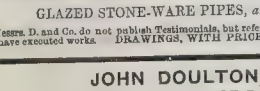
GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

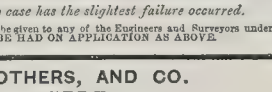
Royal Arsenal, Woolwich, June 24, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.



This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.



HENRY DOULTON AND CO. MANUFACTURERS OF GLAZED STONE-WARE DRAIN-PIPES.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharf, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

SUPERIOR LAND DRAINAGE.—

AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

SUPERIOR STONEWARE GLAZED

PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES,

BENDS, JUNCTIONS, and SYPHONS.—This well known, and long established ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-

VALVES, acknowledged to be the best in use; hydrants or fire plugs; wells sunk and bored; the hydraulic ram; forcing pumps of every description. Estimates prepared for all works connected with hydrantes or gas. Pumps let on hire.

W. P. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PATENT DRAIN-PIPES, UNGLAZED

manufactured by ARTHUR C. FRANCIS and Co. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "

18	"	"	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE.

MANUFACTURER of superior GLAZED STONEWARE PIPES in accordance with the rules established by the Commissioners of Sewers, Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

PATENT SELF-ACTING WATER-

CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the most simple principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

HOSE PIPING.—WAITHMAN'S

PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 66 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

Contractors supplied to any extent.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 29, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Moorfields-street North, City-road, for the sale of CHIMNEY PIECES, and other articles, useful architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.

July 25, 1855. C. ADENEY, Secretary.

TO SCULPTORS, BUILDERS, MASONS, &c.

B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, Sicilian, black and gold, Devonshire, Bardilla, Siena, and Breccia in slabs, and particularly calls their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.

Monuments, vases, and statues, finely executed in Italy.
Carrara Wharf, Thames-bank, Pimlico.

MARBLE.—The Italian Marble Company, Importers of the produce of their own quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt, Messrs. Farmer and Brindley's Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates. For further particulars apply at the Offices of the Company, 18, Cannon-street, City.

WILLIAM W. BONNIN, London Secretary.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to call the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured of statuary, pure Italian, the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dinner-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tomb-Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quarry. Direct from the Quarries in truck-loads of five tons. Pavings, Landings got out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office, 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf and above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful artificial material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS,
BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY,

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

GUERNSEY GRANITE.—Contractors and Others supplied, from a single cargo upwards.—Apply to C. D. BENNETT, Quarry Proprietor and Granite Merchant, St. Sampson's, Guernsey; or 54, Lower Thames-street, London.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—FREGELIS and TAYLOR, 3, Pinner's court, Old Broad-street. Manager—JAS. J. THATHAN, Liskeard.

This Granite is selected for the New Westminster-bridge.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Bolternewton, Hare-hill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curbs and Kitching, all at the very lowest prices.

N.B. Good 3-inch Tooled Paving, at 40s. per 100 feet, cash.

ANCASTER STONE, so remarkable for its free working quality, combined with colour and durability. Price, and cost of transit to any part, may be obtained, upon application, at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and Society of the Society of Arts in 1854. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lavatables, chiffoniers, consoles, &c.; baths baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, and mantles, and dados.—Price lists can be had on application to Mr. MAGNUS, 38 and 40, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand, Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

AUSTIN'S ARTIFICIAL STONE.—This material frequently confounded with Portland Cement has now been in extensive use among the highest class of residences for about twenty-five years. During that time a collection of Ornamental Work, such as Vases, Flutes, and Fountains, has been accumulating, of which the public have scarcely any idea. Suffice it to say, that a single copy of each work would collectively amount to between 2,000 and 3,000. In contradistinction from Terra-cotta, and all other kind of Pottery, there is no distortion of form by the process of baking, and, instead of the glazed surface of Terra-cotta, it has the closest resemblance to Portland Stone, having also the advantage of being waterproof.—AUSTIN and SEELEY, Nos. 1 to 4, Keppel-row, New-road, Regent's-park.

*** A large Stock of Ornamental Chimney-tops.

GROUND FLINT AND CORNISH STONE, UNADULTERATED.
WILCOX & CO.
FLINT MILLS, MILLWALL, POPLAR.

THE RAILWAY SWITCH and CROSSING COMPANY.—Directors of Railways, Engineers, and Manufacturers, are informed that the Offices of the Company are removed to 103, St. Martin's-lane, Charing-cross, where, on application, every information will be afforded respecting their Patented Improvements in Switches and Crossings, now so universally adopted. WILLIAM DEMPSEY, Manager.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster.

The Second Edition of this Company's Circular, just published, is now being forwarded, post free, to Directors, Engineers, Managers, and others interested in Railways.

The Circular contains Engravings, detailed Estimates of cost of construction, and descriptions of many valuable Patents, with the latest results of experience in the working of the various patented systems of Permanent Way, either the property of, or worked by the Permanent Way Company.

These patented systems are now adopted by Companies owning several thousand miles of Railway, are approved of by most of the eminent Railway Engineers, in this country and abroad, and the system of Fish-jointing, in particular, has received the unqualified approval of H. M. Commissioners of the Board of Trade and their Inspecting Officers.

The Permanent Way Company are prepared to grant licenses on liberal terms, to Railway Companies and Manufacturers for the use of all or any of the Patented Inventions, which have for their object the safety and comfort of the travelling public, and economy in construction of the Road and Rolling Stock.

That the objects are accomplished, the following extracts will confirm:—

"There can be no doubt that the practice of Fishing the Rails, which is becoming very general, is a great element of safety, the principle cannot be too much encouraged." Extract from Report of Colonel Wynne, R.E. Chief Inspector of Railways to H. M.'s Commissioners of the Board of Trade, dated April 9th, 1854.

"My Lords direct me to observe, that they trust that the remarks of the Inspecting Officer, as to the desirability of the Fished Joint being adopted to a greater extent upon the Railway, will receive the attentive consideration of the Directors."—Extract from letter of Captain Galton, R.E., Secretary to the Railway Department of the Board of Trade, in reference to the foregoing Report.

"Dear Sir,—In reply to your favour of the 1st instant, I beg to say that I experience no difficulty whatever in keeping the nuts of the bolts tight."—Extract from a letter by Mr. H. Woodhouse, Engineer, of the London and North Western Railway.

"I would, however, beg to state that, in point of safety, the first and most essential element of railway working, the Fish Joint, on your system, is, in my opinion *indispensable*—Extract from letter of Mr. J. E. M'Connell, Locomotive Engineer of the London and North-Western Railway.

"On a district of about thirty miles, where the greatest length has been Fished, the saving in labour of maintenance amounts fully to thirty per cent."—Extract from Mr. R. Jacomb Hood, Engineer to the London, Brighton, and South-Coast Railway.

Among others, the Company call attention to the following Patents recently placed under its management:—Mr. William Pole's important Improvement in Fish Joints, and Mr. Paul Frances Improvements in moulding Railway Chairs.

Licenses, and every information, may be obtained upon application to CHARLES M. MAY, F.R.S. Managing Director of the Company, 26, Great George-street, Westminster; or to WILLIAM HOWDEN, Secretary.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brad) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, December 29, 1855.
